The town meeting this year was an average meeting; that is to say, there was no great political contest to bring out the voters, and the warrant contained few items of special interest. The occasion was favorable, therefore, for observing the ordinary and usual conduct of the town business, and in particular the fitness of the town meeting for its work. I came to the following conclusions: The population of Brunswick is not yet either so large or so heterogeneous as to make town government inefficient or the town meeting unmanageable. The affairs of the town are well and economically administered, political corruption is unknown, and such political favoritism as exists is not at the expense of the public service. The town reports are extensively read and freely criticised. The centring of political control in the hands of a few men, most of them residents of the village, undoubtedly helps to simplify and expedite business. The French or foreign vote is small, but intelligent and appreciative, and, while naturally Democratic, is not cast as a unit for either political party. Non-political officers are reëlected year after year, practically without opposition. The town meeting remains as of old the event of the year, is well attended, and appeals forcibly to the young men of the community. A few men in the town meeting do most of the talking, but the measures passed have virtually unanimous approval. To sum up, the modifications in the old town system have been political rather than administrative, and while these changes are in the direction of more rigid party control, they have not yet interfered with a management of town affairs which is at once effective, economical, and pure.

WILLIAM MACDONALD.

THE OPENING OF PARLIAMENT.

LONDON, February 26, 1895.

THE session has opened with a preliminary battle several times renewed and marked by incidents of great interest. The Government met Parliament with a nominal majority of 32, reduced during the recess to 14 by the formal defection of the 9 Parnellite members. The former majority of 32, none too large, was rather nominal than normal, because the attitude of the Parnellites was always unfriendly, and their support, often withheld, was tolerably certain only during the progress of the Irish Home-Rule Bill. The majority of 14 has been increased to 16 during the debate on the address, by a Liberal victory at Colchester. So small a majority, besides being an abiding element of danger, invited a repetition of the tactics which were pursued by the Opposition when the Liberals came into power after the general election of 1892. The old custom was for the Opposition, if they felt strong enough, to challenge the Government by moving an amendment to the address which was in terms or by implication (more often in terms) a vote of no confidence or of censure. It was done once and no more at that stage. But in August, 1892, the Opposition, believing that the Liberal majority of about forty contained elements of disintegration, delivered a series of assaults, led mainly by Mr. Chamberlain. These failed, and the Government was left materially stronger.

The same thing has happened again. The feature of the case most damaging to the Opposition has been that the unsuccessful attempts to dislodge the Government have been based on organized combination with groups to whose principles the Conservatives profess a strong antipathy. The Parnellites were, of course, available without any formal treaty. Then a dexterous attempt was made, by dangling the question of the unemployed, to detach from the Liberal Left the votes of a few members strongly sympathetic with labor distress, and not averse to socialistic experiments. That was the nature of the first amendment proposed by Mr. Jeffreys, member for an agricultural district in Hampshire. As it first appeared, it was a complaint of a familiar Conservative type, that the Government were neglecting agricultural depression. But, after consultation with Mr. Balfour, it was extended so as to include the question of the unemployed. The amendment was defeated by 12, nearly the full majority which the Government could reckon on. But the result was exhilarating to the Opposition and depressing to the Liberals, as it showed for the first time in black and white how slender an advantage in the House the latter possessed.

Next, Mr. Redmond, the Parnellite leader, moved an amendment calling for a dissolution on the question of home rule for Ireland. It was supported by the official Opposition, led by Mr. Balfour, but was defeated by a majority of 20. There were a few Conservative abstentions.

Then came the official Opposition amendment, which was intrusted to Mr. Chamberlain. The substance of it was, that the Government were bound to disclose their policy with

respect to the House of Lords, instead of wasting Parliamentary time on bills which they did not expect to pass. It was defeated by 14. The debate had then lasted a fortnight, and there were still several amendments on the paper. Sir William Harcourt moved the closure, which was carried by only eight votes, a few Liberals voting against it. This was a significant fact. In the face of the systematic obstruction which they may look for, it will be difficult for the Government to get through their tasks without a pretty frequent application of the closure, and the division last week illustrated the well-known fact that the closure is a weapon to wield which effectually requires a stronger majority than the Government can command.

The debate on the address was remarkable for two parliamentary duels—one between Mr. Goschen and Sir William Harcourt on Mr. Jeffreys's amendment; the other between Mr. Chamberlain on his own amendment and Mr. Asquith. The speeches of the leader of the Opposition were not remarkable throughout the long debate, so it came about that the fighting was done by champions both of whom were once prominent on the Liberal side. It is impossible to be impartial in such questions, but I believe that the general impression was that the advantage in both cases remained with the Government. In Mr. Chamberlain's case, that result was so conspicuous that it was freely admitted by a large portion of the Unionist press.

The situation for Mr. Goschen and Mr. Chamberlain was a difficult one. Mr. Goschen found himself defending the interests of the landlords in the country and the voluntary schools with "convulsive emotion," as Mr. Asquith happily described it. Mr. Goschen's attitude on those questions was once very different. His speech was an eloquent one, in spite of the tone of exaggeration and the almost theatrical delivery which are growing upon him, without, however, weakening his oratorical power when he is at his best. Mr. Chamberlain again rose to expound views on disestablishment in Wales, on the House of Lords, even on Ireland, diametrically opposed to those which a few years ago he preached in striking phrases which still cling to the memory of the House. The speech was not one of his best, and it met with a crushing reply from Mr. Asquith which substantially raised his high reputation as a debater. In strength, directness, precision, and closeness of reasoning he resembles Mr. Chamberlain himself, while his style has greater variety, felicity, and interest. The position of two quondam Liberals who have gone over to the Unionist camp is one which has been defended over and over again, and its difficulties are little calculated to dismay either Mr. Goschen or Mr. Chamberlain. But it did happen that on this occasion they were confronted with their own past more sharply than the House can remember to have witnessed, and in a fashion that was damaging to the Opposition attack.

The address over, the Government might have expected to be in smooth water, at least for some weeks to come. A new danger, the most threatening of all, appeared when Sir Henry James moved the adjournment of the House to discuss the new Indian cotton duties. The finances of India have been for some years in an unsatisfactory position, mainly, as is generally believed, in consequence of the adverse exchange arising from the steady depreciation of the silver rupee. Revenue cannot be made to cover expenditure. The country is poor, the salt tax is already onerous, and any increase of direct taxation in other directions is declared by the Indian Government to be impossible; they have long asked for the consent of the Home Government to reimpose an impost duty on cotton goods, which existed till 1882, but had been condemned by votes of the House of Commons in 1877 and 1879. The request was long refused, but at length the present Secretary of State for India, Mr. Fowler, carrying out a conditional promise made by his predecessor, Lord Kimberley, sanctioned a 5 per cent. impost duty, but insisted at the same time on the imposition of a corresponding excise duty on the higher qualities of cottons, in which alone the very considerable Indian cotton industry comes into competition with Lancashire. In the coarser qualities Lancashire no longer competes to any appreciable extent with the native manufacture. So far as the previous decisions of the House of Commons were concerned, the new duties were defended on two grounds, first, that the duties had been condemned as protective duties, a grievance which the excise duty would redress; secondly, that they were condemned in terms only because at the time they were unnecessary in the financial situation of India, whereas they were now indispensable to the solvency of the Indian Government.

The Lancashire trade viewed the innovation with the utmost jealousy, and of the Lancashire members (more than forty, I think, in number) a large number, including a good many Liberals, were pledged to oppose the duties, while nearly all, under pressure from their constituents, were more or less hostile to them. In these circumstances there was a large Liberal defection at the disposal of the Opposition if they chose to join in the attack as a party, and when the day for Sir Henry James's motion arrived, the defeat of the Government was regarded as extremely probable, and the Government would not view the question as other than vital to their continuance in office. The intentions of the official Opposition were not disclosed, but they issued an urgent whip to their followers. During the day, some of the more respectable organs of the Conservative press dissuaded their leaders from taking advantage of the opportunity. Others never mentioned the subject at all, not knowing what advice would be palatable. In Liberal circles, after the experience of the divisions on the address, in which the Opposition leaders had not been too much hampered by scruples, it was pretty generally believed that the Opposition would not resist the temptation of throwing out the Government. It was thought that Mr. Chamberlain would strongly press for it, and that Mr. Balfour would not resist it. He is not the man to set on foot a political intrigue, but his cynical *insouciance* leads him into partnerships, as in the cases I have narrated, which, at least in the eyes of his opponents, do not appear worthy of him.

The result, however, was different. Sir Henry James has subsequently stated that the movement was promoted solely by the Lancashire members, without any concert with the Opposition as such. For all that, the Opposition doubtless considered what use they should make of the opportunity. One possible element leading to the decision not to make it a party attack may be found in the rivalry which is believed to exist between Mr. Goschen and Mr. Chamberlain for the reversion of the post of Chancellor of the Exchequer. Mr. Goschen strongly opposed the motion; but before he spoke, the work had been done. Sir Henry James opened his case with an unfortunate speech, stilted in style and jarring on the House by the reflections which he made on the Anglo-Indian service, which were strongly resented and sharply rebuked on both sides of the House. Mr. Fowler replied in an admirable and convincing speech, which is said to have turned many votes. He brought out the gist of the question, showing how great an injustice we should do to India if, for the sake of fostering a particular industry in England, we prevented India from raising the money which she absolutely requires by duties for revenue purposes, which every one of our self-governing colonies can and does levy without any restriction in amount. The motion was lost by an overwhelming majority.

One result of the Opposition having endorsed the opinion that the Government were neglecting the question of the unemployed has been that a large and strong committee has been appointed to investigate the question. The motion has been made in previous sessions by Mr. Keir Hardie, the Socialist member, but hitherto it has not been accepted, as it undoubtedly goes a certain length in the direction of adopting the avowed principle of the Socialists that the state is bound to find employment for all unemployed men. As it is, the local authorities have by law large powers of undertaking relief schemes. But the present distress is said, by the movers in the matter, to have got beyond those powers. The motion was more difficult to resist this year in consequence of the exceptional distress during the prolonged frost. But the main pressure on the Government arose from the adoption of the complaint by the Opposition for the purpose of embarrassing the Government. It may be an awkward precedent for the Conservative party in the future, and may force them in a direction in which they are not anxious to move. Meanwhile, the committee, which sits daily, evidently finds its task a difficult one.

The Government is left to begin the work of the session in a stronger position than when the House met. Its enemies will be on the lookout for side-issues and surprises like the Indian cotton duties. There are one or two members who sit on the Liberal side whose public utterances justify the suspicion that they would not be unwilling to open a back door to the besiegers. But their good-will in that respect has not been able to find any better expression than personal attacks in the House of Commons, on the Prime Minister in the Lords. It is probable that, after the last three weeks, the Opposition is not so anxious for a dissolution as its organs in the press profess to be, and in the meantime the Liberal party is in as satisfactory a position as is possible with so slender a majority. C. D.

LOUISE OF SAVOY AND FRANCIS I.

PARIS, February 28, 1895.

M. DE MAULDE has used many documents, some of them inedited, in a volume just published, entitled 'Louise de Savoie et François I.: Trente Ans de Jeunesse.' The mother of Francis I., and Francis I. himself, are both very interesting characters. When Francis became King, he left the details of the government almost entirely to his mother and to his chancellor, reserving for himself the occupation and excitement of perpetual wars.

The beginnings of Louise of Savoy, as is often the case with great queens and empresses, were of the humblest; she was the daughter of a poor cadet of the house of Savoy, the Count de Bresse, who spent half his

life in prison. Her aunt, fortunately for her, was the celebrated Anne de Beaujeu, the wife of Peter II., Duke of Bourbon. The child lost her mother at the age of eight years, and was adopted by Anne de Beaujeu. She was married at the age of twelve to Charles d'Angoulême, who was twenty-eight years old. She had first a daughter named Marguerite; her second child was Francis, born on the 12th of September, 1494. The Count had mistresses, and natural children who were brought up with the other children, in the little court of Cognac. "The situation of Louise," says M. de Maulde, "was not without examples, for instance, in the house of Orleans, where Dunois was brought up also by Valentine de Milan." M. de Maulde gives interesting details concerning this little court of Cognac. Count Charles was faithful to the artistic traditions of the Dukes Louis and Charles of Orleans, and of the good King René. His mother, Marguerite of Rohan, was fond of manuscripts on vellum, and several works were dedicated to her.

Louise of Savoy lost her husband in 1496; she was a widow at the age of eighteen. In the same year her father became Duke of Savoy. She remained at Cognac, with her miniaturist Testard, surrounded by several members of the family of Saint-Gelais, one of whom, Octavien de Saint-Gelais, was a poet, whose works are still found in the library of every bibliophile. His translation of Ovid met with extraordinary success and maintained its reputation for more than a century.

M. de Maulde has succumbed to the modern mania for psychological analysis. His chapter on "l'idée du beau" might be suppressed with advantage in a work which professes to be historical. It is clear that the famous influence of the "milieu," which has been used to satiety by Taine and his followers, was no more lost on Louise of Savoy than on anybody else in our time or in any other time. But it is idle, in dealing with a character like Louise of Savoy, to write a long dissertation on "the beautiful." The dominant passion of Louise was ambition; a monk had predicted to her that she would have a son, and that her son would be king. When Louis XII. became king, she left Cognac and was allowed to live at Amboise with her young son. She was not on very good terms with the Queen, Anne de Bretagne, nor with the King. Louis XII. was anxious to have a son, but his hopes were several times disappointed. His health was miserable, and he was in constant danger of a sudden death. Francis, now called the Duke of Valois, was the heir apparent—a fine, strong boy; all sorts of intrigues already surrounded him and filled the little court of Louise of Savoy. The governor of the young Prince, the Maréchal de Gié, was accused of high treason and deprived for a time of all his dignities. The King gave Francis a new governor in the person of the Cardinal d'Amboise. Anne de Bretagne was always trying to find a husband for Louise of Savoy out of France, so as to force her to leave the country; but Louise refused every offer, preferring to remain near her son.

The States-General met in May, 1506, and the betrothal of Francis to the King's daughter Claude was announced at Plessis le-Tours. The young fiancée was six years old. The contract of marriage was read by the Chancellor: Claude received as her dower several estates—Blois, Coucy, etc.; in case a dauphin should be born, she had the promise of a large pension. Great festivities were celebrated, and one of the heroes of the tournament was Charles de Bourbon-Montpensier, the future Constable, the future enemy of Louise of Savoy. Anne de Bretagne long opposed the marriage of her daughter Claude with the Duke of Valois, but finally withdrew her opposition; she had lost all hope of having a son. The Duke of Valois now lived entirely at court, and M. de Maulde describes minutely his mode of existence. Among the young deities of the court, the first who seems to have attracted the attention of the future king was Anne de Graville. She had been celebrated in verse by Octavien de Saint-Gelais, and proclaimed by him—

"Seule, sans per, la plus belle des belles."

Like Louise of Savoy, she was fond of books, of illuminated manuscripts; she was a reader of Boccaccio, of Petrarch; she wrote verses herself. The young Prince made love to another maid of the Queen, to Françoise de Foix, the sister of two men, the Sires de Lautrec and de Lescun, who afterwards became his companions in arms. Françoise de Foix afterwards married the Seigneur de Chateaubriand. Even while paying court to these two ladies, Francis was occupied with women who surrounded his mother.

He was young, ardent, handsome. His features had not yet the exaggeration which is seen in the portraits made of him in after-life. He was passionately fond of dress, of fine accoutrements, of arms, of jewelry. The people compared this tall and strong youth with the old King, who was a constant invalid. In 1512, Anne de Bretagne had a son, but the child died almost immediately after its birth. Everybody already looked on the young Duke of Valois as the next king. He obtained the command of the army of Guienne, and made his first campaign with Odet de Foix, Sire de Lautrec. When Francis attained the age of nineteen, his household had already become royal: he had fifty-eight chamberlains and high officers, a hundred and thirty other officers, ten secretaries, a doctor, four almoners; he pensioned a painter, a sculptor, a miniaturist, and some musicians.

The Queen, Anne de Bretagne, died at Blois on the 9th of January, 1514. The little court of Cognac was much elated by the news. Forgetting all the dissensions of the past, the Queen, convinced that nothing could now hinder her daughter from belonging to Francis of Valois, had confided this daughter and her immense fortune to Louise of Savoy in her will. The poor King said: "Make the vault which will receive my wife large enough for two, for before a year I shall be her companion." Francis began already to play the King: he received all the ambassadors in private audience, he corresponded directly with the Pope, he took part in all negotiations. His extravagance no longer knew bounds; during the year 1514, the expenses of the Duke of Valois amounted to 140,000 livres, worth 3,600,000 francs in our modern currency; and this only for the household, independently of the expenses of the administration of his domains. The King, who had always been discreet and prudent in his expenses, was afraid of giving his daughter, and with her the Duchy of Brittany, to the prodigal Francis; he postponed the marriage, under various pretexts. The dispensation from Rome arrived at last, and the marriage took place, in the strictest privacy, on account of the King's mourning.

Francis was anxious to make a campaign in Italy. He said to the Venetian Ambassador: "The Duke of Bourbon has asked for the command of the Italian expedition; I have told him not to insist, as I want this command myself. The Duke bowed to me and said that he would aspire to the second rank. To this I assent, for he is a man of the first order. The King will have to give me eighteen thousand lansquenets and two thousand lances. With these, victory will be the affair of a week." Meanwhile, peace was signed with England, and one of its conditions was the marriage of the King of France with Mary, the sister of Henry VIII. This news drove Louise of Savoy almost frantic; she became fearful lest her son, after all, should be cheated of the crown of France. It has been said that at that moment she felt a violent passion for the Duke of Bourbon, that she offered herself to him, and that the future Constable received her offers coldly; this legend has never been proved, but, if it was true, it would explain a hatred which had afterwards terrible consequences.

The Duke of Valois had sufficient control over himself to affect great satisfaction with the King's new marriage; he laid all his plans to play a great part in the festivities of the occasion.

"Everything is in suspense," writes the shrewd Venetian Ambassador, "politics as well as the rest; people talk only of festivities. Such are the French. The marriage has been well received; they think themselves already in Milan. They were afraid only of England, and this phantom has vanished. The King repeats constantly that he will lose his life or retake Milan. . . . Unfortunately, nobody thinks of an obstacle which frightens me. To marry a woman eighteen years old, one of the handsome princesses in Europe, it is unanimously said, is for the King a notable change, and most dangerous in his state of health. There is the alarming black spot."

Mary of England deserved her reputation. She was received at Boulogne by the Dukes of Valois, of Alençon, of Bourbon. She had among her ladies Mary Boleyn, the sister of the celebrated Anne, and in her suite Charles Brandon, the Duke of Suffolk. Louis XII. met his bride at Abbeville; the entrance into Paris was a magnificent pageant. The tournament, in which the Duke of Valois appeared, lasted seven days.

"Mary, who saw the handsome Francis in his cloth of gold either in her escort or in the tournament, happened to find him to her taste, and the Prince fell into the trap. It was the first time that love played him such a Machiavellian trick. A courtier who generally was not facetious, but who on this occasion was very serious, saw the danger and did not hesitate to do his duty; he took the Prince apart and lectured him. The question was, was the Prince going to renounce the crown, and did he prefer to bow his head some day before his own bastard?"

The courtier had little success; Francis would hear nothing, he had eyes only for his new conquest. Grignols (such was the name of the courtier) took stronger means; he went to Louise of Savoy. She had not lost her power, and Francis had to abandon his prey. Mary, gay as a lark, very frivolous and light, changed the life of the court. Louis XII. became prodigal; he heaped all the diamonds of the crown on his young wife; he modified all his habits. After a few weeks, he became so ill that he had to take to his bed. When he felt that he was dying, he sent for Francis; he expired on the 1st of January, 1515, during a terrible tempest. Louise of Savoy came at once from Romorantin. Her son was King! Mary declared herself in the family way, but her error, more or less voluntary, was soon discovered. She received a large dower, and the King, who for a moment had been in love with her, authorized her marriage with Suffolk.

Correspondence.

THE DIALECT DICTIONARY.

To the Editor of The Nation:

Sir: The *Nation* has given some space to the mention of the dictionary proposed by the English Dialect Society, and asked for coöperation on this side of the water for the American material. It is particularly important that this appeal be very widely circulated and meet with widespread and hearty response, if there is to be any adequate representation of American usage in the great dictionary. The English society is over twenty years old; it has in England a much richer and more workable field than our country offers, a larger number of cultured people of leisure to do the work, and a more compact population to form into local branch societies. The American Dialect Society was organized in 1888; it has been from the first maintained chiefly by college men who are professionally interested. The first years have been occupied in work more or less tentative—feeling the way for effective work under the conditions presented by a country comparatively newly settled and having a population comparatively unstable. These conditions are now better understood than at the beginning, and seem to indicate that a lookout should be kept for (1) words and idioms brought by the early settlers, and preserved in the "hill towns" and other places where the population has remained stable; (2) such words and idioms carried to other localities, with possible changes of meaning; (3) new words, or words used in a new sense, formed or adopted to meet new conditions.

The Society has published collections amounting to about 1,500 words, many of which never were printed elsewhere; and there is on hand in manuscript, gathered by various members, or sent in by others, probably as much more, which is now being arranged, and will be printed in due time. There has been from the first much public interest shown, and the number of active members, and the quality of the work they have done, has constantly improved. There is every hope that in good time the membership will increase tenfold, and that means will be found to do thoroughly and systematically the work of collecting for publication most of the dialect usages current in the country; but the English society is ready to prepare its material for the press, and desires to have all we can give them before they print.

Besides the collection of material now going on, an important new line of work is the reading and excerpting of all the dialect matter already printed in this country, and editing it for dictionary use. Besides the books written wholly or partly in dialect, many newspapers, legal documents, old letters, etc., show occasional interesting local usages, and are worth watching. The more active members of the society have been in consultation for some time regarding this work, and ask the coöperation of the public in doing it. So far as it is perfected, the plan may be outlined as follows: A committee of the society will have supervision of the whole work, and decide what books shall be excerpted, and who shall do each one. This is absolutely essential to avoid duplication of work and other waste of energy. All persons who know of any books or other printed matter which they think may be useful, are requested to send full titles, with date and publisher as far as possible, to the secretary, who will take charge of the matter for the present. A list will be made up from these and others already known to the committee, and their value will be examined by competent persons. Those decided upon as important for the work will be assigned to the readers who volunteer. A list of such persons will be kept, and full directions for doing the work will be given with the assignment of the books.

It is desired that each book shall be read, so far as possible, by persons native to the region where the dialect used in the book is current. Preferences expressed as to the choice of work will be regarded so far as possible. The work is likely to be better done if the readers who are within reach of each other are organized into local clubs, working under the supervision of some one who is better informed than the average on the relations of the subject; such a club could be formed, for instance, at almost any town where there is a college or other educational institution, to work under the supervision of the instructor in English. It is intended to hold before long a public meeting in New York with a view to forming one or more such local organizations here. Such clubs can be made headquarters also for the old work of collecting material from the spoken language, and can be kept up after the reading work is done.

New members, and large numbers of them, are greatly needed at once, but collections of material or offers of assistance in the work of reading are always welcome from any source.

E. H. Babbitt, Secretary.

Columbia College, March 11, 1895.

AN AMERICAN REVIEW.

To the Editor of The Nation:

Sir: I am forcibly reminded this week of a suggestion in your columns some time ago in favor of an American literary review. The *Tribune* of the last two Sundays has contained Prof. Lounsbury's review of the Oxford Chaucer by Prof. W. W. Skeat. This edition of Chaucer is the work of the best Chaucer scholar in England; it is reviewed by the foremost American Chaucer scholar, who finds no more suitable medium for the presentation of his criticism than the voluminous sheets of a Sunday newspaper. The incident may fairly be taken as a reflection upon the cultivation of letters among us. Is it a true measure of attainment?

Reviews of high character succeed in foreign countries. Scholarly men and women are naturally attracted to them and by them, and they do a great work in formulating the best opinion on the best subjects. Many of these publications are taken in this country, if not directly into the family circle, at least into our numerous libraries. There is certainly a steady demand—I believe an increasing demand—for sound literature, without pictures to weaken and to cheapen it.

Here is a promising field for the wise expenditure of money. It is a fine thing to found a college for the education of young men or young women. But a philosophical observer might draw some edifying conclusions by contrasting the number of such foundations in the United States with the amount of endowment for individual research, or for special effort in any particular line of advanced scholarship. Moreover, American endowments of this sort have been so far largely in science, with the really brilliant exception of the Turnbull Lectureship on Poetry at the Johns Hopkins University.

We need a literary periodical to seek out and publish manuscripts that now lie idle because they do not appeal to the passing interests of the hour; we need it to withstand the avalanche of easy magazine-writing that descends upon us with such depressing mediocrity and relentlessness; we need it to arrest the degradation of art.

Who will found an American Review?

Mary Augusta Scott.

1507 Park Avenue, Baltimore, Md., March 7, 1895.

THE BOND SALE.

To the Editor of The Nation:

Sir: Continuing upon the line of my letter published in the *Nation* of February 28, I desire to offer as a logical explanation of the high price obtained by the syndicate for the recent issue of bonds, as compared with that paid by them, the fact that this resale was a transaction between individuals wherein the purchaser had no such advantages as did the syndicate in its sale of gold to the Government. While the Morgan-Belmont people were permitted to reap the benefits of the gold squeeze, I believe it will be found that the Treasury has secured an immunity against gold-hoarding by the public, at least for the present, fully justifying its course. It was our dire necessity upon which the gold men kept their eyes steadily fixed, and most of them have been left gazing upon vacancy. No wonder they were mad.

W. M. Haley.

St. Louis, March 7, 1895.

Notes.

Prof. Wm. H. Goodyear solicits subscriptions, at ten dollars or two guineas, to a forthcoming work of his on 'Optical Refinements, Perspective Illusions, and Symmetrophobia in Medieval Architecture,' involving many unpublished personal discoveries and measurements by this well-known writer on art. As Mr. Goodyear will sail for Europe on April 30 to prosecute his surveys, he desires to be addressed without delay at No. 222 East Sixty-ninth Street, New York.

Merrill & Baker, No. 74 Fifth Avenue, have undertaken an illustrated cabinet edition of the Works of George Eliot, together with her Life by J. W. Cross. It will be illustrated with 120 etchings and "photo-etchings," and will consist of twenty-four volumes, procurable as a set or singly. A large-paper edition is also announced.

Edward Fitzgerald's letters to Fanny Kemble, which *Temple Bar* is publishing serially, will be issued in book form by Macmillan & Co., in a style uniform with their two-volume edition of the letters already published. Meantime they have in preparation 'Louis Agassiz: His Life, Letters and Works,' by Jules Marcou.

Gibbon's Memoirs, edited by Prof. Oliver Farrar Emerson of Cornell, is in the press of Ginn & Co.

Canon Farrar's 'Woman's Work in the Home' is to be published in this country by Henry Altemus, Philadelphia.

The Hartford (Conn.) Seminary Press will publish directly 'Qualifications for Ministerial Power,' by the Rev. Chas. Cuthbert Hall.

Spring announcements by T. Fisher Unwin are: 'The Story of Early Gaelic Literature to the Close of the Danish Period,' by Dr. Douglas Hyde; a new collection of Breitmann Ballads, by Chas. G. Leland; 'Reminiscences

of Richard Cobden,' by Mrs. S. Schwabe; 'Sonya Kovaleski,' by the Duchess of Cajanello; 'Some Ancient English Homes and their Associations,' by Miss E. Hodges; 'Vedic India,' by Mme. Z. A. Ragozin; 'Female Offenders,' by Prof. Lombroso; Spinoza's 'Emendation of the Intellect,' translated by Hale White; 'My Climbs in the Alps and Caucasus,' by A. F. Mummery; and 'Matabeleland,' by Capt. H. S. Norris.

Three more novels in the Waverley series, "International Limited Edition" (Boston: Estes & Lauriat; New York: Bryan & Taylor Co.), bring us, through 'Woodstock,' 'The Fair Maid of Perth,' and 'Anne of Geierstein,' in two volumes each, up to the 45th volume, leaving four yet to come. We are inclined to think that Mr. Lang's task has told upon him as Scott's, in the desperate money-making period, did on him. His introductions to the three works before us have no spontaneity, and are of little value apart from the mention of circumstances or moods connected with the writing of each of the novels. That the same weariness has overtaken the illustrators, we would not affirm, yet they are certainly not approaching a climax of excellence.

The appearance of the new one-volume edition of Chaucer edited by Prof. Skeat (Macmillan) is not on a par with that of the other volumes in the series—whether because it has been manufactured on this side of the water or not, we cannot determine. Nevertheless it is a great boon, and will be the edition most used for reference. In one respect it is better than the large edition, viz., the two forms of prologue to the "Legend of Good Women" are printed in parallel columns without any perplexing attempts at amalgamation.

The lesser "Poole," alias the 'Annual Literary Index,' for 1894, edited by W. I. Fletcher and R. R. Bowker, has just appeared (New York: *Publishers' Weekly*). As usual, it indexes the chief periodicals, 124 in number, giving the writer's name beside each article, if known, and adding a special author-index. It also indexes a certain class of books—collective essays and the like—64 in number. Finally, it describes the bibliographies of the year, and takes note of the necrology. For a clue to current thought and criticism in the English language this work is simply indispensable.

Mr. Wynkoop Kiersted, C.E., in his 'Discussion of Sewage Disposal' (New York: John Wiley & Sons), goes over that subject with especial reference to dilution, irrigation, filtration, and precipitation as methods of sewage disposition applicable to the United States. His little volume, which is intelligently, but not very clearly, written, gives a fair résumé of the subject, and does not presume to assert that any particular mode is the best, "for the most approved method of disposal will invariably hinge upon its natural adaptability to the conditions of the locality in question." It is a discussion of principles, not of details.

In the 'Elementary Properties of the Elliptic Functions, with Examples,' by A. C. Dixon (Macmillan), we have elliptic functions without the theta functions, and without the doctrine of transformations!—the theory somewhat maimed by the one omission, the practical application badly hampered by the other. Yet we cannot say the book will serve no purpose other than that of passing examinations; for the thorough mastery of it will be a key to unlock the more recondite treatises, and will render all casual allusions to elliptic functions in mathematical writings intelligible. It will also form a good introduction to the theory of functions. The limited subject has so much analogy to trigonometry that it calls for little additional exercise of memory. It is pretty itself, and makes trigonometry—that dreadful instrument—to appear pretty. It is given chiefly in the classical forms of Jacobi; but the other avenues to it are described, including the super-modern presentation of Weierstrass (for which, we believe, there are no extensive tables).

'Ideler's Handbuch,' though it appeared as long ago as 1825, remains in use as the standard work on chronology, in general, to-day. In fact, there has been no serious attempt to supersede it. The 'Mathematische Chronologie' of Prof. W. F. Wislicenus (Leipzig: B. G. Teubner) is intended to supplement it. At the time Ideler wrote, not only was the theory of the moon in an imperfect state, but no tables of note had been published to aid calculations in chronology. Since that time, excellent tables by Largeteau, Dankworth, Oppolzer, Schram, and Wislicenus himself, have been calculated for various chronological needs, and this little book is a clear explanation for the unmathematical of every problem of mathematical chronology, with examples worked out by means of the modern tables, the use of which is so lucidly and so fully explained that no sane person can have any difficulty in working with them.

Edmond Biré returns to Victor Hugo in 'L'Année 1817' (Paris: H. Champion). The chapter in 'Les Misérables' which bears the above title forms, the author says, "le clou auquel j'ai accroché mon esquisse." The scores of "historical" facts of which, the reader may remember, this entire chapter is composed, are subjected by Biré to a thorough sifting process, with the result that all, or nearly all, prove to be false or inaccurate. The author's political and religious bias is no less apparent than in his earlier works. The biographical incidents with which this "peinture anecdotique" of the Second Restoration abounds, will prove highly entertaining, to say the least, to the student of Hugo, as well as to the student of the history of the epoch. We must refrain from quoting from M. Biré's pages more than a single *mot* of Mme. de Staël's (who, according to the author of 'Les Misérables,' had been dead a year in 1817!). After listening for more than an hour to Baour-Lormian reading his own translation of Tasso, somebody whispered to her: "It is very fine indeed, but don't you think it rather long?" "Je prends mon plaisir en patience," she replied.

The name of Gustave Larroumet, so familiar to students of Molière, fitly associates itself with the Hugo critics of the past decade. His modest, though elegantly printed, brochure, 'La Maison de Victor Hugo: Impressions de Guernesey' (Paris: H. Champion), opens a vista for psychological speculation not only upon the evident influence of the poet's *milieu* upon his works in the period subsequent to 1852, but also upon the analogy between his poetic creations and style and his tastes and skill in other branches of art. The partiality of the "poète-décorateur" for the grotesque ornaments of Gothic art and Chinese monsters, and his curious passion for, and remarkable skill in, forming out of heterogeneous fragments from diverse sources original new combinations for the embellishment of walls and ceilings in Hauteville House, are especially characteristic.

M. Auguste Devaux's 'George Sand' (Paris: Ollendorff) has had the honor of being crowned by the French Academy. Its easy and flowing style, the picturesque summary of George Sand's life, and the appreciation of her work justify the commendation bestowed, but the booklet is not one of great importance, nor does it form an essential contribution to the literature on this subject.

'À propos de nos Écoles' (Paris: Colin & Cie.) is a collection of speeches and articles by M. Ernest Lavisse, whose name is well known on this side the Atlantic. It is a satisfying book to read, for M. Lavisse is a real educator, who fights unceasingly against routine, formalism, conventionality, official regulation, the tyranny of the examination system, and other evils which weigh down educational work and hinder educational progress in other countries than France. The attempt to put new wine into old vessels, to patch the old cloth with bits of new, to force new generations to submit to antiquated formulas, he denounces on every page; and while we in America are free from many of the disadvantages which he combats, there are truths in M. Lavisse's book which should be taken to heart by many of our instructors, who are instructors only, and in no sense educationists. The truths may prove unpalatable, but they are truths, nevertheless.

The approach of Bismarck's eightieth birthday has evoked a permanent memorial of him in the shape of a quarterly review of German history, art, and life, named after him—*Bismarck* (Berlin: Otto Kirmse; New York: Westermann). It will be illustrated, and every spring a special example will be furnished along with the ordinary embellishments. To begin with, Lenbach's latest portrait of Bismarck, an etching fit to be hung on the wall, will be given.

The *Library Journal* for December, 1894, is full to overflowing with a report of the Lake Placid conference of librarians in September last. No one can read these proceedings without a realizing sense of the strength of library coöperation in this country, and the deliberate part which librarians are taking in the moral elevation of the community. President Larned's opening address has a well-considered warning as to "the magnified potency that is given to all things, good or ill, by the science of the modern man," and hence to "ignorant opinions." "Leagues, unions, federations, associations, orders, rings, form themselves among the restless, unstable elements of the time as easily as clouds are formed in the atmosphere, and with kindred lightning flashes and mutterings of thunder." Among the discussions that deserve attention are those on "home libraries" (circulating-boxes among the poor), the attitude of the libraries towards university extension, and the rôle of the daily newspaper in the library. We remark, also, a summary of library benefactions, July 1, 1893–'94, footing up $1,328,597. A good example of the practical, economic bearing of these meetings is the movement to induce publishers to print special durable editions of popular works for libraries.

Both the moralist and the historian might easily pick flaws in Dr. Wm. Everett's political apology for the late Robert C. Winthrop in the current *Harvard Graduates' Magazine*. But the general tribute is strikingly graceful in form, and the praise of what is to be praised just and discriminating. A good portrait accompanies the article, as is also the case with Mr. Davis's account of Thomas Hollis, one of the earliest and most princely benefactors of Harvard; and the welcome announcement is made that the rich store of canvases of Harvard worthies is to be regularly drawn upon for this magazine. Prof. Hart's mid-year re-

trospect has much of the originality, piquancy, and suggestiveness of President Eliot's annual reports. "It is evident," he says, among other things, "that Columbia, and not Yale, is to be the great rival of Harvard in the higher studies." Both Harvard and Columbia are nearly at a standstill in point of growth of attendance in the arts department. Apropos of the recent appointment of a Publication Agent for the University, Prof. Hart expresses a desire for a Clarendon Press at Harvard. We hope shortly to be able to furnish our readers some interesting details concerning this foundation at Oxford. Prof. Hart gives notice of a forthcoming series of Harvard Historical Studies, to be issued by his department.

M. Édouard Rod, in his quality of novelist, has just had a somewhat curious legal experience. One of his stories was lately reproduced in the *Ami du Peuple*, of Fribourg, and a convict in that town thought that he found in the tale a portrait of himself which lacked reserve. Antoine Maradan his name was, and he had been sent to jail for a seven years' term for attempting to rid himself of a second wife by throwing her into the Sarine. M. Rod had deepened the shadows of his story by attributing to the personage in whom Maradan recognized himself the murder of a former wife. So he brought suit against the author and the publisher of the newspaper, first in the local court at Fribourg, and afterwards, on appeal, at Geneva. He got no damages, all the courts holding that a novelist had an absolute right to take his subjects from real life. With so lax a construction of the law of libel as that one might almost look for a recrudescence of realism.

—*Bibliographica* completes its first volume with Part iv., and two more equally sumptuous volumes are to come (London: Kegan Paul; New York: Scribners). In the notable contents of the present issue, we must confine our remarks to Mr. A. J. Butler's illustrated paper on "The Initial Blocks of Some Italian Printers." Mr. Butler has found that initial letters "designed on the principle of the work known to most of us in our childhood, which taught us that A was an Archer," were the prevailing fashion in Italian books issued approximately in the third quarter of the sixteenth century—in Venice particularly, with the general exception of Aldus's publications. He cites, without picturing his examples, three books published at Venice by Domenico Giglio, viz., Gesualdo's Petrarch, 1553, the 'Diporti' of G. Parabosco, 1558, and a 'Capitoli' of 1566. The Petrarch contains eleven letters of an alphabet in which each square block measures nearly 1.5 inches, and the 'Capitoli' contains a twelfth. Besides these in the Petrarch occur six smaller letters, nearly one inch square, and of this minor alphabet Mr. Butler will discover in Giglio's Machiavelli, 1554, not only the E (Europa), but a C (Moses exposed by his mother ?), D (Dido falling on her sword ?), L (two men in the water and a woman kneeling on the beach ?), and T, which agrees with Mr. Butler's description of the corresponding large letter in the 'Capitoli,' save that we have a serving-man in place of a satyr with a dish. We may also direct his attention to the 'Decameron' published at Florence in 1573 by the brothers Giunti, with still larger initials (1.625 in.), resembling the foregoing in style, but not personal or symbolical, consisting nearly all of hunting scenes. Yet here are intercalated an F (Phaethon), L (Leda), and N (Neptune), that might belong to the Petrarch series, though that has its own Neptune. There are also a G (eagle or harpy carrying off a child), P (harvesters), and R (satyr uncovering a sleeping woman), which have no relation to the hunting series. Redrawn copies of the A, I, and T of the 'Decameron' were facsimiled by Mr. George C. Mason in his 'Annals of Trinity Church, Newport, R. I.' (1890), along with the N, P, and S used by Gabriele Giolito de' Ferrari (1546-1559) as noted by Mr. Butler, and several others having games or music for the motive of the designs. The source of Mr. Mason's reproductions was the London *Building News* of a date some years previous to 1890.

—Mr. George P. Baker's edition of Lyly's 'Endymion' (New York : Holt) is a somewhat noteworthy contribution to Elizabethan literary history. Of the notes, which, though few in number and usually very brief, contain several good suggestions, we need say nothing. It is the Introduction which calls for more particular notice. This contains an elaborate investigation of the facts of Lyly's life, and an exhaustive study of the chronology of his writings. New materials proved undiscoverable, in spite of much effort, but, for all that, we have in this monograph a thoroughly original piece of work. Mr. Baker has subjected the collections of his predecessors to a criticism so searching, and has examined their conclusions and theories with so much good sense and acumen, that his results, though, from the nature of the case, in some respects tentative, must in the main meet with ready acceptance. These results throw light on a number of the obscurest problems of Elizabethan literature. They are arrived at by close reasoning, and they are so stated that one is never in doubt as to what is demonstration, what doubtful inference, and what conjecture. This conscientious discrimination is in itself no small merit in a book dealing with subjects so often delivered over to guess-work and to what one is sometimes almost vexed enough to call scholastic chicanery. With some of Mr. Baker's conclusions we cannot agree ; but his arguments on most questions are cogent, and his opinions always command respect. The delay in the publication of 'Euphues and his England' is for the first time satisfactorily accounted for ; Lyly's connection with the Harvey-Nash imbroglio is clearly defined ; and the chronological order of the comedies is settled with a high degree of probability. The puzzling matter of the child-actors is well treated, and several dark points are cleared up, though we do not think Mr. Baker has hit upon the true explanation of the "general pardon." We have no space for further details. Our purpose is merely to call the attention of students of the period to a work which appears in a form so modest as to disguise its real importance.

—Samuel Bamford's 'Passages in the Life of a Radical' appeared at the very crisis of the Chartist agitation in England. Its purpose was to describe the reform movements of a period twenty years earlier, and particularly the Peterloo episode, in which the author had himself been concerned; but while it did this with sympathy and vigor, it had, and was intended to have, a sobering effect upon the physical-force enthusiasts of 1840. The book has continued to be known by those interested in the social and political history of England during the years following the Continental war as one of the most valuable and entertaining sources of information upon working-class conditions and feeling, especially in Lancashire. But of late it could be found only with difficulty in the second-hand bookshops; and it has been a happy thought to reprint it (London: Fisher Unwin; New York: Putnams), and so commend it to a wider circle. With the addition of the 'Early Days,' it now makes two pleasant little volumes; and Mr. Henry Dunckley supplies an introduction which, in spite of its somewhat too condescending tone, seems to present a fair estimate of Bamford's career, and gives some particulars of his later life. The first volume, that containing the 'Early Days,' should attract the attention of a class of readers who are little likely to open the memoirs of minor agitators, to wit, the whole tribe of folk-lorists. It gives a genial account of Lancashire folk-lore and folk-usage, from the point of view not of a scholar or antiquary who looks upon it as a foreign world, but of one who as boy and youth had himself lived in its midst.

—An interesting experiment has just been made by one of the great London morning papers. The *Daily Chronicle*, by way of furthering the cause of the Progressives in the recent London County Council elections, published in its daily issue a series of papers on the Council and its work, to prove, chiefly, that something besides the increase in the rates had been accomplished. This series was illustrated. Of course, it is not the first attempt to illustrate a daily paper. There has been time almost to forget the New York *Daily Graphic*, while the London sheet of the same name and the Paris *Quotidien* seem now to be fairly well established. But it is in the quality of illustrations that such a novel departure has been made, while the breaking away of a London morning journal from English journalistic traditions is, indeed, a concession to new conditions. One knows, by this time, the inevitable mechanical drawing turned out to suit the exigencies of "process" and rapid printing; one knows it, and has long since wearied of it. But the *Chronicle*, with admirable courage, has been daring enough to go to really good men, among others Mr. Whistler and Sir Edward Burne-Jones, and ask their services. The first illustration that appeared was a large cartoon by Burne-Jones, in design very similar to his frontispiece for the 'Dream of John Ball.' Here, naturally, there was no thought of the "process" man, and yet the result was as vigorous as could be. However, the printing has varied tremendously, and on some days has been abominably bad, showing the enterprise to be still in the experimental stage. On others it has been a marked success, fortunately never more so than in the reproduction—enlarged so as to extend across the page—of Mr. Whistler's etching of "Black Lion Wharf." This came clear and sharp, the blacks pure and brilliant, the line clean and strong. It was really a triumph for the printer, or, perhaps it should be said, for modern steam printing, for the illustrated page, as well as the rest of the paper, was printed on an American Hoe press at the rate of nearly 22,000 an hour. Nothing could have proved more thoroughly the absurdity of the doctrine, prevailing in England, that the draughtsman must suppress his own individuality and work down to "process" and the steam press. Mr. Alfred Parsons, Mr. Phil May, Mr. Walter Crane, Mr. Sambourne, Mr. Joseph Pennell are among some of the other contributors.

—The fifth volume of Prof. Lamprecht's 'Deutsche Geschichte' (Berlin: Gaertner), which has been given to the public in advance of the fourth volume, shows more clearly than any previous portion of this work that its au-

thor is destined to be *the* historian of the German people. It comprises the period from the time of the great reformatory councils to the end of the first (revolutionary) phase of Luther's activity, and deals largely with the social, religious, literary, and artistic tendencies of the fifteenth century. It is not too much to say that not since Jacob Burckhardt's 'Kultur der Renaissance in Italien' has there appeared in Germany a contribution to the history of modern civilization equally profound or comprehensive. It is, of course, impossible in a short notice even to outline the scope of such a book. Suffice it to say that its leading thought—the development of the modern personality—is brought out in even stronger relief and with greater fulness than was the case in Burckhardt's epoch-making work. This is largely due to the fact that Prof. Lamprecht brings to his task a more intimate knowledge of social and economical conditions than was at the command of his intellectual predecessor, while in literary and artistic observation he has not in vain adapted himself to the method of that great master of analysis. If we were to select any part of this volume in which the art of the historian seems to be at its highest, we should name two chapters, entitled respectively "The Development of the Individualistic Society" and "The Ascendency of Individualistic Culture." A passage on the decline of the mediæval spirit, taken from the former, may show the author's skill in tracing the great trend of public life even to its remotest effects :

"Language also testifies to the decomposition of the old corporate consciousness, by developing from the word 'bursa'=student-association the individualistic 'bursche'; from 'camerata'= company of room-mates the equally individualistic 'comrade'; and finally, although not before the beginning of the seventeenth century, from the middle-high-German 'vrouwenzimmer'=γυναικεῖον the modern isolated 'Frauenzimmer.' The late development of this latter conception is not without significance. What was still absent from the individualistic society of the fifteenth and sixteenth centuries is woman. In no way do the women of this period of our history play a part which could be compared with that of the Italian women of the same period. The Italian Renaissance is rich in learned, refined, intellectual, nay inspired representatives of the other sex; the German Renaissance knows at best of the vivacious sisters of Pirckheimer or of Peutinger's little daughter, who, when only a few years old, had learned some Latin verses by heart. On the whole, Germany had not yet found the right mean between the mediæval detestation of woman as inculcated by the Church, and her equally mediæval deification as demanded by the code of chivalry. Woman therefore remained apart even from the society of the sixteenth century; and only in the extraordinary perfection of fancy-work, especially of embroidery, and in the luxuriant fashions which carried the cult of the outward personality to the extreme of grotesqueness, is the growing influence of the feminine to be seen."

—We are in receipt of the following information from the holder of the European Fellowship of the Association of Collegiate Alumnæ:

The present winter semester finds fifteen women studying at the University of Göttingen —three English women, one German, and eleven Americans. Seven of them are students of mathematics, astronomy, and physics; the others are working in chemistry, philosophy, history, or political economy. Each candidate for admission must make application to the Prussian Ministry of Education through the curator of Göttingen University. This application must be accompanied by testimonials and a recommendation from a member of the university faculty who has examined the testimonials and the extent and nature of the candidate's previous study. If the result of this application is favorable, the candidate registers as a hearer (*Hospitant*), not as a matriculated student; and after that she must still, like other *Hospitanten*, obtain a special permission from those professors whose courses of lectures she is desirous of hearing. The opening of lectures to women lies thus at present almost entirely with the individual professors; some willingly admit suitable women to their lecture-rooms, others do not oppose the general tendency and tolerate women hearers, while others utterly refuse to grant them admission. When once admitted, the woman student enjoys all the advantages of the regular matriculated student; she also has all library, seminary, and reading-room privileges, and she pays the usual university lecture fees. "The faculty does not refuse to women, as such, permission to take the doctor's examination, but reserves to itself the right of presenting or of refusing to present to the minister any particular request for such permission." At the end of the present year three women will ask for the doctor's degree, and we shall then know with what liberality the above decision of the faculty will be interpreted. The cautiousness exhibited in all these arrangements arises from the fact that the admission of women is still regarded as a debatable question, and it is desired not to commit the university to any steps which cannot easily be retraced later, if that should seem to be necessary. On this account, it is particularly to be desired that no woman should undertake to study at Göttingen who is not thoroughly well prepared for her work, and has not a definite aim and motive in her study; even if suitable students should present themselves in very large numbers, while the experiment is still in this tentative stage, that would also, perhaps, be a cause for regret. It is the wish of Prof. Klein, who, with Prof. Elias Müller, has interested himself warmly in this question, that the conditions of the admission of women to the university lectures, and the general attitude of the university faculty towards this admission, should be clearly and definitely understood by American women.

SYBEL'S GERMAN EMPIRE.—I.

Die Begründung des Deutschen Reiches durch Wilhelm I. Von Heinrich von Sybel. Sechster Band. Munich: R. Oldenbourg; New York: Westermann. 1894.

After an interval of five years Von Sybel resumes the publication of his great history. The five volumes which appeared in 1889 brought the narrative down to the autumn of 1866. The late appearance of the sixth volume is due to the fact that in 1890, a few months after the dismissal of Bismarck, the present Emperor withdrew from the historian the privilege of using the Prussian archives. William II. probably thought that Von Sybel had given Bismarck too much credit for the achievements of 1864 and 1866, and may well have deemed it undesirable that any considerable portion of the glory of 1870 should be diverted from the crown to the ex-chancellor. In the preface to the present volume the author states, without comment, the fact of his exclusion from the archives, and adds that at first it seemed to him impossible to complete his work. Further consideration, however, gave him more courage. For a study of the interval of peace between the Austrian war and the French, the Prussian documents were of less vital importance than in the preceding years of internal and external conflict. Much documentary material had been printed in German and foreign works, and a large part of this had not been adequately utilized. Moreover, the historian himself—and this was for him the decisive consideration—had lived through the events which he was to describe, under circumstances which brought him in touch with the men who were making the history of those years. From the beginning of his work he had found these men ready to give him information on points of the greatest importance; in fact, the more considerable the information they possessed, the more ready were they to impart it. Unpublished journals, letters, and autobiographies were also placed at his disposal. Finally, he had contracted with his publisher to write the history of Prussia from 1850 to 1870, and the publisher would have his bond. Whether the publisher acted wisely, the author leaves to the "competent public" to determine.

The competent public will probably say that the present volume, which covers the year 1867 and a part of 1868, could ill have been spared, and it will welcome the forthcoming seventh volume, with which the work is to end. The skill so to order details that the story marches smoothly; the judgment which discriminates between cardinal facts and those of secondary importance, and the art which gives to the former their due relief; the charm of style which makes a work of patient research easy reading—these are qualities which Von Sybel neither found in the Prussian archives nor left there; and, *pace* Seeley and his school, the world has not yet outgrown the literary historian. At the same time the reader will miss something that he found in the previous volumes. The exact and minute information afforded by original documents enables the historian to give to his pictures a sharpness of outline and wealth of illustrative detail not otherwise attainable. The slight suggestion of haziness, as in an ill-focussed photograph, which hangs about some portions of this volume, is partly due, however, to the author's conscientiousness, which does not permit him to present any inference, however well founded, as a matter of knowledge. It is improbable that the study of Prussian or other archives will seriously modify the impression of this period which Von Sybel gives us, but the reader is constantly reminded that such a modification is not impossible.

The political events of 1867 and 1868 fall, from the German point of view, into three chief groups: the pacification and reorganization of the territories annexed by Prussia in 1866, and the *mise en œuvre* of the North German Federation; the rapid establishment of closer relations between North and South Germany; and finally the growing tension between Germany and France. Of special interest, under the first head, is the description of the way in which the North German Constitution was drafted. The treaties of 1866 had merely indicated the general character of the new union. A constitution was to be submitted to the representatives of the North German governments and ratified by a North German parliament. On his return in December, 1866, from a much-needed vacation, Bismarck found two complete projects worked out by secretaries of the Foreign Office. Both of these he discarded, finding them unavailable even as a basis for correction. On the afternoon of the 13th he dictated to another secretary, Lothar Bucher (an ex-revolutionist, by the way, of 1848), the most important articles of the new constitution, with indications of the lines on which the rest of the document was to be drawn. That night Bucher and Delbrück worked out the new project. It was approved by the Prussian ministry on the following afternoon, and on the 15th it was submitted to the representatives of the allied governments. They suggested numerous amendments, of which eighteen were accepted; and in the constituent parliament thirty-nine more amendments were voted by the representatives of the people and accepted by the allied

governments. When the South German states came into the Union, and the Federation was transformed into the German Empire (1871), a few more changes were made; but in its main lines the constitution under which fifty millions of Germans are still living is the constitution which Bismarck dictated to Bucher on that December afternoon twenty-eight years ago. When it was first published, the London *Times* remarked, in all seriousness, that it was sufficiently illogical to justify the hope that it would work well; and a distinguished German professor of public law complained that it was impossible to decide in which of the established categories this constitution belonged. Von Sybel justly remarks of Bismarck's original draft, that it showed an extraordinary grasp of what was practically needed, without regard to theory or doctrine.

The extension of Prussian influence over South Germany is admirably described and explained. Within less than two years the offensive and defensive alliances concluded in 1866 were ratified by the South German legislatures; the Prussian military system was introduced into each of the South German armies; Moltke's plan for meeting a French attack was adopted by the South German staffs, and a new and stronger customs union was formed. In the customs treaties of 1867 it was provided that duties should be fixed by a customs parliament, which was to be constituted by adding South German delegates to the Federal Council, and South German deputies to the Diet of the North German Federation. This Parliament met at Berlin in 1868, and to turn it into the Imperial Parliament which met there three years later, nothing was needed but to change its name and extend its competence. The organization of the two bodies was identical. All these steps toward unity, however, were taken unwillingly, as far as the majority of the South Germans were concerned. All the southern governments, with the exception of that of Baden, were opposed to any close union. The people of Baden and of Hesse desired to join the North German Federation, but the Clericals of Bavaria and the Democrats of Würtemberg were full of hostility to Prussia, and sent anti-Prussian deputies to the customs parliament. The military and economic alliance with the North was forced upon a reluctant South—not by the North, for Bismarck deemed it unwise to attempt to hasten the progress of events, but by the inexorable logic of the situation. The southern states could not stand alone, either in war or in peace. They could not even stand together, as the Bavarian Prime Minister, Prince von Hohenlohe (now Chancellor of the Empire), discovered when he tried to bring about the South German union for which the Peace of Prague had made provision. The Würtembergers feared Bavaria less than they feared Prussia, but they were quite as jealously hostile to a Bavarian as to a Prussian hegemony, while the people of Baden and of Hesse distinctly preferred Prussian leadership.

The most serious element in the history of these two years was the growing hostility of France, and the most important question which was raised and settled was that of Luxemburg. This duchy, ruled by the King of the Netherlands, but constituting no part of his kingdom, had belonged to the German Confederation (1814–1866); but with the dissolution of that confederation it was legally isolated from the rest of Germany. Under the older federal arrangements and with the sanction of the great Powers, Prussia supplied three-fourths of the garrison of the fortress of Luxemburg. In all the schemes of "compensation" suggested by France in the summer of 1866, and described by Von Sybel in his fifth volume, Luxemburg was, of course, included. On the 29th of August, Benedetti had submitted a final proposition. Prussia was to open negotiations with the King of the Netherlands for the cession of Luxemburg to France. An equivalent was to be tendered him either in German territory or in money. If the arrangement was made on the latter basis, France would reimburse Prussia for the outlay. The acquisition of Luxemburg would be regarded by France as a sufficient compensation for the extension of Prussia's power in North Germany. If Prussia would aid France in acquiring Belgium, France would consent to the incorporation of South Germany in the German Federation. For these latter purposes, an offensive and defensive alliance was proposed. Bismarck replied that an offensive alliance between France and Prussia would arouse suspicion throughout Europe. As regarded Luxemburg, Prussia could not possibly offer German territory to the King of the Netherlands, nor could she take the initiative in arranging a purchase, for the transaction would arouse the national feeling and compromise Prussia's position in Germany. If France could settle the matter quietly, without the official knowledge of the Prussian Government, Germany might be persuaded to accept the accomplished fact. The most that Prussia could do would be to withdraw her troops and suffer events to take their course, and to this programme Bismarck would endeavor to obtain his royal master's consent, if a firm friendship with France could thus be cemented.

No further answer was asked or given until December, when Benedetti returned to the attack and demanded a reply to the French proposals of August 29. Bismarck now for the first time submitted these proposals to the King. The King was not favorably impressed; Moltke and Roon, at his request, worked out memorials on the strategic importance of the fortress of Luxemburg, and advocated the maintenance of the Prussian right of garrison. Bismarck declared that the abandonment of the fortress was of course objectionable, but that an immediate outbreak of war with France would be a greater evil. Early in January, 1867, Benedetti pressed again for an answer. The answer that he received (January 10) was substantially that foreshadowed by Bismarck in August. No offensive alliance with France; at most a defensive alliance, with a pledge of Prussian neutrality in case France should undertake offensive operations—no promise even on this point, simply a possibility that the King would consent; no initiative on the part of Prussia in the Luxemburg affair, not even a voluntary withdrawal of her garrison. France would do well to start a popular agitation in Luxemburg for the removal of the Prussian troops, or, best of all, for the demolition of the fortress. Somewhat later Bismarck notified Benedetti that the Prussian garrison would probably be withdrawn if the King of the Netherlands requested its withdrawal.

THE GOLDEN HOUSE, AND OTHER NOVELS.

The Golden House. By Charles Dudley Warner. Harper & Brothers.

John March, Southerner. By George W. Cable. Charles Scribner's Sons.

Children of Circumstance. By Iota. D. Appleton & Co.

The Bell-ringer of Angels, and Other Stories. By Bret Harte. Houghton, Mifflin & Co.

The Chase of Saint Castin, and Other Stories. By Mary Hartwell Catherwood. Houghton, Mifflin & Co.

EVERY new novel about the rich and fashionable society of New York serves to confirm one of two impressions: either it is the dullest and most purposeless society that ever was on the face of the earth, or the novelists are so far from being in it that their works may be classed properly only as speculations on the vague, the vast, the dazzling unknown. From the first chapter of Mr. Warner's 'Golden House,' elaborately descriptive of a Spanish dancer's dancing before the fashionable world, in a studio, at midnight, it must be inferred that he knows whereof he writes. There is a pronounced flavor of intimacy with luxury in the reflection on "that pleasurable glow which the red Jacqueminot always gets from contiguity with the pale-yellow Clicquot," a perfect familiarity with rare pottery in an instantaneous recognition of a "barbarous pot of Chanak-Kalessi." So on, through all the descriptions of fêtes and functions, clothes and food, both from the minuteness of detail and the absence of that liveliness and humor which characterize most of Mr. Warner's speculative writings, the conviction grows that it is all very knowing and an astonishingly accurate drawing from life. There is too much money in the scene and situations for idle fun, and therefore Mr. Warner, like a good American, has dropped his native pleasantry and assumed polysyllabic solemnity as a fitting tribute to the pomp of the great god Mammon.

Unfortunately, perhaps, we have got into the habit of requiring from a novelist more than a wide acquaintance with external life, and insist, perhaps unreasonably, that he shall reveal the heart of things, or, if they have no heart, of people who, after all, do count even in European palaces or American palatial residences. Tried by this test of actual knowledge or creative imagination, Mr. Warner is disappointing—so disappointing, indeed, that it seems as if any one who wished to write up, or rather write down, fashionable society in a perfectly proper and chaste way might have done as much and could hardly have done less.

An adventurous wit of the last century said she had travelled a good deal and had met only two varieties of the human species—men and women. She died before there was any United States or any New York society, or any phantoms of the same, flitting through finely printed pages and vainly appealing to the illustrator to attest their substantial being by a dozen or more inspiring pictures of correctly clothed backs and legs. Men and women she could not have declared Jack Delancy, or Mr. Mavick, or Mrs. Carmen Henderson, or Miss Tavish to be. All these people are idle, sensuous, self-indulgent, and perhaps the author's failure to represent them at all is accounted for by the way in which he wished to do it—the chaste and proper way. In any other country than America it is recognized that people who persist in skating on thin ice invariably go through, and for novelists of other nations who write about such people the plunge is the natural, the inevitable crisis. It is impossible to believe that a republican form of government can eliminate human passions from human beings and substitute silly social ambitions and calculating self-interest. So when an American author takes immense pains to describe the gyrations of peo-

ple on a skimmed pool, then informs us that they all not only slid off triumphantly to solid land, but had never really been in any danger, we cannot help feeling that he is false to fact if he knows, vapid and ineffective if he does not. We are, of course, far from regretting that Mr. Warner has not written an immoral book, but we wish, if he was irresistibly moved to write about pleasure-loving and pleasure-seeking people, that he had seemed to know that their regard for each other does not rest wholly on hopes of points in stocks or invitations to dinner, and that a racketing crowd on a yacht deliberately crossing a steamer's bows is not, when run into, so perfectly cool and self-possessed as to avoid all appearance of panic and to display "much less excitement than appeared from telegraphed accounts."

On the Street, among the poor, and at the domestic hearth, the author appears to greater advantage. Mr. Henderson will do for any stock-broker who accumulates millions by questionable deals and corners. The faithful little woman doctor, and in a less complete fashion the Anglican priest, are recognizable figures in the movement of a great modern city. The devoted wife of Jack Delancy is all right, and Mr. Warner's sympathy with her sitting up o' nights touches the core of woman's case against man—that listening for the click of the long-past-midnight latch-key. They order this matter better in Corea—enlightened land!—where men are shut up and only women roam abroad after dark.

In view of the number and variety of figures in the 'Golden House,' it seems clear that Mr. Warner is possessed by the prevalent belief among novelists in the seriousness of their profession, and set himself to include in one volume a comprehensive presentation of life in New York. It takes a large imagination and great constructive skill to give unity, force, value to this comprehensive fiction, and so far no American except Mr. Howells, in many volumes, has come within sight of success. Doubtless, Mr. Cable was animated by the same ambition in the composition of 'John March, Southerner'; at all events, it is soothing to find so worthy an excuse for such a maddening performance. Seventy-eight chapters are ostensibly devoted to John from childhood to maturity, but what he was or is or shall be remains an enigma. John's father, a judge, presumably an old-time Southern gentleman, talking an atrocious dialect, dies in the twenty-third chapter, bequeathing to his son an irrelevant, futile, verse-writing mother, and a great deal of unimproved land. The remaining chapters are presumably intended to develop the methods adopted by John for repressing his mother and colonizing his land, several of them being abandoned to these topics. The incidental information is various and unrelated. John has a tedious love affair, meandering through much talk to a second passion. He gets religion, and also gets rid of it at the penitent bench. He insults the British flag, but does not make an international episode. He is casually engaged in a shooting affray with a mountaineer; the mountaineer is shot, and one wishes it had been John. All the time the inhabitants of Suez, in the State of Dixie (generals, colonels, white women, negroes), keep on talking about the war and each other, apparently trying to display astonishing invention in corrupting the English language. Such fiction as this might have been an invaluable agent for reform in the old days when the novel-reading habit was regarded as pernicious. No boy would hide it under his pillow, hoping to snatch a fearful joy at dawn. No woman would, for love of it, neglect her baby and darning.

The author of the 'Yellow Aster' was marked from the beginning as one whose blood should be on her own head. The folly of her first book was surprising, that of her second, 'Children of Circumstance,' is only dull. The few amusing characters are parsons whose contrivances for mitigating the dulness of their profession are quite ingenious. One diverted his mind from a parishioner's confession of iniquity by thinking of "his dead wife and smelling-salts," also of "a rather red nose and treble squeals nicely modulated." A second demanded for solace in his last hours the ministrations of a young lady of high fashion, who shook up his pillows and even "kissed him in her nice, pleasant way." A third relieved the tedium of a district visitor's homily by "watching her face with a sort of irreverent pity—wondering if any one outside a near relative ever had had the courage to kiss her." This parson, Frank Weston, ardently supports the heroine, Miss Dering, in her scheme for redeeming the prostitutes of London by dwelling among them and initiating for their salvation midnight suppers of beef and beer. He tries to rope in his sister, Rica (the young person who kissed the dying curate), but she demands, in the name of Heaven, to know how many whiskey-and-sodas he consumes while writing a sermon; which seems to dispose of her as a means of grace.

It has naturally never occurred to the author that social evils won't yield to the homœopathic cure of like by like. She, therefore, chooses for redeemer-in-chief a young woman who maintains that when a married man makes love to a girl, the only sinner is the wife who has feebly let her husband go—a sentiment not inconsistently cherished by one who, meditating on David, "feels herself hoping that he had a good time with Bathsheba, and wishing, half reluctantly, that it hadn't been cut short quite so soon." The feeling of *camaraderie* which Miss Dering established between herself and her chosen sinners is not a matter for wonder; and when one remembers how, at the suppers, they could watch for nothing "Margaret's small, delicate, ever-varying face cutting pork for her guests' excellent appetites," the marvel is that they ever let such a congenial and phenomenal saviour depart from among them. Cheap irreverence and flippant contempt of decency paraded as liberal thought and worldly wisdom will command an audience for a brief space, amusing many, deceiving a few. The "Children of Circumstance" neither distract nor delude. They forget that too much of a bad thing is as tiresome as too much of a good one, and by loquacious protestation of their thorough-going shockingness fail even to score a shock.

It is several years since Bret Harte has given us such good stories as two at least of those included in the 'Bell-ringer of Angels.' The incidents of the title-story and of the "Sheriff of Siskyou" are very clearly seen, and the characterization has the author's youthful humor and decision. The only falling off from his high standard of excellence is in the ending of both; all that follows Madison Wayne's realization of his crime in the first is unnecessary, and the wanderings through the fire of the Sheriff and his captive, in the second, are unduly prolonged. The rest of the volume is readable, and the sketch of Mr. Callender shows that the author has not been consul in Glasgow for nothing.

In the 'Chase of Saint Castin' Mrs. Catherwood continues her fictitious rendering of incidents of the early French settlement of Canada. It is rather strange that an author who chooses to write historical fiction exclusively should ignore a rule almost invariably observed by distinguished laborers in the same vineyard, and select for her principal figures men to whose actual renown imagination can add nothing. Fortunately for Mrs. Catherwood, the deeds of Saint Castin, of the Le Moynes and La Tours are not too widely known, and the wit and wickedness of the real Baron La Hontan are shut up in a thick little book which, we think, has not had an edition in this century. Therefore her representations of such splendid adventurers may not appear to the general tame and frigid. The selection of episodes in this volume is discriminating, and each is well enough told to hold the attention. Still, the people are so thin, so cold, so far off, that they impart an unveracious air even to authenticated accounts of the events which they shared.

NEW HANDBOOKS OF BOTANY.

In the history of science there occur at irregular intervals well-marked text-book periods of uncertain duration. Sometimes these periods are coincident with inactivity in investigation, but more commonly they mark a change in the direction of investigation. They are chiefly interesting to workers in other fields and to the general public from the fact that a text-book, if it is worth anything at all, is an account of stock on hand. A very sudden accumulation of text-books would seem, therefore, to indicate that a good many authors, not to say authorities, have concluded simultaneously that it is time to look over the results of investigation and take a fresh start. In botany such a time has again come. Many investigations in this science are being prosecuted and new ones are projected, but some of the leading investigators have given us, in a compendious form, the results of what has been done of late. In view of the numerous, almost numberless, text-books published within a year or two, it may be instructive to examine a few of the steps by which new and apparently uncontested positions have been attained, confining this chiefly within the limits imposed by the text-books themselves.

In the first place, it appears to be settled that the protoplasm or living matter in the cells of plants is practically continuous throughout the whole organism. It is recognized that the cell-walls do not shut off communication between contiguous cells. In the walls themselves extremely tenuous lines of protoplasm exist as intercommunicating threads, and these bring all the protoplasm in a given plant into a connected whole. At the approach of autumn, the protoplasm in the perishable parts of a perennial is withdrawn into the permanent parts of the organism, and here it stands ready for the coming of spring and the outburst of new foliage. All this, which is comparatively new, has been promptly incorporated into the text-books. But now arises a very singular exception, which serves to indicate how remarkable is this provision of vegetable economy. The well-known breathing-pores, or stomata, of foliage and other green parts consist of delicately balanced valves which stand in strict relations to their surroundings, and, in short, open and shut according to the needs of the plant. But the side cells of these balanced valves are now demonstrated to maintain no protoplasmic connection with their nearest neighbors, but are, after the first

period of their existence, cut off from them and then are independent. And at the end of the vegetine year, when all the rest of the leaf-protoplasm is taken back into the plant for protection, that which exists in these side cells remains as if a veritable rear-guard, performing some duty while the living matter in the neighboring cells is safely retreating, and, after all the rest is under winter cover, perishes with the fallen leaf.

In the next place, it is now generally admitted that the changes which take place in the nucleus of cells during cell-division, are substantially identical with those which occur in cell-division in animals. The newer text-books have placed within reach, even of beginners, methods by which the more important of the changes can be traced throughout their course. Any intelligent student now has it quite within his power to repeat the observations in this interesting field. The fulness and perspicuity of the directions which are found in the best of these recent text-books in regard to this matter leave practically nothing to be desired in the way of technique and guidance. The same may be said, also, of the advice and the minor hints in respect to the demonstration of the so-called plastids. These minute granules, enclosed in protoplasm, although springing from a common source, are of three different classes. According to their development and office, they become of a green color and undertake the preparation of organic matter from inorganic, or they serve as colorless points around which the prepared food (starch) accumulates and is stored, or lastly, taking on some color other than green, become of protective or attractive service in flower or fruit. That is, these constituents of cells, though alike at the beginning, are turned to different kinds of work.

And here we have the key to all of the modern text-books in botany. The pregnant thought which finds its expression in the reference of all parts of a flowering plant to a few simple morphological members which are turned to multifarious ends in the work of the organism, is now applied unhesitatingly to the tissues and to the vital constituents of the cells. It is, in fact, adaptation in its widest sense. Prominence is given to every element of structure and every phenomenon which can throw any light on the adaptation of the organism to its surroundings. The structure of the plant is regarded as the product of two factors, inheritance and environment; whether the latter merely picks out the fittest or aids in shaping them is, as yet, fair matter for discussion, and hence is kept somewhat in the background, but the fertile ideas of morphology and adaptation are, as is proper, made much of in every way.

Taken for all in all, the most interesting of these recent text-books is a skilfully constructed composite which we owe to the botanical instructors at Bonn on the Rhine ('Lehrbuch der Botanik.' Jena: Gustav Fischer). Prof. Strasburger, widely known as the highest authority in cellular morphology of plants, contributes 130 pages of histology and its relations to external structure. The most recondite matters are made clear; the driest are invested with attractiveness. Dr. Noll follows with the subject of physiology, presenting the principal facts accepted by the best authorities, and suggesting decisive experiments for the use of the student. The field of special systematic botany is divided between Dr. Schenck and Prof. Schimper, the former taking up the lower plants, the latter the flowering. The text is succinct and comprehensive, and in style attractive. When we add that the figures are fresh and telling and well executed, and that the volume, as it comes to us from the German press, is of a high order of book-printing, we have said enough to carry the work into the hands of some besides botanists who wish to see the results of recent investigation coördinated with the older accepted statements, and all presented in the form of a trial balance.

No less than twelve new text-books besides the above are in hand for notice. Nearly all are useful, and some are highly creditable. Of these, we must be permitted to speak of Francis Darwin's 'Practical Physiology of Plants' (Cambridge [Eng.]: University Press; New York: Macmillan), and Prof. Spalding's 'Guide to the Study of Common Plants' (Boston: D. C. Heath & Co.). In the former we have two series of problems which are thought to be within the grasp of a student who has mastered elementary work. Experiments are suggested which, in their turn, must suggest new lines of research. The treatise possesses high merit. Prof. Spalding's excellent work makes use of the best form of the type-method. The student is given good examples illustrating the life-history of representative plants. Just enough information is presented to the student to stimulate his curiosity and keep him well up to his task. Pedagogically considered, this is one of the best contributions to the subject of elementary teaching which we now possess.

Brook Farm: Historic and Personal Memoirs. By John Thomas Codman. Boston: *Arena* Publishing Co. 1894.

Because of the character and standing of certain people connected more or less intimately with Brook Farm, it has had an interest for the public out of all proportion to the social or the economic principles that it involved. From the social or economic standpoint the North American Phalanx at Red Bank, N. J., was an experiment of much more importance, yet it has attracted no such persistent reminiscence on the part of those engaged in it—Horace Greeley the best known; no such persistent curiosity of the outside world. But the fame of Brook Farm is much less on account of its resident Farmers than on account of its casual visitors—Emerson, Parker, Alcott, Margaret Fuller, and others—and the most of these had lost even their casual interest in the enterprise before Mr. Codman, its latest historian, arrived upon the scene. The most distinguished residents of his time were Ripley, Dwight, and Dana, all of whom are described in an effusive manner—Ripley with "damnable iteration." It begins to look as if we never should have a good account of Brook Farm written from the inside. We shall have to content ourselves with such admirable fragments as Mr. Curtis's "Easy Chair" papers and Mr. George P. Bradford's *Century* article. To these Mr. Codman's volume adds little of importance. When some one asked Ripley when he was going to write the history of Brook Farm, he answered, "When I reach my years of indiscretion." He did not live long enough for that. Mr. Codman has been less fortunate, and consequently he has given us a book which, while adding little to our knowledge of Brook Farm, adds nothing to its fascination, and does little credit to the author's judgment, taste, or skill.

At the outset he is unfortunate, for his arrival at the Farm was in 1843, when its idyllic period was fast drawing to a close, under the stress of Albert Brisbane and his Fourierite doctrine. It has been very common for those devoted to the experiment in its earlier stages to depreciate the later, when the organization became much more definite. It is certain that this change, with its partial substitution of a Fourierite phalanstery for a group of free individuals, did much to alienate the sympathy of those, excepting Ripley, who have always given to the Farm its happiest repute. Mr. Codman's book has the advantage of being a counterblast to the prevailing notions. His stay was under the Fourierite dispensation, and he will not allow that there was any falling off from the generous and lofty idealism of the earlier time. But here we have the personal equation: the Fourierite time was *the* time because it was *his* time. Of the other he had no personal knowledge. Of his own exuberant happiness we get an adequate impression. Why not? He was young, in good health, full of animal spirits, could laugh at any joke, however poor, and the opportunities for love-making were unbounded. Whatever stopped in 1843, the "perpetual picnic" of Emerson's impression went on for two years longer if not until the end.

Mr. Codman's book suffers from the indefiniteness of its form, the looseness and carelessness of its expression. Mr. Frothingham's ninety pages in his Life of Ripley give us a much clearer notion of the character of the enterprise and the sequence of events. The account of the Transcendental Club, a forerunner of Brook Farm, is inaccurate in various particulars. It never called itself by its popular name, as Mr. Codman asserts. Dr. Channing attended only one of its meetings, yet he is set down as habitually present and as "afterwards one of the acknowledged leaders of liberal Christendom." In 1835 he had held that position preëminently for some twenty years. We have everywhere the same easy-going style. Hood's "Song of the Shirt" appears to be spoken of as an original contribution to the *Harbinger*, the organ of the Farm, to which a chapter is assigned that contains much irrelevant matter. The chronology is so extremely defective that in vain do we try to follow the order of events. But the worst defect of Mr. Codman's book is its excess of sweetness, its sentimentality, its gush, its ravings over the eyes and hair of this or that glorious creature who captivated his boyish fancy. And, besides this, we suffer much from his own humor and from his memory of the poor little jokes that should have had their day and ceased to be some fifty years ago.

There is a pretty full account of an address by Albert Brisbane on the "Unity of the Passions." It was prodigious fine talk, and one hopes it meant something when, at the conclusion, he flung his arms aloft to the stars and cried, "I *love* those worlds up there." Charles A. Dana followed with the sentiment, "Ambition the greatest of the four social passions." "The four social passions," it seems, "correspond to the common chord in music, but ambition corresponds to the seventh note, on which no music ever ends." John S. Dwight on the same occasion gave "one of those sweet, calm, choice, dignified, exact speeches for which he is noted." But he too could soar into the empyrean, as where he said of Bailey's "Festus," once an immortal poem, that "you might as well cut a cloud out of the purple sunset atmosphere as a figure from the boundless atmospheric beauty of the poem." How touching the simplicity when William Henry Channing asks them all to "join hands and make a circle, and here form the Church of Humanity that shall cover the men and women of every nation

and every clime." Truly here were "great hopes for great souls."

If the community did not have all things in common, it had the smallpox. Some reformer, abjuring vaccination, came, bringing his little boy, who was much fondled, and in a few days there were thirty down with the disease. Isolation was impossible and everybody took his chance. It is Mr. Codman's impression that the harmonious conditions did much to neutralize the danger. And there were compensations. The visitors at the rate of four thousand a year dropped to the zero point. A far greater calamity was the burning of the new unfinished Phalanstery, on which $7,000 had been expended, and there was no insurance. This was really the beginning of the end. "The Hive" became a sieve. It was resolved that the blow should make no difference. It made a great difference. Dwight went to New York, leaving everything cheerful and happy; he came back to find everything going to the bad. Mr. Codman does not give us the particulars of the breaking up. He says:

"It was not discord, it was music stopped."

That is prettily said, but it does not agree with Dwight's impression, and he was a musical authority. The scheme was a complete financial failure. August 18, 1847, the Farm was transferred to a board of trustees to be sold to the best advantage of all concerned. Applying Thoreau's standard, Ripley's failure was so tragical that you could not tell it from success.

Logic. By Dr. Christoph Sigwart. Second edition, revised and enlarged. Translated by Helen Dendy. 2 vols. London: Swan Sonnenschein & Co.; New York: Macmillan & Co. 1895. 8vo.

THE second edition of Sigwart's Logic was substantially a new book; at least, it seemed quite fresh at its appearance a few years ago. The opinions expressed in it are recognized as among the sanest and best-considered. But whether it is a particularly suitable book for translation is not quite so clear. It is to be remembered that no very extensive or important part of logic stands accepted without dispute on all hands. Nor are the differences confined to points of theory and arrangement; on the contrary, they are practically decisive as to what inference is to be commended, what rejected, as well as for methods of inquiry. Beginners in the study of logic certainly ought to be apprised of the more important divergences. Most logicians when they approach a disputed doctrine exhibit manifest symptoms of it. Even if they name nobody, the breath comes quick, and the glare of the eyes is reflected in the type. But Sigwart goes on his way with such calm serenity, giving his own lucid and, to an advanced scholar, luminous views, that the young student would never dream that anybody else ever thought otherwise.

Since the author quite omits, or treats with strictest compression, all those parts of logic about which there is no dispute, one might wonder how two goodly volumes of a thousand pages of four hundred words to the page have been filled up. They contain chiefly the *ex-parte* presentation of Sigwart-ish views, very well worth reading certainly. This is enlarged by a great deal of acute criticism on points of little importance, many of them not truly relevant to logic. Many topics, although subjects of divergent opinions, are passed by without mention.

Historical statements are sparingly made; and of the few, there is a considerable proportion that cannot support criticism. Thus, Sigwart (vol. ii, p. 308, foot-note) attributes to Jevons the remark that induction is an inverse operation (mistranslated a "reverse operation"), related to deduction as division is related to multiplication. But this had been said long before Jevons's day. Indeed, the moment deduction is regarded as a mathematical operation, it follows from Aristotle's conception of induction that this is the inverse operation. The assimilation was made by Leibnitz, and was expanded into two eloquent volumes by Père Gratry. Indeed, the latter writer apprehends it more accurately than either Jevons or Sigwart, for he shows that mathematical differentiation, depending on the inverse operation of subtraction, while integration depends on the direct operation of summation, is in that sense an inverse operation, and he defends the older opinion that differentiation is the instrument of inductive reasoning, integration that of deductive reasoning. Thus the laws of mechanics are expressed by differential equations, and the applications of them are performed by integrating those equations.

Sigwart treats logic chiefly from the point of view of methodology. From that standpoint probability and probable inference appear as its most prominent topics. These are subjects upon which we cannot expect a German treatise to attain the English standard of accuracy and subtlety of thought, for two generations of the most powerful minds the English-speaking countries have produced have had them constantly under scrutiny, while in Germany they have been little studied. Sigwart's account of the philosophy of probability is inferior even to that of Locke. Take this sentence: "F. A. Lange rightly saw that the theory of probability is based upon the disjunctive judgment, and is in this way connected with logic." This is hardly doing justice to that able thinker. But, passing that by, very long before Lange every English logician had seen, what must appear early in one's reflections upon the subject, that the theory of probability is not only "connected with," but is a part of, logic—one might almost say is the major part of it. The pedantry of supposing that "the disjunctive judgment" can shed a vivifying light upon the philosophy of probability is deplorable, while it provokes a smile.

Yet upon subjects closely connected with this Sigwart is most instructive. We will select by way of illustration a point which shows at the same time how near the abstract theory of logic may come to matters of practical concern. Our readers will understand that we are expressing no opinions whatever concerning the subject matter; we intend only to point out how divergent theory may lead to divergent practice. Sigwart remarks that when we investigate anything whatever, we go upon the presumption that the truth about the matter in hand is capable of being expressed in general terms, and further that the proposition that events happen according to laws and are determined by causes is a special case of such presumption. No proof, he says, of the impossibility of a lawless happening has ever been brought forward, and thus he is led to hold that such postulates are "not so much laws which the understanding prescribes to Nature" (which was Kant's opinion), "as laws which the understanding lays down for its own regulation in its investigation and consideration of Nature." Correct or not, this is a pregnant suggestion. In modern whist there are certain presumptions, especially towards the end of a hand, which we make, not because we possess any evidence of their truth, but because if such a proposition be true, there is a way of winning a trick that, under the supposition of its falsity, there is no way of winning. This is the sort of presumptions which German logicians call "regulative principles." Now it is plain that such a regulative principle cannot, *as such*, be universal, because it applies in that capacity only to the single case in hand. If, then, Sigwart be right in holding the law of causation, the principle of the uniformity of nature and the like to be "regulative principles," all ground for asserting them to be absolutely without exception is removed. Now that would profoundly modify not only our theory of the universe, but also our philosophy of life and death. All this would or might come from a particular answer to an abstract, obscure, and apparently insignificant question of pure logic. When we turn over the pages of such a book as that before us, we may be tempted to wonder of what use or application is all that. But it is always possible there is a "live coal behind the thought" that long blown on may some day flame. The instance adduced shows the possibility of this.

The translator writes an easy un-German English, and the accuracy of the rendering is vouched for by the author, who has read all the proofs. Nevertheless mistakes are to be found in it.

From a New England Hillside. By William Potts. Macmillan. 1895.

FARMINGTON, in Connecticut, is one of our loveliest villages. North and south stretches Farmington mountain, ten miles and more long, separating the valley of the Connecticut from the valley in which lay the old canal upon whose bed the New Haven & Northampton Railroad (called originally Canal Railroad) was afterwards built. The mountain is not very high, but is full of picturesque variety of surface, even attaining Alpine dignity of bare, scarped cliffs and jutting crags. West of the high ground stretch the meadows where the Pequabuck meets the Tunxis, and in which the united stream winds in large, slow curves like the lower Connecticut or the Mississippi. The village lies along the western slope of the mountain, with a broad village street two miles long, and also, for it is a big village, a "back lane" further up the hillside, and a river street down on the plain. From all points in the village there are lovely views, and the prospect from the higher slopes is wide and singularly beautiful. The village is very old, in appearance at least. The houses are generally of the eighteenth century, or of years before 1820. Among them are handsome and stately residences, for Farmington was a wealthy town in the days of New England farming. The old village church, unaltered without, though the interior has been spoiled, is famous through all that region. The streets are planted with noble elms, among which are two of the dozen monsters of New England. The railroad station is two miles away, and there are no factories, no great workshops, no crowding in of city people in summer. A year hence these words will not be true, for the trolley-road has invaded the quiet village, and one more place of rest is about to be destroyed.

In this retreat Mr. William Potts has made himself a home, and thence he has written letters to a New England newspaper, which letters are now gathered into a little volume

with the title given above. The author, well known for his activity in the cause of civil-service reform, looks for rest and a relief from his labors in this hillside quiet. His book does not show much interest in the exceptional beauty of the spot and of its neighborhood; he dwells mainly upon the planting, the well-digging, the gardening, in the spirit of those gentle essays familiar to the readers of American prose literature. Printed one by one in the columns of a newspaper, these letters were more readable than as parts of a volume. When one takes book in hand, one expects more substantial food for the mind. The free use of quotations has rather the appearance of a substitute for the thoughts that would not flow freely than of a clincher for thoughts that had already been driven home. It is a relief to come upon the author's meditations over riotous strikers (p. 189), and the sound conclusions that the first principle upon which society rests must be defended against them. Even the half-desponding words which follow, with the inevitable vision of a hideous world to come upon this planet, is a relief from the commonplace. The reader who knows his picturesque New England longs for a little more of it between these covers, and thinks regretfully that Mr. Potts has missed a chance.

Trans-Caspia: The Sealed Provinces of the Tsar. By M. M. Shoemaker. Cincinnati: Robert Clarke Co. 1894.

WILL the time never come when the traveller who has made a flying trip to some more or less remote part of the world will realize that the only thing for him to relate to the public is his own experience, together with such few facts as he may be certain of, from all of which he can draw but the most modest conclusions? Imagine an American, obviously ignorant of the Russian language as well as of the real conditions of the empire, of the circumstances that have caused its peculiar development, the reasons for the nature of its government, and the problems which the Government has to confront; then let him spend a few weeks in central Asia, and in consequence write a book full of superficial observations and opinions besides occasional gross errors, and we have Mr. Shoemaker's work. He is not to blame if his travels were commonplace. Illness forced him to turn back just as he was beginning the more difficult part of his trip. Still, he made an interesting journey which he had as good a right to describe as had the numerous other writers who have made it. If he had confined himself to this we should have found less fault, merely pointing out the absurdity of such statements as that in St. Petersburg, in winter, "The islands are, of course, closed, most of the bridges over the Neva being taken away until the ice goes out in April," whereas the islands are the most famous of St. Petersburg winter resorts, and the floating bridges are taken away only when the ice forms or is breaking up, to be restored a few days later. Or, again, though we fully recognize the difficulty of transcribing Russian names, it is not sufficient to give them as each person fancies they are pronounced, on the ground that "it would, in fact, be impossible to do otherwise" (p. 240). Half an hour's study of the alphabet would have done much to remove this impossibility, and would have perhaps prevented the three cases of impossible spelling in the table of contents alone. To be sure, names in other languages fare little better. Bonvalot is on page 146 printed Bouvalot, Curzon invariably Cruzon.

We repeat, however, that these are not the chief defects we find in the author. What we object to far more is ignorant generalizations, and his peevish criticisms whenever he meets with an annoyance. Witness his wrath that the small bank in Samarkand would not cash his letter of credit, on which it was not mentioned. This causes him to declare that "it would almost seem that if Russia did not make the life of her people as hard, horrible, and inconvenient as possible, she would fear the total wreck of her empire" (p. 151). The same spirit inspires the remark, "If Russia did not want us to come, she should have said so at St. Petersburg and ended the matter there," and the appreciative reflection on an invitation to dine with the Governor-General of Turkestan, that, "with the breath of the outside world which we brought into the dead monotony of his household, we amply repaid him for his courtesy" (p. 181). We can assure our author, too, from personal experience, that it is not true that all strangers, or even all Americans, arriving at Samarkand "are subjected to almost an autopsy on arrival, in order to satisfy these servants of the Czar that their internal construction does not hold something that may be prejudicial to the interests of that potentate" (p. 123). In short, Mr. Shoemaker's book contains nothing that is new, and we bring away from it an impression of faults of grammar and taste, and of petty complaints and foolish remarks about Russia, full of nonsense about the Czar and Czardom.

John Bull & Co.: The great Colonial Branches of the firm—Canada, Australia, New Zealand, and South Africa. By Max O'Rell. New York: Charles L. Webster & Co. 1894.

WE always read Max O'Rell's "impressions" with pleasure, because, whatever else he is, he is never dull—not even now that he has, as he tells us, "delivered four hundred and forty-six public lectures in the United States, Canada, Australia, New Zealand, and South Africa, under the direction of Major Pond in America and Mr. Robert S. Smythe in the Colonies." With his quick eye for character and his thoroughly French wit, he stands by himself as an observer, and to us he often seems a better one than many a profounder and more thoughtful critic. This present volume gives an account of some of the countries in which he lectured for two years, and if it is not as good as 'John Bull and his Island,' it is partly because the countries themselves are not so interesting; as he says himself, a new country cannot be as interesting as an old one.

Max O'Rell's impressions relate entirely to the Anglo-Saxon world. He tells us that he neither speaks nor understands German, and is "foolish enough to boast of it," but of the English-speaking world he writes with some authority. The English character evidently has a fascination for him, and the British empire he rightly regards as one of the most astonishing achievements in the art of government that the world has ever seen. Whether or no he labors under the impression, from which no Frenchman ever frees himself without great difficulty, that the English empire has been built up as the result of a carefully prepared scheme of foreign aggrandizement, deliberately acted upon by a succession of ministries for generations, we do not quite make out. Nothing is clearer, of course, than that a very great part of her empire has come to England as the result of chance rather than design, and that there has been an absolute lack of any common or continuous purpose of foreign aggrandizement. The conception of John Bull as a powerful, scheming villain, whose plan is, and always has been, to get possession of his neighbor's lands and chattels, is thoroughly French, and is one of the things which embitter the discussion of all their differences with England to a degree difficult for any one not a Frenchman to comprehend. But, whatever his secret opinion may be, Max O'Rell is altogether too clever to involve himself in controversy on this subject. No matter what the British empire is, or how it was got together, his business is simply to see and report what it is, and for many reasons the report of a Frenchman as intelligent as he throws a new light upon it.

'John Bull & Co.' is a very amusing book, and, on the whole, no one is likely to get more amusement out of it than an Englishman.

London and the Kingdom. By Reginald R. Sharpe, D.C.L., Records Clerk in the Office of the Town Clerk of the City of London. In three volumes. Vols. I. and II. Printed by order of the Corporation. Longmans, Green & Co.

THE historical student has often to thank the chances of current politics for the publication of valuable material; and he has, almost as often, to regret that preoccupation with current politics has prevented the material from being presented in quite as useful a form as he could wish. The cluster of wealthy and dignified persons who govern the little historical centre to which alone belongs in strictness the name of the City of London, has been greatly exercised, and very naturally, by the proposals of the London County Council, which rules the great area all around, for a "unification of London." In their anxiety, they have wished to reassure themselves, and to impress the outside world, by the recital of all the great and good things the corporation has done in the past; and accordingly, in 1889, they instructed Dr. Sharpe, their Records Clerk, to prepare a work "showing the preëminent position occupied by the City of London, and the important function it exercised in the shaping and making of England." The result so far is these two sturdy volumes: one, of 566 pages, coming down to 1603, the other, of 650 pages, stretching from 1603 to 1714.

The humble scholar will be moderately thankful. The foot-notes reveal sources of information to which he can have recourse. The volumes are intelligent journey-work, scholarly, moving with complacent jog-trot from year to year; and so far as we can test the statements they seem trustworthy. There are, indeed, slips from time to time—as where, on the second page, Bede's "multorum emporium populorum" is turned into "Emporium of the World"; and we cannot say we altogether trust the author's critical acumen. Still, it is a good and substantial performance—of its kind. But there's the rub! The book was, of course, intended by its patrons to be a eulogy of London. Fortunately Dr. Sharpe is too good a scholar, and unfortunately he is too little of a man of letters, either to fall to the depths or rise to the heights which such a programme might have suggested. To represent London as "shaping and making" for eight long centuries, and never as misshaping—that London which, as Dr. Stubbs says, was "sometimes the brain, often the purse, but never the heart of England"—was beyond him; and so he fell back on bare statements of fact, reliable enough, but very dull.

Perhaps a voice from across the Atlantic

may penetrate even the Common Council of the City of London. We would urge upon it that it is high time that the city set about the establishment of an adequate department of Archives; that Dr. Sharpe has shown by his *Calendar of Wills* that he is quite competent to tell them what the work of a city archivist ought to be; and that if they will realize their duty in this regard, they will win the respect of scholars—allies not to be despised even in this democratic age.

L'Histoire Ancienne des Peuples de l'Orient. Tome 1. Les Origines: Égypte et Chaldée. Paris: Hachette; New York: F. W. Christern. 8vo. 1894.

The Dawn of Civilization: Egypt and Chaldea. By G. Maspero, Member of the Institute and Professor at the College of France. Edited by A. H. Sayce, Professor of Assyriology, Oxford. Translated by M. L. McClure, Member of the Committee of the Egypt Exploration Fund. With maps and over 470 illustrations and plans. D. Appleton & Co. 1894. Large 8vo, pp. xii, 800.

THE two tasks which Prof. Maspero has undertaken in this first volume of what will be a monumental work, are very different. In the case of Egypt the material is supposed to be quite accessible and well known; in the case of Assyria and Babylon it is only partly unearthed, and none of it lies open to the casual gaze of the tourist. The former task relates to a land of pleasure-seekers and excursionists; the latter to a land where the Occidental seldom goes except on a special mission armed with a Turkish firman instead of a Cook's ticket. In either case the "*origines*" are shrouded in mystery—confessedly so in the second instance, and far more so in the first than is generally supposed. The civilization of the Nile as it is first revealed to us in monumental remains is full-blown and perfect in many respects. That of the Euphrates is discovered only after long study and patient investigation. Its growth may be traced more in detail than the other, and the student has merely to piece together the fragments that his industry discovers. The difference in the case of Egypt is scarcely credible. Myths concerning the gods and their doings have in a very few cases been preserved in fairly full shape, but for the most part we are left to infer the details from fragmentary statements and occasional phrases imbedded in religious texts. History does not begin even with the earliest reputed human king, but later generations wove legends about his venerated name and the names of his successors. Then suddenly the fourth Egyptian dynasty appears, like Minerva, full-grown and panoplied, upon the field. To explain the apparition of a civilization in which were order, government, classes of society, arts, industry, such as are here revealed is a task still unsolved. A society which couched its thoughts in an alphabetic writing, and which showed such a degree of artistic skill in delineating the characters in stone, must have been preceded by a long course of development somewhere and somehow. But here the author, like any other man, stands in expectant attitude, only able to postulate several thousand years of antecedent growth. No more than any other can he tell where its seat was or where its memorials are.

The problem is, likely enough, insoluble. Whence came this wonderful people? Whence came their ability to cut the hardest rocks and to inscribe on them the most delicate hieroglyphs? Whence did they derive their language and their graphic system, which still well-nigh defies the efforts of the decipherer? To these questions only half-answers can be given. In the nature of the case, satisfactory replies cannot be expected, and Prof. Maspero does not essay the task. His purpose is to collect those things that are known and to set them forth. He does not theorize and insist dogmatically on his theory. He presents the facts that are known and lets them speak for themselves. He hints that an unexpected turn of the explorer's spade may reveal clues at any moment, but as yet we are largely working in the dark. The duty of the hour is the preservation of that which is exposed to the destruction wrought by vandals, native or imported. Systematic excavation and search are things of the future, and even then they may prove unavailing. The earth has swallowed up the traces of the original dwellers on the Nile, and only Petrie has attempted to follow their course and to discover their descent. In passing, it may be remarked that it is strange that Maspero does not seem to have given to the results achieved by the explorer of Koptos and Medum the credit which is their due. Diversities in prehistoric burial customs and specimens of non-Egyptian art found on Egyptian soil would appear preëminently to belong to the "*origines*," and they should have found a place in these pages; but our search for them has been in vain. It may also be remarked that the author still holds, apparently, to his former notion touching a prehistoric origin of the great sphinx of Gizeh, unaffected by Petrie's cogent reasons for placing it much later.

The work of Maspero, as noted above, has been planned for the most part along the lines of actual knowledge. He takes up the myths and the earliest remains, and out of them he weaves a connected story. The land and its peculiarities, the gods and their attributes, the mythical beings who ruled Egypt in the ages of the demigods, the early kings of pre-monumental times, the consolidation (or rather the consolidated form) of government and society as the earliest extant monuments exhibit them, the period of decay which followed the sixth dynasty, and the brilliant period of the twelfth dynasty, when the bounds of the dominion of the Pharaohs were extended to include nearly the whole of the region within which the Nile was one river without tributary or branch—these form the theme of the portion of his work that relates to Egypt. The treatment is thus partly historical and partly archæological. In the case of Assyria and Babylonia, the treatment is mainly of an archæological character. There are no such fundamentally perplexing problems as those noted above. For instance, the development of the cuneiform system of writing may be traced from the hieroglyphic picture to the wedge, but the beauty of the Egyptian hieroglyphs was as great, perhaps greater, in the first period as ever after, and in phonetic power they remained practically unchanged through all time. Questions regarding the "Akkadians" and the "Sumerians" may have been perplexing, but they are nothing as compared with those that are presented by a ready-made and full-grown civilization. But if the problems were as perplexing, we should not expect a specialist in another department to go into them at length. In the earlier and larger portion of the volume the author is thoroughly at home and is an acknowledged authority. In the latter he is a compiler of other men's results. His text is unencumbered with the details that delight the heart of the scholar and are so detestable to the "ordinary reader"; the details are in the notes which abound on every page.

The translator has introduced some changes into the English edition, but he has not gone as far as he might The general map including both countries is valuable, and the index is a most worthy addition. One can only regret that it was not made more exhaustive and thorough: the notes and authors' names are entirely neglected. In conclusion it may be said that the work itself is one of the most noteworthy contributions that have been made to the subject in many years, full and wonderfully inclusive. The severest criticism that one is inclined to pass upon it concerns a certain diffuseness of style that has considerably increased its size.

BOOKS OF THE WEEK.

Bailey, Harriet M. On the Chafing-Dish. G. W. Dillingham. 50 cents.
Ballantine, Henry. On India's Frontier; or, Nepal. J. Selwin Tait & Sons. $2 50.
Bamberger, Ludwig. Politische Schriften von 1848 bis 1868. Berlin: Rosenbaum & Hart.
Bedlow, Henry. The White Tsar, and Other Poems. Illustrated. J. Selwin Tait & Sons. $3.50.
Bennett, Prof. C. E. A Latin Grammar. Boston: Allyn & Bacon 80 cents.
Billings, Dr. J. S., and Hurd, Dr. H. M. Suggestions to Hospital and Asylum Visitors. Philadelphia: J. B. Lippincott Co. 50 cents.
Colvin, Sir Auckland. John Russell Colvin. [Rulers of India.] Macmillan. 60 cents.
Dumas, Alexandre. La Poudre de Soissons. Longmans, Green & Co. 40 cents.
Fletcher, J. S. The Wonderful Wapentake. Illustrated. London: John Lane; Chicago: A. C. McClurg & Co. $2.
Greene, F. D. The Armenian Crisis in Turkey. Putnams. $1.
Henty, G. A. Dorothy's Double. Rand, McNally & Co. 75 cents.
Heysinger, L. W. The Source and Mode of Solar Energy throughout the Universe. Philadelphia: J. B. Lippincott Co.
Howe, Rev. R. H. Quadragesima: Thoughts for Each Sunday in Lent. Whittaker. $1.
How to Govern Chicago. Chicago: C. H. Kerr & Co.
Hume, Fergus. The Lone Inn. Cassell. 50 cents.
Jones, H. S. Select Passages from Ancient Writers illustrative of the History of Greek Sculpture. Macmillan. $2.25.
King, Dr. C. R. Life and Correspondence of Rufus King. Vol. II., 1795—1799. Putnams.
Knapp, Adeline. One Thousand Dollars a Day: Studies in Practical Economics. Boston: *Arena* Publishing Co
Labiche, E., and Martin, E. La Poudre aux Yeux. Maynard, Merrill & Co.
Macaulay, G. C. The Chronicles of Froissart. [Globe Edition.] Macmillan. $1.25.
Marryat, Capt. Japhet in Search of a Father. Macmillan. $1.25.
McLaughlin, J. M., and Veazie, G. A. The Advanced Fourth Music Reader. Boston: Ginn & Co. $1.05.
Meredith, George. The Tale of Chloe, etc. Ward, Lock & Bowden.
Milton, John. L'Allegro, and Other Poems. Boston: Houghton, Mifflin & Co. 15 cents.
Morrison, Arthur. Martin Hewitt, Investigator. Rand, McNally & Co. 25 cents.
Muir, M. M. P. Tables and Directions for the Qualitative Chemical Analysis of Moderately Complex Mixtures of Salts. Longmans, Green & Co. 50 cents.
Nernst, Prof. Walter. Theoretical Chemistry. Macmillan. $5.
Never! Social Handbook. G. W. Dillingham. 50 cents.
Nevius, Rev. J. L. Demon Possession and Allied Themes. F. H. Revell Co. $1 50.
Partridge, W. O. Technique of Sculpture. Boston: Ginn & Co. $1.10.
Phillips, Maurice. The Teaching of the Vedas. Longmans, Green & Co. $1.75.
Postgate, J. P. Corpus Poetarum Latinorum. Fasc. I. and II. London: Bell & Sons; New York: Macmillan.
Scott, Sir W. Anne of Geierstein. 2 vols. Fair Maid of Perth. 2 vols Woodstock. 2 vols. [International Edition.] Boston: Estes & Lauriat; New York: Bryan & Taylor Co.
Scudder, J. W. First Latin Reader. Boston: Allyn & Bacon. 90 cents.
Sephton, J. The Saga of King Olaf Tryggwason. London: Nutt: New York: Macmillan. $5.
Sheffield, Charles A. The History of Florence, Mass. Florence, Mass.: The Author. $2.50.
Sheldon, W. L. Story of the Life of Jesus for the Young, Told from an Ethical Standpoint. Philadelphia: S. B. Weston 50 cents.
Smollett, Tobias. Peregrine Pickle. 2 vols. Illustrated. London: Bell & Sons; New York: Macmillan. $2.
Smollett, Tobias. Roderick Random. Illustrated. London: Bell & Sons; New York: Macmillan. $1.
Solovyoff, V. S. A Modern Priestess of Isis. Longmans, Green & Co. $2
Sutton, Ada L. Lingua Gemmæ: A Cycle of Gems. Merriam Co. $1.50.
Tolman, W. H. Municipal Reform Movements. F. H. Revell Co. $1.
Vachell, H. A. Judge Ketchum's Romance. J. Selwin Tait & Sons. $1.
Viollet-Le-Duc, M. E. Rational Building. Macmillan. $3.00.
Waggaman, Prof. Samuel. A Compendium of Botanic Materia Medica. Revised and corrected ed. Washington: W. H. Lowdermilk & Co. $2.
We Three and Troddles. Philadelphia: Henry Altemus.
Wilkinson, Spenser. The Brain of the Navy. London: A. Constable & Co.
Wilson, V. Guide to the Yukon Gold Fields Seattle, Wash.: Calvert Co. 75 cents.
Wolcott, Miss Julia A. Song-Blossoms. Boston: *Arena* Publishing Co. $1.25.

The Nation.

NEW YORK, THURSDAY, MARCH 21, 1895.

The Week.

THE business outlook is improving. Even those trade journals which have been most pessimistic heretofore acknowledge this fact. Among the causes of the better condition, by far the most important is the assurance conveyed to the public, and now abundantly confirmed and universally believed on both sides of the water, that the gold standard is to be maintained. This has given confidence to the possessors of capital, which was the only thing needed to set the wheels of production revolving. The bond syndicate has done what it undertook to, and even more; it has thus far controlled the rate of sterling exchange so that gold could not be exported. It has done this in addition to the delivery, at regular intervals, of the gold which it contracted to supply to the Treasury. It is within the bounds of truth to say that no other group of men in the world could have accomplished this feat. The importance of it is beyond estimation, since it arrested a panic the consequences of which nobody can depict any more than he can tell how far a prairie fire will spread after it is once started. It is not to be supposed that these men have been meeting all demands for foreign exchange below the gold-shipping point since the 2d of February without cost to themselves, seeing that gold was going out before that date at the rate of $10,000,000 per week. Whether they make a profit or not at the end of their undertaking depends on circumstances. They have certainly deserved it, but they have not yet reached the end. The clamor of envious tongues has now nearly ceased, and has dwindled to a few objurgations about the tightness of money, which is attributed to the operations of the syndicate. If it were due to them it would be another title of honor, because tightness of money means employment of money, and is the surest sign of the betterment of trade.

An actual and bona-fide sale of American woollens has been made in Bradford, the great English centre of woollen manufacturing. This is said to have been the first shipment of American woollens ever made to Europe. In itself of no great moment, as the goods were only in a single line, the event has naturally made a great stir in woollen circles. The shipment was made by W. E. Derby & Co. of this city. In explanation a member of the firm says:

"As soon as a reduction of duties was effected on manufactures of wool, we commenced to investigate the matter of a possible exportation of domestic fabrics; we compared the foreign and domestic prices as they gradually approached each other, and the fabrication of the closely competing foreign and domestic fabrics, with the result that we discovered an opportunity to gain a foothold for American woollen goods in England, even though small. In endeavoring to make a place for these goods we found much prejudice existing against the use of stock which people there were not accustomed to, and found it necessary to sell the goods at lower prices than we could purchase similar goods of English manufacture for; at the same time we were selling at a profit. We in fact could not buy similar English fabrics at within 4 pence of what these American goods were sold at, but as soon as our line of goods becomes better known I have no doubt but that we shall be able to obtain from 3 to 4 pence per yard more than now."

There is something painfully un-American about this. The woollens did not even "follow the flag." They unpatriotically went on the *Teutonic*. No drum-beat, no guns, no powerful naval demonstration preceded and caused their shipment, but in the basest and most mercenary spirit they were sent over because they could be sold "at a profit." This is a distinct degradation of international trade from its holiest uses, and what is responsible for it? Another un-American thing, "a reduction of duties." At least, that is what the exporters say. But we shall not so far cater to universal scepticism as to credit this explanation. Too many innocent and trusting minds have been taught at their mothers' knees to believe that a reduction of duties meant a general dumping of goods on us, to make the suggestion that it really means our dumping the goods on other people seem anything but sacrilegious. We hope, however, that McKinley and the great wool-gatherer, Judge Lawrence, will make haste to advance a "new theology" of protectionism, into which these disturbing facts may be fitted without upsetting the precious faith of the little ones.

A Spanish war-ship on March 8 attempted to stop an American steamer six miles from the shore of Cuba. For this purpose it fired a blank charge across her bows. The American captain chose not to obey the signal. Thereupon the Spaniard gave chase and fired a shot at him, which fell a quarter of a mile short. As the American was steaming thirteen miles an hour and the Spaniard only eleven, the latter was soon dropped astern. These facts were well adapted to display by head-lines, of which the *Tribune* supplied fourteen, besides a picture of the steamer that was fired on. The *World* did much better, for it had a picture of both ships while the firing was going on, which showed a shell exploding within ten feet of the American ship—a fact which was not mentioned by the captain. It also had portraits of most of the officers of the steamship that was fired on. We tremble to think what Senator Lodge will say about it when his turn comes. He said the other day that Halifax threatened us. If that is true, what words will express his indignation at this Spanish assault upon our rights and dignity? Secretary Gresham has added to the other enormities of his career that of writing a despatch to the American minister at Madrid on the *Alliança* affair without letting the newspaper men know anything about it, thus luring them into the belief that he was doing nothing, or worse than nothing—that is, trying to find out the other side of the case, which is worse than nothing. Thus some of them "went off at half-cock," and are now subjects of laughter from a cynical age.

The energy displayed by the Governor of Colorado in bringing to justice the murderers of the Italians at Walsenburg is much to be commended, and is in glaring contrast with the proceedings in Louisiana in 1891 when the jail was broken into by a "respectable mob," and a number of prisoners brutally killed. In that case the Italian ambassador, after making a demand for the punishment of the murderers and reparation for the families of the victims which the secretary of state, Mr. Blaine, was unable to comply with, demanded his passports and withdrew. Regular diplomatic relations between Italy and the United States were suspended until some time later, when Mr. Blaine managed to save up enough money from the contingent fund of his department to satisfy the pecuniary claims. Nothing ever was done to bring the murderers to punishment. On the contrary, the leader was fêted and toasted at home as though he had deserved well of the republic, and a few years later he received similar honors in Boston, but not for that reason—probably the killing of the Italians had been forgotten. The promptness of the action taken in Colorado is perhaps due in large part to the steps taken by Italy after the New Orleans affair. It is not a pleasant thing to have one's country stigmatized as unfit for diplomatic relations by reason of the lawless character of its inhabitants and the inability of its Government to protect the lives of foreigners who have a right to be here. We shall hope to see the efforts of Gov. McIntire crowned with success.

New Orleans has at last some lawlessness of which she appears to be ashamed, and which, though several days late, she means to put down. The striking 'longshoremen have but taken a leaf out of the book of the "first citizens" who, only four years ago, got their rifles and massacred the Italians. What wonder that the strikers should have accepted powder and ball as the proper New Orleans method of arguing? Is a negro any better than a "Dago"? Let ten-dollars-

a-day arbitrators say that the strikers were too hasty, that they should have appealed to arbitration; the fact remains that the 'longshoremen thought as straight as they shot. Those negroes were doing *their* work, drawing *their* wages, taking the bread from *their* wives and children. Can you parley with robbers? No; the thing to do is, as Parkerson told the mob that massacred the Italians, "Get your guns." This the 'longshoremen did, and thereby showed an admirable perception of the conclusions to which the modern doctrine of the rights of labor directly leads.

The shocking riot in the Indiana Legislature in which so many persons were hurt and the ribs of the Governor's secretary broken, was a regular football attempt to "tackle him low," so as to prevent his reaching the Speaker with a bill, and a distinguished football player really won fresh honors in the mêlée. The row arose over a bill intended to substitute a Republican for a Democrat as custodian of the State-house. The Republican majority passed the bill, but the Democratic Governor held it till the last moment so that when he vetoed it the Legislature could not pass it over his veto. The object of the Republicans, therefore, was to prevent the veto reaching the Speaker before adjournment, and for this purpose they bucked and tackled the Democrats. So many Republicans were, however, injured in the fray, that he finally got to the Speaker's chair, with a bleeding face, a broken rib, and a lacerated diaphragm. It is said the parties are all ashamed of the scrimmage now, and well they may be, but they would do it again. The affair is one more contribution to the mass of scandal which, all over the country, is discrediting representative government.

The point in the matter, however, which most deserves attention is that the row arose over a small office, and that probably nothing else in the world could have caused it. Neither war, currency, taxation, prohibition, nor any other subject likely to engage the attention of the Legislature, or lying within its jurisdiction, could possibly have led to such a scene. Concerning such matters most politicians nowadays are comparatively lukewarm. They do not give them very serious consideration. They do not become excited about them. The thing which most occupies their minds in all political contests is the offices which are likely to be at their disposal in case they win an election. The thing which most exasperates them when they lose one is the seizure of the offices by the other fellows. When this city was throbbing last fall with horror over the revelations of the Lexow committee, and vowing before high heaven that this great shame should cease, what the political men were thinking of was the number of offices the shame would probably give them, and the persons who would probably get them. Lauterbach went to work promptly, not to draft reform bills and bring criminals to justice, but to make out his "list," and Platt got the Legislature together to consider how many offices the mayor ought to give in payment of a reasonable amount of reform.

Another week has passed at Albany, making ten since the session began, and the various municipal reform bills have made no progress. The city-magistrates bill, the public-school bill, the real-estate sales bill have not advanced a particle from the positions which they occupied a week ago. They are all "hung up" under Platt's orders, and they will be kept so until the Platt men are frightened into taking them down. The chairmen of all the committees, especially those on cities and the judiciary, in both houses, are such servile Platt agents that it is impossible to reach them by ordinary powers of persuasion. Nothing less than a mass-meeting moves them, and then they respond as slightly as they think to be safe. It is necessary that the people, and especially the Republicans of the State, should realize the importance of exerting themselves to bring pressure upon these enemies of the public welfare. If this Legislature fails to keep the pledges upon which its Republican members were elected, it will be a long time before Republican promises of reform will be able to attract independent votes again in this State, and without that support the Republicans cannot hope to win. Then, too, the whole country is watching the struggle here, and if reform be defeated the effect upon national Republican prospects cannot fail to be disastrous.

The presentment of the special grand jury against the Police Department, accompanied by the indictment of eleven police officials, is another demand upon the Legislature for a thorough reorganization of that department. It emphasizes the popular verdict upon the revelations of the Lexow committee as expressed at the polls in November. It justifies and approves the work of the Committee of Seventy, both in the late election and in the preparation of measures of police reform since election. The voice of the city has been heard many times now. It spoke first in the election. It spoke again in the Cooper Union mass-meeting. It spoke again in the Chamber of Commerce meeting. It has spoken repeatedly through the Committee of Seventy, through the various reform organizations, and through other bodies of its leading citizens like the Union League Club. The special grand jury, like the Committee of Seventy, is a representative body of citizens, but it speaks for the city with even greater force, for it acts under legal restrictions and auspices which give its words especial solemnity and weight. Even Lexow cannot denounce it as a "gang of reformers" merely.

The decision rendered by the Supreme Court of Illinois last week against the constitutionality of a recent eight-hour law of that State is essentially a declaration in favor of the right of free contract. The law provided that "no female shall be employed in any factory or workshop more than eight hours in any one day, or forty-eight hours in any one week." It was one of Gov. Altgeld's pet measures. The court holds that women and men are on the same footing as regards contracts regulating their labor and hours of work; that the restriction made by the law is in conflict with the provision of the State Constitution that "no person shall be deprived of life, liberty, or property without due process of law," the right to labor or employ labor and to make contracts being included in this provision; the section which forbids women to work more than eight hours a day in a manufacturing establishment, while permitting them to work as many hours as they see fit at other occupations, is declared to be an unconstitutional discrimination. The court holds that the Legislature has no power to substitute its own judgment for the judgment of an employer and employee in a matter about which the latter are competent to reach an agreement, and it will not accept the plea that the provision quoted is a sanitary provision, and therefore justifiable as an exercise of the police authority of the State. This power the court does not think can be invoked to prevent injury to an individual in a particular calling. The object of this law was to protect women from the exactions of "sweat shops."

Dr. Coan, in his comments the other day upon Mr. Shearman's arraignment of the Missionaries' Sons in Hawaii, spoke of his "strange sensations" in hearing in this country attacks on missionaries which in Hawaii used to be heard only from the rabble. But his strange sensations can be nothing to those of the Hawaiians themselves. For years they had been referred to as the crowning glory of missionary enterprise, and their praise was in all the churches. What solemn rejoicing there was when the American Board announced that the Hawaiians were all Christians, that they needed no more missionaries, that they would maintain their own churches—not only that, but would themselves send missionaries to other Pacific islands. Read the accounts of the Hawaiians given by Dr. Coan's own father, that heroic and gentle pioneer. While not concealing their weaknesses, he had warm words for their simplicity, their kindliness, their love for their native rulers, and their patriotic pride. If it is a question of "strange sensations," what ones could be stranger than those of these simple-mind-

ed natives as they read the abuse and slander poured out upon them by the American Board's agent in the islands, and by the pious clergyman, the Rev. Sereno E. Bishop, who a little while ago was praising and accepting favors from the very Queen that he has lately been charging with nameless vices. A good deal of this holy slander was reproduced with much effect in Senator Pettigrew's speech against annexation, and makes an edifying contrast to what the churches and Missionaries' Sons were all saying of the Hawaiians until the time came to rob them of land and flag.

The *Tribune* has addressed words of wisdom and solemn warning to Japan, which the rulers of that aspiring country will do well to heed. It takes occasion to point out that the acquisition of Chinese provinces, as a result of the war, would entail great embarrassments and expense upon the Japanese. Before rashly going ahead, it warns them to think of the large standing army they would have to maintain, of the fortresses and naval stations they would have to establish, and, particularly, of the loss of the great advantage they now enjoy of being free from foreign entanglements. In the same number of the *Tribune* a weighty protest is addressed to the French Government against squandering any more money in Madagascar. The present expedition is likely to cost $25,000,000, and French taxpayers would rather have less glory and colonial expansion and more hard cash in their pockets. This is good traditional American doctrine, but we fear the cynical Japanese and French will look upon it very much as they would on an offer of cast-off clothing. Such faithful readers of the *Tribune* as they are, know well that it considers the true national policy to be one of universal grabbing and absorption; naval stations and strategic islands and focal points and "keys" to be added every day. And how, then, has it the face to preach economy and caution and peaceful methods to the Japanese just as they are getting into position to do some grabbing themselves?

The "man on horseback" is always just around the corner in Spain, and when debts grow onerous, when political factions get by the ears, when civil order is threatened, he is the man to whom society turns as its saviour. Castelar's republic was upset and the Cortes dispersed by the Captain-General of Madrid in 1873, and now Castelar's newspaper is sacked by a lot of young lieutenants, who, instead of being punished, become at once the heroes of the hour and start a popular cry for a soldier at the head of the government. Gen. Martinez Campos made a good part of his reputation in putting down the former Cuban rebellion, and the critical state of affairs in the island may now have much to do with the demand for his accession to the premiership. But the appeal to him marks also a new stage in the disgust of Spaniards with the working of representative institutions as they have enjoyed them since the revolution of 1868. A civilian government they have found to mean a succession of factional chiefs, with the taxes ever growing and national bankruptcy ever nearer. The Constitution guarantees freedom of the press, but what do the young Hotspurs care for that, if the newspapers criticise them? Their first thought was to challenge all the editors, but finally they concluded to go and smash all the presses and office furniture and "stop the paper" in that effective way. The result has amply justified them, as the ministry was too cowardly to punish them, "adhesions" by telegraph came from all parts of the country, and the Government promptly resigned.

Indifference of the electors is urged by some French writers as a chief cause of the creaking and groaning of the machine of representative government in their country. They point to the recent municipal election of Marseilles, in which, out of 81,874 registered voters, but 17,848 took the trouble to go to the polls—this, though the cry that the Philistines, in the shape of the Socialists, were upon the city had been raised with great justification. A similar abstention of voters was noticeable in two elections lately held to fill vacancies in the Chamber: in one Paris arrondissement, and in the election of the late M. Burdeau's successor from Lyons, less than a quarter of the registered vote was cast. "If things go on in this way," says M. Paul Laffitte, who discusses the matter in the *Revue Bleue*, "municipal councillors chosen by one-fifth of the population will control one of the first cities of France, and Deputies elected by one-fourth of the voters will rule the country." Another writer analyzes the votes by which the present Chamber was elected, and asserts that three out of five voters took no part in its choice. The favorite remedy for the evil is that idle or suicidal one sometimes proposed in this country—compulsory voting. There is no chance, however, that it will be adopted in France any sooner than in this country, or that citizens there will be led to take an interest in politics from any motives but those which rule in every land of free suffrage, namely, political ambition or public spirit or self-interest or self-defence.

Mr. James Bryce has introduced a bill in the House of Commons authorizing the Board of Trade to inquire into the cause of labor disputes, to invite arbitration of them, to appoint the arbitrators, and to send for persons and papers and administer oaths in arbitration proceedings. That any such scheme will be more effective in England than here we doubt very much. The central difficulty is that if the decision be against labor, the employer will not get any labor at all, or get only discontented labor, and he will vastly prefer fighting his quarrel out until labor surrenders at discretion, or until he comes to an amicable agreement with it of his own motion, or until he is able to fill the places of the strikers with new persons eager for work. No plan for making defeated labor go back to work contentedly has yet been hit upon. They have sought to solve the problem in some of the Australian colonies by incorporating the trades unions, so that they could make contracts and be responsible in damages for breaches. But the responsibility in damages will be useful only when they have money in their treasury, and if they saw a case going against them, they would probably make away with it. In short, there is no way of getting around the fact that the root of the labor trouble is the low state of morality among the laborers, and in this world you must have either character or money to pull you through.

Whatever may be the decision of the German Government, under stress of political weather, in regard to letting loose a new flood of international palaver on silver, it is clear that the business sense of the empire is dead against any change in the monetary standard. On February 22, but a few days after the Chancellor had thrown his sop to the agrarians in the Reichstag, the German Board of Trade (*Handelstag*) took up the matter. There were present representatives of 104 different commercial and industrial associations, from all the leading trade centres, and without a dissenting vote the following resolution was adopted:

> "The German Board of Trade stands by its declaration voted in full meeting on March 12, 1886, that the German gold standard ought not to be interfered with; such interference should be looked upon as a deadly blow at the entire commercial life of the German Empire, and against it too loud and emphatic protests cannot be made."

The president was also authorized to call a special meeting of the board to take further and more urgent action if it should appear necessary. Writing of the significance of these proceedings, in the Berlin *Nation* of March 2, Ludwig Bamberger took the view that the attitude of the German merchants would make the Government give up the conference altogether. The latest despatches, however, seem to show that Hohenlohe is being pushed ahead by the council of state, and that a conference will be called. Opinions will differ as to the wisdom of such a course. That silver will emerge from any such conference more maltreated and outraged than ever is certain. Stewart is perfectly right about this. Meanwhile, from the silver standpoint, much precious time will be lost. Thousands of new mortgages will be executed by Stewart and others containing the deadly gold clause, and the business world will have time to intrench itself still more impregnably on the gold standard.

CONGRESS AND THE CONSTITUTION.

It would be difficult to overestimate the gravity of the discussion which has been going on before the Supreme Court in Washington on the income tax. The position taken on behalf of the tax by Mr. Olney and Mr. Carter is that Congress is the great depositary of the rights and privileges of the people; that Congress might not, it is true, exercise the taxing power arbitrarily, as, for instance, by taxing bald-headed men, but it might tax the rich because they were rich, for the benefit of the poor, and classify the population in any way it pleased for the purposes of taxation, and is the sole judge whether taxes are direct or indirect, uniform or not. Mr. Olney was equally emphatic in declaring that Congress could not make a mistake in declaring what public policy required in the matter of imposing burdens on some portions of the community from which others were exempt. "On that point Congress was the sole and final authority," and its decision, once made, was binding on all other departments of the Government. The court has already decided, too, that it may go further than this, and give a name to a tax, for administrative purposes, which will take it out of constitutional prohibitions, without reference to the facts—call it indirect, for instance, when it is direct, or uniform when it is discriminating; that is, has complete powers of nomenclature—dictionaries and popular usage notwithstanding. The court has also decided that, in the matter of currency, Congress may give the name of "money" to anything it pleases; that it may decree the circulation as legal tender of irredeemable paper as well as coin, and, presumably, authorize a man to pay his debts in any material it may choose to designate for the purpose. Congress has also, with the sanction of the court, taken away the benefit of the writ of habeas corpus from large bodies of unoffending persons who may be accused of having come here as "contract laborers," and denied to the courts the power of passing on the facts of their case, and enabled a subordinate officer of the Government to keep them in confinement for a practically unlimited period.

All this is done or permitted under the rule that Congress is supreme judge of what the "policy" of the nation ought to be. Ever since the war, the decisions of the Supreme Court have been steadily extending the range of this power of deciding what our policy ought to be. The only restrictions it has attempted to place on congressional powers of legislation have been in the deliverance of the States from some of the encroachments on their police powers which sprang up in the reconstruction period. Should the powers now claimed for it in the matter of taxation be added to the powers already secured in the matter of currency, it will have firm and unrestricted hold of the chief interests of the individual—of those which most nearly concern his happiness and prosperity. Unrestricted power of taxation is the greatest power over accumulated wealth, manufactures, industry, and personal freedom which any government can have; for liberty, as Hampden found out, cannot be worth much to a man who may be taxed in any way some other man pleases. If, in fact, the Supreme Court should sustain the income tax on the grounds set out in Mr. Carter's and Mr. Olney's briefs, Congress will stand practically in the position of the British Parliament, without the mass of customs and traditions which keep Parliament in check, and the Constitution will be mainly interesting as a somewhat obscure but venerable record of eighteenth-century political philosophy. Legislative power on any matter of great importance it will not have.

Whether this will be a good or bad state of things will depend on the kind of Congress we shall have. During the past hundred years our great boast has been that we had, by means of a written constitution, discovered at last the means of protecting liberty and property against the excesses and passions of democratic legislatures, and especially against the attacks on property of the poor, the greedy, and unscrupulous. In fact, it is largely on this ground that the Constitution was recommended for general adoption. For such a constitution the propertied and saving classes all over Europe are sighing to-day as they tremble before the advances of a fanatical socialistic democracy. We have on this account, we venture to say, more than on any other, excited the envy of all other nations. The Congresses we have had ever since the war, or at all events ever since 1870, have done a good deal to justify this envy to ourselves. When we recall their dealings with the two great questions of the tariff and the currency within that period, the idea of releasing our politicians from all restraints in deciding on policy might well alarm even the bravest of us. The idea that this last one, which has just dispersed, could have a "policy" of any kind, will excite the merriment of any one familiar with its members and their work.

Of course it may be said that, after all, Congress is the product of the popular vote, and to say that its errors cannot be corrected by the popular vote is to deny the fitness of democracy for the work of government. This is true of a united population which in its politics seeks only the general good by different methods. It is not true of a population in which class has been set against class, and the man who has saved and accumulated is marked out as a proper subject of taxation for the benefit of everybody who, *for any reason*, has less than he has. Nothing more certain to bring constitutional government to ruin than this idea working among a voting population, most of whom are poor, could be devised.

ECONOMIC FICTION.

Apropos of the discussion over the income tax, it is worthy of note that nearly every argument in its favor is based on the assumption that Congress is somewhat in the position of a benevolent and extremely wise despot, who is seriously occupied with the problem of making taxation equable and just, of making every man pay according to his ability, and no more. In fact, all rules of taxation framed by economists, including Adam Smith's famous rules, rest on the same theory. They all presuppose governments to desire just taxation, and to be anxious to receive light from the thinkers and economists as to what just taxation is. There has probably never been any age of the world in which theories of taxation were so much discussed by economists and sociologists, in which these gentlemen wrote so many books, and in which there were so many chairs in colleges devoted to instruction in the science of society, as the present one. Everything, or nearly everything, they say, however, has reference to what may be called an ideal world—that is, a world in which highly instructed men hold the reins of power, in which the observations of philosophers on social phenomena are carefully considered, and as far as possible embodied in legislation.

This view of the powers that be has been carried into the Supreme Court in the present arguments on the income tax, and has been already embodied by the Supreme Court itself in several decisions. Congress, according to these decisions, has a "public policy," based, as "public policy" should always be, on careful consideration of the national history, character, and manners, and tendencies, and of the national resources, checked and widened by the experience of the human race in other ages and countries. But if all other species of literature were to be lost, and we were to be known to posterity only through our books and lectures on taxation, political economy, and the science of government, we doubt if our descendants would get from them any idea of the kind of governments we really lived under. "Surely," they would say, "these ancients cannot have discharged all this wisdom into the desert air. There must have been legislators in all countries who gave ear to these treatises, and who sought to embody in their acts these remarkable fruits of philosophic research and meditation." What would be their astonishment, however, to find that this class had very little influence on legislation, and, in fact, that this influence diminished as institutions became more democratic, and as the cultivation of political science in the colleges and in literature increased.

The truth is, that our economists and professors are in this matter living in a fool's paradise. The government of the world has passed, or is passing rapidly, into the hands of men who know them not, or, if they know them, contemn

them. The "State" which they are saddling with so much responsibility, does not exist and probably never will exist. Their theories of taxation and their analyses of taxation with which they load their magazines, are looked on by the rulers of the world as so much idle speculation. They get but a contemptuous hearing in most legislative committee rooms. We have heard from a financier who went on to Washington to discuss with the committee of Congress the conditions of the late loan, that he found his audience so ignorant of the principles of finance and exchange, and so suspicious of him as a capitalist, that he forebore to say anything. The same thing would be true at Albany. The best minds in this city have been at work on reformatory bills, but they found their labors rejected with scorn by farmers and small lawyers. Loudly as our system of State taxation calls for reform, it has been found impossible in thirty years to secure any legislative attention to any new scheme framed by competent hands.

The lesson of all this is, not that we must sit down and despair of mankind, but that we should oppose every attempt to add to the powers of Government, and to enable simple majorities to get at people's property. If democracy should perish as previous systems have perished, it will probably be through attempting too much; and yet the tendency in that direction is very strong, and it is encouraged by many of the educated and wealthy class with a sort of suicidal *insouciance*. Take the assertion that the rich may fairly be set apart for heavy taxation for the benefit of the poor, which is at the bottom of the progressive income tax and the inheritance tax. All the economists who have advocated these have done so on a theory, probably hardly ever thoroughly thought out, that there was somewhere, above both rich and poor, some sort of earthly Providence who would see that the rich paid no more than they could bear, and did not pay enough to make them emigrate, or to weaken among young men the desire to accumulate, or, in other words, that the tax was just and scientific. If one of them had been asked, Would you think it just and expedient that the poor should decide how much the rich ought to pay, and treat the rich as a class apart, whose liabilities should be measured by the desire of the poor to be rich themselves?—he would undoubtedly answer that he never dreamed of such a thing; that class government was odious to him, and that he knew as well as any one the danger of driving the rich away by overtaxation. But there is no such power. The State is not an earthly Providence. The poor now hold the Government in most constitutional states, and the political motive which is most powerful among them is to make the rich pay as much as possible of the public expenses. They measure the rich man's fortune by the amount he has to spend, and they refuse to consider the general effect on industrial activity, and the desire to accumulate, of serious interference with his spending.

What most occupies the minds of the masses in all countries to-day is the possibility of a new mode of distributing wealth. The socialistic section wishes to seize all the means of production—land, mines, factories, and stock—or, in other words, rob the rich on a great scale. The less advanced section wishes simply to get at them by heavy taxation, and principally through direct taxes like the income tax, so as to make it less pleasant to be rich, to discourage the heaping up of wealth. It wishes, in other words, to destroy or greatly weaken the motive of nearly all our industrial activity, of nearly all efforts to "get on" in the world on the part of every class above the manual laborer, though this is the motive to which we owe nine-tenths of the material progress of the country during the past century. In fact, the socialistic agitation of the last few years has carried men's thoughts strongly towards schemes of more or less disguised spoliation, and away from the cultivation of character and frugality as commercial factors.

The main objection to our income tax is that it fosters these tendencies. It furnishes one class of the community (*i. e.*, the people who have not succeeded in securing four thousand a year) with legal machinery for charging another class (*i. e.*, those who have secured more than four thousand a year) with a large proportion of their own liabilities. It relieves all this first class, which is the more numerous, of the payment of a certain sum of money, and makes the members of the second class pay it. And it gets the help of a host of jurists and economists in spreading the fiction that this arrangement has been ordered after mature consideration and with a hearty desire to do what is exactly right and just, by a very wise body called Congress, which decides nothing without taking the interests of all classes into account. There has probably never been such ignoring of the facts of life as in this discussion.

INCOME TAXES IN 1787.

THE printed briefs and arguments in the income-tax case will be read with great interest. They will make, when bound, two large volumes. Those offered by Mr. Seward, and bearing exclusively on the inquiry whether or not, in 1787 and thereabouts, income taxes were used by the States of the Confederation, or afterwards by the States in Union, are intensely interesting in historical and economic aspects. The assemblage of so many controlling historic facts could have been made only by painstaking and enterprising search in the now excellent libraries of many historical societies. The learned monograph by Prof. Max West of the University of Chicago, on the teachings by political economists in regard to a definition of direct taxes, which the lawyers honored by presentation to the court in one of the contesting briefs, is an illumination for students.

The contestants of the income-tax law asserted that the tax is a "direct tax," and that the law imposing it is void because the tax is not apportioned between the several States upon the basis of the census; and if the tax be an "excise," it is void because not "uniform" throughout the United States. The attorney-general does not seem to have relied much on *stare decisis*, which, in lawyers' lingo, means that a previous decision of the court is to control when the same question is again presented. He merely said this: "If your Honors find this tax to be a direct tax, you can only do so by overruling five of the decisions heretofore given by this court." Alluding to the five decisions, Mr. Carter said in his brief: "To attempt at this late day to revise and reverse this unanimity of opinion, without the aid of new *historical* light, would be an extreme folly." That implied clearly that, in the opinion of the Government, *stare decisis* ought not to prevail against new historical facts showing that in 1787 "direct taxes" were generally understood to include income taxes. Mr. Carter distinctly conceded that, by these sentences in his brief:

> "It should be remembered that at that time *what is now understood by an income tax was unknown*. . . . The true inquiry is: What did those who adopted the Constitution mean? If there was at that time a clear, distinct, and well-known sense in which the term was used, the inference is very strong that such is its meaning in the particular case, unless there is something in the context pointing to a different signification. But if there was then no well-known and accepted meaning of the term, we must look altogether to the context and the surrounding circumstances for a right interpretation."

The attorney-general also conceded that the meaning of "direct taxes" is to be ascertained by traversing the historic route, for he said:

> "The legal definition of direct taxes in the Constitution is in truth not a scientific, but an historic one. The distinction made between direct taxes on the one hand and duties, imposts, and excises on the other formed part of one of the most famous compromises of the Constitutional Convention. By direct taxes the delegates meant certain taxes, and no other. They meant poll taxes and taxes on real property. This definition was fully explained by the Supreme Court in Hylton vs. United States."

Hylton's case was the "carriage case" decided in 1796.

Mr. Seward, and they who denounced the constitutionality of the odious income tax of 1894, insisted that the definition of "direct taxes" made by the court in four of the cited cases—the substituting of "land" for "direct" in the critical phrase—was a servile following of an uninformed definition in the first case of the five, which was the "carriage case"; that the definition was not based on evidence tending to show the sense in which the words were used by those who framed or adopted the Constitution, and

that even five such opinions are not to be considered as controlling, if new evidence shall be presented which conclusively establishes that the conclusions reached in the antecedent cases were erroneous. Courts, it was said, habitually reverse former decisions when new facts show that such former decisions were not well founded. Mr. Seward's brief exhibits what the opponents of the tax claimed were historic facts not presented to the court in any of the five cases. Some of the facts were, perhaps, not accessible when the "carriage tax" was decided. Certainly they were not obtained and used in the Springer case, argued by Mr. Springer, as Mr. Choate cynically remarked.

The facts are really new, in an historic sense, even to historians, and are so important generally that we shall endeavor to give very concisely the substance of them as presented by Mr. Seward. Under the Confederation, requisitions upon the States were, as every one knows, met by their own systems of taxation. Taxes were imposed by all the States upon land, polls, and specifically enumerated articles of property, including carriages. The requisitions were also met by a tax upon incomes. Vermont, by a law passed in 1779, rated certain classes of citizens in the lists proportionable to their gains and returns. Massachusetts, by the laws of 1706, 1738, and 1777, imposed a tax on "incomes from any profession, faculty, handicraft, trade, or employment," and the act of 1777 was continued by the Constitution of that State. An income tax is now imposed by Massachusetts in accordance with these laws, and has been so imposed since 1706. Connecticut, by a law passed in 1769, provided that all trades, tradesmen, and artificers should be rated proportionably to their gains and returns. Pennsylvania, in order to comply with a federal requisition, passed an act in 1782 by which all offices and positions of profit, trades, occupations, and professions were to be rated at the discretion of the assessors, having due regard to the profits arising from them. In Delaware a rule was established by the assessors and confirmed by long usage, to assess all persons at one-fifth part of their annual income. In New Jersey all artificers and persons in places of profit were made liable to an assessment for the same, according to the discretion of the assessors. In Virginia a tax was levied on lands and houses in towns of five-sixths of one per cent. of the ascertained or estimated yearly income arising from that species of property. In South Carolina a tax was imposed in 1701 upon estates, goods, merchandise, stocks, abilities, offices and places of profit of whatever kind or nature soever.

All of these taxes, whether upon lands, polls, or income, were proved to the court, by the debates in the conventions of the several States called to ratify the Constitution, to have been named and identified in each one of the States as "direct taxes" and to have been paid by the people, under the name of "direct taxes," for the joint support of their several States and of the federal Government. No other name was given at the time of the adoption of the Constitution, nor has any other name ever since been given to such taxes so paid by the States. The debates in the State conventions which were offered in evidence seem to us to prove that the delegates understood the difference between "direct taxes" and "indirect taxes," and acted, in the formation of the Constitution and in the provisions for the protection of the several States incorporated therein, upon the accepted definition of such terms. These State conventions, as well as the Philadelphia convention, drew a line of distinction between such direct taxes as they were then paying for the support of the general Government, including therein a tax upon income, and indirect taxes, such as excises, duties, and imposts.

These were the new facts which were brought before the court for the first time in the present cases. They show that Mr. Carter was mistaken when he said that, at the date of the adoption of the Constitution (1787), what is now understood by an income tax was "unknown." They also show, and precisely as Mr. Carter required, that "there was at that time a clear, distinct, and well-known sense in which the term [direct taxes] was used." If this be so, then Mr. Carter's further statement that "the inference is very strong that such was its meaning in the particular case," was correct, and was justified by the new evidence, and, therefore, the words "direct taxes" as used in the Constitution did include a tax on income in the understanding of those who inserted that phrase and who were at the time paying such a tax for the support of the federal Government.

It further appears from the new evidence that Chief Justice Marshall, when a delegate to the Virginia convention, said: "The objects of direct taxes are well understood. They are but few. What are they? Lands, slaves, stock of all kinds, and a few other articles of domestic property." He was speaking for the State of Virginia and of such taxes as were then imposed by that State. The "few other articles of domestic property" specified by him included a tax on carriages, under the then law of the State of Virginia. Mr. Madison concurred in the judgment that a tax on carriages was a direct tax within the meaning of the Constitution. It is quite evident, therefore, that if Mr. Marshall had been chief justice at the time of the decision in the "carriage case," he would not have concurred in the opinion of the court that the tax on carriages involved in that case was not a direct tax, but was an indirect duty.

"LABOR" VS. WORK AND WAGES.

LEGISLATIVE "hearings" are seldom scenes to which a wise man would resort in the hope of hearing wholesome truth set forth without fear or favor; but the hearing granted week before last by the committee on mercantile affairs of the Massachusetts Legislature was an occasion at which anybody but a legislator might have profited. The committee was about to go South to investigate the question of the competition between Southern cotton-mills and those of New England, and first invited some of the leading cotton-manufacturers of the State to present their views of the question. Such well-known men as Mr. Jefferson Coolidge, W. C. Lovering, A. A. Lawrence, and Joseph Healey appeared before the committee, and their remarks discovered a most extraordinary state of things.

The first point these manufacturers set forth with convincing evidence was the fact that their industry remains in New England at all only on sufferance. It is away from the raw material. It is away from a cheap coal-supply. It has to employ high-priced labor. On its side is the advantage of skill and experience, but these the Southerners are rapidly acquiring, and adding to their natural advantages for the manufacture of cotton. Within the past two years Massachusetts increased her spindles absolutely less, and comparatively much less, than the four Southern States which have taken up cotton-spinning. In the South new mills are building every day, while not one is building in New England.

Thus the natural tendency clearly is for the cotton industry of Massachusetts to go ultimately where her rolling-mills have gone, where her locomotive-works have gone, where her furniture-factories have gone, and where her shoe-manufacturing shows signs of going—"to seek the base of supplies," as Mr. Lovering said. Mr. Coolidge spoke with emphasis on the question of coal-supply. In the South, coal can be had for eighty cents to $1.50 a ton. "In Lowell the same coal will cost from $3.50 to $4.50." In his mill the item of coal alone meant an extra cost, as compared with the South, of $60,000 a year. This shows how true a representative of his section that New England Senator was—it was Senator Hoar, we believe—who said in the tariff debate that no New England manufacturer had asked for free coal. The Southern cost of labor is, according to Mr. Coolidge, 30 per cent. less than that in Massachusetts, and the mills are run from an hour to an hour and a half longer each day.

Now, with this fatal handicap laid upon Massachusetts cotton-mills, with the almost absolute certainty that they must ultimately go South in spite of everything, what would it be expected that the policy of the State would be towards them? Would not one say that the Legislature of Massachusetts, the stronghold of protec-

tion, the sacred seat of the Home Market Club, would surely do everything in its power to retain the industry, to refrain from assaults upon the $130,000,000 of capital invested in it, and to throw every make-weight into the scale in order to withstand the natural tendency as long as possible? But what are the facts? It has, in the first place, laid a great burden of direct taxation upon the mills. Mr. Coolidge said that a Massachusetts mill that had to pay $90,000 a year in taxes would, under English rates, pay no more than $30,000 to $40,000, while in the South it would not be taxed at all. But, worse than this, it has year after year pursued and pestered the manufacturers with "labor" legislation, until, as Mr. Lovering said, "No sooner does the Legislature assemble than a tremor runs through our business community—a fear lest some act will be done that will threaten the existence of our industries, or further impair the extremely small margin upon which they are carried on." Mr. Coolidge affirmed that the trades-unions and the bills "gotten up by some man who is mostly concerned with some fancy to do good to mankind," had already forced him to sell goods at a loss, and that it was simply a question of getting some relief or going South. Mr. Healey was blunt enough, and said: "I will tell you frankly when I was present and looking at the House of Representatives in this capitol, one would have thought it was the headquarters of the labor unions." He was told that the South's turn for labor legislation would soon come, and that then matters would be evened up; but what comfort was that to him if in the meantime he was ruined?

As a matter of fact, a Southern Legislature, that of North Carolina, was, almost at the same time, displaying a business sense that ought to make the Massachusetts Representatives blush for their Yankee 'cuteness. At Raleigh, as at Boston, "labor" was on hand with its bills for regulating the cotton-mills. But the whole batch of them was tabled as fast as they came up, and no more philanthropic reasons were given for this action than "the argument that any legislative 'monkeying' with the present condition of cotton-mill labor in this section would check the Southern movement in cotton-manufacturing, and cause many Northern investors who now contemplate putting money into Southern cotton-mill property to seek other fields for the safe and profitable investment of their capital."

The whole affair is an extreme but characteristic illustration of the idea that has got into so many heads that it is possible to legislate for "labor" without affecting work and wages. A "committee on labor" is about the deadliest enemy industry has to encounter. Suppose the Department of Labor were called the Department of Work; does not everybody see that all the glamour would be gone? "Labor" is not really concerned about work, about steady employment and regular wages, but about certain dignities and privileges, about certain crampings and hamperings of capital. It is not often, however, that the folly and fatuity of it are so patent as in this Massachusetts experience. The greatest folly of all is to suppose, as the sapient men at Boston did, that if North Carolina would only vex and oppress the manufacturers, then they could be kept in Massachusetts. Persecuted in one State, the manufacturers will undoubtedly flee to another; but persecuted in all States, they will simply cease to be manufacturers. Before confiscation in the name of "labor" arrives, there will be nothing to confiscate.

Correspondence.

THE ONLY POINT OF ATTACK.

To the Editor of The Nation:

Sir: In an editorial of the 14th inst. you pointed out in the strongest terms the danger of the reckless way in which Congress squanders the public money, and that the true cause lies in the anarchy, the want of cohesion and discipline, of that body. You then remark: "A thorough-going remedy it is idle to hope for. Other civilized governments themselves take exclusive charge of revenue and appropriation bills. To suggest that at Washington would have no more effect than an east wind blowing over the capitol."

But Washington is not the only place in the country. If civil-service reform had been left to the initiative of Congress, the Greek kalends might have passed before the first step was taken. What was accomplished was reached by popular agitation through the country. And the new issue is infinitely more important, because it covers the whole conduct of government, including civil-service reform just as much as the finances.

It is beginning to dawn upon the public mind that the tap-root of our difficulties lies in the usurped supremacy of Congress—as well as the State legislatures—in every department of government, executive, legislative, and judicial. The problem is to make the Legislature let go its hold and consent to restore the balance—first of executive power, in which stands first of all "exclusive charge of revenue and appropriation bills." This means war to the knife; a fight as bitter, though not as bloody, as that with slavery itself. It must be admitted, too, that the fight is against tremendous odds. The executive consists of one man, while Congress includes 450, all ready to pounce as one man upon the luckless individual who, in defence of the rights of his office on behalf of the public interest, shall dare to expose himself to the charge of personal ambition.

But there is no other road. This fact is well illustrated by the palpable inadequacy of the expedient which you suggest as a substitute because it appears to be more practicable of attainment. It fails because it seeks to evade the real issue—the overwhelming predominance of Congress—which is the keynote of the whole struggle.

There is this strong point on the other side, that popular enthusiasm always gravitates towards personality, and only needs the right kind to bring it out in irresistible force. I believe there is gathering in the public mind a mass of seething if silent indignation, which, like the electricity in a thunder-cloud, waits only for a lightning-rod or a tree-top to draw it forth. Mr. Cleveland's bond sale did more to put the question into concrete shape than anything since the war. Can it be possible that he will have the insight, the courage, and the patriotism to go steadily forward in the same path? May God grant it! G. B.

Boston, March 16, 1895.

THE INCOME TAX.

To the Editor of The Nation:

Sir: I have read the arguments before the United States Supreme Court on the question of the constitutionality of the income tax as reported in my newspaper. Mr. Choate's position is, that a tax on the income from land is a tax on the land itself, and therefore a direct tax, which, under article i., section 2, of the Constitution, must be laid according to numbers. But this objection would invalidate the act only *pro tanto*—in respect only to incomes arising from land. It strikes me that the true ground is that the tax is virtually a capitation tax, which is forbidden unless laid in proportionate numbers (article i., section 9).

Now, there can be but two kinds of tax in respect to the *subject* of taxation—a tax on persons and a tax on things. A tax on things belongs to one or other of these two heads: (1) Imports, synonymous (see Worcester) with customs, and Duties on Imports; or (2) Excises, which (I quote from Walker's 'American Law,' a standard authority) "are impositions exacted upon the manufacture, retail, or consumption of commodities." Thus imports, customs, duties, embrace things imported from abroad, and excises are taxes on things made, sold, or consumed at home. And both these taxes have for their sole subject, not persons, but things; and things that are tangible, that can be—not indirectly or potentially, but directly and actually—used or consumed. Now, does the income tax belong to this category? If it does not—if it is not a tax on things—it must be a tax on persons; in other words, virtually a capitation tax.

It is true that there exist taxes which are neither on persons nor on things that are tangible, such as license taxes, or taxes imposed to authorize the pursuit of a certain trade or business. But this species of taxation is exercised under the general police powers that inhere in every state or national government, and the real object of which is not revenue, but the regulation of certain trades or businesses or to subserve some special public policy under those same police powers which are practically unlimited. An instance of this is the 10 per cent. tax on the circulation of State banks, the object of which, as every one knows, was not to add to the nation's revenues, but to secure to the people a safe and sound currency. Such taxes may bring in more or less income to the Government, but this effect is only incidental. They would often be laid and continued even if they brought nothing into the Treasury at all; and, relating only to the exercise of police, or quasi-police, powers, they are not such taxes as are contemplated in the Constitution.

My conclusion is, that the income tax, being a direct tax on persons, and laid, not according to numbers, but according to the incomes of the taxpayers, is unconstitutional.

Francis J. Lippitt.

Annapolis, Md., March 15, 1895.

WHEAT AND SILVER.

To the Editor of The Nation:

Sir: In your article, "A Pessimistic Outlook," in No. 1549, you mention "the popular belief, in many parts of the country, that if silver money were set afloat in large quantities, poor people would somehow get some of it into their pockets—an hallucination, which," etc. With the wheat-raisers of the Northwest this is not altogether "an hallucination," but a fact easy of demonstration.

These farmers are all in debt, and the debts are of several years' standing. They were contracted when money was plentiful—that is, when wheat was above a dollar a bushel, and everything else in proportion. With wheat at only 52 cents, it is plain that the effect is to double these debts. If some scheme could be devised to reduce their debts in the same ratio in which the volume of money in the country has shrunken—as measured by the price of wheat—then, no doubt, they would be in favor of sound money, with wheat and everything else cheap in the same proportion. Nor is it the original debt alone which is doubled by the low price of wheat, but the interest also. With wheat at a dollar a bushel, 8 per cent. was as easy to pay as 4 per cent. is with wheat at 50 cents.

And there is another point that persons in the East fail to consider. The very cheapness of living has raised the price of farm labor, especially at the harvest time, to the wheat-farmer, and increased its difficulties and annoyance. During the harvesting, many more hands are required than are kept the year round on the farm. These additional hands are, necessarily, of an inferior class—transients, tramps, hobos. The very fact that a man can be hired for a temporary job indicates that he is not good for much; good men have steady work. These harvest hands work till they receive their first payment, then quit and loaf, drinking and lounging as long as their money lasts. Then they work another spell, and so on. Any decrease in the cost of living and loafing only lengthens the intervals that they can lie idle; and also enables them to demand greater inducement to work at all—higher wages. This is no theory; it is the exact condition as it exists.

Now what the wheat-farmer wants is some sort of inflation that will raise the price of wheat and enable him to pay off the debts he contracted when wheat was high—some kind of bankrupt scheme, as it were, that will set him free from his back debts, but leave him his farm and stock. If he could but get a new start, he would care little whether money were scarce or plenty, whether all things were dear or cheap, so long as they were dear or cheap in the same ratio.—Very respectfully,

Matthew F. Steele.

Sturgis, S. D., March 11, 1895.

NEWSPAPER READING.

To the Editor of The Nation:

Sir: Your article "Newspaper Dementia," in the *Nation* of March 14, touches a sore spot. It is true that the tone of our daily papers is deplorably low, cynical, and silly. In conversation I have frequently heard this remarked, sometimes with the addition that in this part of the country very little is read besides the daily paper and the latest novel. Upon such occasions a certain argument (a true newspaper argument) was sure to be brought forward, though it is curiously ludicrous. Some of those discussing the subject would surely say: "You must remember that this is a *new country*, and that European culture is many centuries older than ours." I have heard very intelligent people make this remark, and they did not seem to perceive its fallacy; it had come to them through the newspapers. They had forgotten that the Europeans who came here brought European culture with them, and remained in constant literary intercourse with the mother country; quite forgotten, also, what upon other occasions we do not fail to boast of, namely, that enormous efforts have long been made in this country in matters of education, and that in no country are donations for that purpose given so liberally and generously as among ourselves.

When we remind our friends of these facts, they are apt to say that people in this country are kept too busy in developing the great resources of the country and in making money. But it is easy to show that we have great leisure classes. First and foremost the children of the rich. These are, as a rule, remote from literary or scientific pursuits, and employ themselves in spending what their fathers earned. Next the women, in countless numbers, who have received a liberal education and are married to men of means. These are fully occupied with society duties and with the latest novels. Next the great army of professors and teachers who have two holidays each week during the school year, besides the long summer vacations. These say that when the school-day (of five or six hours) is at an end, they need rest; and when the five school-days end, they sorely need rest; and when the school-year ends, they are absolutely worn out.

These facts being mentioned, our friends, unwilling that we should appear thus wanting in literary interest, will "point with pride" to our public libraries. But inquire, we answer, as to what people get from the libraries, and you find the irrepressible novel uppermost. The strongest evidence, however, for the fact that very little is read in these parts besides the daily paper and the daily novel, is the almost total absence of a book trade. Almost the only books that can be bought here (besides novels) are books for practical purposes—law-books, medical books, popular theological books (for Theology with us is intensely practical). Now let any American travelling abroad note the difference in the literary atmosphere. In 1891, on a European tour, the first town I saw was Bremen, a mere trading town or commercial city. But how great was my surprise and how refreshing the fact that there were book concerns, three or four, well supplied with literary and scientific novelties.

Where, then, are we at fault? I should say that all our energies go to what we call the practical. Everything with us must serve a practical purpose—that is, some purpose whose utility can be estimated in money; whatever has no such commercial value is apt to be regarded as unworthy of attention or mental effort. So in our schools and colleges. The result is, that our young people fail to acquire scientific or literary tastes. Our libraries would be filled with books of better calibre had we the readers; and our great universities would turn out more men and women filled with thirst for truth and its discovery, did these institutions receive in greater number young people in whom that noble passion had been planted so as to take root.

Respectfully, Werner A. Stille.

St. Louis, March 16, 1895.

A NEW REVIEW.

To the Editor of The Nation:

Sir: I am glad to see that the suggestion of a new Review, recently made in your columns, is receiving attention. Given a management which shall be above the temptation to use such a Review as a mere money-making enterprise, which shall consider the inherent excellence of an article of more importance than the notoriety of its author, and the only bias of which shall be a bias for the sensible, well-considered discussion of such topics as would naturally claim a place in its columns, and it does seem that a living patronage might be secured.

There are many classes from which support could be drawn. The libraries belonging to institutions of learning, cities, towns, and associations of various kinds reach somewhere into the thousands in number. There are several thousands of college professors, instructors, etc., and a very much larger number of superintendents, principals, and teachers in the higher grades of our public schools who have sufficient interest in such matters to realize the value of such a Review. In the ranks of our physicians and lawyers is a large and increasing number of men interested in periodical literature of the better sort. The ministry of the various religious denominations supply thousands more of the same sort.

Should an effort be made to launch such a Review, all these classes can be reached with comparative ease, as lists of their names and addresses are easily obtained, and each class mentioned would certainly furnish a great many subscribers, *if the names behind the movement were such as to command immediate respect and confidence.* Of course there is a wide field for effort among men and women of literary tastes and pursuits outside the special classes enumerated above.

I am not sanguine enough to suppose that subscribers would flock in to such an extent as to enrich publishers, pay princely salaries to editors, and give contributors the scale of pay which a Kipling or a Du Maurier can command from the great magazines. A sufficient patronage to secure the proprietors against any irksome financial burden ought to be considered a success, and inasmuch as the field to be entered is absolutely unoccupied, the impossibility of securing this amount of support would be a severe reflection on American culture. W. H. Johnson.

Denison University,
Granville, Ohio, March 1, 1895.

Notes.

Houghton, Mifflin & Co. announce 'Russian Rambles,' by Miss Isabel F. Hapgood; 'After-Dinner and Other Speeches,' by ex-Governor John D. Long of Massachusetts; 'Chocorua's Tenants,' poems by the late Frank Bolles; a translation of selected essays by the late James Darmesteter; and 'Daughters of the Revolution,' by Charles Carleton Coffin.

Little, Brown & Co.'s spring announcements include 'Children of the Soil,' from the Polish of Sienkiewicz; 'A Madonna of the Alps,' from the German of B. Schulze-Smidt; 'Tales of the Fairies and of the Ghost-World, collected from oral tradition in Southwest Munster,' by Jeremiah Curtin; 'Pleasure Cycling,' by Henry Clyde; 'The History of English Law before the Time of Edward I.,' by Sir Frederick Pollock and Prof. F. W. Maitland, in two

volumes; and 'The Cause of Hard Times,' by Uriel H. Crocker.

Besides Prof. McMaster's fourth volume, D. Appleton & Co. have nearly ready 'Actual Africa; or, the Coming Continent,' by Frank Vincent; 'The Gods, Some Mortals, and Lord Wickenham,' by John Oliver Hobbes; 'Bogmyrtle and Peat,' by S. R. Crockett; 'Majesty,' a novel, by Louis Couperus; 'The Story of Sonny Sahib,' by Mrs. Everard Cotes (Sara Jeannette Duncan); and a new edition of Smith's 'Dictionary of Terms, Phrases, and Quotations.'

Macmillan & Co. will publish a Life of Adam Smith by John Rae; 'Studies in Social Life and Theory,' edited by B. Bosanquet; and, in connection with J. M. Dent & Co., a translation of Balzac's works under the editorship and direct supervision of Mr. George Saintsbury, with etched illustrations.

A novelty in advertising is Mr. Unwin's 'Good Reading about Many Books, mostly by their Authors,' of which the title describes the contents. Mrs. Craigie ("John Oliver Hobbes") begins the confessions of Mr. Unwin's clients, followed by S. R. Crockett, W. M. Conway, and many other men and women bidden by their publisher each "to discourse of my craft, and especially of my apprenticeship thereto." Autographs and portraits make the collection still more curious, and the form is taking. Some American writers are on the list.

The reprinting of classical novels promises to go forward this year with renewed activity, and with no falling off in mechanical beauty. We have already spoken of the Macmillan series which began with Miss Edgeworth's 'Castle Rackrent'—plain duodecimos, in excellent typography and tasteful binding, very reasonable in price. The second issue is Marryat's 'Japhet in Search of a Father,' and we need say no more of it than that the illustrations are clever beyond the average. Yet we will add that, at the very end of the introduction with which each volume is to be supplied, the printer's devil has changed *picaresque* into "picturesque." The same firm publish vicariously in this country the Bohn's Novelist's Library (London: George Bell & Sons), of which we now receive Smollett's 'Roderick Random,' in one volume, and 'Peregrine Pickle,' in two. The first has a short memoir of the author with a portrait and a general bibliography, and each story is accompanied by a special bibliography, by J. H. Isaacs. The present reissue is further distinguished by the reproduction of Cruikshank's illustrations, which date from 1831. Here we have, again, good clear print and simple but presentable binding, at a really cheap figure. On a grade above the foregoing are the "Romances and Narratives by Daniel Defoe," edited by George A. Aitken, and to appear in sixteen volumes. They proceed from the same London firm of Dent & Co. which has scored such remarkable successes in fine bookmaking with Jane Austen, Fielding, etc., and as heretofore they are marketed by Macmillan on this side of the water. Mr. Aitken bids us anticipate (what he is well able to furnish) new and interesting particulars concerning each story or narrative (like the 'Journal of the Plague') as to the circumstances in which it was produced, the sources to which Defoe was indebted, and so forth. 'Robinson Crusoe' naturally leads off, in two delightful volumes bound in green cloth, with illustrations. A third, companion volume consists of the 'Serious Reflections of Robinson Crusoe' and the 'Vision of the Angelic World.' Mr. Aitken effectively disposes, in his general introduction, of Mr. Thomas Wright's contention, in his Life of Defoe, which we lately reviewed, that the 'Serious Reflections' are to be taken as literal and truthful autobiography. This edition is heartily to be commended, and needs but to be seen.

The Harpers have brought to a happy conclusion Mrs. Green's illustrated edition of her husband's 'Short History of the English People'—still short, although now spread out in four volumes of fair type. The pictures present the usual medley of map and portrait, medal and autograph, advertisement and label, miniature and tapestry, costume and industry, landscape and architecture, which are not close illustrations, following upon the heels of the text, and carefully inserted in their proper place, but a sort of obligato for the period. There is almost nothing trivial or forced in this generous selection. The chronological annals at the end, and the royal genealogical tables, are welcome adjuncts. The whole forms a gift book of a very high order, sure to be read, and equally in place on the shelf or on the centre-table.

Under the title, "Economic Classics," Macmillan & Co. are publishing a series of thin volumes, each containing what is thought to be most valuable in the works of some one of the great economic writers; the selection being made by Prof. W. J. Ashley of Harvard. There have appeared so far three of this series, viz., Adam Smith, Ricardo, and Malthus, and there are promised Mun, Child, Turgot, Quesnay, Roscher, and others. The volume upon Adam Smith consists of selections from the 'Wealth of Nations,' which amount in bulk, we should say, to about one-third of the complete work. We miss some favorite passages, and think every one would be the better nowadays for reading the whole of this great book; but no doubt an edition like the present will reach many who would not attempt a larger volume, and the omissions appear to be judiciously made. Of Ricardo only the first six chapters are given—sufficient to show his method and the more important of his conclusions. In the case of Malthus a somewhat different course is pursued, parallel chapters being taken from his first and second editions, somewhat in the line pursued by Mr. Bonar. Both Ricardo and Malthus we believe to be practically unread nowadays, even by those who discourse most glibly on their theories, and such as are conscious of delinquency herein may easily correct their error through the aid of this series.

Six addresses delivered at the annual meetings of University Extension students in London from 1886 to 1893 have been gathered into a small volume called 'Aspects of Modern Study' (Macmillan). The speakers were men of note: Lord Playfair, Canon Browne, Mr. Goschen, Mr. John Morley, Sir James Paget, Prof. Max Müller, the Duke of Argyll, the Bishop of Durham, and Prof. Jebb. It is not surprising that the Mansion House hall, as the secretary of the society informs us in his preface, was crowded to hear them. Yet most of the lectures, though interesting enough, contain little that makes them of permanent value. Their main import lies in their implicit or outspoken recognition of the principles and practices of university extension. Canon Browne, whose subject is "The Future of University Extension in London," even suggests the possibility of a system by which such study may get into some kind of connection with a university degree. His paper is, from an educational point of view, the most pertinent of the series, and is well worth reading—once—whatever may be thought of his views on metropolitan "teaching universities." Lord Playfair's discourse may be skipped without loss. It roams at will, and with much self-confidence, over various fields—some of them fields with which the lecturer has but slight acquaintance.

Mr. Joseph Jacobs, already favorably known by his 'Jews of Angevin England,' has made another important contribution to the history of the race in his 'Inquiry into the Sources of the History of the Jews in Spain' (Macmillan). It embodies the result of a mission to the peninsula to investigate the MSS. and documents relating to the Spanish Jews, and bears emphatic evidence to the indefatigable zeal of the writer, for he tells us that he spent but twenty-eight working days in examining the voluminous archives at Barcelona, Madrid, Alcalá, Simancas, and Pamplona. He has given us abstracts of a large number of documents relating to his subject, with transcripts of some of them in his appendix, and has added an elaborate list of Spanish-Jewish writers and an extended Spanish-Jewish bibliography, all of which must prove of much utility to students. The career of the Jews in Spain is of surpassing interest, and, from their being the cause as well as the victims of the Inquisition, they exercised a preponderating influence on the strange vicissitudes of the Spanish kingdoms. A volume, therefore, which, like the present, affords substantial aid to the elucidation of the complex problems involved is to be warmly welcomed. More careful proofreading, however, would have relieved it of its too numerous errors of the press. In the matter of dates alone we may point out that "the fatal year 1300" (p. xxviii) should of course be 1390. The date of 1221 (p. 70) ascribed to a bull of Gregory IX. is impossible, and on the same page Innocent VI. should be Innocent IV. if the date of 1250 is accurate, while on p. 149 the expulsion edict of Ferdinand and Isabella is credited to 1452 in place of 1492.

Mr. H. Stuart Jones's 'Select Passages from Ancient Writers Illustrative of the History of Greek Sculpture' (Macmillan & Co.) is adequately described by its title. The introduction informs us that it was prepared, at the request of Prof. Percy Gardner, for the use of students in the classical school at Oxford; and, this being the case, we wonder that the editor should have thought it necessary to translate all the passages selected. The fact that he has done so, however, will make the book useful to others, not classical students, who are interested in the history of Greek art. Text and translation are arranged in parallel columns, and many convenient notes and commentaries are interspersed by the editor. The book by no means takes the place of Overbeck's 'Schriftquellen,' and is not intended to, the number of passages relating to almost every sculptor being considerably less than those given by Overbeck, while Löwy's invaluable 'Inschriften' is only referred to occasionally in the notes. As a consequence the book will be of service only to beginners, and while the passages selected are invariably the most interesting, they are far from exhausting the knowledge to be gathered from ancient writers on the subjects to which they relate. There are a few quotations not given by Overbeck, among which we notice a passage from Niketas Choniates describing the destruction, in Constantinople, of a colossal bronze Athena, which is identified with the Promachos of Athens, and extracts from inscriptions found at Epidauros relating to Timotheos and Thra-

symedes, sculptors who were employed in the decoration of the temple of Asklepios.

Revived interest in municipal government is cause and theme of 'Municipal Reform Movements in the United States,' by W. H. Tolman (F. H. Revell Co.), of which the chief value lies in the useful list of reform organizations in various American cities, with officers, objects, and methods duly set forth, together with a record of clubs and associations, male and female, for civic betterment. With this volume may conveniently be coupled 'The Universities and the Social Problem' (London: Rivington, Percival & Co.), in which, by a dozen hands, the actual methods of the University settlements in East London are described. Both books will find a place on the shelf labelled Practical Reform.

A treatise upon the income tax law of 1894, prepared by Roger Foster and E. V. Abbot of the New York bar, is published by the Boston Book Co. Important as this act is, it would scarcely seem possible to make a book of nearly 550 pages upon it before it has received any judicial construction, although, if it be upheld, many volumes will be needed to contain the accounts of the litigation which it will cause. But by reprinting the old acts, the instructions to collectors, the copies of various forms now or formerly used, and by constant repetition, the authors have contrived to swell the work to its present compass. While we incline to think that a digest of the old internal-revenue reports might have been more valuable, we can testify, after a careful reading, that nearly every point upon which it is now possible to throw light has been here considered. The book is so prepared as to be available for non-professional readers, and is of service to lawyers especially on account of its annotations upon the statute, section by section. It must be said, however, that many of the citations are wholly irrelevant, and must have been introduced through hasty and careless preparation or as mere padding.

It was but a few months ago (so belated were we) that we gave a pretty full account of the scheme of Kürschner's 'Deutscher Litteratur-Kalender,' apropos of last year's issue. That for 1895 is now before us (Stuttgart: Göschen; New York: Westermann), and if we remark on its greater fulness and on the fact that the frontispiece is a portrait of Louise Reuter, there remains no further occasion to speak of this well-established personal directory and guide to German literary activity in all forms, at home and abroad.

Any one in search of grim stories should turn to Vladimir Korolenko's 'La Forêt murmure,' translated into French by R. Candiani (Paris: Colin & Cie.). There are two or three strong sketches in the book, grisly enough in subject and treatment, and very full of local color of Ukraine and Siberia. The longer story, "The Blind Musician," has passages of marked beauty, but lacks unity and vigor, becoming very monotonous, while "Makar's Dream" is positively childish. But the first two pieces suffice to make the volume attractive.

From the land of Maeterlinck comes 'Le Sire de Ryebeke,' by Marguerite van de Wiele (Paris: Librairie de *l'Art*). The Flemish legend, admirably told but for certain flaws of repetition and iteration, is sad and gloomy, but sadness, gloom, and suggestion of horror are what Maeterlinckites revel in. It is a mediæval tale of a girlish youth and a hard proud mother, and there is a suave poesy about it that lessens the feeling of pain the story evokes. Quaintly written, quaintly illustrated, it is more than attractive, it is fascinating.

It would be a curious inquiry how many professed students and critics of art could give any account of the latest of the "Artistes Célèbres" to be included in the series of that name published by the Librairie de *l'Art*. Hubert Robert was a "painter of ruins" who flourished at the end of the eighteenth century, and is interesting only as one of the symptoms of the revived interest in classical antiquity which marked his epoch. He suffered under Louis David and was imprisoned at the instance, as M. Gabillot supposes, of that somewhat truculent personage, but survived the Terror, and was one of the founders of the Louvre. Around him and "his times" is constructed one of the thickest volumes in the series. The "times" are more interesting than the man, and the volume is readable.

The eighth number of *La Quinzaine* does not differ essentially from the first. Nowhere in it is any improvement shown. Like most other religious periodicals, it appears to seek first of all to be *bien pensant* after its own fashion of orthodoxy, and only afterwards to be intelligent and critical and judicial and judicious. Nevertheless, there are in the present number some articles that may be read with interest and profit. "Les Normaliens dans l'Église" treats of the epoch of 1835-1840, throwing a little side-light on that most interesting period of French ecclesiastical history, the Revival which began in 1830 under Lamennais and Lacordaire, and which has moved France less obviously, it may be, but perhaps as widely and deeply as the contemporary Oxford Movement stirred England. "1848—Souvenirs d'un Témoin" is the story of the Revolution of that year, set down from day to day as it appeared to the eyes of an intelligent young woman of strong royalist sympathies. It has something of the freshness of a diary. The sentiments expressed in M. Maurice Bouchor's "Prière à Saint Maurice" are unexceptionable. His piety, which closed its petals at Chicago, expands into full bloom in Paris. In the department of "Livres et Idées" much sympathy is expressed with regard to M. Brunetière's recent attempt to petition science into insolvency.

In *Mélusine* for January February, 1895, M. Gaidoz returns to the subject of the four estates (all resting on the husbandman) which has formed the subject of popular engravings for some three centuries. He gives facsimiles of one older than any he has yet pictured, and of a British specimen, "The Five Alls"—with the parson at one end and the devil at the other—by the Scotch caricaturist John Kay (1792-1826).

The February *Portfolio* (Macmillan) is, we believe, the first number of that publication devoted to the work of a living artist. "The Art of William Quiller Orchardson" is treated of by Walter Armstrong, with some forcing of the note, but, on the whole, not unjustly. We should hesitate to take Mr. Orchardson's powers of draughtsmanship quite as seriously as does his English critic, but draughtsmanship of a serious kind is sufficiently rare in England to make Mr. Orchardson's seem almost masterly. His talent as a colorist is indubitable and his work possesses great charm. It is, perhaps, at times a trifle too "literary," but nothing could be much more delightful as a pictorial *trouvaille* than the scattered cards in "Hard Hit," and many another passage in his works.

Mr. Wm. M. Stevenson, librarian of the Carnegie Free Library at Allegheny, Pa., has followed the example of the Los Angeles Public Library in adding to his author-and-title list of fiction a subject-index, duly arranged under countries, epochs, etc. He has done better than his predecessor in making use of Mr. Griswold's 'Descriptive Lists of Novels,' and has wisely included some "books which, if not novels, read like novels." A little bibliography is prefixed to this section, with a brief list of biographies of writers of fiction, another of works of criticism and description in fiction, and a third of noteworthy articles in periodical literature bearing on the main theme.

We have received from the statistical bureau of the Italian Department of Agriculture part i. of Library Statistics in two volumes. It embraces particulars concerning not only State, provincial, and communal libraries, but also certain private libraries accessible to students, and notable for size or precious contents. The second part will embrace the libraries of academies, scientific institutions, and associations, circulating libraries, the lower school libraries, etc., etc. It is quite impossible in our limits to do justice to the thoroughness of this admirable undertaking. So far as is possible, each library is described with reference to its origin and history, accommodations, provision against fire, insurance, special features (with examples, as in the case of incunabula, MSS., Dante collections, Dürer engravings, etc., etc.), pecuniary resources, loaning or non-loaning of books, and the rest. Such a mine of information has an immediate value for all students, and will afford, as time goes on, a basis for comparisons of growth that will prove most instructive to those who are concerned with the moral and intellectual development of the Italian people. It reflects the greatest credit upon the Government of to-day.

—Articles upon two popular superstitions appear in the February number of the *American Meteorological Journal*. One has reference to the notion that change in the lunar phase influences the weather—that is, that more rain falls at new than at full moon. The records at New Haven seemed to confirm this idea, nearly one-half more precipitation occurring at the former than at the latter time; but the records of one hundred years in London yielded a negative result, as also a study of the rainfall for the whole country. In Boston, however, the new moon appeared to exercise a rather remarkable influence on the maximum rainfall. While many more observations will be needed to prove anything one way or the other, still, hardly less than fifty years' observations can materially alter what is at least a striking coincidence at Boston. So our friends who always look for "a change of weather with a change of moon" have a little more basis for their unscientific expectations than they are apt to be credited with. The second article of a purely popular nature has reference to the idea that storms always accompany the sun's "crossing the line." The equinoxes being only the intersection of two imaginary lines, it is hard to conceive of this producing any possible effect, yet no fallacy is more widespread. A careful study of records here produces entirely negative results, and the pet "line storms" of the masses must vanish in thin air.

—In the March number a valuable article is contributed by Mr. A. E. Douglass upon the study of atmospheric currents by the aid of large telescopes, and the effect of such currents on the quality of the "seeing." The writer's observations began at the Harvard College Observatory at Arequipa in Peru, during the summer of 1892. There the observatory is near a river valley down which on clear nights

a swift stream of cold air descends. In observations on Mars it was found that as soon as this stream reached the objective the seeing was at once ruined. More recently the writer witnessed some experiments at the Clark workrooms with the great Yerkes glass, still in process of completion. It was found to be exquisitely delicate in detecting small differences of temperature. A lighted lamp—even a lighted match—produced great atmospheric commotion, while the bare hand held up, or a person standing four feet from the optical axis, resulted in noticeable warming and consequent unsteadiness of air. During the autumn and winter of 1894 Mr. Douglass made experiments upon the swiftness of air-currents at Mr. Lowell's observatory at Flagstaff, Arizona. Careful tests have revealed three types of wave-systems, with sometimes perplexing combinations. The size of these atmospheric waves does not vary with different apertures in the telescope, nor do they differ except in being more difficult to study with a small glass. It was shown that sometimes, by diminishing the aperture, detail on the disk of the observed planet may be improved, while the edge or limb becomes less steady; which is one reason, similar to the effect of increased coarseness of the air-waves, why very good seeing may often be found between clouds. Out of eight actual observations, the highest current came from the southwest and west-northwest five times. Below a certain level the wind on two days became gusty and intermittent. The actual velocities of the first form of air-currents vary between five and twenty miles an hour. The altitude of the observatory at Flagstaff is 7,250 feet above sea-level, an excellent position from which to study these as yet little understood movements and periods of the atmosphere. Mr. Douglass speaks at some length of the instruments to be used in such studies, and his paper is one of much significance in the location of future observatories, no less than regarding the study of the best conditions for astronomical work at those already founded.

—The fifth volume of 'Memorial Biographies of the New England Historic Genealogical Society' (Boston) comprises forty-nine sketches, of divers lengths and importance, which leaves but a single deceased member of the Society uncommemorated up to June, 1864. The slowness of publication under the Towne Fund is illustrated by the fact that Thomas Hill, the biographer of Convers Francis, is himself dead. The notice of Stillman B. Pratt was prepared eleven years ago. A few foreign members are on the list, the most noted being Lord Lyndhurst; among the natives, most eminent are G. W. Bethune, G. L. Duykinck, William Darlington, Chief Justice Hornblower, Luther Bradish, W. D. Ticknor, and Edward Robinson, the great Biblical scholar. More than one who fell in the civil war are companions of the foregoing, so that the range covers several generations. The notices are unconventional, and are such as would be very useful to the editor, say, of an American 'Dictionary of National Biography.' The practice is general of recording the wives and posterity of the subjects treated, and this is to be commended in view of the contrary practice in almost all biographical dictionaries, even in the case of distinguished characters. Incidentally a good deal of curious information is to be had from this volume, as, the particulars concerning Dr. Geo. B. Cheever's imprisonment for libel in connection with his temperance "Dream" of Deacon Giles's Distillery (under Daniel Henshaw); the fact that Ticknor took over the *Atlantic Monthly* from Phillips & Sampson against the protest of his partner, Fields, who afterwards became its editor; and the statement that, "as a result of Mr. Pratt's editorial connections, all of his sons became journalists, as did some of the daughters, several grandchildren, and other collateral members of the family," so that credibly "more country newspapers are now (1844) in the hands of his kindred than are controlled by any other family in the world; Stillman B. Pratt, his oldest son, being the proprietor of twenty-five local papers." The historic date of October, 1835, mentioned on page 251, should be 21, not "5."

—In a somewhat unattractive form, Harper & Brothers publish 'The Literature of the Georgian Era,' by the late William Minto, edited by his friend Prof. Knight, who has furnished a long and not particularly satisfactory biographical introduction. The volume consists of two essays on Pope which had been previously printed in *Macmillan's Magazine*, a carefully prepared lecture on Burns, and a series of some twenty popular lectures on the century of English literature that runs from Pope to Shelley. The audience that heard the latter is to be congratulated. They are entertaining without attempting to be funny, and scholarly without attempting to be learned. They lack, moreover, the tone of self-abasement that sounds in much of our university-extension and kindred work, in which a lecturer often seems almost ashamed to implant in his hearers' minds anything but the mere rudiments of his doctrine. Prof. Minto held his audience up to its work; he gave it matter for strict attention and solid thought, but it was matter clearly arranged and neatly expressed. Where the hearer profited, the reader will not fail to profit also. Other scholars have attempted more in this field, but none has covered it in a way so interesting or so suggestive for the public that cares to read thoughtfully and not merely to be amused.

—A volume of succulent critical essays, on historical, philosophical, and literary subjects, bears the name of Timothée Colani (Paris: Chailley). This author is probably unknown to most American readers, yet he was one of the leading Protestant thinkers and writers in France. A man of scientific tastes and disposition, forced into the Protestant ministry by his father, himself a well-known *pasteur*, Colani became one of the most brilliant preachers in his communion, and founded, with Scherer, the *Revue de Théologie et de Philosophie Chrétiennes*. His scientific methods, applied to the exegesis of the Scriptures, his determination to find the truth and to abide by it when found, caused him, in his latter years, to leave the church in which he had been brought up. Shortly afterwards he joined the staff of the *République Française*, and he continued to write for that journal to the day of his death. A vigorous thinker, a firm, unhesitating judge, a man unblinded by conventionalities, Colani exhibits very remarkable critical powers and a profound insight into the very marrow of the subjects he discusses. The present volume of essays is an excellent collection, and displays the talent of Colani in different aspects. Trenchant articles on Taine, whose *parti pris* Colani cannot endure; on Renan, who owes Colani so great a debt, and whose fluid, elusive character is admirably appreciated; on Zola, the hollowness of whose pretensions is exposed in masterly fashion, and two most interesting studies of "Hamlet," form the best part of the book, in which, however, all is good—the historical as well as the literary, the political as well as the philosophical part. The brief preface of M. Joseph Reinach must not be missed either.

—On January 18, Moriz Carriere, Professor of Æsthetics in the University of Munich, died of apoplexy, in the seventy-eighth year of his age. Only the day before his death he had delivered his lecture in the regular course on Goethe's "Faust," and closed with the promise to give on the morrow an interpretation of the Walpurgisnacht. One of his last contributions to the literature of the day was an open letter on "Gedankenfreiheit," addressed to the editor and printed in the February number of the *Deutsche Revue*. It is a manly and timely protest against the growing tendency of the German Government to repress freedom of thought and to restrict the liberty of the press—a tendency that has greatly increased in strength and aggressiveness since the accession of William II., and culminated in the project of a law known as the "Umsturzvorlage" (subversion-bill) lately under discussion by the Imperial Diet. The object of the proposed law is to protect the institutions of religion, marriage, property, and monarchy in their present form against all adverse criticism, and its enactment would make the publication of many passages in the writings of Luther, Melanchthon, Klopstock, Goethe, and Schiller a criminal offence. When the "Holy Coat of Trier" was "elevated" in 1844, the head of the German Catholics, Johannes Ronge, addressed an epistle to Bishop Arnoldi, in which he denounced the exhibition and adoration of the old garment as gross and disgraceful fetishism. This public expression of his opinion caused intense excitement, but it never occurred to the Prussian or any other German Government to intervene. When the same "holy coat" was again exposed in 1891, a young Protestant theologian, who censured this "idolatrous worship" in much milder terms than Ronge had used, was tried and condemned for attacking "an institution of the Catholic Church." In this case the German tribunal was animated by the same spirit that led the Russian censor Korasovsky to erase from a book on natural history the chapter treating of the noxiousness of fungi, on the ground that "fungi form the favorite food of devout Christians on fast-days, and whoever declares them to be noxious seeks to undermine the Christian faith and to diffuse irreligion."

—If the German fashion prevailed with us, telegrams of congratulation would, on this seventieth birthday of Dr. Fitzedward Hall, be pouring in to Marlesford, England, where this American scholar has his home. His name is not unknown to our readers, who have for years enjoyed his expositions of English verbal usage such as no other man living could produce. But he has experienced the usual fate of an absentee in being overlooked by his countrymen, and in being accordingly without his proper honor here. That he is even a Harvard graduate—a member of the class of 1846 and classmate of Professors Child, Lane, and Norton—is little suspected by the great majority of the alumni of that institution, to which he has given many valuable Oriental books, and recently some five hundred Oriental MSS., many of the greatest rarity. Those, again, who read Dr. Murray's recurring acknowledgments of Dr. Hall's invaluable and

incomparable services in supplementing the readers for and the proof-readers of the New English Dictionary—acknowledgments which, to be adequate, would seem exaggerated—do not think of Dr. Hall as an Orientalist who spent sixteen years in India. His career there, whose beginning was made memorable by a shipwreck in the treacherous river Hooghly, was the honorable one of public usefulness as superintendent of schools, and as professor of Sanskrit at the sacred city of Benares, the very centre of Hindu learning. In India he familiarized himself with divers Eastern languages, was the first American to publish a Sanskrit text, and has, in the Journal of *The* Asiatic Society (*i. e.*, of Bengal) and in Indian magazines and printed volumes, been a most prolific writer and editor on Oriental subjects, as the British Museum catalogue will testify. Of his achievements in the various fields of Hindu antiquity, we may mention his books and essays on the philosophical systems, especially the Sankhya, on dramaturgy, astronomy, and epigraphy; although published for the most part three or four decades ago, they are still of great and almost undiminished value and authority. His wonderful *Belesenheit* — which competent authorities pronounce to be as admirable in Sanskrit as we know that it is in English—was brought to bear not only upon the annotation of texts, but also upon some of the intricate problems of Hindu literary chronology, with extraordinary acuteness and success. Since 1862 he has been constantly employed by the British civil-service commissioners as examiner in Sanskrit, Hindustanî, Hindî, Bengalî, or English. All this time has been going on the note making on points of English which, as he lately wrote to the Chicago *Dial*, he began in 1838, or when he was but thirteen years of age, and which has borne fruit not only in the present help to Dr. Murray's international enterprise, but in classical works like his 'Recent Exemplifications of False Philology' (1872), 'Modern English' (1873), 'On English Adjectives in -able' (1877), and others more controversial. An intense American, it has been Dr. Hall's lot to dwell among Englishmen for more than three-fifths of his life. His profound learning won for him, as long ago as 1860, the highest recognition from the University of Oxford—the degree of J.C.D.—just as also his modest and unfailing kindness and public spirit have won him a recognition (perhaps even dearer to him) in the little hamlet in Suffolk that has so long been his home; but it ought not to happen that his seventieth birthday should pass without a word of cordial and admiring remembrance from his native land.

TOWER'S LAFAYETTE.

The Marquis de La Fayette in the American Revolution. With some account of the attitude of France toward the War of Independence. By Charlemagne Tower, jr., LL.D. Philadelphia: J. B. Lippincott Co. 1895. 2 vols., 8vo, pp. x, 494, 537.

THE above work on Lafayette's services to America, and incidentally on the French participation in the Revolution, is fair-minded yet sympathetic. Of neither France nor America is Mr. Tower a partisan. Indeed, on the moot points he becomes defender or apologist for each in turn, and one comes quickly to trust his impartiality. So strongly marked is this quality that it is singularly difficult to take issue with any of his positions and opinions; yet on two points it is perhaps worth while to look a little closer before accepting his conclusions entire.

Mr. Tower believes, with Lafayette, that the *lettre de cachet* sent after his hero was seriously intended on the part of France, thus taking issue with Kapp, who saw in the step only a nominal act of the Government, done for appearance' sake and to silence the complaints of the English Minister, with no intention that it should be obeyed. Nor can a restudy of the question, we think, alter this conclusion. Genuine *lettres de cachet* were not sent after fugitives, and the fugitive then left free to act as he pleased. Moreover, this particular one was issued at the request (nominally) of the Duc d'Ayen, the father-in-law of Lafayette, who, while thus seemingly objecting to the service of his daughter's husband in America, was actually endeavoring at that very time to secure from the Commissioners at Paris a commission for himself. Even more conclusive still is the information contained in the despatch of the secret agent of the English Ministry in Paris to Lord Suffolk, in which, after stating that Lafayette had sailed for America, he continued: "This spirited exertion is pretendedly disapproved by the Court, but all the Ladies applaud it, particularly the Queen, which excites many of the highest rank of young nobility to follow the example."

The second point on which we are tempted to take issue with Mr. Tower relates to the campaign in Rhode Island. In writing of the Newport fiasco, the author had, to be fair, a task of real difficulty. There can be no question that both French and Americans tried to outwit each other in order to obtain all the glory of the expected success, and even Lafayette could write: "I feel that the Frenchmen will somewhat eclipse their [American] neighbors, and that the best dramatic effects will probably fall to their share. . . . I should be greatly disappointed if they were not allowed the advantage I think is rightfully theirs." But when this mutual jealousy had produced its logical results, he did, too late, what he could to heal the breach. Few Americans have written so favorably to the French in this matter as Mr. Tower, and we are pleased to read his account, even while we think it biassed. The fact that Luzerne thought it necessary to take the American commander of the expedition against Rhode Island, Sullivan, into his pay, to close his mouth, is so striking that it can hardly be read amiss.

One of the most interesting portions of the whole book is that devoted to the attempt of the Conway Cabal to separate Lafayette from Washington—an attempt which of itself shows how great a power the young officer had come to be. The conspirators offered Lafayette, against the judgment of Washington, who disapproved of the whole scheme, the command of an army to invade Canada, and, to render it doubly attractive to Lafayette while humiliating to Washington, they made it a distinct command, subject to no orders but those of the Congress—a blow at Washington which, had it succeeded, would almost certainly have been followed by the detaching of other commands, till the commander-in-chief would have had but a mere title, and could easily have been brushed aside by the Cabal. Fortunately, Lafayette was above even such tempting bait, and, if for nothing else, his loyalty under such temptation should make him dear to every American. He replied to Congress that he would accept the command only on condition that he should remain a subordinate of Washington and report to him. And when these terms were accepted, not content with this, he forced the Board of War to allow him to name his subordinates, thus neutralizing their endeavor to associate with him only the partisans of the Cabal. The action on this matter has unfortunately escaped Mr. Tower, and as it is essential it deserves quotation here (Report of a Board of War, January 31, 1778):

"That General Washington be informed that, in compliance with the request of the Marquis de la Fayette, Congress are willing that General McDougal should proceed on the intended Incursion into Canada if his State of Health will admit of it, but if not, that the Baron de Kalb be directed to follow the Marquis on the said expedition, in case General Washington can dispense with his presence."

Even in this apparent yielding to his wish, however, Lafayette detected the sting of the Cabal. The report, so apparently favorable to him, cast a slur on Washington by the inference of the last line that the General was so incompetent that he could not "dispense" with the "presence" of Kalb; and to Lafayette, who was present when this report was adopted, was undoubtedly due the striking out of the slurring line, and the substitution of the words, "in case General Washington shall judge it proper."

Another and even greater service of Lafayette at this time is also overlooked by Mr. Tower. One of the meanest and trickiest devices of the Cabal to destroy Washington was to compel him to attack Howe's army in Philadelphia—a project so desperate as to seem mad had the Board of War hoped for a moment that success was possible. The scheme, however, was merely one to destroy Washington by compelling him to fight Howe on Howe's own terms; defeat being a hopeful way of removing Washington from the command. In the Congress, in the Board of War, and even in camp, the scheme had its adherents, and the committee sent to camp was largely ordered with this in mind. At this critical moment Washington asked each of the general officers for a written opinion as to the possibility of the manœuvre, and none rallied more quickly to his aid or gave a more decisive negative than Lafayette, who, though new to the whole scene of war, and easily open to deception, yet drew up an admirably clear and lengthy opinion, which, united with that of a majority (for there was a minority even among the generals), reinforced Washington's own conclusions and saved him from a most hopeless undertaking. The omission of this paper is a serious defect in the present work, though none of the "opinions" drawn up for Washington by Lafayette are included.

The narrative of the movements leading up to and including the battle of Monmouth is almost a model of military history—clear, concise, yet detailed. Scarcely less so is the section devoted to Lafayette's Virginian campaign. The absolute impotence of the civil Government of that State, the revolt in the back counties, the refusal of the militia to embody in many places, their constant desertion in the field, and the strong dislike of the Northern soldiers for Southern service, together with the superior strength of the enemy, all combined to make the task of the young general of twenty-six truly Herculean, and to cause him to write: "I am just that much of a general as will make me an historian of misfortunes, and nail my name upon the ruins of what good folks are pleased to call the Army of Virginia." But the "good sense" that Washington had so quickly detected under the impetuous and rash longing for action

came to Lafayette's service. Conscious of his own tendency, he wrote: "To speak truth I was afraid of myself as much as of the enemy. Independence has made me more cautious, as I know my own warmth." In place of constantly urging action and attack, under the sobering influence of responsibility he adopted the Fabian policy of his chief, and thus not merely saved Virginia, but led the way to the triumph at Yorktown.

The services of Lafayette to the American cause were not limited, however, to operations in the field. Quite as essential and important were his negotiations on behalf of America with the French Cabinet. To preface these properly, Mr. Tower has chronicled at length the hesitating and vacillating conduct of the French Ministry in the period between the moment when the rising storm in the colonies first attracted the attention of France and the signing of the treaty of alliance. The aid, both secret and open, which France gave to America never professed to be based on any other than selfish grounds. Gérard, speaking for Vergennes, put the best face upon it when he said to the Commissioners that they did not "pretend" that they acted "wholly" for the sake of America, "since . . . it was manifestly the interest of France that the power of England should be diminished by . . . separation." And how little real interest or affection the French Minister had for the States is well shown in two of his despatches to his American agent, in which he outlines the French policy as follows:

> "I think as you do, that the preservation of the Congress would suit us, but what perhaps suits us better is that the U. S. should not acquire the political consistence of which they are susceptible." (To French Chargé, July 21, 1783.)
>
> "It suits France that the U. S. should remain in their present state, because if they should acquire the political consistence of which they are susceptible, they would soon acquire a force or a power which they would be very ready to abuse." (To Moustier, September 27, 1787.)

Whatever the selfish views of the Cabinet, the French people were more generous, while Lafayette was so extreme as to make Maurepas say that some day the young officer would strip Versailles for "his American cause." Mr. Tower narrates at length his constant appeals to France for aid for the Americans. The man, indeed, as here shown, seems tireless in his persistence and in the multiplicity of his schemes. Canada, Florida, the British West Indies, and each British force in the colonies, are one by one conquered by him—on paper—and to the older and cooler men with whom he was dealing the length of the campaigns, in which ink only was shed, must have been not a little fatiguing. But his exertions led to important results, for Mr. Tower makes plain how large an element Lafayette's personal popularity at Court and his arguments to the Ministry played, in producing the various French expeditions of 1780-81 which led to the capture of Cornwallis. However mistaken the policy of France was, in pulling the chestnuts out of the fire for America, or however blindly selfish her motives in so doing, Lafayette was actuated by nothing but unselfish love for this country. Everything he could do for it, he did. He clothed his brigade at his own expense. He pledged his credit to move troops southward when that of the Government was insufficient. He took his loss cheerfully when he was swindled out of the cargo he had brought with him to America, on which he had hoped to make a profit of "three or four hundred per cent.," and instead, to reach Philadelphia, was compelled to borrow money "at a high rate of interest." He was silent when the Jew money-lenders of Philadelphia took such advantage of his situation as to make Beaumarchais write laughingly that Lafayette had found "Jerusalem in America." Blood, time, and money he gave without stint and without thought. "I love them all," he wrote; "I hope to deserve their esteem, and so we are mutually satisfied." Small wonder that he was able to say, "M. de Lafayette was no longer a stranger" to the Americans. "There never was an adoption so complete."

Of this brilliant and generous story, Mr. Tower has written a most inclusive, careful, and satisfactory account. First, practically, among American writers, he has made a full use, so far as served his purpose, of two recent and most important historical works: M. Doniol's 'La Participation de la France,' and B. F. Stevens's 'Facsimiles of Manuscripts.' With a thoroughness that is admirable, he has gathered a large mass of hitherto unpublished material from the Washington papers and the records of the Continental Congress. From the Gates and Steuben papers, hitherto so closely guarded by the New York Historical Society, as well as from the letter-books and papers of Rochambeau and Wayne, he has garnered with skill. He has even obtained copies of the long series of letters from Lafayette to the Executive of Virginia, abstracted from the State archives by Benson J. Lossing, immediately after the occupation of Richmond by the Federal troops, and at present the subject of a law suit. He has used, practically *in extenso*, the letters of Lafayette to Estaing, discovered by M. Doniol, too recently for inclusion in his great work, but made public in the *Revue d'Histoire Diplomatique*. It is not too much to say that he has quadrupled the amount of accessible material concerning the central figure of his book. We can recall no biographical work in American history containing such a wealth of original material concerning the subject treated. To this Mr. Tower has added reproductions of several maps prepared for Lafayette, besides several specially drawn for the present work. A new portrait of Lafayette, painted at the time of his service in America, and one of his wife, are also additions well worth the making. In every respect the book shows skill and thoroughness.

We note with some interest that Mr. Tower adopts the form of "La Fayette," for which he has the authority of Larousse; yet the man himself almost invariably wrote it Lafayette, and this has been followed with hardly an exception in this country, being, we think, the preferable form. On the other hand, the author follows Doniol in spelling the name of Florida Blanca as one word, which we also think to be an error. There are a few mistakes in names, unsupported by any authority, as Col. Rall for Rahl. Far more serious is the double use of the surnames Broglie and Broglio. The Maison de Broglie was at times styled "de Broglio," but it is essential in any book to adopt a uniform system. In this case, the double use not merely apparently creates two distinct families, but leads to an absolute confusion of the individuality of the two brothers. Thus, the "Comte de Broglie" of page 17 becomes "Count Broglio" on page 25, and "Maréchal de Broglie" on page 75; while the "Marshal Duc de Broglie" on page 22 becomes the "Marshal Broglio" on page 297. The confusion is increased by the index, which enters under Marshal Broglio a reference to the Broglie of the text, and the Broglie of the text is entered under Broglio in the index. On the whole, however, the book is very free from slips of this kind, and shows most careful proof-reading. Not quite so fortunate was Mr. Tower in his mapmaker, who twice changes the "Byrd's Tavern" of the text into "Bird's," the correct "Brandon House" of one map to "Brandon's house" in another, and, while correctly spelling the river "Nansemond" on one map, on a second gives it as "Hansemond" and on a third as "Vansemond."

SYBEL'S GERMAN EMPIRE.—II.

Die Begründung des Deutschen Reiches durch Wilhelm I. Von Heinrich von Sybel. Sechster Band. Munich: R. Oldenbourg; New York: Westermann. 1894.

Bismarck's attitude on the Luxemburg question—his declaration (January 10, 1867) that Prussia would neither lend active aid in securing the duchy for France nor give official consent in advance to the transfer—was far from satisfactory to Napoleon and his ministers. They determined, however, to act as Bismarck had advised—to start an agitation in Luxemburg and negotiate directly with the King of the Netherlands. At the same time the European Powers were sounded. The responses received from the principal courts were encouraging, although Austria warned France that the project would excite the national feeling of Germany and tend to bring the North and South into greater harmony. The King of the Netherlands, however, declared (March 18) that he could do nothing without the formal consent of the great Powers, including Prussia. In the meantime an interpellation from Thiers on the policy of France towards Italy and Germany had given rise to a protracted debate in the French Legislature (March 14–18), in which the Opposition asserted, and the governmental orators conceded, that the tendency toward German unity was a menace to the power of France. On the 18th the status of Luxemburg became the subject of a brief debate in the North German Diet. Rumors of French designs upon Luxemburg were already current, and appeal was made to the Chancellor to prevent the annexation of German soil by a dangerous neighbor. Bismarck warned the assembly that a discussion of the Luxemburg question might give rise to a European question.

This terminated the episode, but German national feeling had been so strongly aroused that Bismarck determined to publish the treaties of offensive and defensive alliance between Prussia and the South German States. This he did with the less hesitation, Von Sybel tells us, because he had already notified Benedetti of the existence and nature of these treaties, and had received the answer that they had long been known to the French diplomatists. The effect of their publication was to create, both in Germany and in other countries, a conviction that Prussia proposed to resist any French attempt to acquire German territory. The Dutch King was confirmed in his resolve to take no step in the Luxemburg matter without Prussia's express authorization. A new French appeal to Bismarck elicited an even more emphatic declaration that Prussia could not go beyond a *laisser-faire* policy. On the 22d of March he earnestly cautioned Benedetti to prevent the King of the Netherlands from making any communication on the subject to the Prussian Government; but this warning, says Von Sybel, came too late. On the 26th, the King notified the Prussian ambassador at

The Hague that he had promised to cede Luxemburg to France provided Prussia would consent, and requested the ambassador to transmit this statement to Berlin. By this time the European newspapers were full of the question, and war was regarded as imminent. The King of Prussia, however, avoided giving a direct answer to the message from The Hague: he telegraphed that he could reach no decision without consulting the other European Powers. At the same time another step was taken which, as the Luxemburg historian Servais remarks, ought to have shown the Dutch King that Prussia would not try to prevent the cession. Nearly six months before, the Luxemburg Government had notified the Prussian Government that in its opinion the Prussian right of keeping troops in Luxemburg had ceased with the dissolution of the Confederation, and it had suggested the conclusion of a new treaty providing for the continuance of the Prussian garrison. This offer, to which no answer had as yet been given, was now declined by telegraph (March 27). Rothan, the French historian, who constantly cites the work of Servais, makes no mention of this telegram.

Napoleon regarded the matter as settled. An autograph letter was sent to the King of the Netherlands, accepting the cession and assuming full responsibility as regarded Prussia. The King declared himself satisfied; the treaty was drawn up in duplicate, and it was arranged that it should be signed March 31. On that day, however, it suddenly occurred to the Dutch minister, Van Zuylen, that the signing was not his business, but that of the Luxemburg minister, Tornaco. The latter was summoned to The Hague, and the signing was postponed to the 1st of April — an ominous date! On that day (which was Bismarck's fifty-second birthday) a conversation occurred between Bismarck and Benedetti which is worth quoting:

"On the morning of the 1st of April, Benedetti called upon Bismarck, and after offering his congratulations . . . stated that he had an important communication to make. Bismarck, who could easily conjecture its character, at once interrupted him. 'I have,' he said, 'no time at present to talk business; I am on the point of starting for the Diet, where I am to answer, on Bennigsen's interpellation, the following questions: "What does the Government know regarding the alleged cession of Luxemburg to France? and is the Government resolved at all hazards to maintain the connection of this German territory with Germany?" If you will go with me,' he added, 'we can talk this matter over on the way.' As they walked towards the Diet, Bismarck explained that it was his intention to answer that the Government was indeed aware that such negotiations were pending at The Hague; that in response to a question from the King of the Netherlands regarding Prussia's view of the matter, reference had been made to the necessity of consulting the great Powers and considering public opinion; that the Government did not know whether the negotiations in The Hague had already been brought to a conclusion, and was therefore not in a position at the moment, to give a direct answer — yes or no — to the second question; that it believed, however, that no foreign Power would encroach upon indubitable rights of German States, and that it hoped to be able to protect such rights by peaceful negotiations. 'You see,' he then remarked to Count Benedetti, 'that in this way every occasion for a rupture is avoided; but you also see that the basis on which my whole explanation rests is the fact that I am not aware that the treaty has been concluded. And it will be equally clear to you that if you were now to reveal to me that the treaty has been concluded, and I were obliged to communicate this fact to the Diet, the inevitable result, with the high degree of excitement which now prevails in the assembly, would be an explosion, the effect of which would be incalculable.' At this point in the conversation the two men reached the door of the Diet. 'Now,' inquired Bismarck, 'with this result and the responsibility for it clearly before you, have you an important despatch to deliver to me?' Benedetti was not a bellicose person. He reflected a moment, said 'No'—and took his leave. Bismarck went into the Diet" (pp. 110, 111).

The interpellation was a preconcerted one. Bismarck's intention, as Von Sybel claims, was to allay the excitement which prevailed in Germany; and he quotes a French despatch to show that this was understood by the French diplomatists. The effect, however, of Bennigsen's inquiry and Bismarck's answer was rather to increase the agitation of the public mind. The tone of Bennigsen's speech was patriotic and almost belligerent. He assumed that the rights of Germany in Luxemburg were indubitable; assured the Government that where resistance to foreign aggression was concerned, there could be no parties in the Diet, and expressed the confidence of the assembly that the interests of Germany would be effectively protected. Bismarck began his answer by reminding the assembly that, with the dissolution of the old German Confederation, Luxemburg had become a sovereign state. He assured them that neither its ruler nor its inhabitants had the slightest desire to enter the new Federation. He let his hearers see, incidentally, that Prussia's right to keep a garrison in Luxemburg had already been questioned. He then answered Bennigsen's questions precisely as he had told Benedetti that he would answer them. In spite of the first part of his speech, his remark about the protection of "indubitable rights" was taken to mean that Germany would at all hazards keep Luxemburg out of Napoleon's hands. The cold and guarded tone of his whole speech was attributed to diplomatic caution—the more easily because, in a sentence which appears in the stenographic report of his remarks, but is not included in Von Sybel's abstract, he remarked that a Deputy could properly use warmer language than became a diplomatist while peaceful negotiations were still possible.

At The Hague, too, the impression created by the debate was that Prussia would not permit the sale of Luxemburg. This impression was confirmed by a Prussian telegram of April 2, saying that the King was free to decide as he saw fit, but was requested to pay some regard to the excited condition of German public feeling. According to Von Sybel, this despatch and a similar message sent the same day to Paris were intended simply to secure a postponement of the cession until the North German Parliament should have completed its labors and adjourned (which happened a fortnight later). In Paris, however, the message created the impression that Bismarck was not playing fairly. This impression was changed to a conviction by a declaration received from the King of the Netherlands, that his promise had been given to Napoleon under the express condition of Prussia's consent, and that he now considered himself released from all obligation.

War now seemed inevitable; but, on reflection, the French Cabinet decided not to force hostilities. It was not demonstrable, after all, that Prussia had prevented the purchase of Luxemburg; the military reorganization of France (the increase of the active army and the distribution of breech-loading rifles) was just beginning; and a proposal to Austria to form an offensive alliance against Prussia elicited the reply that the ruler of 10,000,000 Germans could not take up arms to support a foreign annexation of German territory. Napoleon therefore decided to refer the whole question to a European congress. The congress met, and the settlement which it sanctioned—the neutralization of Luxemburg, the demolition of the fortress, the withdrawal of the Prussian troops—left France in a position to claim that something had been accomplished by her diplomacy.

We have given a fairly complete abstract of Von Sybel's narrative, partly because his is, on the whole, the most intelligible version of the Luxemburg imbroglio that has yet appeared, and partly to obtain a basis for criticising his interpretation of Bismarck's action. He maintains that Bismarck was willing to sacrifice Luxemburg for the sake of postponing the war with France. We think it perfectly clear that Bismarck did not intend to do anything to prevent the cession of Luxemburg for which he could be held responsible and which would furnish France with a *casus belli*. But that he really wished France to have Luxemburg is an impossible supposition; and that he was not willing to frustrate the French plans *if he could so do it as not to appear to have done it*, seems very improbable. According to Von Sybel, the degree of excitement which the question aroused in Germany took Bismarck by surprise; the effect of the publication of the South German treaties and the impression produced by Bennigsen's interpellation were quite other than he had anticipated, as was also the case with his despatches of April 2. To this we can only answer that at no other period in Bismarck's long diplomatic career did he exhibit any such lack of comprehension of popular feeling, or any such incapacity to adapt his means to his ends, as the historian here ascribes to him. It seems to us that Von Sybel is trying to save Bismarck's reputation for straight dealing at the cost of his reputation for intelligence; and we cannot but sympathize with Napoleon's statement to the historian (p. 119): "Bismarck tried to dupe me."

The latter part of the volume describes the efforts to bring about a triple alliance between France, Austria, and Italy, efforts impeded by the insoluble Roman question; the plan of replacing the French garrison in the States of the Church by a Spanish force, a plan defeated by the dethronement of Queen Isabella. More space than is apparently necessary is given to the negotiations between the Hohenzollern-Sigmaringen family and the King of Prussia which preceded the acceptance by Prince Charles of the Rumanian crown; but the questions discussed were so similar to those which were raised in 1870 by the candidacy of Charles's older brother, Leopold, for the crown of Spain, and the attitude of King William in the latter case was so completely consistent with that which he maintained in the former case, that Von Sybel has laid an admirable basis for a vindication of the King against the French charge of indirectness and insincerity. The comparison between the two episodes is the more effective because the historian is clever enough not to make it.

RECENT BOOKS ABOUT JOHN BROWN.

John Brown and His Men, with some account of the roads they travelled to reach Harper's Ferry. By Richard J. Hinton. Funk & Wagnalls. 1894.

John Brown among the Quakers, and Other Sketches, by Irving B. Richman, Consul-General of the United States to Switzerland. Des Moines: The Historical Department of Iowa.

John Brown in Canada: A Monograph. By James Cleland Hamilton, LL.B., V.P. Canadian Institute. From *Canadian Magazine*, December, 1894.

THE literature of John Brown, like his soul in the ballad, is still marching on. As with his stout defender Henry Thoreau, who published two books during his life and has had a dozen printed about him since his death, so John Brown, who published no book at all, has had his biography written five times—by Redpath, Webb, Von Holst, Sanborn, and now Hinton—has been the subject of eight separate papers in the *Atlantic Monthly* alone, besides an uncounted number in other magazines—and is still open to treatment. He thus fulfils what has been described as the truest type of fame—the elevation into a permanent post-mortem importance of a man whose life was spent for the most part in obscurity.

Mr. Hinton had previously written some reminiscences of Captain Brown in *Frank Leslie's Monthly* for June, 1880, and had moreover had, in editing the volume of 'English Radical Leaders' for Higginson's "European Statesmen" series, some practice in biographical writing. His memoir of John Brown is by far the fullest treatment of the subject yet printed, except that of Mr. Sanborn. It perhaps falls short of this last work in arrangement, but surpasses it in directness and simplicity; shows less profuse details of historical investigation, but more of personal intimacy, at least during the Kansas period. The author went first to Kansas in 1856, as a member of one of the three parties organized at Worcester, Mass., under the auspices of the State Kansas Committee and afterwards of the National Committee, and having no connection with the Emigrants' Aid Society, which had then passed its prime. He was a young English printer and journalist, resident in Boston, ardent, liberty-loving, and thoroughly honest. He knew most of Brown's men, and traces their career more thoroughly, in some respects, than has hitherto been done. Incidentally he makes clear the utter preposterousness of the view taken in Nicolay and Hay's 'Lincoln'—and hitherto confined to that too superficial book—that these men were largely a set of impecunious hangers-on, attracted to Brown by the prospect of support. Nothing was more remarkable in Brown than the Puritan vigor with which he shed from him all men of that class, and impressed his own self-denying type, for good or for evil, on those who followed him. He was, in this respect, the greatest contrast to his contemporary, "Jim" Lane, to whom the humbler Wildrakes and swashbucklers of that unsettled period naturally gravitated.

Perhaps the most eminent service rendered by Mr. Hinton's book is in exploding, even more thoroughly than Mr. Sanborn's, the curious theory urged of late years in some quarters, and embodied in Prof. Spring's volume on Kansas in "American Commonwealths," to the effect that there was a distinct division in that Territory, during its period of struggle, between the advocates of diplomacy and those of armed resistance. Mr. Hinton makes it very clear that this whole theory is an afterthought. In Kansas, as elsewhere, different men were assigned by temperament and accident to different vocations, which they discharged more or less well—Robinson to diplomacy, Brown to fighting; but this implied no real antagonism between them. Mr. Sanborn showed long since, by documentary evidence, that Robinson put the seal of explicit approval for many years on Brown's most extreme and most censured act, the massacre at Pottawatomie. Now comes Mr. Hinton and shows, moreover, that Robinson told Brown himself, in 1856, that "the Pottawatomie slaying was entirely justifiable, and that more of the same sort should be done" (p. 88); that in 1859, three years after the event, he supported at Lawrence resolutions declaring the act "a sad necessity" (p. 89); and that in 1877, on the unveiling of Brown's monument, Robinson made a speech comparing him to Jesus of Nazareth. Not only this, but Mr. Hinton shows that Mr. Eli Thayer, who has of late years been constant in his denunciation of Brown's career at that period, presented him, the year after the Pottawatomie affair, with a gun made expressly for him in Worcester, the receipted bill of which, made out to Mr. Thayer, was endorsed by him on the back to this effect: "Presented to my friend, Captain John Brown, for use in the cause of freedom. Eli Thayer" (p. 90). We are not now arguing whether the Pottawatomie "necessity" was right or wrong; Mr. Hinton has shown pretty clearly that there was not at the time in Kansas any prominent "free-State" man or class of men who did not approve of it. If one sinned, all sinned, at least by way of sympathy.

The main features of Captain Brown's career were so simple and are now so well understood that Mr. Hinton puts them in no essentially new light, though he throws, from his own memory and the correspondence of others, many side-lights on the man and his times. The other two books are monographs on special periods in Brown's life. An organization known as "The Historical Department of Iowa" publishes several monographs by Mr. Richman, of which the most interesting is a study from original sources of the life of Captain Brown in Springdale and Tabor, Iowa, both well known in those days as settlements founded by anti slavery Quakers. It was there that Brown obtained, in August, 1857, the rifles deposited there by the Kansas State Committee of Massachusetts, but actually the property of George L. Stearns, its chairman. It was there also that he brought Captain Hugh Forbes, the erratic English Garibaldian drill-master, who first taught Brown tactics and then betrayed him. Some of his subsequent followers at Harper's Ferry joined Brown there; and they went thence, in 1858, to Chatham in Canada, for their well-known "quiet convention," as their leader called it.

Here Mr. Hamilton takes up the tale and gives in his pamphlet the best account yet printed of that assemblage, and this especially from the point of view of the colored members, although the writer himself appears to be white. Chatham was chosen for the meeting as being near the headquarters of the colored race, of whom Hinton says that there were then 75,000 in Canada, although Hamilton thinks this an over-estimate. Many of these interested themselves in the convention, and the portraits of some of them—strong faces all—are given. Pictures also are given of the rough little schoolhouse and engine-hall of Chatham, where, as the author thinks, "the train was laid that fired the mine whence resulted the overthrow of the proud Southern oligarchy."

The Art of Thomas Hardy. By Lionel Johnson. Dodd, Mead & Co.

THERE was once a lady who lived in Alabama and who wrote novels with heroines especially dear to girls of a literary turn. These heroines were compact of learning. Asked a question about household affairs, they promptly replied with a long quotation from the Vedas. An adorer venturing a compliment was turned from his frivolous way by a disquisition on Babylonic cuneiform or a pressing invitation to consider the wanderings of the Aryans. Except those edifying novels, there is nothing in our literature of which Mr. Lionel Johnson's 'Art of Thomas Hardy' reminds us. No comment is made on any manifestation or phase of that art without a corollary mentioning how Tibullus puts it or what appears in an ancient version of Herodian, or the sentiments of Quintilian, Dante, Bossuet, and Mr. Pater on subjects ranging from the use of words to the destiny of the soul.

Perhaps all the pagan and Christian classics have been absorbed by Mr. Johnson and become native to his memory, but unfortunately his use of them is so harum-scarum that he does not make the impression of one crammed to bursting with erudition, rather of one possessing a large library of excerpts and quotations, and resolute to share it with the public, heedless of relevancy to Homer or to Hardy. In his first chapter he quotes Dr. Johnson's "I never desire to converse with a man who has written more than he has read"; and, in view of this performance, it may almost be assumed that Mr. Johnson was inspired to show that the Doctor would have found him worthy even of a temporary suspension of his own eloquence. However, he says that the object of his essays is to show that "Mr. Hardy is often of the humanists and may be of the classics." The extreme caution of this statement binds a man to nothing, especially as the company is declared to be catholic, excluding only the "perverse," by whom, we gather from the context, are meant only clever photographers of a moment, a class to which no one would ever dream of relegating Mr. Hardy. We feel that Mr. Johnson might have permitted himself the excess of trying to show that Mr. Hardy is always of the humanists and must be of the classics. Then there would have been a chance for spirited argument. But who so rash as to argue with a man capable of observing that his author's manner of presentation "has about it something Elizabethan, something Shakespearian, or something of later date, Jacobean, and Caroline," with constant reminder that it has also something Victorian and something *fin de siècle?*

What Mr. Johnson does manage to show in intervals of rest from citation, we think scarcely needed to be shown. The principal points of emphasis are that Mr. Hardy writes by preference about Wessex, which means that portion of England once known as the Kingdom of Wessex, which was the home of the West Saxons; that his favorite motive is the meeting and clashing of the restless, modern spirit with the repose, or rather stolidity, of antiquity; that his design is free and worked out with patience, sincerity, and composure; finally, that he ought not to use the "split infinitive" (Mr. Johnson takes that sin deeply to heart), and ought to have denied himself "all commentary" in telling the tragedy of Tess of the D'Urbervilles. Many minor propositions, hardly, however, less valuable, are advanced in such pomp of diction and splendor of allusion that at least the admirers of our lady novelist from Alabama (if such be still among us) will never perceive how great is Mr. Johnson in making much ado about nothing.

The book is admirably printed on rough, light paper, provided with a careful bibliography, decorated with an etching of Mr. Hardy, and distinguished from other books by

the constant recurrence of "an habit," and the insertion of a *u* in the first syllable of portraiture.

The Marches of Wales: Notes and Impressions on the Welsh Borders from the Severn Sea to the Sands o' Dee. By Charles G. Harper. With 114 illustrations from drawings by the author and from old-time portraits. London: Chapman & Hall; New York: Charles Scribner's Sons. 1894. Pp. xvi, 368.

THIS is an old-fashioned book of travel. The author goes slowly along from village to village, and tells with gusto all manner of little anecdotes of his pleasant and unpleasant experiences. The odd people whom he meets are duly described, and specimens of their dialect given in full. He stops at ruined abbeys and castles, at elegant modern mansions and parish churches, and about each he has his word to say, as concerning their architecture, their associations, even their history. Any famous man or woman whose name is somehow associated with town or tower receives his or her due biographical notice. Every battle or siege whose locality is visited is related, in a true chronicler's fashion, with details. Modern railway and manufacturing works come in for their word of comment; and mingled with it all are the traveller's own views on history, art, politics, and sociology given with great freedom as by one who is sure of the sympathy of his readers.

The record begins with the railway tunnel under the Severn, from Northwick to Portscuett; and we are told how hard it used to be to enter Wales from the southwest, as you had your choice only between the stormy passage across the "Severn Sea" and the long journey round by the north. Chepstow Castle comes next, and we read at length, as we might do as well in the 'Dictionary of National Biography,' about Henry Marten, and that he was a "regicide"; that King Charles's putting to death was "murder," and that Marten was let off with "altogether inadequate retribution" for his signing of the death-warrant. At Tintern Abbey we are treated to the queer notions which the eighteenth century had of Gothic architecture, and there is much about the ideally rustic cottage in which the author found a lodging, and about the dog and the two cats attendant upon it. At Raglan Castle we learn of the food and the table-equipage of a wealthy household of the seventeenth century—something also about the Marquis of Worcester, and something of the famous siege of 1646; and we are informed that the Puritans were "those whining humbugs who formed the greater part of the hosts called by some writers of the time the Army of God," and again that the civil war was "a pseudo-religious revolution." At Shrewsbury the whole campaign of Henry IV. against the Percys and their allies is recounted, and the battle fought under the town wall is described at length. It appears, too, that Owen Glendower deserted his allies "like a true Welshman, half-hearted and treacherous." Apropos of the Roman Uriconium, the story of the abandonment of Britain by the legions and its invasion by Danes and Saxons is told as if in a child's history of England. At Franknell, where Charles Darwin was born, the whole Darwinian controversy of 1860 to 1880 is gone through with, as if in a popular encyclopædia. At Hawarden we learn that the castle is "the house of Rimmon," that Mr. Gladstone is much admired by Radicals, and that these Radicals come to see him and his place a good deal; further, that "it is a singular irony of fate which has made a demagogue of the owner of so beautiful a demesne as Hawarden Park," apparently because "a country gentleman and rural squire" who talks "in anathema of class and glorification of that superlatively virtuous noun, the People," is a surprising and almost inconceivable phenomenon.

The book is not uninteresting, however. It belongs to the class of the amusing and mildly instructive. The reader of Sunday newspapers will find in it a better selection of scraps of knowledge than his weekly sheets can offer, and that held together by a thread of geographical association which will help him to remember some interesting facts. The illustrations, too, though hardly more artistic than those of the Sunday paper, are evidently more trustworthy. In fact, it is because of the illustrations that this book deserves notice from local antiquarians. There are very curious epitaphs and other inscriptions given in representative drawings. A really remarkable sculpture on a tombstone at Mitchell-Troy is shown at page 55—a relief, absurd in meaning, but rather artistical in design. What seem very truthful renderings of Gothic sculpture are presented at pp. 131 and 145. A very unusual form of the heraldic portcullis of the Worcesters occurs on page 65. Urishay Castle appears at page 140 as a most picturesque country house of moderate size. A good mediæval churchyard cross is figured at Trelleck, and another, beside which lies the grave of John Kemble, Catholic martyr of 1679, at Welsh Newton. At page 152 is an impossible sort of structure well portrayed—the belfry of Pembridge Church, a wooden structure of the fourteenth century looking like a windmill without its sails; a delicate morsel for the students of mediæval building. Mr. Harper is at his best when he has an object before him whose characteristics it behooves him to set down with accuracy; then he inspires respect by his obviously faithful recording.

Philosophy of Mind: An Essay in the Metaphysics of Psychology. By George Trumbull Ladd, Professor of Philosophy in Yale University. New York: Charles Scribner's Sons. 1895. Pp. xiv, 414, 8vo.

THERE were but few, we venture to think, who read Prof. Ladd's 'Psychology, Descriptive and Explanatory,' issued last year, that did not feel the presence of an obscure background of opinion which in part, at least, was determining the author's course at every step, but found no adequate expression in his argument; and the like is true of the 'Philosophy of Mind.' Neither book contains its own final premises. Those of the 'Psychology' are now first published in the 'Philosophy of Mind,' and those of the 'Philosophy of Mind' lie hidden, as the author intimates (page 81), in "certain points of view, and even certain conclusions" which he has not yet made accessible to the public. The result may be imagined. The series of which this volume forms an instalment is composed on the plan of a Ciceronian period, and purposes to move in all the pomp of suspended intelligibility till the last word. The "secret of Ladd" retires before one like the boxes in a Chinese puzzle, and every volume hands on its mystery to the next. This is, of course, a matter of exposition, simply; and Prof. Ladd unquestionably has a right to keep his secret through as many volumes as he may choose; but he presents meantime too often the ungraceful attitude of sweeping in the stakes without showing his cards.

With this drawback, or rather in spite of it, the 'Philosophy of Mind' is a full, rich book, with that amplitude of by-remark which fattens the writings of middle aged men. It opens with two chapters on the relation of Psychology to Philosophy. Their general purport is, that in spite of the failure of its professors consistently to treat it so, Psychology is properly a natural science like any other, and proceeds upon assumptions which it is not its own business, but the business of metaphysic as the general science of final assumptions, to criticise. There is much in them to remark, but as they stand in no vital connection with what follows, we pass at once to the rest of the book.

Prof. Ladd is interesting among psychologists of note at the present day in his holding by the soul, and the 'Philosophy of Mind' is in the main devoted to his declarations on that head. The reader will find them very new wine in an old bottle. The soul, according to this new dispensation, is terribly up to date; it differs from the soul of tradition in pretty much everything but the name. It is not an entity over and above consciousness. It is not an unchanging core of reality—a perdurable substratum of the conscious states. It is not simple, it is not indivisible, it is not in its essence immortal (the "possibility" or "perhaps the probability" of immortality is at the utmost but "suggested"), it is not even continuously existent in the past. In every deep dreamless sleep, in every case of fainting or other loss of consciousness, the soul ceases utterly to exist. The self we are conscious of—the "agent" we observe in introspection actively presiding over consciousness—is the only human soul there is. It begins with the appearance of consciousness in the body; it dies, so far as the weight of the evidence goes, with the death of the body; its existence is broken into blocks by every gap in consciousness, and between these blocks there exists no unity but a felt unity—the later block remembers the earlier and looks upon itself as a continuance of it. For the trustworthiness of memory, however, we have but the guarantee of a tender bit of dialectic which will not, we may suspect, outlast the strain of close inspection. It is as follows: We can't doubt the memory, for unless we remember correctly the premises of our argument to disprove it till we reach the conclusion, the conclusion does not follow. But we apprehend that premises and conclusion are never in different moments of consciousness; we don't conclude that Socrates is mortal because we remember that we *formerly* believed that all men are mortal and that Socrates is a man; we conclude it only on the ground that we believe this *now*. If premises and conclusion are not in the same moment of consciousness, there *is* no conclusion.

One wonders, in these days of Hegelian formulæ, how the pews in most of the churches would "sit up" if they ever got a notion what the pulpit is saying. Prof. Ladd's doctrine of self is very good doctrine, and the ten chapters of which it forms the backbone are in many places models of sustained argument and masterly exposition, but one wonders why he calls it *soul*. His statements differ not at all from those of the least hirsute (*baldest* is his word) phenomenism; unless it be in the term "agent." But an agent who is not an entity over and above consciousness is an ego that Hume himself might have accommodated. Phenomenism, however, Prof. Ladd regards with unconcealed aversion, sometimes on the ground that it is "shallow," sometimes on the ground that it is "bald," sometimes that it is self-contradictory and absurd. It

would seem a pity, if this last be true, that he should have argued himself into it. Happily his reasons for regarding it in that disparaging light may not prove inexpugnable—so far, at least, as he has yet suggested them. (There may no doubt be better ones in that dark background of assumption to which allusion has been made.) We can examine but one of them before we close, but it may be taken as a sample of the rest. It may be stated as follows: That one knows something, one cannot doubt—one assumes it even in the argument to disprove it. But knowledge of phenomena is not knowledge; knowledge by its very terms imports reality. Therefore, the fundamendal doctrine of phenomenism, that we know nothing but phenomena (of consciousness), amounts to this, that we know that we know nothing.

We apologize for the harshness of the terms (it would be a mistake to speak of Prof. Ladd in semi-tones—he does not deal in them himself), but this bit of reasoning reminds one of a celebrated syllogism mentioned by Molière, in which the major was inept, the minor ridiculous, and the conclusion impertinent. For if (as Prof. Ladd grants for the purposes of argument) one can, on the assumption that one knows something, have a proof that one knows nothing, that assumption, like any other which issues in a contradiction, is sufficiently discredited. That a knowledge of phenomena is not knowledge sufficiently discredits itself. And that the conclusion is not pertinent will be plain to anybody who reflects on the bare meaning of the proposition that one knows *nothing* but phenomena. It means above all that the one thing we cannot know about consciousness is, that it is a phenomenon of something else—that consciousness is the only reality.

These, however, are but blemishes in a book which is strong enough to carry even worse ones. We have touched on its central and most interesting topic, but it treats incidentally and often at some length of many things besides. "The self, . . . not simply as known to itself, but also as scientifically known in its relations to the bodily organism," is the author's own statement of his subject, and under the latter head he discusses monistic materialism, monistic spiritualism (that monism of the "unknown" and "absurd" which regards both matter and mind as common manifestations of a single *tertium quid*), the law of causation, the conservation of energy, etc., etc. The three monisms mentioned he rejects for the time being in favor of something very like a plain man's dualism, which he assumes provisionally until the publication of the "certain points of view" and "even certain conclusions"—the undivulged premises of the 'Philosophy of Mind.' They will amount in their entirety, it seems, to an Idealistic Monism, not otherwise defined than that it issues in a personal Absolute, the One Ground of all interrelated existences and activities. The positions of the present book the reader is left to adjust to this as best he may.

Corea, or Cho-Sen, the Land of the Morning Calm. By A. Henry Savage-Landor. Macmillan & Co.

Mr. Landor's record as a writer of trustworthy narratives of travel does not predis pose us to accept without reservation his story of what he tells us about Cho-Sen. Like those of almost all writers upon the peninsular kingdom and people, his observations were confined to the capital and vicinity. He tells us a good deal about Chemulpo, the mushroom seaport, and of Seoul, which shares with Peking the reputation of being one of the dirtiest cities in the world. Being an artist, he was able to make realistic pictures, which are reproduced in text and full-page illustrations. One of these, entitled "A Study from Still Life," is horribly suggestive. It pictures scenes on one of those execution grounds which old residents of Japan, also, remember as being common, but which have so far disappeared from view that Japanese born since 1870 know nothing of them. The book, as a work of literary industry, shows vastly more care than our author's initial work, 'Alone with the Hairy Ainu,' and there is a good index. Evidently the author has profited by the severe criticisms and merciless exposure of his misstatements by those who have lived long among the Ainu. Hence, despite the tone of exaggeration on many pages of his present volume, and notwithstanding that certain episodes are reported as having taken place which we doubt utterly, we can recommend the narrative as in the main lively and interesting.

Mr. Landor, as his preface states, does not write "literary" English, but there are too many unnecessary colloquialisms to suit even the moderately critical reader, while whenever we meet the expressions "If I remember right," "I believe," etc., we are pretty sure to have a doubtful story or statement. The author nowhere refers to any authority for his knowledge of Korean history, and the very liberal way in which he has decanted considerable portions from a well-known work entitled 'Corea, the Hermit Nation,' without once referring to his source of information, cannot accurately be called fair or generous. Still further, remembering an article which he has written quite recently for an English periodical, in which he suggests that a startling romance could be constructed out of materials furnished in the book just named, and also (disguised under philanthropic pretences) in Oppert's 'A Forbidden Land,' we doubt the story of his meeting at Fusan the alleged body-snatcher (pp. 5–15). After reading the factitious conversation, we do not wonder that on Mr. Landor's appearing on deck to interview the "pirate," the latter had already gone, while his own ship was very conveniently on the point of raising anchor bound for Chemulpo. Besides other exaggerations and contempt of accuracy, we find that on page 1 the Pappenburg of Nagasaki Bay becomes Battenberg; the well-known Japanese firm Mitsu-Bishi becomes Mitzui Bashi, etc. We are told that "Corea is an extremely cold country, the thermometer reaching as low sometimes as 70 or even 80 degrees of frost." As for the (author's) tiger, he is omnipresent, and really Mr. Landor's ideas about him are very much like those of a child that has been frightened by its nurse. One has but to compare his thoroughly untrustworthy talk about tigers (not one of which he saw alive) with the very honest book of Capt. Cavendish, who, in his 'Korea and the Sacred White Mountain,' tells of his journeys through tiger land, showing that, besides the comparative rarity of the beasts, no European has yet had a shot at one of them. Mr. Landor seems to be more at home when he is describing the mythical zoölogy of the peninsula, in which, as in other subjects, his indebtedness to his authorities is not at all expressed.

Apart from these criticisms, the work is a narrative that has in it the element of personal adventure, and the pictures of the outdoor life of the white robed natives are full of warmth and color. The conversations which Mr. Landor had with both the educated and common folks, through more or less skilful interpreters, show a people too easily satisfied with their condition. They are not fond of cleanliness, though as a rule neat in their dress. They are great smokers of tobacco. They are not at all nice in the preparation of their food. They partake liberally of meat diet, and are, as a rule, fine-looking and stalwart. The contrast between their physical appearance, giving the suggestion of robustness, and their moral weakness, is clearly brought out. Mr. Landor's observations, however, seem to have been confined almost wholly to the capital, where the people, as a rule, are said to be shorter in stature than those in the north. In his realistic style we are told about the lepers, the various sorts of diseases, the gluttons, the criminals, the stone fights, and the fires, which vary the monotony of life. One chapter is devoted entirely to the mental traits, the physiognomy, the emotions and their expression, in the Korean man and woman. Families are generally small in number, it being rare that more than two children of the same father and mother come to maturity. Infant mortality is very great, and there are many reasons for it. Owing to the dissolute and effeminate life among the upper classes, very few able men are to be found among them. In short, this book gives a picture of Korea which is astonishingly like that of old or unreformed Japan. The pessimistic view of the author, who regards the future of Korea as almost hopeless, chimes in with that of Mr. Curzon in his recent book on 'The Problems of the Far East.' Thus far it appears that English authors and students, who look at Asiatic politics in the light of the necessities of the English market, do not seem to know that the old Korea which they describe is now for ever past. The Murata rifle has blown it to the winds, while at the same time piercing the rhinoceros crust of Chinese conceit. A new Korea is as surely and steadily, though very slowly, rising as has risen the New Japan of our day.

A Life of William Charles Macready. By W. T. Price. Brentano's.

The chief object of this publication in the "Masks and Faces" series seems to be the justification of Edwin Forrest for his share in the unfortunate quarrel which ended in the slaughter in Astor Place in 1849. One would have thought that it was scarcely worth while, especially in the case of an avowed friend of the American tragedian, to recall these bitter memories after a lapse of forty-five years. Mr. Price has nothing to add to the established facts with which all readers of stage history have long been familiar. His main contention is that Forster was Macready's most intimate friend, confidant, and agent, and that, therefore, Macready cannot be absolved from responsibility for whatever he may have said or done to the prejudice of Forrest in London. This is not a very ingenuous argument. It would be just as fair to hold Forrest to account for everything that his partisans wrote or said about Macready. Beyond doubt Forster was an ardent admirer and supporter of the English actor, but the extent of his active participation in the literary campaign against the American performer is uncertain. He denied the authorship of some of the articles ascribed to him; and Macready himself—a fair-dealing man in spite of his passions and jealousies—always declared that he had never stooped to suborn the press against his rival. Of course there

were faults and lamentable misunderstandings on both sides, but the fact remains that the first act of overt hostility was committed by Forrest, when he publicly insulted his adversary by hissing him in the theatre and boasting of the deed afterwards. Had it not been for the later bloodshed, this tempest in the theatrical teapot would never have been recorded except in the newspapers of the day. The responsibility for the closing tragedy does not rest upon any one man or two. Possibly a scheme of theatrical advertising may have had more to do with the inflammation of public feeling than has been suspected generally.

Mr. Price's biographical sketch is pleasantly written and affords a compact and comprehensive synopsis of Macready's career as previously set forth in the diaries and elsewhere. His selection of anecdotes, or, rather, his arrangement of them, is, perhaps, a little malicious; but, on the whole, he gives due prominence to the many virtues as well as the notorious faults of his remarkable subject. An interesting feature of the little book is the excerpts from contemporary criticism. Macready's life ought to be studied by all who wish to know what the pursuit of theatrical art for its own sake really means.

BOOKS OF THE WEEK.

Bangs, J. K. The Idiot. Harpers. $1.
Boardman, S. L. Handbook of the Turf. Orange Judd Co. $1.
Chambers, G. F. The Story of the Stars. [Library of Useful Stories.] Appletons.
Chambers, R. W. The King in Yellow. F. T. Neely.

YALE MIXTURE.

The choicest tobacco made, and pre-eminently a gentleman's smoke.

Marburg Bros., The American Tobacco Co, Successor, Baltimore, Md.

The Nation.

NEW YORK, THURSDAY, MARCH 28, 1895.

The Week.

Our esteemed contemporary the *Tribune* continues to lift its Cassandra cry against the improvement of trade, pointing out particularly "the flood of imports" that is rushing upon our shores. In order to give this flood its due effect on the imagination, it takes up the several countries and articles seriatim. Thus, we learn that during the quarter ending December 31, 1894, we imported from Canada $475,000 worth of fish, $92,000 of apples, $56,000 of flax and tow, $107,000 of hides and skins, and a total of forest and farm products of $3,608,000. If Canada belonged to us, this condition of trade would be considered highly flourishing, because her products would be paid for with our products; but since she is a foreign country, we must pay for her products with gold, and this leads to our impoverishment. It relieves the situation somewhat to learn that we are selling pig-iron in Canada to such an extent that we have driven Scotch pig out of the Montreal market. This fact we learn from the columns of the *American Manufacturer* of Pittsburgh. This paper says apologetically that the selling of so much American iron in Canada is due to the very low price at which it is offered, a fact that usually accounts for large sales both at home and abroad. Perhaps the sales of Canadian fish, apples, flax, tow, hides, etc., to us are accounted for in the same way.

The lamentable increase of imports extends to Russia and to Sweden. The former country has flooded us with bristles, camels' hair, goat skins, carpet wool, licorice root, and manganese ore, while the latter has deluged us with iron ore and wood pulp. Switzerland has dumped upon our shores aniline colors, cheese, condensed milk, embroideries, curtains, dyestuffs, chemicals, silk goods, straw goods, watches and watch materials to the amount of more than four million dollars, being an increase of fully a million as compared with the last quarter of 1893. Holland is not far behind Switzerland in this nefarious business, having sent us bulbs and plants to the amount of $54,000, besides Edam cheese, cocoa, coffee, herrings, rice, Sumatra tobacco and, alas, diamonds, to the value of $642,000. Who is going to pay for these diamonds, we should like to know? Horace Greeley used to lecture us once a week on the purchase of foreign gewgaws. Can there be a more reprehensible gewgaw than a diamond? And when American citizens buy diamonds for their wives, do they reflect that they have to be paid for with gold, if indeed they are paid for at all?

We are sorry to say that it has been decided in the newspaper offices that we must have a war with Great Britain on account of Venezuela, if not also on account of Nicaragua. What is the trouble? Why, according to one of the space writers, "the facts are so clear that nobody needs to be for a single moment in doubt. The case is perfectly simple. Venezuela owns the land [the Cuyuni Valley], Great Britain covets it and is trying to grab it, by guile if she can, by force if she must. Is she to succeed? That is the whole Venezuelan question. This is therefore a barefaced attempt by a European power to oppress an independent American state, and to seize and colonize its territory." The facts being so clear, there can be no difficulty in applying the Monroe Doctrine to them. We must repel Great Britain from Venezuela by force of arms. What we wish especially to point out is the wonderful simplicity we have introduced into diplomatic controversies. Nothing has come out so clearly within the last two or three years as the absurdity of maintaining expensive diplomatic services and foreign offices and the like, and the futility of the long discussions carried on over these international disputes about rights and wrongs. There are few newspaper offices in this country in which all such questions cannot be settled by a young man at a salary which is not one-twentieth of what is paid to our pompous ambassadors and ministers plenipotentiary. Take this Venezuelan controversy. It has been so examined in the *Tribune* office that "nobody need to be for a single moment in doubt" about it. Now see the advantages of this system. Everybody is not interested in the Venezuelan trouble, but those who are can have their minds cleared about it for three cents. The man who clears their minds probably gets only $40 a week. Gresham gets probably $150, and Bayard gets about $336. But we must not suppose that these two are the only persons who are paid for doing this silly business. There is a whole army of secretaries, clerks, and précis-writers employed at Washington in the State Department to work over complaints against Great Britain, ocean "keys," military cables, and manifest destiny. The waste, sheer, wicked waste, of all this must surely be becoming clearer to a religious and thrifty people.

The weight of the religious press is not what it used to be in politics, for reasons which it is not necessary to discuss, but on the subject of needlessly embroiling the country in war it still speaks with conviction and influence. It was the warnings and protests of the religious press that, as much as anything, showed Harrison how strongly the sentiment of the country was against his senseless and desperate project of going to war with Chili; and again last week we were pleased to see the *Independent*, the *Outlook*, and other papers of their class, condemn the bloodthirstiness of the Jingoes. There never was a more ludicrous case of a handful of penny-a-liners and noisy and unscrupulous politicians pretending to speak for the dignity and majesty of a nation, which is in more danger of humiliation by their braggart silliness than by anything else.

Senator Proctor is a man for good Americans to keep their eyes on. He does not agree with Lodge, Frye, and Cullom in hoping for a war with Spain so that "we may have an opportunity to annex Cuba." The character of the population, he adds, is not such as he would consider desirable in a State of the Union, and a State Cuba would necessarily become, he thinks, if annexed. Now it is hard to have to sit down with a United States Senator and point out to him what Lodge says every intelligent schoolboy knows, but we must do it if our institutions are to live and prosper. Does not Mr. Proctor know that intense Americans never ask how we are to govern distant islands and mongrel races after we get them? That, as President Harrison said when urging the annexation of Hawaii, is a mere matter of detail which it is always wise to leave to the future. Moreover, if the Cubans are undesirable, what are the Hawaiians, what are the Samoans, what are the other nondescript islanders that Lodge says we must annex? Surely Senator Proctor must see that these disagreeable inquiries about the character of new citizens have a "holier-than-thou" appearance. They are, in fact, thoroughly provincial, quite like the unreasonable squeamishness of a Vermont villager over having a Russian boarding-house opened next door to him. America can never, under that system, become the great and glorious bully of Lodge's dreams. Besides, does not Mr. Proctor know what the instantaneous effect of American institutions upon alien peoples is certain to be? Can he not see them becoming, at first contact with our politics, industrious and sober, students of the constitution, enemies of corruption, good Republicans? We fear he has not read Lodge's great speech, which, we are glad to see, has been reprinted, colored maps and all, for the benefit of just such slow wits as Senator Proctor.

The Missionaries and their friends are clearly disturbed in their minds by the attention which has been called to the discrepancy between the accounts they used to give of the moral condition of the natives of Hawaii and those they give now after

getting their property away from them and overturning their Government. So Mr. Gorham D. Gilman has come to the rescue in virtue of fifty years' residence and experience in the Sandwich Islands, and characteristically enough furnishes an explanation of it all in that "home of lost causes," the New York *Sun*. The way it happens that the Hawaiians are so bad now when they used to be so good is this: All went well till Kalakaua ascended the throne. This wicked sovereign promptly "cut loose from moral restrictions," and set to work "seducing his people from the code of morals which had been established." He also used "political influence and bribery." After sixteen years of this, the natives perceived that they might abandon Christianity without losing their palace "pull," so they abandoned it, and "soured on" the Missionaries.

But a far worse thing than this happened about the same time, namely, "the withdrawal by the American Board in 1862 of the financial support which for forty years they had generously given." This seems to have precipitated the moral collapse of the natives. As soon as they found the Missionaries had lost their "financial support," they cried, "Evil, be thou my good," and, "Satan, come to my arms." They then set to work to breed an evil and adulterous generation, with this result:

> "The condition of affairs in 1865–1895, a generation of the race, is vastly different, not from any course of action of the missionaries or their sons, but from the conduct of the native leaders, who have endeavored persistently and systematically to turn the people from the gospel of truth and purity to the condition in which we find them to-day. It is not by any means to be understood that all of the natives are to be classed as degenerate or apostates. There are still many of them who maintain respectable church connections, and it is believed that under the present influence of renewed activity in religious life, and the stable government which has been established, very many will again return to their churches."

We must all rejoice that the determination of the Sons of the Missionaries to get hold of the Government for business reasons should have coincided with need of a revival of religious life among the natives. But we cannot acquit the Missionaries of all responsibility in the matter, because it is plain from Mr. Gilman's own admission that the withdrawal of the "financial support" caused some relaxation of evangelical activity on their part. But in a country of yams, breadfruit, wild pigs, and other necessaries, and in a fine climate, this ought not to have had any effect on real apostles. Sooner than let the natives go to the dogs in this way, ought they not to have preached in breechclouts and lived on locusts and wild honey? We are sorry to hear that "the men now in charge of affairs are largely men of Christian character"; for much of their conduct is well calculated to bring "Christian character" into disrepute.

The registration of the laborers in the city service is probably one of the most important steps yet taken in this city by the Civil-Service Commission, for in no department has corruption been more rampant and more corrupting. It is no great exaggeration to say that the privilege of laboring for the city with shovel or spade, or pickaxe or broom, has for years and years been an article of merchandise; that it was regularly dealt in by aldermen, district leaders, and ward "heelers"; that poor men were compelled to share their wages with the scum of the community, and in return were allowed to dawdle and loaf over their work. The bargain, however, gave them no security of tenure, for they were turned adrift as soon as something was to be gained by finding a place for another "man." One of the worst features of the system, besides its corruption and injustice, was the profound belief in the venality of everybody connected with the administration of city affairs, which this diffused among the working classes, especially the more ignorant portion of them. A worse preparation for the exercise of the electoral franchise could hardly be conceived of, especially when backed up by a totally corrupt police and a vicious and blackguard police-bench. Indeed, we think it may be said that the release of the laborer from this base tyranny is the foundation on which all other city reforms must be built. Under the new rules, every laborer who is physically fit and whose character is good, can register himself as an applicant for labor, and all departments of the city government employing labor must take the men as they stand on the list, without sale, denial, or delay.

The strike of the electrical workers is declared "off" after having been "on" for more than a month. The men gain nothing which was not theirs from the beginning for the asking, and go back to work with the proud consciousness that they have lost a month's wages in vain. Some of them have lost their jobs permanently, and will have to find employment elsewhere. Yet we suppose the next time the walking delegates order a strike, a strike will come with the same unquestioning obedience of the men, and child-like faith as in superior powers. What organized workmen can gain without strikes is shown by Mrs. Lowell's account of the New York bricklayers. They have not struck once in the past ten years, yet during that time have succeeded in getting their wages raised from forty-two to fifty cents an hour, and in securing an eight-hour day; although a long strike in 1884 for a nine-hour day failed disastrously. These results have been brought about through a permanent joint arbitration committee, composed of equal numbers of employers and employed, in which all differences have been rationally discussed and amicably adjusted. This method is hard on the dignity and emoluments of the walking delegate, but as far as the man is concerned who does the work and earns the wages, it seems to be successful, though very inglorious.

The Massachusetts committee which went down to the South to inquire into the cotton-mill question, got into an amusing trouble at Richmond, Va. One of its members named Teamoh was a negro, but he appears to have been very nearly white, for he made his way into the Governor's mansion to lunch along with the others without obstruction. But Gov. O'Ferrall found it out afterwards, and he has accordingly written to the committee that if he had known there was a colored man in the party, his reception of them would have been much more "formal." He would have met them at his "executive office," and not in "his mansion." He appears, too, to accuse the committee of double-dealing, for he says the stories the members have been telling in Boston about the affair do not tally with "the expressions of disgust and annoyance in which they indulged *ad libitum* in Richmond at having with them the negro Teamoh." The Governor is undoubtedly in a very embarrassing position. His white constituents would never have forgiven him had he knowingly entertained Teamoh, and, on the other hand, had he excluded Teamoh he would have been guilty of discourtesy to a sister State. The committee, on the other hand, had to pretend in Boston that they were delighted to have Teamoh with them, but at Richmond, that he was a disgusting object. To ordinary men such situations are very trying, but politicians rather like them. They enjoy shamelessly the twists and turns by which they escape being "cornered."

Prof. W. J. Meyers makes a neat little demonstration in the *Political Science Quarterly* of the fallacies of municipal bookkeeping as applied to electric lighting. The report of the superintendent of the Chicago electric-light plant reports the annual cost as $96 per lamp, against $102 per lamp paid private companies. But an analysis of the figures shows that the superintendent made no allowance for water consumed, nor for interest, nor taxes, nor insurance nor depreciation of plant. Adding in a proper estimate for these items, the true cost is shown to be $167 per lamp. This is in line with the results obtained by Mr. Francisco in his instructive examination of the alleged economies of municipal ownership. The economies are almost invariably on paper merely, and a little figuring will show it.

Harvard clearly does not shrink from the distinction of administering the deathblow to intercollegiate football. After thinking over the matter for several weeks,

the faculty of the university have not only adhered to their former resolution, adopted on February 19, requesting the committee on athletics to put a stop to such contests, but have gone a step further, and, by a considerable majority, have voted that they "remain of the opinion that no student under their charge should be permitted to take part in intercollegiate football contests." This action was taken after a report of the committee on athletics, recommending a continuation of the game restricted to college grounds and placed under other limitations, had been rejected. While there are some pretences of doubt as to what this action means, there can be only one interpretation put upon it. It means that Harvard has abolished the game, and that other colleges will be obliged to follow suit. That such a course was inevitable has been sufficiently plain for several months. There has been a great deal of anxiety "to save the game" among the graduates and undergraduates, but the faculty of Harvard have been more anxious to save the cause of learning, and have adopted the surest course possible to that end. What a pitiable figure the colleges of the present day would have cut in the eyes of posterity if, in order to "save the game," they had let the cause of learning go by the board; yet this is what many of them, egged on by the clamor of graduates, were in danger of doing. Harvard has saved the cause for them, and within a few years they will all be grateful to her for her courage in doing so. The devotees of the game will weep for a season, but their sorrow will be short-lived, and sanity will speedily resume sway in their minds.

Mr. Gladstone's latest literary achievement is the publication of a concordance to the Psalter. In explaining why he chose the text as it stands in the Book of Common Prayer, he speaks of its "incomparable beauty," and says that "there are many of its single verses on which, taken severally, we might be content, so lofty is their nature, to stake the whole argument for a Divine Revelation." Such high praise could scarcely have appeared too high to those who read the Fiftieth Psalm in the church service a Sunday or two ago, and perceived with what a sure touch a man of our own day was hit off by the sacred writer. "Thou hatest to be reformed," says the Prayer-Book version, certainly with much more point than the vague rendering, "Thou hatest instruction," preferred in the church where Platt worships. Then with what a prophetic pen does Asaph go on: "When thou sawest a thief, thou consentedst unto him, and hast been partaker with the adulterers." "These things hast thou done, and I held my tongue, and thou thoughtest wickedly that I am even such a one as thyself; but I will reprove thee, and set before thee the things that thou hast done." We are conscientiously opposed to a union of church and state, but a law, or even a constitutional amendment, requiring this psalm to be read daily before the Legislature, we could not find it in our hearts to oppose. And much as we, in common with Platt's pastor, are attached to King James's version, we should be glad to see the Prayer-Book text adopted in the Marble Church—at least on those Sundays when Platt is present. "Thou hatest to be reformed," read with proper elocution before a devout assembly of which he was a conspicuous member, could not fail to heighten the general reverence for Holy Writ.

Among the silver nostrums proposed for the next international conference, if one should be held, is that of Herr von Schraut, who was one of the German delegates to the Paris conference of 1881. He proposes a method of smoothing the way for England's coöperation in the attempt to "do something for silver." His plan is to authorize any country to issue silver certificates against bullion or coin at an agreed ratio with gold, such certificates to be accepted in international trade at their face value and to be redeemable by the issuing country in silver or gold at the holder's option. Thus, if the ratio agreed upon should be 20 to 1, the United States could issue a certificate for 20,000 ounces of silver or 1,000 ounces of gold, and the certificate would be legal tender for its face value in all the countries embraced in the treaty, on condition that the United States should pay on demand to the holder either 20,000 ounces of silver or 1,000 ounces of gold, as he might elect. This arrangement, it is needless to say, would be laughed to scorn by our silverites, and indeed it ought to be. Herr von Schraut thinks that it would be well to put a time limit on the plan at first, making it operative for only five years. The declared object of the scheme is "to mobilize the unproductive mass of silver so as to facilitate the relations of exchange among the various countries." This is rather a Delphic utterance, but as it seems to relate mainly to the mass of silver now in existence, we must ask what will be the effect of it on silver mining. If it should cause an advance in the price, it would assuredly lead to an increased output. The *Engineering and Mining Journal*, which keeps a pretty close account of the yield, says that, while the production of our own mines shows a decline of ten or eleven million ounces per annum since the repeal of the Sherman law, those of Mexico and of Australia show an increase and those of South America no diminution. It is too early to say that the aggregate yield of the world has declined.

Absolute freedom in teaching has been so long associated with the German universities that few Americans have taken seriously the reports that the so-called *Umsturzvorlage*, now before a committee of the Reichstag, has for one of its objects the limitation of *Lehrfreiheit*. Yet such is undoubtedly the case. Paragraph 130 of the bill contains a provision by which any person convicted of publicly attacking religion, the monarchy, and the institutions of private property, marriage, and the family, shall be liable to a penalty of imprisonment for not more than two years, or a fine of not more than six hundred marks. Both the language of the journals that are supporting the bill, and that of the Social Democrats, who are rejoiced at this opportunity to aid their cause by making martyrs of the university professors, make it plain that an attack upon *Lehrfreiheit* is intended. It is urged, on the one hand, that it is hopeless to attempt to stem the tide of social revolution among the lower classes if the upper classes are to be taught at the universities that the existing social and political order is unjust and unjustifiable; and, on the other, that it is not logical to punish Socialist orators for proclaiming on the platform the very doctrines that the professors are systematically expounding in their lecture-rooms. One deputy has mentioned by name, in debating this bill, Profs. Ziegler of Strassburg and Wagner and Paulsen of Berlin as men whose writings contained passages that attack certain widely held beliefs, and who should therefore be punished.

For a time the university professors seem to have taken no notice of these attacks; but more recently Prof. Haeckel of Jena and others have come forward to defend their privileges. Haeckel enumerates the scientists, from Keppler to Helmholtz, whose works the law would suppress; as for the defence of marriage, he suggests the abolition of sacerdotal celibacy. Prof. Paulsen, in an article that has attracted much attention, throws down the gauntlet to the friends of the bill, by pointing out that, from Wittenberg down, all the great revolutions of Germany have proceeded from the universities, that such a measure as is proposed will tend to hasten the very calamity that it is designed to prevent. The students are strongly supporting the professors, and have recently made a formal demonstration in honor of those who have been attacked. The committee of sixteen having this bill in charge are listening to most extraordinary propositions. It is publicly reported that a Catholic member of the committee soberly proposed an amendment to provide that any one who does not believe in the existence of God and the immortality of the soul shall be punished with two years' imprisonment. Not only was this amendment actually proposed and discussed, but it is said that only Dr. Barth, editor of *Die Nation*, and Bebel, the Socialist leader, took strong ground against it.

GOVERNMENTAL WASTE.

In the closing hours of Congress, reports were received and ordered printed from the Joint Commission on the reorganization of business methods in the executive departments of the Government. Little or no attention was paid them. How could there have been when all the truly great minds at Washington were convulsed over the Hawaiian cable, the sugar-bounty grab, and other really practical matters? Yet to the plain mind of an ordinary citizen, gladly leaving statesmanship to those who have a genius for it, and taking merely an humble interest in the actual working of the machinery of state, in economy, in despatch of business, in the adoption of modern methods of office-work, the reports will appear as important as anything which Congress did or left undone.

The Commission was created by act of March 3, 1893, and consisted of Senators Cockrell, Jones (of Arkansas), and Cullom, with Representatives Dockery, Dingley, and Richardson; Mr. Dockery being chosen chairman. Early in May three business experts were employed, who first directed their attention to the methods of accounting in the Treasury Department. These were at once found to be antiquated, cumbrous, and costly. A system which every large business had long since cast aside was clung to by the Government, partly out of sheer inertia and laziness, partly because any reform would involve a cutting down of the force of employees, which is something no public man could contemplate without horror. Still, the exposition of the experts was too convincing and their arguments too powerful to be withstood, even by a lumpish Congress, and, under the skilful guidance of Messrs. Dockery and Dingley in the House and Mr. Cockrell in the Senate, a bill reorganizing the general accounting system of the Government passed and was approved July 31, 1894. It dispensed outright with the services of 176 clerks, at an annual saving to the Government of $239,430. This is the incredible part of the story. To devise new methods of book-keeping is all very well if they only call for greater outlay and a larger force; but to legislate 176 clerks out of a job at one blow is enough to rouse apprehensions among all lovers of the Constitution. Apprehensions were roused. Senator Sherman was put forward to allege that the methods good enough for "the fathers" were good enough for the children, and to hint vaguely at great losses to the Government which might result if so many manipulators of red tape were dispensed with. Still, the bill passed, and is the greatest single achievement of its kind, the greatest triumph of common sense as applied to public business, since the war, if not since the foundation of the Government.

Of course the prophets of evil were bound to make good their own predictions. As if by concerted arrangement, complaints about the new system began to find their way to the newspapers soon after it was instituted. Some of the discharged clerks shook their heads ominously as if they could tell a tale an they would, and as if the losses and stealings under the new plan would prove something tremendous. Outraged Government contractors were discovered in the Far West whose accounts had been terribly muddled in the department, who were never so delayed and vexed in their lives, and so on. But the report of the Commission has effectually stilled this outcry. It contains letters from the secretary of the treasury and from all the heads of departments, showing that the new system is working well, that accounts are adjusted with greater rapidity and certainty than ever before, and that the Government business is distinctly in a more forward and intelligible condition than before the useless clerical lumber was got rid of.

But the Commission did not stop here. It took up the question of purchase of Government supplies, and devised a system by which the Senate should not pay a higher price for ice than the House, the attorney-general's carpets should be bought as cheaply as the secretary of agriculture's, and coal got at as good advantage for the Treasury Building as for the War-Office. By a little consolidation and systematization here another $100,000 a year is saved to the Government. The Commission's experts also devised a new and economical form of postal money-orders, and effected various other savings and retrenchments which are set forth, together with those mentioned, in the following table:

	Clerks	Salaries.	Miscellaneous.	Total.
Purchase of supplies	.....	.....	$100,000	$100,000
Treasurer's report	2	$2,000	6,500	8,500
Certificates of deposits by postmasters	5	6,000	.....	6,000
Accounting in Post-Office Department	40	77,780	70,000	147,780
Property returns	13	15,000	.....	15,000
Destruction of old money-orders	.....	.....	10,000	10,000
Warrants and drafts	4	5,400	.....	5,400
Returns of quartermaster and commissary generals	5	6,000	.....	6,000
Statistics, international money orders	5	7,000	3,000	10,000
General Land Office	1	2,000	1,181	3,181
Inspecting coal and wood	.....	.....	6,300	6,300
Books, stationery, rent, etc	.....	.....	50,000	50,000
Treasury accounting	176	239,430	.....	239,430
Total	251	$360,610	$246,981	$607,591

Other recommendations made but not yet acted upon would cause a further annual saving of $449,928, or a total of more than $1,000,000, at a cost in salaries of experts, etc., of $41,264.

These results not only are significant and cheering in themselves, but are suggestive of still greater reforms to come. No man can go an inch below the surface of federal, State, or municipal administration without finding evidence on all sides of waste and extravagance. Executive departments and offices are created, not to do the public business in the best and most economical way, but to make comfortable "places" for a certain number of politicians. This was very neatly brought out in one separate report of the Joint Commission. They showed that the new form of money-order devised by them and adopted in September, 1893, made entirely superfluous the "checking division," employing thirty-six clerks at an annual cost of $37,120. Under the new system there is no checking to do. Yet those thirty-six devoted clerks have gone on checking and drawing their salaries just the same. No change of system can change their fidelity. There they are, true to the last, awaiting the order of the secretary of the treasury to go. The commission recommends their discharge as cumberers of the office, but Mr. Carlisle still clings to them, as far as the public knows. They are spared monuments of governmental waste. When our socialist friends want a clinching argument to show how economically and at what a low cost of production business can be carried on by the state, let them bring out those checking clerks, their work abolished, their occupation gone, but still mechanically checking away and drawing their salaries.

THE SUPREME COURT AND THE DICTIONARY.

One of the oddest things in the income-tax discussion through which we have been passing during the last few months is the general acknowledgment of the power of the Supreme Court to alter nomenclature—that is, to give one name to a thing when the dictionaries and popular usage give another, and on this change to base a decision seriously affecting property rights. The attention of the lawyers has been given so largely to the legal aspects of the case, to the task of proving that the income tax is a direct tax, that comparatively little attention has been paid to the liberties taken by the court with the language; and yet this is really a more serious matter than the amount of the tax, for if it can take one thing out of the purview of the Constitution by giving it a new name, of course it can take another, and then what is the use of the Constitution?

The distinction between direct and indirect taxes has been known and talked of almost ever since taxation became regularized. Turgot says (vol. i, 394): "There are only three possible forms of taxation: the direct on land; the direct on persons, which becomes a tax on exploitation; the indirect on consumption." Adam Smith does not mention the direct tax, *eo nomine*, but he describes it. The fifth "Maxim" of Quesnay, the French physiocrat, "that the tax should be laid immediately on the returns of real estate, and not on salaries or products," is described by Lavergne in his 'Économistes Français du 18me Siècle' as "nothing less than the theory of the direct or sin-

gle tax (*impôt unique et direct*), to the exclusion of indirect taxes on consumption." McCulloch, in his notes to his edition of Adam Smith, quotes a discussion of the comparative merits of direct and indirect taxes by the Marquis de Garnier in the preface to his translation of Smith. He discusses them himself also (p. 615). Alexander Hamilton, in No. 36 of the *Federalist*, talks of the division of internal taxes into "direct and indirect," and says, "By the latter must be understood duties and excises on articles of consumption." Say (vol. ii, p. 396) says, "progression can only take place in relation to the direct tax"; that it "is impossible to apply it to the indirect tax, such as customs duties and taxes on consumption." Tooke, in his 'History of Prices' (vol. i, p. 87), in the index, speaks of "taxes on commodities" as "indirect." Ricardo (p. 145) speaks of the distinction as existing, but misleading on the point of final incidence. John Stuart Mill (book v, p. 51) says "taxation demanded from the very persons who it is intended or desired should pay, is direct taxation." Prof. Nicholson, in the 'Encyclopædia Britannica' ("Taxation"), makes the same distinction. Prof. Henry Sedgwick, in his 'Principles of Political Economy,' treats *direct or indirect* as "the common classification," but agrees with Ricardo in thinking it misleading as to incidence. Mill's definition has likewise been adopted by Fawcett and Wagner the German, in his 'Handbuch.' All the large dictionaries, English and American, adopt it also.

Léon Say, in his 'Dictionnaire d'Économie Politique,' describes a direct tax as

> "any tax which falls directly on persons or property, is collected by means of registered names, and passes immediately from the tax-payer to the tax-collector. Indirect taxes are so called because, instead of falling directly and by name on persons, they fall, in general, on objects of consumption or on services rendered."

The direct tax is, in common parlance, and by apparently universal agreement, a tax paid directly by persons without any special or immediate means of diffusing it.

We may mention, also, that there is a very brilliant discussion of the working of direct and indirect taxation under the old régime in France, in Taine's 'Régime Moderne' (p. 263 *et seq.*). To crown all, we think we may assert with confidence that in no economical work or philological dictionary is "excise" defined as anything but a tax levied on articles of consumption or on movable property, which may be avoided by not consuming or not owning the articles taxed. Yet this term has been applied by the Supreme Court and the lawyers to the income tax. All this would seem to indicate that a claim is solemnly made for the Supreme Court of a power over nomenclature—that is, over the names of things—in disregard both of their nature and uses, which to the lay mind is quite incomprehensible, and which if often resorted to would bring contempt on the law.

There does not appear in the history of the terms any better cause of the departure of the court from common usage than a suggestion of Alexander Hamilton in the carriage case (1796) that capitation and land tax were the only direct taxes known to the Constitution, which was possibly true, for Pitt did not introduce the income-tax bill till 1798. But the oddity of this decision, which, when the tax appeared more than half a century later, on our side of the water, made it "an excise," lay in the fact that the nature of the tax, its subject and manner of collection, were apparently not considered by the court at all. It simply said, Is this a capitation tax? No. Is it a land tax? No. Then it must be an excise. All this is more important than it seems at first sight, because the judgment of the court in the carriage case (Hylton agst. the United States) confesses that the provision in the Constitution that a direct tax must be based on population, was expressly intended to protect one part of the country from oppressive taxation at the hands of another—the South, for instance, with its slaves and scanty population, at the hands of the rich and prosperous North. Alexander Hamilton recognizes this same danger in the *Federalist*, for, speaking of the direct taxes, he says:

> "An actual census or enumeration of the people must furnish the rule, a circumstance which effectually shuts the door to partiality or oppression. The abuse of this power of taxation seems to have been provided against with guarded circumspection. In addition to the precautions just mentioned, there is a provision that 'all duties, imposts, and excises shall be uniform throughout the United States.'"

Singularly enough, the value of this provision did not become apparent for a century, as no direct tax was attempted till during the war, when the patriotic enthusiasm of the time made its examination impossible. But the one which is now under discussion undoubtedly aims at the very thing which the South feared in 1787. That is, it is a tax meant by the South and West to oppress and harass the region in which gold-bugs most abound, and in which people are supposed to be rolling in luxury through their adhesion to a sound currency.

REPUBLICAN HIGHWAYMEN.

The list of Republican Senators who advocate the conquest of Cuba now includes two from New England, Lodge, and Frye, with Cullom of Illinois. Lodge scored a "beat" on the others by announcing in the *Forum* that Cuba would soon "become a necessity to us." The others have, however, made up for their tardiness by the boldness of their language. Cullom, with the true fury of a fresh-water Senator spoiling for a sea-fight, declared last week that Cuba was "the natural property of the United States," and, of course, could not be made ours too soon. "In fact," said the tough old Illinoisian, working himself up into a patriotic frenzy becoming to one who was talking to a *Tribune* reporter, "it is time that some one woke up and realized the necessity of annexing property." When this interview reached Washington, Frye saw at once that he must look to his laurels as a freebooter, and accordingly delivered himself of the following praise of piracy:

> "It looks as if Spain would make the required apology, and as if all would soon be settled. I had hoped it would be otherwise, and that Spain would assume such an arrogant and belligerent tone that it would be necessary for the United States to go over and take possession of Cuba. We certainly ought to have that island in order to round out our possessions as they should be, and if we cannot buy it, I for one should like to have an opportunity to acquire it by conquest."

In casting about for suitable epithets to apply to these eminent Republicans, one cannot do better than turn to the platform of the Republican party in 1856. One of the planks of that platform, the first ever adopted by the Republican party, reads as follows:

> "Resolved, that the highwayman's plea, that 'Might makes right,' embodied in the Ostend circular, was in every respect unworthy of American diplomacy, and would bring shame and dishonor upon any government or people that gave it their sanction."

What was the Ostend circular? It was a proslavery plan of campaign to seize upon Cuba, based on almost precisely the same arguments as those now used by the New England Senators. Soulé, Buchanan, and Mason declared in 1854, just as Lodge, Frye, and Cullom declare in 1895, that "the United States must have Cuba." Spain ought to sell us the island at a fair price, but if she would not, then we should be justified in taking it by force, and need not care for the "reproaches of the world." Even Lodge's wonderful "map" argument was anticipated by his proslavery predecessors, inasmuch as the Ostend conspirators were able to see, as well as he, that "a glance at the map" would show that Cuba was "necessary to the United States." These arguments the Republican party, in the first flush of its moral enthusiasm against slavery, denounced as the arguments of highwaymen, little dreaming that the next generation would see Republican Senators, representing the religion and humanity of New England, taking the places of Foote and Slidell and Brown. The last-named, a Senator from Mississippi, made a speech in New York city in 1859, which Senator Frye seems to have plagiarized almost bodily. Said Brown:

> "Cuba must and shall be ours. If Spain is disposed to sell the island, I, for one, stand prepared to pay for it. If Spain be indisposed to sell, I would seize Cuba as indemnity for the past, and then negotiate for future security. We intend to meet Seward face to face on this question."

How Seward and Sumner and Davis would rub their eyes if they were here now and found leading Republican Senators taking the place of the Southern fire-eaters and highwaymen of fifty years ago! *Hamlet* and *Laertes* changing swords is nothing to this. The Southern slave-own-

ing Senators used almost the same arguments, and acted from almost the same motives, as their Northern imitators. They wanted to expand our territory. They wanted to extend our commerce. Moreover, they hated England with as fierce a hatred as the most patriotic Republican of the present day. England was then the stronghold of freemen; therefore she must be the deadly enemy of a slave-owning country. She is now the stronghold of free trade; therefore a protectionist country can never live on good terms with her. If seizing Cuba would mortify her, then we need no other reason. The Southerners were the Jingoes of a generation ago. They were spoiling for a fight as our valiant Republican Senators are now—but, again like them, they did not want to pick out too big an antagonist. When Lord Salisbury told Harrison that this country would seize another British ship in Bering Sea at its peril, the Republicans discovered a sudden zeal for arbitration; but against feeble Chili, against distracted Spain, they rage with awful and unappeasable fury.

This remarkable historical *volte-face*, by which the Republicans take the place of the men whom they denounced as highwaymen forty years ago, has of course a political and psychological explanation. Republicans adopt the tactics of the slave party because they have got themselves into substantially the same position that the slave party occupied. They have tremendous and urgent domestic questions to confront and settle, but find the work dangerous, politically, and irksome. The currency, civil-service reform, good government in state and city—these are the burning questions of the day just as slavery was the burning question of the 50's. But it is much easier to blink these matters, with their difficulties and dangers, get up a foreign war, if possible, at any rate whoop loudly about our navy and our greatness as a nation, and try and distract attention, in that way, from the really pressing questions of public policy and national good repute. But the Democratic highwaymen of 1856 failed to work this trick successfully, and we are confident that the Republican highwaymen of 1895 will similarly fail.

M. DE MONTROND.

PARIS, March 12, 1895.

AMONG the minor, but not the least important, actors of the Napoleonic era and of the Restoration, Count de Montrond has a prominent place. His name was familiar in the diplomatic world, as he was the *âme damnée* of Talleyrand. M. Welschinger, well known by his important historical studies on the unfortunate Duke d'Enghien, Marshal Ney, etc., has just written a short biography of Montrond. A French proverb says: "Tel maître, tel valet." In his remarkable and severe study of Talleyrand, Sainte-Beuve says: "To each man his acolyte and his favorite aide-de-camp. If the pious Aeneas had his faithful Achates, if Saint Louis had Joinville, Fénelon his Abbé de Langeron, Talleyrand and Montrond are inseparable."

Count Casimir of Montrond was born in 1768, son of an officer of the Gardes Françaises. His mother was a distinguished person, even a writer. She wrote for a little while in the royalist paper *Les Actes des Apôtres;* in 1790 she took refuge, first in Switzerland, afterwards in England, where she wrote a 'Histoire du Long Parlement d'Angleterre et de ses Crimes'—a satire on the French Constituent Assembly. After the 18th Brumaire, she returned to France and lived at Besançon, where she died, at the age of eighty-two years, in 1827. Her son Casimir remained in Paris during the Terror, and was imprisoned at Saint-Lazare, with the Duchess de Fleury, who, after her divorce, had resumed her name of Coigny; it was for her that André Chénier wrote "La Jeune Captive." She owed her life to the intervention of Montrond; for a hundred louis he obtained her liberty as well as his own. After the 9th Thermidor he married her, and they left together for England. Their honeymoon was not long; she obtained a divorce and returned to France, where she died in 1820 at the age of forty-four. There can be little doubt that the Memoirs which she left must have been of great interest; they were probably not very flattering to her husband. Unfortunately, they were confided by her to Talleyrand, and they have disappeared; Montrond evidently obtained their suppression from his powerful friend.

The intimacy of these two men began during the Directory. They felt immediately drawn to each other. One of the beauties of that time, who had Montrond, with many others, among her lovers, is said once to have asked him why he seemed to like Talleyrand so much, and to have received this answer: "Who would not like him? He is so vicious." Montrond belonged to a type which has now only a few representatives; it may be found already under Louis XIII., during the minority of Louis XIV.; it was represented during the reign of the great king by such *libertins* as Bussy-Rabutin, D'Évremond, and under the Regency of the Duke d'Orléans by the famous *roués*. Montrond as well as Talleyrand had all the traditions of the *roués* and of the famous courtiers who succeeded to the *roués* during the reigns of Louis XV. and Louis XVI. The traits of the *roué* were somewhat softened in Talleyrand, owing, perhaps, to the ecclesiastical education which he had received; but, on the whole, they had the same ideal, if that word can be used for an abnormal combination and essence of all possible vices, contempt for the truth, systematic hypocrisy and treachery, total disregard of all the common duties and obligations of life, a satanic pride and pleasure in defying the vulgar code of morality.

As long as Talleyrand was Minister of Foreign Affairs, Montrond was a sort of confidential agent; he helped him in many secret negotiations, he helped him chiefly in his pecuniary dealings with the German Princes. "I am inclined to think," says M. Welschinger, "that M. de Montrond, whose capricious fortune was a mystery to everybody, had the art of bringing into the Rue d'Anjou or the Rue Saint Florentin [where Talleyrand lived] the sums promised or exacted for such or such diplomatic services, and that he took a commission on these sums. As these receipts were frequent, he thus made a good revenue."

In 1807, Talleyrand was replaced at the Foreign Office by the Duke of Champagny; he fell completely into disgrace in 1809. Montrond was exiled from Paris, and forbidden to come nearer than forty leagues to the capital. He chose Antwerp for his residence. Antwerp was at that time the *chef-lieu* of a French department, "des Deux-Nèthes," and the prefect, Voyer d'Argenson, was a personal friend of Montrond. Talleyrand, to do him justice, did all he could to obtain the pardon of Montrond, and wrote him long letters, in his own peculiar fluid style: "Once you come back, you will have to find a mode of life open to the least possible objection. We will search for it and find it. Relieve your tedium by reading and writing. Don't spend money, and think kindly of your friends. Nobody loves you more tenderly than I" (January 13, 1810). Talleyrand, in another letter, says to him in English that he has himself become "an indolent looker-on."

Montrond, tired of Antwerp, went to Spa, where he found Pauline Borghèse (who, if we may believe M. de Lanzac de Laborie, counted him among her numerous lovers). Always under the eye of the Imperial police, he goes to Aix-la-Chapelle, to Besançon, returns to Antwerp. In September, 1811, Napoleon suddenly arrives in Antwerp, and, by his order, Montrond is arrested and sent to the fortress of Ham (the same prison where Prince Louis, who became Napoleon III., was long confined). After a month's imprisonment he was authorized to live at Châtillon-sur-Seine; he had to give his word of honor not to leave this place, and to report himself twice a week to the subprefect. A few weeks after his arrival he suddenly disappeared. Orders for his arrest were sent all over the empire; his flight was a real Odyssey. He had procured almost by chance a passport for Spain. On reaching the Spanish frontier, he crossed a country full of guerillas till he came to the seashore; he took a fishing-boat and met an English ship, which gave him a passage for Mahon. The brig which transported him met the admiral's ship, and the admiral, hearing that a Frenchman was on board, kept him as a prisoner, mistaking him for a French general. Montrond was held for five weeks till they fell in with another English ship, on which fortunately was Lord Walpole, who recognized Montrond. He was allowed to go to Sardinia, and from there he sailed for England, the only safe place for him at the time.

Montrond came back to France only after the departure of Napoleon for Elba. During the Hundred Days Napoleon, who needed a secret agent in Austria who could approach Talleyrand during the Congress of Vienna, did not hesitate to choose Montrond, who did not hesitate to accept this extraordinary mission. He was instructed to try to convert Talleyrand, who was officially in Vienna as the representative of Louis XVIII., to the interests of the Emperor, and, if an occasion could be found, to bring Marie Louise and the King of Rome back to France. Montrond succeeded in going to Vienna, and saw his friend. Talleyrand writes to Louis XVIII. on April 13: "Everything proves that Bonaparte is greatly embarrassed. I judge so from the emissaries he has sent here. One of them, M. de Montrond, has arrived in Vienna. He had no despatches nor any ostensible mission. He was charged with verbal messages for M. de Metternich, M. de Nesselrode, and for myself. He was to learn if the foreign Powers had seriously decided not to recognize Bonaparte and to make war on him. He also had a letter for Prince Eugene." He had still another letter for M. de Méneval, who accompanied Marie Louise. M. de Méneval told him that Marie Louise was much more occupied with M. de Neipperg than with Napoleon or with her own Regency. M. de Montrond was not

long in perceiving the plans of the allies. Metternich said to him, when he raised the question of the possibility of a Regency, "The Regency, we want no more of it." He asked Nesselrode what was the object of the allies: "The destruction of Bonaparte and all his following." Talleyrand had made up his mind; Montrond, failing in his mission, had a liver complaint, and went to Carlsbad to look after his health before returning to Paris.

As soon as the Bourbons returned to Paris in 1815, Montrond returned to his master and friend in the Rue Saint Florentin. They were now left more freely to their natural inclinations; the fear of Napoleon was no longer felt. Montrond continued to ape Talleyrand; he invented bons-mots for him occasionally. Talleyrand treated him with familiarity mixed with contempt. I have not discovered in Welschinger's notice an anecdote which is very characteristic of their relations. Montrond was an inveterate gambler; one day he had a quarrel with some people he had been playing with at cards. He flew to Talleyrand in a state of great agitation. "Would you believe it," said he, "they threatened to throw me out of the window?" "I have always advised you," said Talleyrand very quietly, "never to play cards except on the ground floor."

Talleyrand as well as Montrond were objects of suspicion to Louis XVIII. Talleyrand used Montrond in a thousand ways; he sometimes sent him to London, sometimes kept him with him at his château at Valençay. In 1830, after the Revolution which placed Louis-Philippe on the throne, Talleyrand was sent as Ambassador to London, and took Montrond with him. Raikes wrote in 1832: "Montrond, who is about sixty-five years old, is a protégé of Talleyrand, and a constant guest at his table. He has been through the various scenes of the French Revolution. . . . He is received in the best houses. He is witty and seductive, though his tone is almost trenchant. He plays high and wins daily. He is full of anecdotes, and tells them well." Raikes asked him once if it was true that Louis-Philippe gave him a pension. He answered: "Yes, 20,000 francs a year, for speaking well of him in the clubs and in England."

Montrond was struck with paralysis a year before the death of Talleyrand, at the age of seventy. He was carried about at Valençay in the park, almost blind; he had still at times some flashes of his former wit. He outlived his friend more than five years. Talleyrand before his death went through the form of a conversion and made his peace with the Church. Montrond imitated him in this as well as in the rest. When the priest asked him: "You probably in old times uttered many pleasantries against religion?"—"No," said he, coldly, "I have always lived in good company." I have another version of his answer: "Sir," said he to the priest, "I have been accused, and justly accused, in my lifetime, of many vices; I have never been accused of being an imbecile."

Correspondence.

COMPANIONS IN MISERY.

To the Editor of The Nation:

Sir: Commenting upon M. Jules Roche's recent speech in the Chamber of Deputies on the necessity for increased expenditure on the French army, if it is to be kept in readiness to cope with the army of united Germany, the *Spectator* of the 9th inst. says, as regards Europe:

"It seems a hard situation for the civilized section of mankind to be eternally asked for more forced labor, a larger slice of wages, a greater readiness to lie out in the open with shattered bones; but where is the remedy to be found? The peoples are wild to find one, the statesmen would help them if they could, and the Kings, for the first time in history, look on war with sick distaste, as if it had no 'happy chances' to compensate for its incalculable risks; but they are all powerless to improve a position which for them all brings nothing but more toil, more discomfort, more responsibility. The single alleviation for the peoples is that they are not much worse off than their brethren in America, where, without a conscription, without fear of war, without a frontier in fact, the Treasury is as overspent as if it were European, the people are as much robbed by currency fluctuations as if they were at war, and all men are as care-stricken as if they might be summoned at any moment to defend their homes."

What a comment is supplied by the last paragraph on the cruel and stupid selfishness at Washington, which has, by its improvident recklessness, reduced the people of the United States to a pass so miserable and contemptible in the sight of Europe.

An Old Subscriber.

London, March 12, 1895.

THE SUGAR BOUNTY.

To the Editor of The Nation:

Sir: I was rather surprised to see you denounce the payment to the sugar-planters of 8-10 cent per pound (in place of the payment of the bounty of 2 cents given by the McKinley tariff). Some time ago the *Nation* expressed the opinion that the sugar-planters ought to receive the bounty on the crop of 1894. I think all bounties are wrong in principle and probably unconstitutional. But, as the matter is *fait accompli*, it is needless to go into the discussion.

While rather savagely assailing some members of Congress who spoke and voted in favor of paying the small portion of the earned bounty for 1894, as embodied in the Sundry Civil Appropriation bill, I was glad to find that you did not assail the course of Mr. Wilson, who did the same thing. Your high appreciation of his character and abilities, expressed by you when noticing his appointment as a member of Mr. Cleveland's cabinet, gave great pleasure to his many friends and admirers. In your comments on the action of the House in voting the bounty, you say: "The strongest leaders on both sides were against it, Mr. Reed was against it [most inconsistently], and Mr. Cannon and Mr. Payne—that is, the next Speaker, the next chairman of the appropriations and possibly the next chairman of the ways and means committee [I trust "the sugar bolting planters" of Louisiana will note this]." Do you not consider Mr. Wilson a strong leader on one side?

I was glad, also, that you did not reflect upon Mr. Cleveland, who openly, in conversation with the Louisiana delegation and several other citizens of that State, expressed himself in favor of the payment of the bounty on the crop of 1894, on the just and equitable grounds advanced by the Louisiana Representatives in the House and by the Louisiana Senators in the Senate. Mr. Carlisle was also believed to be in favor of the payment.

Wm. Porcher Miles,
A Louisiana sugar-planter.

Houmas House, Ascension Parish, La.,
March 19, 1895.

[We cannot better explain the difference between "the earned bounty of 1894" and the sum Congress actually voted than by the following citation from Congressman Cannon's speech:

"They say that $238,000 of this money is going to people who made sugar, who took out licenses, who had made their preparations; and the tax was due on the 28th day of August, when the Wilson bill went on the statute book. If that is so, there is not one single man of them who cannot go into the Court of Claims and recover. Yet that $238,000, according to the statement that is made, is a debt due to these people, and is to be used to pull through the $5,000,000 that is produced after the Wilson law went on the statute book."

—Ed. Nation.]

THE OUTREACHINGS OF ATHLETICS.

To the Editor of The Nation:

Sir: If the ill consequences of excess in intercollegiate athletics were confined within the colleges, the case would be sufficiently distressing. But every one acquainted with the state of things knows that they are not. They affect deeply and lamentably the preparatory schools. A boy in one of our large academies, making ready for college, becomes impressed very early with what we may call the social power of athletics. Success in sports will do two things for him: it will assure him "prominence" in college, and a good opening into the business or professional world beyond. The first of these facts is natural in the present conditions of undergraduate life. If the second seems strange, it is to be noted that "loyal graduates" of a college now make it their duty to reward the youth who has "upheld the honor" of the institution, by rendering him practical assistance when he starts in the world.

A boy in a preparatory school knows that if he goes up to college with a good athletic record and prospects of further development, the "prominent men" in the upper classes will take him in hand, fraternities will vie with each other to secure his membership, the freshman societies will all want him, and class offices will be open to him. He will be from the first a "prominent man." Especially is this so if he be a football player, so that his value to the college becomes apparent in the very first days of his freshman year. Then, if he bears out the promise he has given and does well for his college in the field, he is brought in contact with those graduates who are interested in athletics, usually of the wealthy and leisure class. He is wined, dined, and made much of, so that by the time he is ready to become a lawyer or to go into business, he has a host of friends of just the right kind, whom, moreover, he has put under a quasi-obligation to him by his services to the common glory. Is it any wonder if a schoolboy, perceiving these facts, acts on them—if they mould in a powerful way his aims and efforts?

This may be, says some one, the state of things in the colleges, but how does a boy, while still in his Euclid and Latin grammar, know of all these incentives to muscular ambition? The process is something like this: He cannot long be distinguished in the sports of a large school before the eyes of some one interested in a particular college are drawn to him; usually more than one such watcher perceives his value. Soon he is receiving visits from captains, athletic managers, and "prominent men" out of half-a-dozen colleges. When a vacation comes, he is enticed to visit this university or that. Then a set of good fellows take him in hand

who "make it pleasant" for him. Graduates of standing are even brought to use their influence with the boy or his parents. Rivalry, however, does not stop here. It frequently drives the competitors for an athlete's services to make substantial offers. His friends from one college where good rooms are highly prized promise him a room on the campus. This is met by rival canvassers with a promise of equally choice lodgings and membership in some desirable society. If he is a fellow of limited means, his tuition for four years or his board, or both, will be assured to him. He is not being hired, of course; he is merely "assisted." Or it is put in the form of a loan, which, after he graduates, is forgiven. Sometimes a liberal alumnus supports an athlete entirely. The graduate is interested in muscular humanity and in the athletic success of his college. Thus, from his point of view, he is as much justified in educating the boy of his choice as any person of religious interests in assisting a candidate for the ministry. The fever has attacked even the less athletic sex. One of the teams at a well-known university contained, a few years ago, three men who were being supported by the same woman.

Such are the inducements spread before the athletic schoolboy. When he has made his choice, he is regarded as pledged to the college whose representatives have won him, and hard names are like to be called if he is then induced to change his mind. The reader may recall some heated items in the papers of two years ago, when it was given out that three athletes at a prominent New England fitting-school, who were fully scheduled for one of our chief colleges, had decided to enter another. Of further signs which mark this chase for the promising athletes, most remarkable is its persistency. Last summer a young man in one of our large cities, who had left school and gone to work for his living, was followed for two or three months by the athletic management of a certain college with offers to give him good accommodation and relieve him from all anxiety in regard to the cost of tuition. Another boy who had passed his examination for one college, engaged a room there, and made every preparation to matriculate in the fall, was besieged during the summer vacation by representatives of a rival institution. Their enticing offers culminated in a letter from the venerable president of the college, one of the oldest and most honored in this country. He expressed his interest in the young man, who had never written to him, and hoped, with many expressions of good will, that he would decide to come there for his education. Now, what had the president heard of this boy—that he was desirable by reason of character or abilities? The manager of one of the athletic teams brought him a name, and said: Here is a fellow we want. For colleges nowadays are run on business principles, and there is no advertisement like athletic success.

Some special results of this state of things have already been indicated—its effect on the schoolboy athlete. But it warps the mind and feelings of every boy in every preparatory school in the country. Before the child is out of knickerbockers he has acquired the idea that college is a place where they have crack athletic teams, and that college life is like a great tournament at which every one is devoted to the encouragement of some one combatant to the exclusion of all others. No better illustration of the latter phase ever occurred than the remark of a little boy on seeing two men, whom he knew to be of rival universities, conversing amicably: "I suppose Uncle Harry and Mr. B. can be friends now because they've graduated from college." HECTOR.

A NEW REVIEW.

TO THE EDITOR OF THE NATION:

SIR: I have received so many replies to my letter seconding Mr. Lawton's motion for a new literary review, that I beg leave to trespass upon your space a second time.

My thought was, that the conduct of a literary review might very properly become a part of the plan in the development of the American university, and that possibly some benefactor might be found who would be glad to endow a literary journal, just as chairs of Latin or of applied science are endowed. Such a publication, under a management that could command widespread respect, would exercise an influence on American letters that is simply incalculable. It would bring distinction upon the university establishing it, and would be a monument of which any lover of his kind might well be proud.

Without endowment, I feel sure that a good review could be made to pay. But it would need an editor who, in addition to the necessary qualifications of ability and literary conscientiousness, should be possessed of some old-fashioned virtues. If the commercial spirit were allowed to control the enterprise, the review would at once enter into competition with the magazines, and the day of picture-writing would not be far off.

A comment suggests itself as to the relation of a university review to graduate work, especially for women. Several gentlemen write to me that women are more ready than men both to read and to write for a high-class literary periodical. I fancy my correspondents base their conclusion on the fact that women in general care more for the ideal in life than men do—at least they make sacrifices for it more willingly. As to the conclusion itself, I am not perhaps a fair judge; what struck me in it was, that we can still count on the fingers of one hand the years since women were admitted to university privileges in the United States, and that so far a considerable number of university women have been students of the humanities. Possibly women are to bring about the renascence of literature. "This is very midsummer madness."

MARY AUGUSTA SCOTT.

1507 PARK AVENUE, BALTIMORE, March 23, 1895.

THE LEISURE OF PROFESSORS.

TO THE EDITOR OF THE NATION:

SIR: In Mr. Werner A. Stille's letter, in your last issue, occur these words:

"It is easy to show that we have great leisure classes. First and foremost the children of the rich. . . . Next the great army of professors and teachers who have two holidays each week during the school year, besides the long summer vacations. These say that when the school day (of five or six hours) is at an end, they need rest; and when the five school-days end, they sorely need rest; and when the school-year ends, they are absolutely worn out."

The sarcasm is as evident as it is unjust. I do not know your correspondent's position, profession, or trade, but I feel he has never taught, and knows nothing, therefore, of the great drain on the nervous system caused by teaching. He knows nothing, either, I should judge, of the manifold duties and responsibilities of professors in large American colleges, who do not have, many of them, even *one* holiday a week, and whose long summer vacation is not unfrequently more of a name than a reality.—Yours sincerely,

F. C. DE SUMICHRAST.

CAMBRIDGE, MASS., March 23, 1895.

THE BOOKMAN AND HIS ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: The *Bookman*, Dodd, Mead & Co.'s new monthly, quotes, as its motto, "I am a Bookman," from James Russell Lowell. One wonders whether Lowell was this sort of "Bookman," and what he would say to such expressions as the following, which occur, with many others about equally bad, in the first twelve pages of the March number:

"Mrs. William Claflin . . . of Boston, whose home has been for so long the centre of social and literary attraction, and where Whittier," etc. "Bernardin de Saint-Pierre, . . . the famous author, . . . has been received into the Laurel Crowned Tales emanating from the press of A. C. McClurg & Co." "Sketches on the famous Bens he climbed and the fish he angled." "Mr. Mosher's laudable plan is to garner in the hidden corners of scarce editions for those rare exotics of literature which do not find a wide or ready audience." "We learn, as we go to press from a friend in England." "This novel . . . is laid among the scenes and characters of old Virginia."

If this Bookman cannot mend his English, we are doubtful about letting him proffer his wares at our stand to the young men to whom we are trying to teach a little of their mother-tongue along with a great deal that is of perhaps less value.—Very truly yours,

W. I. F.

AMHERST COLLEGE LIBRARY, March 19, 1895.

AN INTERESTING BOOK.

TO THE EDITOR OF THE NATION:

SIR: Many of your readers, other than the Harvard graduates upon your list, may be interested to learn that among the valuable gifts made by Dr. Fitzedward Hall to his Alma Mater, and mentioned by you in your issue of yesterday, there is one of most noteworthy character and history. It is a copy of the first Sanskrit book ever printed, given by Dr. Hall to the Harvard College Library. The title reads: 'The Seasons: A Descriptive Poem, by Cálidás, in the original Sanscrit. Calcutta: M.DCC.XCII.' And the "Advertisement" of twenty lines on page three begins with the words, "This book is the first ever printed in *Sanscrit*." Neither here nor on the title-page is there any mention of the editor's name; but we know his name from the fact that the "Advertisement" is reprinted (vol. xiii., p. 386, 8vo ed. of London, 1807) as a part of "The Works of Sir William Jones."

The book is an octavo of 4+64 pages, printed in Bengali letters, on admirable paper of J. Whatman, with broad margins. As early as 1840, Von Bohlen, in his edition of the 'Seasons,' says of Jones's edition: ". . . et primum omnino, id quod memoratu dignum est, opusculum fuit Sanskritum prelo subjectum. Europam vero hoc incunabulum, quod vel in ipsa India jam dudum prorsus evanuit, vix vidit; et ubi forte, veluti in Chambersiana codicum collectione [in the Royal Library at Berlin], invenitur, codicis manuscripti instar aestimandum est." There follows Jones's "preface" entire. And Gildemeister, in his 'Bibliothecæ Sanskritæ Specimen' (Bonn, 1847, p.

70), says: "Liber sanscritus omnium qui typis exscripti sunt primus isque rarissimus."

But this is not all. The title-page bears the name "Cha^{s}. Wilkins," presumably in his autograph. Now, in the ninth volume of the Journal of the American Oriental Society, p. lxxxviii (October, 1870), are extracts from "thirteen inedited letters from Sir William Jones to Mr. (afterwards Sir) Charles Wilkins," communicated by Prof. Fitzedward Hall, D.C.L. Several extracts may follow: "You are the first European that ever understood Sanscrit, and will, possibly, be the last" (October 6, 1787). "The ships of this season will carry home seven hundred copies of our first volume of Transactions; . . . but unless the impression should be sold in London, Harington and Morris (who print the book at their hazard) will be losers, and we must dissolve the Society [The Asiatic Society of Bengal!]" (February 27, 1789). "I am so busy at this season that I have only time to request your acceptance of a little Sanscrit poem, which Morris has printed [*i. e.*, presumably Harington and Morris], and which you are the only man in Europe who can read and understand" (January 14, 1793).

As is evident from the date of the last extract, the "little poem" can be no other than the 'Seasons' of "Cálidás." The extract itself is a copy of the very words of the editor that were sent with the poem. And the volume itself, without doubt, is no other than the identical copy given by Sir William Jones to Sir Charles Wilkins. Illustrious owners! Homer tells of "the handing-down of the sceptre" (of Agamemnon). Here is a book whose handing-down ought to have for Oriental students no less interest than the story of the sceptre had for Thucydides. Dr. Hall's gift deserves to be held in honor.

CHARLES ROCKWELL LANMAN.

CAMBRIDGE, MASS., March 22, 1895.

Notes.

A WORK on 'Korean Games,' with notes on the corresponding games of China and Japan, by Stewart Culin, director of the Museum of Archæology and Palæontology of the University of Pennsylvania, will contain twenty-two full-page colored plates from Corean paintings, and be in other respects a handsomely made book. Mr. Frank Hamilton Cushing of the Bureau of Ethnology will contribute a comment on the games. The subscription price is five dollars.

Silver, Burdett & Co. will publish next month 'Poems of Home and Country; also, Sacred and Miscellaneous Verse,' by the Rev. Samuel Francis Smith, author of "America." Portraits will accompany this collection.

Ginn & Co. have in preparation 'An Introduction to the Study of Literary Criticism,' by Profs. Charles Mills Gayley and Fred. Newton Scott, in two volumes: Poetics and the Drama; Literary Types (other than the Drama).

Further announcements from Macmillan & Co. are a new edition, in four volumes, of H. E. Watts's translation of 'Don Quixote'; the first of four volumes of a 'History of English Poetry,' by W. J. Courthope; volumes of verse by H. C. Beeching and by Arthur C. Benson, brother of the novelist; a third series of William Winter's 'Shadows of the Stage,' and from the same pen 'Brown Heather and Bluebells.'

T. Fisher Unwin is about to issue a modern English prose version of 'Piers the Plowman,' by Miss Kate M. Warren. Dr. Wm. Lyon Phelps of Yale is editing a volume of Chapman's plays for the "Mermaid Series" published by Mr. Unwin. It will appear in the autumn.

Prof. Barrett Wendell of Harvard and Dr. A. W. Colton of Yale are joint editors of a new 'Selections from Addison,' to be published this year in Ginn's "Athenæum Press Series."

The late Rev. J. B. R. Walker's 'Comprehensive Concordance to the Holy Scriptures' (Boston: Congregational Sunday-school and Publishing Society), is a one-alphabet text-finder calculated to supersede Cruden, whose defects are notorious. It is compactly printed in triple columns, with heavy-face type for the rubrics, and with new-style and old style figures for chapter and verse respectively—aids to the eye which somewhat detract from the typographic beauty of the page by giving it a spotty appearance. The proper names are accented for pronunciation. The upwards of 900 pages make a solid but not bulky volume.

'The Royal English Dictionary and Word Treasury' is a large name for a handy little work compiled by Thomas T. Maclagan (T. Nelson & Sons). It aims at great simplicity in its definitions, and to supply, as occasion offers, lists of what it calls "similar words," whether synonymous or not. For ordinary, popular use the vocabulary seems well chosen, and the etymologies are neither more nor less subject to the customary caveat. The definitions are generally to be praised. "One who *causes* anarchy" is not exactly our latter-day Anarchist. The effort to condense is shown in the grouping of derivatives under stem-words, with the occasional penalty of such dislocation as the introduction of *railroad* before *raillery*, and *daybook* immediately after *daily*.

The Dryburgh Edition of the Waverley Novels (Black-Macmillan) has been judiciously supplemented by Scott's Poems, in two volumes uniform with the novels. Mr. Andrew Lang has been called upon to make the selection, to edit text and notes, and to supply an introductory estimate of Scott's poetic gift. All this he has done in a satisfactory manner. The print is extremely good, and the absence of illustrations is by no means to be regretted.

An excellent popular account of the Crusades is that recently issued under the title 'The Crusades: The Story of the Latin Kingdom of Jerusalem,' by T. A. Archer and Charles L. Kingsford (Putnams). The authors have made a consecutive story, into which, besides the expected chronicle of battles, they have introduced a very interesting description of the life of the Franks who dwelt in Syria for nearly two centuries. Usually, historians have regaled us only with the martial exploits, which were in the main so similar that they are hard to remember; to lay stress on the other side of the Crusaders' experience—to remind the modern reader that there were long periods during which not only they were not fighting, but actually lived on amicable terms with the Saracens—was well worth doing. Properly, also, the authors omit the Fourth Crusade, in which the Latins turned aside to seize Constantinople in true brigand fashion, and those miscalled crusades against the Albigenses and other heterodox Christians. We have not seen elsewhere so sober, suggestive, and able a summing up of the subject as is contained in the last chapter of this book. Especial commendation should also be given to the illustrations, which are reproductions of historical maps, views, coins, tapestry, etc., and which really enhance the value of the work. We note some misprints: Caloman for Koloman (p. 37); Gotschalk for Gottschalk (p. 39); jougleur for jongleur (p. 285); Domenicho Michaeli for Domenico Michiel (p. 295); the title of the Italian translation of Brunetto Latini's *di Tresors* should be *Tesoretto*, not *Tesauro* (p. 444). We notice also some discrepancies; thus, "Mentz" and "Mayence" are both used (p. 372 and 36), and there is no uniformity in the Englishing of the Eastern, particularly the Arab, proper names. "Bayazid" for the common "Bajazet" (p. 420) seems unnecessarily odd.

Mr. J. H. Wylie, who published the first volume of his 'History of England under Henry the Fourth' (Longmans) some ten years ago, has recently issued a second volume of 490 pp. covering only the years 1405 1406. This is an amplitude of canvas that we can allow to Mr. Gardiner in dealing with the Great Rebellion; but when it is demanded for the Lancastrian period, we cannot help thinking that there must be some want of selection and generalization. Mr. Wylie's work is most solid and thorough, with exact references for every statement, and these usually to contemporary writers. It has, alas! scarcely more style than a table of statistics. After saying this, it need hardly be added that it is not a book to be read with a light heart. It is to be taken in small quantities at a time, and these well digested. But it is a book true scholars will respect, for it is a mine of learning; and it will long remain one of the standard authorities for the period.

In 'Ancient Rome and Its Neighborhood' (London: Bell; New York: Macmillan) Mr. Robert Burn offers a convenient little handbook, condensed from his 'Rome and the Campagna' and 'Old Rome.' Revisions have been made, as well as additions containing brief accounts of the results of the latest excavations; and the volume is illustrated with good cuts and several maps. Although scarcely full enough to be interesting reading by itself, the book will serve, on the classic sites, as a useful supplement to one's Baedeker, and would be helpful to students who are "getting up" the topography of Rome.

'Half-Hours with an Old Golfer,' by Calamo Currente (Macmillan), is not a particularly valuable addition to the literature of the game. It is mainly written in doggerel verse of decidedly poor quality, and for the production of which no excuse is offered. It is claimed by enthusiasts that there is an element of poetry in the game, but they will hardly accept this book as a specimen of the poetic evolution of the sport.

The Burlington Fine Arts Club of London has just published a large quarto volume with two and twenty plates to commemorate the Exhibition of Ferrara-Bolognese Art held last summer. Besides an interesting introduction and the catalogue of the pictures exhibited—nearly all of the school to be found in Great Britain—this volume contains an admirable *catalogue raisonné* of all the known works by the painters under consideration. Students will find it of such aid that, despite the difficulty of obtaining copies, libraries should make every effort to possess themselves of it.

The fifth volume of Señor Menéndez y Pelayo's 'Antología de Poetas Líricos Castellanos,' (Madrid) somewhat belies its name. It is hardly fair to designate as an anthology of lyrics this volume of 442 pages, of which only 62 pages are in verse at all. The real bulk of the volume is the editor's prefatory study of the literary court of D. Juan II. This preface fills no less than 308 pages, the remaining 72 being given up to "documents pertaining to the poetry of the middle ages." Such poetry as is supplied

does not amount to much, since it is but a postscript of the previous volume, entering a few poems before neglected or forgotten. But if Señor Menéndez y Pelayo's anthology is something like a Parisian filet in which the meat is only an excuse for the sauce, at least it must be admitted that the excuse is a good one. The first half of the sixteenth century in Spain was one of much verse, but little poetry. The Renaissance had begun to break down the old national types, but was as yet too new, too confused, too undigested to offer new models. The time was one of origins but not originality; hence its literature is peculiarly interesting to read about but tiresome to read. Three men stand out, however, who either wrote or abetted good poetry of a more personal sort than the sweet, colorless rest, and of these three we have here very full and sympathetic studies. They are D. Enrique de Villena, Iñigo López de Mendoza (Marqués de Santillana), and Juan de Mena. In addition to this biographical criticism Señor Menéndez y Pelayo gives an excellently condensed account of the Spanish writers in the court of Alfonso V. at Naples from fresh sources.

The first volume of the Ginori lectures for 1894, entitled 'Vita Italiana nel Seicento: Storia' (Milan: Treves), contains a good although bombastically worded sketch of general European history during the sixteenth and seventeenth centuries by Guido Falorsi; some frothy paragraphs by Pompeo Molmenti on the decay of Venice, and articles on the Catholic Reaction and on Rome and the Popes by Ernesto Masi and Domenico Guoli respectively. Continuing the lines of thought expressed in a previous lecture on the Reformation in Italy (which we have had the pleasure to notice), Signor Masi ventures to suggest that, even without the impulse of "the German revolt," the religious element was bound to get the upper hand in reaction against the veneer of paganism prevalent at the beginning of the sixteenth century. Count Guoli gives an account, fertile in data culled from unpublished documents, of the systematic nepotism begun by the reëstablished Papacy, and of the accompanying degradation of the Roman populace to an abject dependence for its very subsistence on the beck and nod of the priest. This, by the way, was only the resurrection of the patron and client system of imperial Rome.

The *Nuova Rivista Misena* is a bi-monthly publication, now in its seventh year, appearing at Arcevia (Marche), and edited by Signor Anselmo Anselmi. Although devoting itself more especially to the art of the March of Ancona, the *Rivista* is a periodical which has already published innumerable documents of great—a few of the greatest—value to students of Italian art and history. The annual subscription is 6 lire.

One often hears inquiries for an Italian magazine of light reading, and such a one, by no means unattractive, is the new *Emporium*, a monthly illustrated review of art, literature, science, and miscellany. It is issued at Bergamo by the Istituto Italiano d'Arti Grafiche, at one lira per number, or thirteen per annum to foreign parts. The January number opens with a paper on the pictorial treatment of the visit of the three kings from the Orient to the infant Saviour, followed by one (in pretty stiff contrast to the Prince of Peace) on naval armaments, old and new, and another on Carpineto, the birthplace of Pope Leo XIII. Noticeable also are articles on Corea and the Coreans, on young French men of letters, and on telegraphic photography. The pictures are all half-tone or facsimile, but are adequate.

The *Korean Repository* for January, 1895, has reached us from the Trilingual Press, Seoul. Prof. Homer B. Hulbert, the translator of the new Corean constitution, in a paper on the reforms already begun under Japanese auspices, shows how far-reaching in their effect these will be. The distinction between the patrician and plebeian classes is abolished, and appointment to office will be upon the basis of merit only. This act is really a great moral lever for the elevation of the whole people; it reduces also to the class of producers the excessively large parasitic element. Rev. Graham Lee, after personal visitation, gives a graphic picture of the battle-field of Ping Yang. The student of Buddhism will enjoy, for its own sake and for comparison with Japanese usage, Dr. E. B. Landis's paper on "The Classic of the Rosary." This is accompanied by a folding diagram illustration. Besides juicy notes and comments there is a retrospect of the year 1894, with editorial explanation and a list of officers in the royal cabinet. The quondam exiles and refugees have been recalled from the ends of the earth, and now hold the highest offices. Among visible fruits of the wholesale reforms instituted are the disappearance of the conventional long sleeves of the Yang-Ban, or parasitic office seeking class, and the discharge, both from prefunctionary service and from the Government pay-rolls, of seventeen thousand eunuchs, palace servants of both sexes, runners, hangers-on, torch-bearers, etc. This monthly magazine costs $2 a year, and subscriptions may be sent to Hunt & Eaton, 150 Fifth Avenue, New York.

Students of things Spanish will be interested in the announcement of a new *Revista Crítica de Historia y Literatura Españolas*, the first number of which was to appear on March 10. The purpose of the review is to supply a monthly account of works, both in Spanish and in other languages, relating to the literature and history of the Spanish peninsula (Portugal included) and of Spanish America. In the list of Spanish contributors we note several well-known names—Azcárate, Cánovas del Castillo, Codera, Joaquin Costa, Menéndez y Pelayo, Juan Riaño, Rubio y Lluch, Eduardo Saavedra, etc. Several foreign scholars also have promised aid—Morel-Fatio, Hübner, Fitzmaurice Kelly, Farinelli, Croce, and others. The editing of the historical part of the periodical will be in the hands of Sr. D. Rafael Altamira of the Royal Academy of History; and that of the literary part in those of Sr. D. Luis Ruiz y Contreras. A further interesting and valuable feature, especially for foreigners, will be *comptes-rendus* of the more noteworthy novels, dramas, poems, and other works of belles-lettres published in the Spanish-speaking countries. The subscription price of the review is to be 15 pesetas ($3.00) a year for countries in the Postal Union; and subscriptions may be addressed to No. 55, Paseo de Santa Engracia, Madrid.

It is estimated that in the course of five years woodland acreage equal to the whole of southern New Jersey is burnt up in that section. The evil at all events is so gross that organizations have arisen to stay the devastation, and an illustrated bi-monthly magazine, the New Jersey *Forester*, has begun to be issued at May's Landing, by John Gifford, under the auspices of the South Jersey Woodmen's Association and the Avalon Summer School of Forestry. The conductors of this enterprise are in earnest, and the *Forester* is likely to train public opinion in the right direction. Incendiarism is a chief cause of the destruction.

In his latest report (1892-94) on the receipt, distribution, and sale of public documents, the efficient superintendent, Mr. John G. Ames, records the chief provisions of the bill which legislates him out of office, while embodying principles which he has so long labored to get enacted. Though he makes his valedictory, we should hope it were morally impossible for the Public Printer, under the new order, to appoint any other to the superintendency than this faithful servant of twenty years. We are yet to have from Mr. Ames, in addition to his recent 'Comprehensive Index of the Documents of the 51st and 52d Congresses,' a new edition of his 'Check-list of Congressional and Other Documents,' and a list of the principal speeches on important subjects made by Senators and Representatives of the 43d to the 52d Congresses inclusive. Since 1887, $5,526 has been taken in for public documents sold at cost of presswork and paper. The dearest book on the list is a Hayden Survey monograph on Invertebrate Palæontology ($8.00). The largest sale was of State maps at 17 cents each; for these there were 822 orders. The 'Growth of Industrial Art,' costing $2.00, is recommended by the superintendent for public and school libraries, "as illustrating in a graphic form the development of mechanical arts from the beginning."

The little *Almanach de la Coopération Française*, edited by Charles Gide (Paris: Imprimerie Nouvelle, 11 Rue Cadet), enters upon its third year. It is now able to present detailed statistics concerning French coöperative societies, which still lack a common statutory regulation, though a measure has been before the Legislature for eleven years. Some account is also given of similar societies in Italy, Holland, Germany, and England, with lists of establishments in all Europe and in the United States. Here we find Houghton, Mifflin & Co., the Century Co., Rand, MacNally & Co., the *Public Ledger*, side by side with Peace Dale, the Pillsbury flour-mills, Alfred Dolge, John Wanamaker, etc., etc. There are several cuts of coöperative establishments, and a translation by Édouard Monod of Hood's "Song of the Shirt." This is in all respects a wholesome and cheering publication.

The Boston Museum of Fine Arts has recently acquired what is beyond comparison the most important collection of Greek vases ever brought to this country. It comprises fifty-three specimens, and those who are familiar with Greek ceramics will appreciate their value from the fact that they include signed examples of such masters as Euphronios, Hieron, Hermogenes, Kachrylion, Duris, Brygos, Pamphaios, Nikosthenes, and Xenokles. A number of them contain interesting inscriptions besides the makers' names; but the most remarkable feature of the collection is its intrinsic beauty. Every specimen is a masterpiece of the type to which it belongs, both in shape and in the quality of the drawing upon it, and will appeal to the artist no less than to the archaeologist. Boston is not the only city to be congratulated upon this splendid acquisition; for the opportunity it gives to all American students to see Greek pottery at its very best, and the stimulus which is thereby given to the study of the subject, cannot fail to be of benefit to the country generally. It is pleasant to learn that the museum was able to make this purchase out of its own funds, it having received several important bequests lately for the purchase of works of art of various periods.

—The putting into print of the 'Watertown Records' is in line with the efforts made by the Massachusetts Commissioner of Public Records

to preserve these earliest documents of the Puritan commonwealth. The town had the good sense to intrust the transcription (no easy matter) and publication to the local Historical Society, which has discharged its duties admirably, with the aid, we may remark, of more than one woman in its membership. The volume is divided into four parts, viz., the Town Proceedings; Lands, Grants, and Possessions; Proprietors' Book of Common and Undivided Land; and Births, Marriages, and Deaths. Each part has an index. There is not much in the records that seems peculiar to one familiar with Puritan annals. After the usual difficulties over boundaries and allotments, the keep of fences, the ringing of swine, the felling of public trees, the intrusion of possible burdens on the community, one is struck most, perhaps, by the concern to suppress poverty and idleness in quite another than the socialistic way. The town offered to be helpful to Edward Sanderson and his wife in "giteing a servis for the bigist of his two least of his childeren wher it may be to their own content and the good Edewcation of the child in lerneing and labor." Nor was an income tax in view when it was "Ordered y' John Baall be warned to the next towne meeting to make knowne his condicion," for Capt. Mason was then bidden "to Joyne with Brother Baall in putting forth two of his children to Brother Pearce." At the same time the jealousy engendered by ostentatious wealth was guarded against by a sumptuary ordinance against "eccesse in apparrell." The illiteracy of the later records as compared with the earlier marks the falling off of the second and third New England generations from the culture of the first. Watertown began its school in 1650, or 16 years after its records begin, when Mr. Richard Norcross "was Chosen Schoole master, for the Chilldren to Reed & write & soe much of Lattin acording to an Order of Courtt," and he might teach "any maidens" desirous to learn to write. But the town sanctioned the most irregular attendance, "for a weeke or two and [the Inhabytant] to take them away agayne at his plesure." In December, 1670, each parent had to send a quarter of a cord of wood to the school to enable it to be held in cold weather. Garfield is a prominent name in the Proceedings; one Edward appears on the scene December 30, 1637.

—In Viollet-le-Duc's well-known 'Dictionary of French Architecture' from the eleventh to the sixteenth century, more than half the fourth volume is devoted to a remarkable monograph on Construction. In this article of 280 pages, including 150 cuts, there are laid down the principles which guided the builders of the twelfth and thirteenth centuries in their revolutionary dealings with architecture; and the feeble efforts of the earlier men, as well as the changes slowly made by the late Gothic builders, are also described. No architecture has ever been so logical and so intelligent as French Gothic. In comparison with this style all others are simple and child-like—rich, perhaps, in decoration, massive and durable in the piling up of cut stone or cemented brick and rubble, but the work of men who had few ideas about building and who held tenaciously to those few. To see bold experimenting and swift decision applied to building problems, one must study European, and especially French, work of from 1150 to 1250. All this is well set forth in the celebrated Frenchman's text and drawings, and this has been translated by Mr. George Martin Huss, an architect of this city (Macmillan). The translation is literal, almost a fault. Viollet-le-Duc was a discursive writer; he did not take time enough to write short, but let his too ready pen run freely along. And yet Mr. Huss has done rightly in translating him word for word. Not to do so would be to substitute another sequence of thought for that of the author, and to cause a doubt in the reader's mind as to how far the changes might extend. The difficulty of doing so in a book of this kind is very great, for the English vocabulary of building and of fine art is very much less rich than the French, and the words do not correspond. You may translate *moellon* by "rubble" three times out of four, but on the fourth appearance of the word it may not be rendered so. *Arc-doubleau*, *arc d'ogive*, *butter* and *contre-butter*, and many such terms are as untranslatable as the warmest lover of difficulties could desire, and even the innocent-looking *contrefort* cannot always be rendered as "buttress." Therefore Mr. Huss's task has been difficult as well as worthy, and the stiffness of the text in many places is chargeable to the laudable effort to give exactly the idea of the original.

—A notable contribution to the literature of modern miracles is Friedrich Jaskowski's 'Der Trierer Rock und seine Patienten vom Jahre 1891' (Saarbrücken: Carl Schmidthe), a pungent reply to Bishop Korum's 'Wunder und Göttliche Gnadenerweise' noticed not long ago in these columns. The author is a Catholic priest in the diocese of Trier, and therefore under the ecclesiastical authority of the bishop whose statements and opinions he so courageously attacks. The holy coat, he asserts, acts just as any other old garment would do under similar circumstances; it is marked by the same defects and liable to the same accidents, and must be cleaned and darned and patched, and, if kept in a damp closet, gets mouldy like any profane piece of cloth. For three centuries (1512-1810) no one ever thought of endowing it with the gift of working miracles. A few wonders of this sort were reported in 1810, but failed to receive the endorsement of the Church. At the next "exaltation," in 1844, the popular demand for miracles became so loud that the clergy yielded to it (or, as our author puts it, "stellte sich auf die Seite der Schreier"), and announced through the mouth of Bishop Arnoldi that "leibliche Wunder" had been wrought. A critical examination of the whole list of cures reported by Bishop Korum shows that in many instances the patient experienced only temporary relief and sometimes died shortly afterwards. Of thirty-eight cases, twenty-five were women and thirteen men; this special predilection for the fair sex (*besondere Vorliebe für die Damenwelt*) is regarded by Jaskowski as a suspicious circumstance. He quotes Prof. Charcot and other neuropathologists to prove that persons affected by hysteria or similar nervous disorders may be healed by heterosuggestion or even autosuggestion, and cites as an example the words of the woman who approached Jesus with the fixed idea: "If I may but touch the hem of his garment, I shall be whole." He admits that peculiarly constituted individuals may have recovered of certain ailments through firm faith in the holy coat of Trier; "in no case, however, was the cure effected by a miracle, or by any divine interference with the established course of things, but happened in a purely natural manner."

—By the death of Leopold von Sacher-Masoch literature loses a novelist of great fecundity and cleverness, of much originality, and of a distinct flavor and charm. It is but little more than twenty years since he began to work in fiction, and in this brief time his fertile imagination has brought forth more than fifty novels and volumes of shorter tales and stories. As an observer he had a specially keen eye for the characteristics of race, and the reader of his novels moves through crowds of Galicians, Poles, Germans, and Little Russians—and, above all, of the Jews who are fellow countrymen of these—with a strong sense of the life-likeness of his surroundings. Sacher-Masoch was born at Lemberg, in Galicia, in 1836. He studied at the Universities of Prague and of Grätz, and engaged first in teaching, which he soon left for literature. He devoted himself first to history and afterwards to criticism, achieving good results in each. In 1873 he commenced novelist with an historical romance, 'Kaunitz.' Then followed the fifty volumes just spoken of. At different times he resided at Prague, Grätz, Budapest, and Leipzig. Paris held him for two years. He liked France, and was liked there, and most of his books were translated into French. He died on March 9 at his country-house at Lindheim, in Hesse, to which he retired some years ago. About one year ago a false report of his death was current, and many obituary notices of him appeared in Europe and America.

SKEAT'S CHAUCER.—III.

The Complete Works of Geoffrey Chaucer. Edited, from numerous manuscripts, by the Rev. Walter W. Skeat, Litt.D., LL.D., Ph.D., M.A. Oxford: Clarendon Press; New York: Macmillan. Vols. IV.-VI.

Prof. Skeat has accomplished his great task in the time allotted, and the Oxford Chaucer is now complete. Vols. iv. and v.—one for text and the other for notes—are occupied by the 'Canterbury Tales,' and vol. vi. contains glossaries, indexes, and other apparatus belonging to the whole series. The last part of vol. iii. is taken up with a long essay on the sources of the Tales, and this claims our first attention.

The study of sources has to do not merely with immediate derivation, but with widely ramifying literary relations. In the department of mediæval literature it has for some years proved attractive to many of the best heads among scholars, and the results have been proportionately great. Mr. Skeat, as it happens, has never made this one of his special fields of research, and, though there is no kind of Chaucerian investigation that is not indebted to his efforts, he has done less for Chaucer in this line than in almost any other. We were to expect of this essay, then, not so much original discoveries as a compendious account of what is already known, with full references, and, above all, a searching criticism of some theories now provisionally accepted. Of criticism we do not find so much as we had hoped for; but in other respects the discussion is in the main satisfactory. Few contributions to this subject have escaped Mr. Skeat's eye, and he has generally made a good digest. Still, there are conspicuous inequalities, some unaccountable omissions, and a few errors. A good part of the essay has appeared before in the editor's small Clarendon Press volumes, and this has been transferred to the present edition with the least change possible. In this process it was inevitable that some bits of erroneous or obsolete information should elude the revising pen, and that shapeliness and method should frequently be sacrificed to a

momentary convenience. Nor is this all. Throughout the essay we miss that power of condensing and codifying which such discussions demand. The several versions of a story, instead of being arranged according to their age or their relations to each other, are often set down hap-hazard. Indeed, there is sometimes no attempt to point out relations in any but the most general terms. We have no wish to belittle either the labor of putting this essay together or the convenience of having so many facts at hand in a single volume. We yield to no one in our gratitude to the editor for accomplishing so much; but we could wish that he had revised his manuscript once more before sending it to the composing-room.

To criticise this part of the edition in full would require much space, but we may mention a few details that call for correction. The reasoning as to the date of the "Man of Law's Tale" is not very close, nor are the arguments advanced as to its supposed revision for insertion in the 'Canterbury Tales' at all convincing. The existence of a verse translation of Innocent's 'De Contemptu Mundi' is confidently asserted on very weak grounds. No such postulation is needed to account for all the phenomena. In the matter of Ser Giovanni and Il Pecorone it is not a little surprising that Mr. Skeat has nothing later to offer than a quotation from the 1845 edition of Dunlop's 'History of Prose Fiction.' He seems to have disregarded recent Italian research. The vexed question of Chaucer's relations to Gower is left in an unsatisfactory condition. Meier's ingenious work is not even referred to. The suggestion that Chaucer was offended at a few trivial coincidences of expression between Gower's story of Constance in the 'Confessio Amantis' and his own version in the "Man of Law's Tale," is not to be lightly accepted. These coincidences are probably accidental, and, even if they were deliberate copying on Gower's part, cannot have been any ground for ill feeling. A serious mistake is the ascription of the 'Roman de la Manekine' to Philippe de *Reimes*. This implies that Mr. Skeat knows the poem in Michel's edition only, and accordingly we find no mention of Suchier's 'Œuvres poétiques de Philippe de Rémi,' which would have furnished him with incalculably the best discussion of the whole cycle of stories to which the "Man of Law's Tale" belongs. The summary of the literature of the "Prioress's Tale" is meagre and out of date. Prof. Child's 'Ballads' would have furnished the editor with much fuller information. For the "Wife of Bath's Tale" Mr. Clouston's rather fragmentary notes are followed. Much more could have been made of this interesting subject.—Such are some of the particulars in which Mr. Skeat's essay on the sources of the 'Canterbury Tales' is inadequate. It must not be supposed, however, that these are fair samples of the accuracy or learning of the whole.

The text of the 'Canterbury Tales' fills the fourth volume, with the exception of a few pages devoted to a list of manuscripts and to three short poems discovered by Mr. Skeat since the appearance of vol. i. One of these poems, "Womanly Noblesse," may be ascribed to Chaucer with some confidence. The other two, called by the editor "Complaint to My Mortal Foe" and "Complaint to My Lodesterre," are more than doubtful.

The text of the Tales is of course based on the Ellesmere MS., which is closely followed, though with many slight changes in the interest of a uniform spelling. These changes are made with good judgment and are in no sense modernizations. The foot-notes register variations from this manuscript and also contain a somewhat condensed collation of the other important codices, readings from which are now and then adopted. Emendation has seldom been resorted to, for the superior manuscript tradition of the 'Canterbury Tales' makes it far less necessary than in the Minor Poems. Mr. Skeat has taken great pains with this part of his work, and no previous text can compare with the present edition either in accuracy or in readableness. Still, much remains to be done; for, as he would be the first to admit, we can never have the 'Canterbury Tales' in a satisfactory condition till the genealogy of the chief manuscripts has been worked out. As things stood, the only practicable course was that taken by the editor—to use the best single manuscript as a basis, and to patch up its errors by the help of such other manuscripts as seemed worth consulting. How far this process falls short of scientific textual criticism is clear enough. Fortunately the Ellesmere codex is so good that one may usually rest content with the results. We shall not trouble our readers with dry details of *variae lectiones*; but we may remark, in passing, that the mystery of the Harleian MS. remains as dark as ever: Mr. Skeat has apparently given up the problem.

The Notes to the 'Canterbury Tales' fill vol. v. Mr. Skeat's merits as a commentator are well known. He has learning and penetration; he writes with spirit; and he is never daunted by difficulties. His previously published notes on selected Tales were the best since Tyrwhitt's, and encouraged us to expect something quite extraordinary of his complete commentary. That these expectations have not been altogether fulfilled may be regarded as further testimony to our high opinion of Mr. Skeat. The commentary shows two general faults. The first is the result of an attempt to serve two classes of readers—the tyro and the adept. We do not mean to suggest that a "library edition" should contain nothing except what the specialist will need. On the contrary, it must furnish a good deal of rather elementary information. But it seems equally clear that to combine long and erudite notes, like many of Mr. Skeat's, with little suggestions about pronunciation and common grammatical forms is an attempt to serve two masters which both of them may properly resent. The second general fault is discursiveness and lack of condensation.

Of particular points there are, of course, in so extensive a commentary, many on which we cannot agree with the editor, others in which he fails to give full information, and some in which he is manifestly in error. Without trying to distinguish between these three categories, we shall refer briefly to several such points, to enable our readers to judge for themselves. Mr. Skeat's note on *goliardeys* is a conspicuous example of hasty work. It is confused and inadequate; the references neglect the latest discussions of the subject; and the conclusions are vague and untrustworthy. "It would appear that *Golias* is the sole invention of Walter Map, the probable author of the 'Golias' poems" (p. 48), is a statement which, in the present condition of this question, is little less than amazing. The application of the term *goliardeys* to the Miller is also left uncertain. The unwary will think that this person was "a ribald jester, one who gained his living by following rich men's tables, telling tales, and making sport for the guests." Not that Mr. Skeat means to make precisely this assertion, but that the form of his note has not been carefully considered.

The editor's views on the Prioress's French are reaffirmed. The wording varies slightly from that of the school edition, but the erroneous assertions and false conclusions remain unchanged. We take this to be the very worst note ever written on a passage of Chaucer, as some of Mr. Skeat's come near being the very best.

Of less moment are such slips or oversights as occur in the note on *this pestilence* (p. 286), which assumes that this particular line was in the supposed Italian original of the "Pardoner's Tale"; on *rede colera* (p. 251), which is hardly intelligible; on *Galianes* (p. 266), which misses the fun; on *to-tore* (p. 419), which clothes the canon in strange attire; on the *Secree of Secrees*, which ignores Benedict Burgh and his painstaking editor. To multiply small criticisms of this kind, however, would be worse than ungracious—it would be misleading; for these imperfections and their fellows bear no proportion to the sound and scholarly part of the volume. Chaucer-commenting is not done with yet, by any means, nor are Mr. Skeat's annotations the sea-mark of its utmost sail; but he has accomplished enough to justify one in associating his name with that of Tyrwhitt—and no Chaucerian can ask for higher honor.

Vol. vi. brings the work to a close with General Introduction, Glossary, and Indexes. The introduction, which is very elaborate, not only furnishes a compendium of the familiar, indispensable facts about language and versification, but affords a number of new observations. Particularly interesting are some of the remarks on metre, the excursus on open and close *ē* and *ō*, and that on the Kentish dialect. The refutation of Prof. Lounsbury's errors with regard to Chaucer's rhymes is spirited and in the main conclusive, but its effectiveness is weakened by an odd confusion of terms by which Prof. Lounsbury is actually represented as having assailed Chaucer! In the grammatical outline due credit is given to Prof. Child as the founder of the scientific investigation of Chaucer's language. The General Index is not very full, but it is supplemented by a number of special indexes. The Glossary is admirable It fills more than 350 pages and is excellently arranged. We are glad to learn that a supplementary volume, uniform with the series just completed, will soon be published. This will contain the prose 'Testament of Love,' and most of the poems which have been mistakenly attributed to Chaucer. Some of these have much merit, and nearly all possess an interest apart from the question of their authorship.

In conclusion we wish to express once more our deep sense of the obligation under which Prof. Skeat has laid all who care for learning or for literature. If we have dwelt at times on some of the defects of his edition, we have never failed to recognize its merits. He may rest secure of the gratitude of more than one generation.

ROOSEVELT'S WINNING OF THE WEST.

The Winning of the West and Southwest, from the Alleghanies to the Mississippi, 1769–1790. By Theodore Roosevelt. 3 vols. G. P. Putnam's Sons.

BEFORE Mr. Roosevelt began his work, there was no satisfactory account of our westward expansion as a whole. As a rule, older writers relied too much upon tradition, lacked the critical method, and wrote without insight into the broader aspects of their subject. Mr. Roosevelt had the historical insight and the good for-

tune to make use of a vast mass of original material. It is surprising, considering the primitive conditions which are the subject of the work, what large accumulations of letters, journals, official records, etc., remain. Aside from the documentary fragments in the older histories, Mr. Roosevelt has had access to the manuscript collections at Washington and at Nashville, the Haldimand Papers in the Canadian archives, the Durrett collection at Louisville, the Draper manuscripts of the Historical Society of Wisconsin, and other collections. It is to be regretted that he used the Draper papers for his last volume only, as they are rich in material relating to Boone, George Rogers Clark, and other pioneers whose story falls in the period covered by the first volumes.

These abundant materials Mr. Roosevelt has used with the skill of a practised historian, writing with appreciation of the fact that he is describing a phase in the general movement of civilization. Having experience as a rancher and hunter upon the present frontier, he writes with sympathy of the frontiersmen of the old West, the West that lay between the Alleghanies and the Mississippi. In his first two volumes he relates how the pioneers took their way along the parallel ridges of the Alleghanies through Cumberland Gap, and down the Tennessee and Ohio, into the pasture-lands and game-preserves of Kentucky and Tennessee. He describes the Indians at either end of the Alleghany Mountain barrier, the French on the Great Lakes and in the Illinois country, and their foes the frontiersmen, "hewing out their own fortunes in advance of any governmental action." He depicts the leaders in this advance, a host of border heroes, like Sevier, Shelby, and Robertson. "Above the throng of wood-choppers, game-hunters, and Indian fighters, loom the sinewy figures of Daniel Boon [*sic*] and George Rogers Clark." Next follows the history of the formation of the Watauga commonwealth and the Cumberland settlement (the communities which were to become Tennessee), and the early settlement of Kentucky. The story of Lord Dunmore's war and the Revolutionary war in the West is well told, including an excellent description of George Rogers Clark's campaign in the Illinois country, and a discriminating account of King's Mountain. Mr. Roosevelt brings out the western aspects of the Revolution as a war for the right of entry into the country beyond the Alleghanies. He views the winning of the West and the Southwest as a stage in the conquest of a continent. The frontiersmen, he says, somewhat grandiloquently, and certainly with no pretence of moral discrimination,

> "warred and settled from the high hill-valleys of the French Broad and the Upper Cumberland to the half-tropical basin of the Rio Grande, and to where the Golden Gate lets through the long-heaving waters of the Pacific. The story of how this was done forms a compact and continuous whole. The fathers followed Boon or fought at King's Mountain; the sons marched south with Jackson to overcome the Creeks and beat back the British; the grandsons died at the Alamo, or charged to victory at San Jacinto. They were doing their share of a work that began with the conquest of Britain, that entered on its second and wider period after the defeat of the Spanish Armada, that culminated in the marvellous growth of the United States."

In his third volume, under the title "The Founding of the Trans Alleghany Commonwealths, 1784–1790," the author tells of the inrush of settlement after the Revolutionary war, and shows how land furnished almost the sole object for speculation in that period. The analysis of society in the second stage of Western growth, with the indication of the rise of a Western gentry, is a particularly welcome contribution, especially as Mr. Roosevelt is disposed not to devote as much attention to social and economic aspects of the movement as the student of the period would like to have him give. His sketch of Indian wars between 1784 and 1787 affords him an opportunity to restate his favorite doctrine respecting the relation of whites and Indians. He contends that the wars were inevitable if the savage was to be superseded. Treaties could be secured only by war, or the effective menace of war, and, as a rule, the treaties of the nation with the Indians seem to him more than just. Only a silly morality, he says, would forbid such a course of conquest: "The rude, fierce settler who drives the savage from the land, lays all civilized mankind under a debt to him. American and Indian, Boer and Zulu, Cossack and Tartar, New Zealander and Maori—in each case the victor, horrible though many of his deeds are, has laid deep the foundations for the future greatness of a mighty people."

The most important and most interesting portion of the third volume is that which deals with the struggle for the navigation of the Mississippi River, the intrigues of the Western leaders with Spain, and the schemes of separation of the Western communities from the mother States and from the Union itself. Mr. Roosevelt enables the reader to perceive the mutual jealousies and misunderstandings between the coast States and the Western settlements, and the lack of national sentiment in the country as a whole. Describing the intrigues of men like Sevier and Robertson with Spain, he neither feels called upon to view that turbulent and particularistic era through the glasses of present-day consolidation, and to execrate as traitors the men who felt that the interests of their communities lay in independence, nor does he find it necessary to attempt to explain away the actions of the frontier leaders. The manuscript sources make it plain that Sevier, Robertson, Gardoqui, and Clark, as well as the mere freebooters like Wilkinson, engaged in intrigues for Spanish aid. While he rightly considers the actions of these men in the light of their times, he also points out in the true historical spirit the disastrous results that the success of their plans would have implied. In this connection he makes an interesting comparison with the history of the States of Spanish America, although it may well be doubted whether the fate of these States could by any possibility have befallen the West, under its physiographic and racial conditions. Mr. Roosevelt's castigation of that disreputable soldier of fortune, Gen. Wilkinson, is well applied. The closing portion of the volume is devoted to an account of the settlement and territorial organization of the Ohio region, and to the territorial organization of the Southwest.

The third volume bears evident marks of haste in imperfect proof-reading, loose citation of authorities, and occasional whipping together of material. Mr. Roosevelt has not fully freed himself from the point of view of the earlier writers. His work leans to the romantic side of the subject. On the other hand, in avoiding the unessential details given by the annalist, he sometimes seems to hasten over his materials, and to take refuge in a certain smartness of generalization which is not entirely free from the appearance of a homily. In illustration of his neglect of certain topics his treatment of the plans of Arthur Campbell of Washington County, Virginia, may be cited. The projects of these western Virginians were of grave importance and of long-continued interest, but Mr. Roosevelt passes them by with hardly more than a mention of Campbell's scheme for separation from Virginia and union with Franklin. As early as the winter of 1782 there were proposals of common action for the Virginia and North Carolina counties of this region. Campbell corresponded at that time regarding the project of calling a convention of deputies from Greenbrier, Montgomery, and Washington Counties in Virginia, and of the two North Carolina counties on the Western Waters, Sullivan and Washington, with a view to joint action by the men residing in the western country. They thought that, "in the general confusion and disturbance, they ought to take care of themselves." Jefferson and Madison recognized the danger lest the people of this region and the settlers in the limits of the Indiana Company's claim (West Virginia) should unite with Kentucky in forming a separatist State. In Congress a number of the States were regarded as favorable to such a separation from Virginia, some of the members being moved by the intrigues of the friends of the Indiana and other companies, some of them by a desire to see the revenue from the back lands fall into the hands of the Federal Government. It was in part the fear of losing all of her lands unless she ceded some that led Virginia to cede the Northwest. The Western Virginians petitioned Congress in 1784 and 1785 for organization as a State with Kentucky and Tennessee. In 1788 Caleb Wallace of Kentucky was writing to Campbell about the anger in Kentucky over the failure of Congress to act favorably on Kentucky's desire for statehood. He intimated that radical action would soon be taken, and was "reflecting on the hint" which Campbell held out "of a general coalescence of the western country."

These indications show the significance of the movement which had its centre in Washington County, Virginia. It deserves a fuller elucidation. The evidence also enables us to criticise Mr. Roosevelt's failure to give the history of such land companies as the Indiana Company and the Vandalia Company. The influence of these companies upon the question of the cession of the back land was very important, and Mr. Roosevelt's disregard of them does much to vitiate his account of those cessions, which is but superficial at best. It is, further, impossible to understand the land-company schemes, such as those of Morgan (formerly agent of the Indiana Company), Wilkinson, and the Yazoo Company, without tracing these earlier manifestations of the spirit of land speculation. With all his excellent generalizations on the subject, Mr. Roosevelt has not grasped with sufficient firmness the fundamental importance of land questions in relation to settlement. The desire of the Western communities to control their own lands affected their desire for independence in a way which the author fails to perceive.

Another criticism is suggested by the evidence drawn from Arthur Campbell's plans. Mr. Roosevelt states that "the national feeling among the separatists was so slight that the very communities which wished to break off from the Atlantic States were also quite indifferent to the deeds and fates of one another. The only bond among them was their tendency to break loose from the central Government." On the basis of this conclusion he goes on in later pages to compare the future of the West, if separatist influences had prevailed,

with the warring Spanish-American States. Respecting this view it is to be remarked that the sentiment of independence was a real bond among the Western communities. The phrases used in this connection in pamphlets and letters were, not Kentucky, or Franklin, or Washington County, but "the men of the Western Waters," "the western country." It was this recognition of the physiographic unity of the West that made the possibility of separation. When Kentucky was considering statehood in the fall of 1787, Cumberland sent two agents to wait on the convention to see if they might be allowed to join her. Georgia, a frontier State, entered into relations with Franklin. The connection of Franklin and the settlements of western Virginia has been noted. The readiness of each community to defend itself against the Indians, regardless of its neighbors, is evidence of the same spirit that led the frontiersmen to fight as individuals instead of in close ranks, rather than an evidence of indifference to the fate of each other. Moreover, there is positive evidence that these Western communities did ask and receive assistance from each other in their wars. With all their contentiousness, the Westerners showed an unmistakable tendency to combine on issues that affected them as a whole.

In mentioning the schemes for land companies, Mr. Roosevelt omits the Yazoo Company, which, through its agent O'Fallon, had important intrigues with Spain and with George Rogers Clark and Wilkinson. He also omits the less important, but interesting, plan of Isaac Sherman of Connecticut to colonize west of the Mississippi and attack Spain; and the attempt to interest France in Western separation. It would appear probable that the material in the Canadian archives upon these movements was unknown to the author. We miss, also, in Mr. Roosevelt's pages any attempt to exhibit the reaction of Western settlement upon the East. This might be shown in various ways, as in the effect of Western land politics upon Congress. Mr. Roosevelt further ignores the relation of internal-improvement schemes to the calling of a constitutional convention; and he does not explain the bearing of the Mississippi question upon the ratification of the Constitution. Finally, the work also loses much by beginning in 1769, and thus leaving unexplained the origins of the frontier conditions and institutions. They arose in the area east of the Blue Ridge. This was the oldest "West."

To sum up, we should be thankful to Mr. Roosevelt for the valuable work which he has done, while not shutting our eyes to the fact that the study of the early stages of the spread of a democracy over the virgin soil of this continent is far from being exhausted.

Life and Adventures of George Augustus Sala. Written by himself. Charles Scribner's Sons.

BEFORE he has gone very far in this book the reader will have formed a pretty accurate estimate of the writer's peculiarities. He will not be surprised to learn that Mr. Sala is a great admirer of Donizetti, and that he considers modern ears "depraved and distorted by Wagnerism." Long before reaching this confession of faith the reader will have divined that Mr. Sala's ideas of music, if expressed, would be certain to take some such shape; for, in fact, this book records the experiences and opinions of a Philistine of the Philistines. If it be true that a majority of readers are in the same category, then Mr. Sala's book will be a popular one. On the other hand, those who set before themselves high ideals of life and of literature will find a sentence here and there with which they can cordially agree. For instance: "I have always had a lively aversion for my own writings and my own individuality, . . . and I am grossly ignorant of the rules of English grammar." Moreover, they will give Mr. Sala due credit for some of the things which he has *not* done: "I could have swollen these volumes to thrice their size had I distended them with excerpts from my writings as a newspaper correspondent." "It is not my business to be a moralist, and I have studiously endeavored in the course of this book to avoid bombasting my pages with reflections." "Even now I see my way to the composition of an historical tragedy; but not a line of it has been committed to paper." It would seem that the world has been spared this tragedy owing to the ready wit of Sir Augustus Harris, who assured Mr. Sala that it would cost £4,000 to produce his unwritten tragedy with adequate spectacular effect.

Mr. Sala tells us that he first saw the light in 1828, and that his mother was an actress and singing-teacher. The most remarkable thing about his mother, however, was that in some mysterious manner she managed to get thirteen months into her years: "She lived a third of the year in London, six months in Brighton, and the remaining three months in great country houses." Other passages go to show that it was from his maternal relative that Mr. Sala inherited his love of the aristocracy which is one of his most decided tastes: *e. g.*, "Late in the seventies came other distinguished friends, among whom I hasten to mention the Duke of Fife and the Earl of Rosebery, and I frequently enjoyed the hospitality of the Heir of the Crown."

Mr. Sala states that he was "brilliantly educated"—whatever that may mean—at a school in Paris and another near London. When this process was completed, he tried his hand at drawing and etching, at which he was able to earn some money, and from time to time he ventured into the outskirts of journalism. When Soyer, the celebrated French cook, opened his restaurant in the Exhibition of 1851, young Sala became his head clerk, and he naïvely remarks that this connection was of much more benefit to him than to Soyer, inasmuch as he was brought in contact with "various distinguished persons." It was at this time, also, that he began to contribute articles to *Household Words*, then conducted by Charles Dickens, who had known his family; and for some years he earned by these articles an average of £5 a week, and never had an article refused—from which the judicious reader may perhaps infer that Dickens allowed his friendly feeling to outweigh his literary judgment. Encouraged by this steady income, Mr. Sala began to wander about Europe. He visited Belgium, which he describes as being "in some respects French, but in others wholly and delightfully unaccustomed to me." He also crossed what he calls the Alpines, and finally went to Russia, and described his journey in a series of articles which, after a quarrel with Dickens, he was allowed to republish in the form of a book called 'A Journey Due North.'

In 1857 he joined the staff of the *Daily Telegraph*, a journal which then occupied in the London press a position corresponding to that of the *World* in the New York press of to-day, and from that time to this he has remained in the service of the same paper. This connection with the press is evidently a source of supreme satisfaction to him. He constantly refers to his capacity for producing "copy," and to the number of words he is able to turn out in an hour; and very odd words some of them are. Here are a few taken at random: engendrure, addictiveness, unvested, frankalmoign, oppressingly, needments, viatorial. It is to be hoped that the *Daily Telegraph* employs an expert to turn Mr. Sala's "copy" into English, for there are sentences in these volumes that are quite incomprehensible. But to all this Mr. Sala replies, in his grandiloquent fashion, that he does not write to please the critics, but to entertain and instruct the public.

In the early sixties the *Saturday Review*, then largely written by the late T. C. Sandars and Lord Bowen, used to make great game of Mr. Sala and his literary pretensions, and he candidly admits "that in many respects the writers were justified in reviling him"; but he chuckles at the recollection that at that very time he was earning £2,000 a year. Some years later Matthew Arnold was wont to cover with ridicule the writings of the gentlemen whom he called "the young lions of the *Daily Telegraph*"; and to this also Mr. Sala replies that his income at that time was £40 a week. This is the quintessence of Philistinism. He says, in effect: My style is execrable, and my ideas on most subjects are snobbish or banal, but I care not so long as they please the readers of the *Daily Telegraph* and bring me in so much a year!

Mr. Sala has acted as special correspondent of his paper in all parts of the world. He always kept trunks packed with clothing suited to different climates, so that he could start to the North Pole or the Equator at a moment's notice. He was quite in the habit of receiving such messages as this: "Please write a leading article on the price of fish at Billingsgate and go to St. Petersburg in the evening." He of course met with many adventures, some of which he describes with humor. He was in a train which was "held up" by Carlists in Spain, and he overheard a Spanish gentleman who was overcome with fright murmuring to himself: "To die so young, to leave my wife and babes: oh, it is sad, it is sad! and I haven't even had my breakfast."

Mr. Sala came to this country in 1863-'64. It is perhaps unnecessary to say that his sympathies were altogether with the South. This was invariably the attitude of the British Philistine of the period, and is therefore not surprising. But incidentally he states that the closest friend he made was William Henry Hurlburt, and that their friendship remains undiminished to this day, and he is "wholly at a loss to understand the *acharnement* with which Mr. Hurlburt has been pursued." This surely indicates, to any one aware of the facts in the case, a strange sort of moral obliquity. In relating his American experiences, which, by the way, are singularly uninteresting, Mr. Sala makes the odd blunder of calling the well-known Capt. Judkins of the Cunard line Capt. *Jenkins*.

On the whole, Mr. Sala has produced an unsatisfactory book, for the reason that it was not in the nature of the man to do otherwise. He had seen much of the world and had abundant material out of which to fashion an autobiography of considerable interest; but he is entirely destitute of literary skill, and the all-pervading impression of his personality is decidedly unattractive.

The Foundations of Belief: Being Notes introductory to the Study of Theology. By the Right Hon. Arthur James Balfour. Longmans, Green & Co.

Mr. Balfour's six years' wrestle with the Irish seems to have given an added touch of wariness to his methods as a philosopher. He puts out his views with the caution of a Chief Secretary for Ireland expounding a new coercion bill. Before giving wrong-headed obstructionists a chance to fall upon him, he falls upon them. Confessing with charming frankness that his constructive chapters are open to formidable objections, he holds them back to the very last; meanwhile having no end of fun with the opinions which he imagines his opponents will set up as rivals to his own. If he must confess, in the end, that he knows but little about the deeper things of knowledge and life, he will at least make his retort on you before you have a chance to make yours on him, quite with the air of an Irish Secretary triumphantly demanding, "If coercion is bad, what in heaven's name would home rule be?"

The result is to give his book the appearance of standing on its head. Before being told why or what we are to believe, we have "Some Consequences of Belief" thrust in our faces. These consequences are, of course, horrid, as they are not those of Mr. Balfour's belief, but of that of his enemies; and he is preparing their minds to accept his philosophy further on by showing them at the start how absurd and harmful their own philosophy is. Then comes Part II., "Some Reasons for Belief"—again other people's reasons, not Mr. Balfour's; and inadequate and foolish reasons they are before he gets through with them. Still leaving his coercion bill lying on the table, provokingly unread, he next takes up "Some Causes of Belief," showing that you really believe not at all for the reasons and in the way you think and allege, but for quite other reasons and in a wholly different way, as he will explain to you if you will stop interrupting and listen to him. After having thus nagged and worried the Opposition through 240 pages, he at last brings out, in 120 pages and with much deprecation, his "Suggestions towards a Provisional Philosophy." He states, in effect, that he fears his constructive theory would have been torn to pieces if he had laid it before his critics while they were fresh, but that he hopes in their wearied condition they will not be too hard on him.

Mr. Balfour is undeniably clever and interesting. His wit and unconventionality in dealing with abstract philosophical subjects are as refreshing as they are rare. But a more sceptical book was never written—this, despite the acclaim with which he has been hailed as a new defender of the faith. His scepticism is of that thoroughgoing and hopeless character which throws doubt on the validity of all knowledge. He displays this more openly, it is true, in his analysis of scientific presuppositions; but it always lurks around the corner in his exposition of religious presuppositions. He himself is dimly conscious, and in several places more than half admits, that the weapons which he had used in the first part of the book would be too strong for his own defences if turned against them. But he has a parent's tenderness for his own progeny. It may be "a hard thing for us to believe that we are made in the likeness of God, yet it is a very necessary thing." In other words, Mr. Balfour, when put to it, consents to reason after what Hallam called the *a-tutiori* method, and exposes himself to the indignant scorn of Maurice for those who thought of religion as "the greatest betting-book in the world," in which the odds were altogether in favor of a real heaven and a real hell.

Mr. Balfour is at his best and evidently most enjoys himself as a destructive critic. Some popular forms of current theology were never more neatly impaled than in his chapters on "Rationalist Orthodoxy" and "Science and Theology." Our old friends of the "two parallel lines," science and religion, never really touching each other, will find Mr. Balfour bringing them rapidly into serious collision and disaster. And as for those modern champions of the faith who go forth to withstand science, panoplied in a hastily patched-up scientific armor, what presage of their final fate could be more doleful than that which Mr. Balfour addresses to "the rationalizing theologian"?

> "He has borrowed the premises, the methods, and all the positive conclusions of Naturalism. He advances on the same strategic principles, and from the same base of operations. And though he professes by these means to have overrun a whole continent of alien conclusions with which Naturalism will have nothing to do, can he permanently retain it? Is it not certain that the huge expanse of his theology, attached by so slender a tie to the main system of which it is intended to be a dependency, will sooner or later have to be abandoned; and that the weak and artificial connection which has been so ingeniously contrived will snap at the first strain to which it shall be subjected by the forces either of criticism or sentiment?"

A word should be added respecting Mr. Balfour's own attitude towards science. Ostensibly he surrenders to its "psychologic climate"—a happy phrase of his. Only against its presuppositions does he wage war. Yet he shows but a meagre acquaintance, and a still more meagre sympathy, with the tentative, modest, patient, approximate methods of scientific inquiry. He must have a sweeping generalization, a complete explanation, or he turns away in disgust. The plodders who put together fact by fact to clear up some section of the puzzle of life are too slow for his impetuous temper. An excellent proof of this is seen in the chapter on "Naturalism and Æsthetic." Mr. Balfour is arguing against the sufficiency of the scientific account of the origin of pleasurable emotions, particularly those pleasurable emotions connected with music. Darwin's speculation on the subject, with Spencer's, he analyzes only to reject. He has not the patience to stop over their facts, or over the large collection of material on the point in hand to be found in such a book as Wallaschek's 'Primitive Music,' but hurries on for an all-embracing principle. Finding none to suit him in the scientific writers, he falls back on the assertion that "we must believe that somewhere and for some Being there shines an unchanging splendor of beauty, of which in Nature and in Art we see, each of us from our own standpoint, only passing gleams and stray reflections," etc. Apparently he does not see how blank and barren such an affirmation must remain, how it leaves the whole inquiry hanging in mid-air, stops all investigation at the threshold, and denies us the sense of reality and true (if groping) rationality to be had from contact with the terra firma of facts, confessedly incomplete as they still are. The scientific æsthetician may go on very slowly, but he moves; whereas Mr. Balfour stops everything short with a sweeping generalization which accounts for no single detail. This is but one of many indications to be found in the book that his mind, while profoundly sceptical, is really of the imperious, high-priori type, and deceives itself in thinking it has grasped and accepted scientific method.

The Church of Sancta Sophia, Constantinople: A Study of Byzantine Building. By W. R. Lethaby and Harold Swainson. Macmillan & Co. 1894. Pp. viii, 307. Illustrations.

The increased interest in Byzantine building and fine art which marks the present quarter-century is very encouraging. It is almost certainly a sign of increased catholicism in love and study of art. The style has never been taught in the schools or preached by partisans as the one style to follow. No one proposes a Byzantine Revival. The beautiful works of the Greek spirit acting under novel conditions, and with the Roman imperial traditions and requirements still powerful, are being studied for their beauty and suggestiveness in what seems a wholesome way. That this should be contemporary with an historical rehabilitation of the Byzantine empire is probably not very significant or very important, but it is pleasant to think of.

Sancta Sophia, or Aya Sophia, the great church of Constantinople, is recognized by many thinkers on fine art as the most important church in Europe, and the centre of modern building. That it is the most beautiful church in Europe is probably true if we consider the interior alone. Inasmuch as it has not been the prototype followed by Western builders generally, and inasmuch as Western architecture makes much of the exterior and, even in church work, gives equal importance to that with the inner design, Sancta Sophia is not quite the universal model which some of its admirers seem to assert. It is the more worthy of close study to-day that we may see whether some of the principles involved in its design and construction may not be of use to the uncertain and hesitating architects of Europe and America.

The book before us does not attempt to give large plates or a complete series of plates or any illustrations in color. It refers for these to books already existing, and especially to the folio of Salzenberg. The illustrations, which are freely used, give the plans of the church at a sufficient scale for easy comprehension, especially when aided by the text; by diagrams of the construction as in figure 34, where an isometric view is given of the system of vaulting; and finally by drawings of details of the ornament, inlaid and other, surprisingly useful and agreeable for such simple work. They are artistic in a rather high sense. The text in which these illustrations are set consists of an account of the church, its history, its design, its system of construction and ornamentation, all made up in a singular way from personal observation and the study of ancient documents. The two are combined together and each is used to elucidate the other. Thus, in section 4 of chapter x, on "Structural System and Vaulting," the arches, domes, and wagon-vaults are described as they appear to the skilled observer; their forms and combinations are explained by diagrams; questions of material and processes employed are answered by reference to Mr. Choisy's important treatise, to a Greek architect named Kouppas, who has described the traditional methods still in use in the East, to Viollet-le-Duc and his remarks upon early mediæval vaulting, and to other writers, and the whole is checked by the sagacious insight of the authors.

Chapters iii. and iv. give a kind of résumé of the often cited poem of Paul the Silentiary,

together with large parts of the poem in what appears to be literal translation. Chapter v. contains a full account of the disposition and arrangements of the church as it was intended to be; this being derived partly from the Silentiary's poem or from other ancient writers, and partly from the building as it exists. Chapter vii. gives the later history of the church and some of its legends. Chapter viii. takes up the church at the time of the much needed repairs begun in 1847, and includes a description of the church as it was then, abridged from Salzenberg's text. In the other chapters the minor details of the church, its lighting, its sacred vessels and utensils, its mosaics and marble lining, the carved capitals and alabaster shafts of its columns are dwelt upon with intelligent affection. The buildings in the immediate neighborhood of the church and which, like it, are a part of the palace-group of the Christian city, receive their notice in chapter ix.; and chapters i. and ii. give us the historical setting of the whole with diagrams of the plan of the city, the Acropolis and the church as first planned by the architects of Justinian.

The purpose of the authors, as expressly stated in the preface, is to call back students of architecture to "sound common-sense building and pleasurable craftsmanship." They find Sancta Sophia a perfect embodiment of all that is intelligent, rational, and logical in construction, and of admirable taste and judgment controlling the design of the whole and its parts. The entire book breathes the same spirit of sincere, almost devout, study of noble architecture and of that which makes it noble. It is as handsome as it is worthy. It is printed on laid French paper of a most agreeable texture and surface, with rough edges, and is simply bound in buckram. We regret to notice the death of one of the authors, Mr. Lethaby, while our notice has been in preparation.

Nihilism as It Is: Being Stepniak's Pamphlets, translated by E. L. Voynich, and Felix Volkhovsky's 'Claims of the Russian Liberals.' With an Introduction by Dr. R. Spence Watson. London: T. Fisher Unwin; New York: Putnams.

THIS volume has been published, as Dr. Watson states in his introduction, in answer to the general demand for authoritative information as to the aims and doctrines of the Russian revolutionists, whether extremists or moderate men. It also is intended to show what language the Russian revolutionist holds to his allies at home, and to disprove the assertion, which has been made, that he varies his tone according as the audience he addresses is foreign or native. It is a pity that the book bears no date. The letter sent by the revolutionary executive committee to Alexander III. on his accession to the throne, and the letter from the Liberals of Moscow to Count Loris Melikoff show for themselves that they were written in 1881. They have frequently been printed, and are so familiar to the public that it is not necessary to discuss them here. The substance of Mr. Volkhovsky's 'Claims of the Russian Liberals' is also known to American readers, through Mr. Kennan's article, "Last Appeal of the Russian Liberals," in the *Century*.

Mr. Stepniak is always interesting, but his pamphlets were written in 1890. This fact does not invalidate their worth as ancient history, and it is a happy thought on the part of Mr. Unwin to collect these documents in a convenient form. But a new reign has begun; new characters, if not new conditions, and, possibly, new principles, are already changing the situation day by day. This change brings out in relief what may be called the kernel of Stepniak's utterances, and shows how fluctuating is the value of belated documents.

"We believe," he says, "that the worthless gang which now rules over Russia, taking advantage of a misunderstanding of the peasant masses, can be overthrown only by force, and to this end we see no other means than force. In politics we are revolutionists, recognizing not only popular insurrection, but military plots, nocturnal attacks upon the palace, bombs and dynamite. We shall not, while living abroad, preach these things to our Russian comrades. Apart from the moral impossibility of inciting others to actions in which we ourselves can take no part, there is also the question of timeliness, and, therefore, of the expediency of a given action—a question which can be decided only on the spot. We regard all such acts as morally justifiable, and we are ready to defend them, and to acknowledge our moral solidarity with them, once people have been driven to commit them."

But Stepniak has stated, in his account of the book's origin, that the two pamphlets were "written originally in Russian, and for the Russians," and that he "never expected them to be known outside the dominions of the Czar." The question immediately occurs to the reader: What else is this but inciting to violence from a distance, and disclaiming beforehand all responsibility for results produced by zealous disciples acting on the creed thus plainly stated, and which, possibly, they have never previously heard? When Stepniak was in America, at about the time when this pamphlet was written, he professed to believe that the peasants might be induced to revolt "peaceably" by propagandist persuasion, and declared that bombs, murder, violence in general, would be adopted only in case persuasion failed. We are glad to have a definite assurance that the Russian revolutionists outside of Russia are not aiding in dynamite plots in Russia. They ought to be, if they are faithful to the creed which we have quoted above; or else, they ought not to be circulating tracts containing their confession of faith among the people whose precious lives will be endangered by living up to it, while lack of information keeps those at a safe distance from preventing useless sacrifices.

Another interesting confession is, that the Russian opposition suffers from internal dissensions, not only arising from the nature of domestic affairs, but strengthened by foreign and artificial differences. For these reasons, Stepniak says, "our 'cause' still continues to be a mere cloud of words cast upon the wind"; and he gives an amusing and truly characteristic account of the week-long, month-long discussion of entirely superfluous points between provincial philosophers, culminating in an uproar which attracts the police to the nest of reformers.

Other significant passages refer to the ultimate expectations of these reformers:

"Russia is a land of peasants. And yet, so far as we know, there is not at this moment a single section among the Russian revolutionists which seriously looks to the peasantry for support—that is, which really works to obtain partisans among them. . . . A new attempt to 'go among the people,' though, of course, not in the old way and not with the old message, but with a practical and comprehensible plan of a transfer of land by the State to the people, and of peasant autonomy—such an attempt would have, we believe, a good chance to meet with quite other response and to give quite other results from those obtained by the attempts of the seventies. . . . Up till now the world has invented no other form of free state except Constitutional Monarchy or Republic, and so far no voices have been raised for a republic in Russia. . . . But why all these fig-leaves? We prefer a republican form of government to any other, and most certainly have no prejudice in favor of the Romanoff dynasty. . . . It is only from the point of view of evolutionary socialism that the struggle against autocracy, with its numberless and terrible sacrifices, has a true and great significance; otherwise it is nothing but an aimless and sanguinary farce—strife for strife's sake, practice in self-sacrifice. . . . To anarchists, representative government is not worth fighting for, and, therefore, there are no anarchists in Russia. . . . We propose to take our stand openly in favor of evolutionary socialism, recognizing freedom of speech, freedom of the press, and universal franchise as fully sufficient weapons. . . . Both imperial and Jacobinical socialism lead to the same result—the transformation of the country into a huge workhouse."

The argument would appear to read, briefly, as follows: Nobody in Russia wants a republic, but everybody wants a republic. Everybody is to have the franchise and vote for representatives; but anarchists want no representative government, therefore the lamb-like people who are not anarchists are to roam about in wolves' clothing, stir up insurrections, military plots, and nocturnal attacks on the palace, and employ dynamite and bombs to prevent the republican, representative government which they crave. Only an inattentive reader could possibly accuse Stepniak of lacking clearness in his statements and deductions.

In his "Supplement: The Beginning of the End," he appears as a prophet of the millennium which the great famine of 1892 was to inaugurate, by revolution. As the prophecy has not been fulfilled in any perceptible degree, if at all, we may be excused for not taking it seriously.

Recollections of Life in Ohio from 1813 to 1840. By William Cooper Howells. With an Introduction by his son, William Dean Howells. Cincinnati: The Robert Clarke Co. 1895.

A SORT of glory is reflected back on these Recollections of the elder Howells from the celebrity of his son. But those who begin to read the book for the sake of the son will read on to the end for the father's sake and for their own. Multitudinous details regarding early decades of Ohio are missing in Howells's brief chronicle, though garnered up in cumbrous tomes in which most counties have already shown forth their beginnings. The truth is, these compilations are only material to serve for history; they are not history. They will always be consulted, but never read. They give us more than we find in Mr. Howells, but we receive less. They lack the individuality which pervades and vivifies every page of Howells.

The most noticeable feature in the outward life of Mr. Howells was his manifold changes of base. The first one, from the Old World to the New, began during his first year. Within half-a-dozen years thereafter his homes were in New York, Pennsylvania, Virginia, and Ohio. After he emerged from childhood, all spots looked to him, as to his Welsh father, greener than that where he stood. He verified half-a-dozen times Franklin's proverb that three removes are as bad as a fire, yet never wavered in his faith that the next move he made would give him all he sought. As a natural result, the ups and downs of moves over the Alleghanies, through Ohio mud and on river arks, are portrayed by him with those minute and vivid realistic touches which all feel to be truthful. Such a feeling deepens in

every reader as the young pioneer describes, *à la* Tolstoi, his struggles to make the best of the privations, disappointments, and want of all things that now seem essential for making life worth living. Most of us have some idea of a forest fire, of the way to clear a field and grub it, as well as how to thresh grain and build a kiln to dry peaches. In running over, however, young Howells's experiences in these matters we learn not a little which but for him we should never have known. He saw through much that we only saw.

Mr. Howells's roughing it was well over before the birth of his distinguished son in 1837, but his past vicissitudes and even woes served for sweet discourses in the time to come. No wonder his children importuned him to set down the facts of his previous life. Though this record was meant for his family only, it was at once seen to be of general interest. It could not fail to be. With change of names and dates, it was the history not of one family, but, as to some one of its branches, of well-nigh all families who in early decades adventured beyond the Alleghanies. Few of those first comers came so near being nonagenarians as Mr. Howells, still fewer wrote out reminiscences. Accordingly, a myriad of Westerners in reading his book will rejoice in something analogous to their own family narratives. Some of them, had they his skill in spinning, could spin tougher yarns than his. His snake stories are tolerable, but not far from his beat an uncle of the present writer was the first minister, and at the close of a morning service in the school-house church he said: "Brethren, the sun is waking up the snakes, and they may make trouble for our children to-morrow. It would be a work of necessity and mercy to deal with them between meetings." Within an hour two hundred and fifty-six rattlesnakes lay in a heap at the church door of Granville. The members of this church were Sabbath-keepers. They had driven their oxen from Massachusetts, but not one step on Sunday. Yet every Sunday evening they held a business meeting in the church, for their Sabbath ended at sunset. If they knew the Presbyterians in the adjoining tier of counties, whose Sabbath, according to Howells, lasted till midnight, they must have fought on the question, "When does holy time begin?" Sabbaths from sunset to sunset were favored by Dr. Taylor, the theological professor at Yale. He did not insist so much on the text, "From even unto even shalt thou celebrate thy Sabbaths," as on the fact that the young people, who put on go-to-meeting suits Sunday morning, could go a-courting more conveniently on Sunday evening than on any other day, while it was not desirable that sparking should encroach on sacred hours. Disputes of a similar type, scandals, litigations, camp-meetings, husking-bees, are mentioned by Howells as all thrice welcome, for breaking the deadening monotony of life in the wilderness, where toil so seldom relented and gave its turn to play.

A most surprising statement to many readers is that the emigrant Howells, on going aboard for America, was arrested, as being skilled in woollen manufacture, and therefore not allowed by law to leave the country. The statute for detaining him ought to have been given. The acts usually cited, Blackstone iv. p. 160, do not cover the case. It may be the legal authority was Blackstone i. 266: "Some persons were anciently under a perpetual prohibition of going abroad, . . . among which were all . . . artificers, lest they should instruct foreigners to rival us in their several trades and manufactures." Howells's leaving the country may thus have been held a high contempt against the King's prerogative.

It is remarkable how a plain tale of things just as they are, unawares adds to the vast vocabulary of our speech. In no dictionary that we have consulted does "mourner" (p. 92), meaning one "on the anxious seat," or "niggle" (p. 59), to cut up a fallen tree, or "peach leather" (p. 77) appear. The homely narrative is enlivened by many sayings which at least under the circumstances were smart. The immigrant Howells, after an intrusive visitor had worn out his welcome, was called out on some business, and said to the guest, "I suppose you will not be here when I return, so I wish you good-by!" This was not bad, except in comparison with the superb stratagem ascribed to Gerrit Smith in such emergencies—as that he used to say in his family prayer, after breakfast, "May the Lord also bless Brother Jones, who leaves us on the ten o'clock train this morning!" Smith's hospitality was more imposed on than that of Howells; hence necessity may have made him more inventive of protective devices.

BOOKS OF THE WEEK.

Baldwin, F. S. Die Englischen Bergwerksgesetze. Stuttgart: J. G. Cotta.
Cassell's Complete Pocket-Guide to Europe. Revised and Enlarged. Cassell. $1.50.

Freer's Life of Margaret of Navarre.

THE LIFE OF

Marguerite of Navarre

(*MARGUERITE D'ANGOULEME*).

Duchess d'Alencon and de Berry, sister of Francis I. of France, and Author of the Heptameron. By MARTHA WALKER FREER.

Beautifully printed by John Wilson & Son. Illustrated with 3 engraved portraits. 2 vols., large 8vo, buckram cloth, gilt tops.

The edition is limited to 750 numbered copies. Price, $7.50 net.

An exact reprint of the exceedingly scarce second edition of this valuable work. We have selected the second edition in preference to the first, as it contains many important additions and corrections by the author.

We have also added a FULL AND COMPLETE INDEX to the entire work, no index having been made to the work till this edition.

Erasmus praises "her prudence worthy a philosopher, hes chastity, her piety, her moderation, her invincible strength of mind, her marvellous contempt for the vanities of the world."

"A Life of Marguerite of Navarre, the illustrious sister of Francis I., is now for the first time offered to the public. The varied stores of French history offer no theme more worthy of research and study than the career of this great princess who exercised so potent an influence over the politics and manners of the age of which she was herself the brightest ornament."

Hull House Maps and Papers.

A Presentation of Nationalities and Wages in a Congested District of Chicago, together with Comments and Essays on Problems growing out of the Social Conditions. By Residents of Hull House, Chicago. One volume, x + 230 pp., with colored Maps, Diagrams, and eight Illustrations, 8vo, $2.50; special edition, with Maps mounted on cloth, $3.50.

This extraordinary book presents in graphic form a certain number of facts concerning the "criminal district of Chicago, which ranks as one of the most openly and flagrantly vicious in the civilized world," and also the poorest and most crowded section of Chicago. Especially amazing is the account of the sweating-shops. It would seem as if the direct menace which they offer to those who hold themselver aloof from the questions of reform might awaken the public conscience to a most abrupt and sudden change These maps speak for themselves, but the special essays, of which there are eleven, bring home the lessons in thunder tones. An Appendix, illustrated with photographic reproductions, gives a definite account of Hull House and its beneficent methods of work.

For sale by all Booksellers.

The Nation.

NEW YORK, THURSDAY, APRIL 4, 1895.

The Week.

THE invitation extended by the commercial bodies of Chicago to President and Mrs. Cleveland to accept a public non-partisan reception in that city to express "our deep sense of appreciation of your statesmanlike and courageous action in maintaining the financial credit of our Government, and your uncompromising attitude in favor of the preservation of a sound national currency," is the emphatic response of business men to the scurrilous attacks made upon Mr. Cleveland in Congress and the press on account of the syndicate loan which is now in course of fulfilment. That financial arrangement quieted a panic which was in full blast and would have drawn every dollar of gold out of the Treasury if it had lasted a week longer. Failure to pay gold would have been bankruptcy, and this fact would have put enormous difficulties in the way of getting more gold to resume with. Mr. Cleveland did the only thing that it was possible to do in order to save trade and industry from incalculable distress. For this he was abused and vilified, both in and out of Congress, in terms that would have disgraced the fish-market. The expiring House of Representatives, in order to give vent to its ignorance and malice in the most emphatic manner, voted that the bonds should draw 3¾ per cent. interest instead of 3 per cent., thus taking vengeance on the taxpayers to satisfy its animosity against Mr. Cleveland. That Congress has now "passed in its chips," and this Chicago invitation is the first public proof that the business men of the country are on the side of the President. What the commercial bodies of Chicago have said, all the other commercial bodies of the country think, and if Mr. Cleveland should make a tour of the United States at this time, he would be received by the business men everywhere with a more cordial welcome than he ever had before in his whole public career.

Immediately after the election last fall the reformers of Illinois began active work to secure from the new Legislature the passage of a law introducing the merit system in that State. The movement was under the leadership of the Civic Federation of Chicago, a non-political and non-sectarian association organized about a year ago for the purpose of "promoting the honesty, efficiency, and economy of the municipal government and the highest welfare of the citizens," and to "increase the interest of citizens in municipal affairs by securing the utmost practical separation of municipal issues from State and national politics." From the very start the movement met with the greatest popular favor. The press of the city supported it with practical unanimity, and the most influential newspapers in the State were earnest in their appeals for favorable action by the Legislature. So powerfully did public sentiment express itself that the spoilsmen were constrained to bow to it, and the Legislature passed "an act to regulate the civil service of cities," authorizing the voters of any municipality to apply the reform system to their civil service whenever so disposed. In the campaign leading up to the municipal election on Tuesday, the Civic Federation was backed by the clergy and unanimously by the Trade and Labor Assembly, and the cheering result was a majority of 45,000 for the abandonment of the spoils system.

Both in Ohio and in Connecticut, Monday's elections indicated the reaction against the A. P. A. movement which was sure to occur. Columbus has been the chief seat of the propaganda in Ohio, and the Republicans this week paid the penalty of encouraging the craze. In Bridgeport the A. P. A. element got control of the Republican convention, and made the issue sharp on members of the school committee. Extraordinary interest was aroused, and about two thousand women participated in the choice of committeemen, the great majority of their votes being cast for the liberal ticket. The result was a majority of about two thousand for the members opposed by the A. P. A., while enough Republicans were so much disgusted with the attitude of their party that they voted for the Democratic candidate for mayor, who was elected by a smaller majority. It is conceded by both sides that the election would have gone the other way but for the introduction of this issue. It is amazing that men who pride themselves upon their shrewdness as "practical politicians" should be so easily deluded with the idea that votes are to be made by such tactics, when the history of the country has shown over and over again that a party could not adopt a worse policy for carrying elections.

We are sorry to see in Senator Platt of Connecticut a disposition to warn the people against expecting too much of the next Congress. The last Congress was properly execrated for incompetence, and a successor of the opposite political faith was chosen. But if the new one turns out equally incompetent, we must not judge it too harshly, but encourage it to do better next time. It would appear, however, that Senator Platt cannot have read ex-Speaker Reed's recent interview concerning the personnel of the next House. Mr. Reed had met nearly all of the new Republican members, and gave a most cheering account of them. They were, without exception, men of singular patriotism, high-mindedness, and ability. They were all going to vote for Reed for Speaker, and to follow up that action by a succession of others (not named, we admit) fully as patriotic and equally designed to benefit the country and to make it truly great and glorious. This is first-hand testimony of an impartial witness, and why will not Senator Platt accept it? Is he prepared to believe, simply because Republicans misbehave in Albany or in Indianapolis, that such an order of men as Mr. Reed declares the next House to consist of can fail to make us all happy and rich and proud of our institutions? For our part, we shall not believe it till we see it, and we do not expect to see it before about a year from this time.

Senator Lodge is enabled to keep up his racket about the "Monroe doctrine" because few people know what it is, and many people will believe his account of it. Under it he says that a European power may demand compensation for injuries done to one of its citizens, but may not exact payment by any species of coercion. The notion that such a rule as this can be enforced against Europe on behalf of some fifteen American States deepens the impression that Lodge and his coadjutors are simply having some fun with the public. The alternative supposition, that they are in earnest, is too extravagant for general acceptance. There is no great harm done by it that we know of except making us ridiculous in the eyes of civilized man. Our recent discussions of foreign politics, especially through such organs as Senator Morgan, so closely resemble the dialogues between Birch and Backus, the famous minstrels, in the old days, that a great many people think them forgeries.

The narrow escape from war we have had in the Nicaragua matter ought to be a subject of great thankfulness. Lord Kimberley, in proposing arbitration for the settlement of Great Britain's difficulties with Nicaragua, laid it down that "no citizen of any American State" must be among the arbitrators. As there are forty-four North American States of this Union, and fifteen Central and South American, the young man in the *Tribune* office who attends to these matters was disposed to hold that this meant fifty-nine deliberate insults, besides being "an explicit declaration by England that she declined to recognize any force in the Monroe doc-

trine," and "a gratuitous reflection on the United States." Fifty-nine insults, one "gratuitous reflection," and one non-recognition of the Monroe doctrine constitute probably as promising a *casus belli* as has ever arisen. Another day of delay in explanation, and the dogs of war would have been let loose in every newspaper office in the country. Lord Kimberley, however, quickly saw what was impending, and changed his tune. He now says he meant only citizens of the South American republics, and that the British Foreign Office never uses the phrase "American States" in speaking of the United States. It can hardly be doubted that he is prevaricating, and that he really meant to insult us and to repudiate the Monroe doctrine; but let that pass. We suppose we are compelled, under what are called "diplomatic usages," to accept his explanation, but it is noticeable how obedience to these usages in Secretary Gresham's hands always results in the humiliation of the United States, and with what impunity the agents of monarchical powers can apologize and explain to him. "No British minister," says the young man in the *Tribune* office, "ever attempted to crawl out of a smaller hole than this quibbling explanation opens, but since Lord Kimberley is out of it, his disavowal may be taken as satisfactory." But why should it be taken as satisfactory? It is all very well for Secretary Gresham to take it as satisfactory—it is like him to do so; but why should a young "newspaper diplomatist," whose business is to keep Kimberley in his holes, allow him to crawl out? It seems to us as if our foreign affairs were getting into a critical condition in the hands of two such blunderers.

Capt. Mahan was rather cruel to the great international lawyer and naval strategist (temporarily acting as reporter for the *Sun*) who sought him out, on his return from his foreign cruise, to get his opinion about ships, war, England, the Oriental situation, insults to the flag, etc. Perceiving his inability to cope with his questioner in the subtler matters of diplomacy, the captain refused to discuss them at all. The reporter then passed lightly to the question whether England was not greatly concerned about her Pacific possessions, "since Japan has developed into a conspicuous naval power." But the hard-hearted captain denied that Japan had so developed, and asserted that even after the captured Chinese vessels were repaired and commissioned, England could easily assemble a superior fleet. Dropping that point, the newspaper publicist next took up the question of England's dread of Japanese competition in foreign commerce. Here again, however, he met with an unsympathetic request to point out a single manufactured article that Japan could supply in competition with England. "But the ships," said the reporter, "the increased Japanese naval power—do not they necessarily mean an extension of Japanese commerce?" The reply of the unfeeling Mahan was: "A power which seeks to extend its trade by the aid of its navy must have goods to trade." All this shows what an overrated man the captain is, or, what is more likely, that his stay and flattering reception in England have completely turned his head, and given it a dangerously un-American twist.

An Ohio Circuit Court decided last week at Cincinnati that the Dodge inheritance-tax law of that State is unconstitutional. The point upon which the decision turned was the section of the Constitution requiring that all taxes should be uniform. There could be no question here of "territorial uniformity," as in the case of the phrase of the federal Constitution making the same provision. The court said the section must mean that there should be no discrimination between the various owners of property. One rate and treatment should be applied to all. But the Dodge law, by exempting estates of $20,000 from the tax, really made such discrimination. An owner succeeding to an estate of $20,000 would enter upon it untaxed, but one inheriting $20,001 would be taxed, and thereby have his property cut down to $19,800. This process, the court held, was obnoxious to the constitutional requirement of uniformity, and hence the law contemplating it was invalid. Under such an interpretation of the word "uniform," it is clear that no such tax as the federal income tax could be levied in Ohio, nor can graduated taxation, that pleasing dream of socialists, ever be practised in that State.

The attempt to collect an income tax from foreigners, which the law passed by the last Congress evidently contemplates, is a novelty in our legislation if not in that of the civilized world. The income tax levied during and after the civil war did not include foreigners, and it was held in at least one ruling of the internal-revenue office that it could not include them because they were beyond the jurisdiction of the taxing power. There is room for a distinction, however, between a tax levied *in rem*—that is, against property within our jurisdiction, as, for example, railway shares—and on the gross income of the foreigner derived from property in this country. Corporations are taxed directly under the law, so that the income derived by foreigners from that source is lessened by the amount of the tax. That is clearly within the scope of our powers, but the attempt to make foreigners file statements of income derived from property situated in the United States—that is, to coöperate with our taxing authorities—and to impose penalties on them if they neglect to do so, is of doubtful validity. As the person is not within our jurisdiction, the question how the penalty is to be enforced becomes important. The theory of the law is, that the person liable to pay the tax must make a return under oath, and that if it is not a true return, he shall be liable to prosecution for perjury. What kind of oath taken by a foreigner in his own country would form the basis for a prosecution for perjury in this country, even if we could lay our hands on him? But how can we lay our hands on him in any case? If we cannot prosecute him for a false oath, what is the use of having his oath at all? These incongruities are, perhaps, among the seventy-five defects that Senator Vest says the finance committee intended to cure by amendments when the bill should go into conference committee, but which were rendered incurable by the action of the House in swallowing the whole bill as it came from the Senate.

One of the most interesting of the reports of the experts of the Dockery Commission related to the function of the naval officers in the auditing of collectors' accounts. There are six such independent naval officers—at New York, Boston, Philadelphia, Baltimore, New Orleans, and San Francisco. What they really do, and all that they really do, is to audit accounts. But the experts show that the auditing can just as well be done in the auditor's office at Washington. They make an exception in favor of New York, on account of the great volume of business at that port and the expense of sending on so many papers to Washington; but the naval officers at the other ports they show to be entirely needless. Why should Baltimore, collecting $2,990,750 of duties, need a naval officer if Chicago, collecting $6,137,864, can get on without one? Why should New Orleans, collecting but $1,271,203, support a naval officer and assistants at an annual cost of $14,700? There is, of course, no answer except that the spoilsmen want the places. The experts recommend the abolition of all naval offices except that of New York, and show that the result would be a saving to the Government of $86,105 a year. But we fear this reform will prove as difficult to secure as the consolidation of Maine customs districts which Secretary Folger endeavored to get through Congress, but which was promptly blocked, presumably by Congressman Reed, who was reported to have said that there was more "political hell" in the consolidation bill than in anything he was acquainted with.

Mr. Bland, silver's true lover and ex-M. C., compiled and had published in the *Congressional Record* of March 20 a history of all the votes taken on silver in either house since the Forty-fourth Congress. This makes a handy record, but we notice a lack of fulness and accuracy in it at one point. It states that "in the House, November 7, 1877, Mr. Bland

moved to suspend the rules and pass a bill (H. R. 1093) to authorize the coinage of a dollar of 412½ grains silver standard, and for other purposes." Now, what were the facts? It was on October 29, 1877, that Mr. Bland made a motion such as he describes, but the bill was House bill 571. This bill was talked and filibustered out of time on that day, and went over, under the rules, to the following Monday as unfinished business. On that Monday, November 5, the Speaker called up the bill, but Mr. Bland slipped in a new measure, House bill 1093, not with the title he now alleges, but the entirely different one, "A bill to authorize the *free coinage* of the standard silver dollar, and to restore its legal-tender character." It was rushed through under suspension of the rules, though few members of the House knew what they were really voting for. This was made clear the next day, when Mr. Frye rose and charged Mr. Bland with having practised a fraud on the House in substituting one bill for another without notice or consent. Mr. Bland then answered that whether he was right or wrong, the House and the country were with him, and he wanted the gentleman to know that he was not there for the purpose of being catechised by the gentleman or by any one else. After all these years, however, he thinks it better to tamper with the record and give the bill that was passed its right number, but wrong title. It will look to the future historian as if there was such a thing also as "the crime of 1877."

Strikes for the restoration of wages to rates in force before the panic are reported in various industries, particularly in the woollen manufacture. In many cases wages have been voluntarily restored by employers, notably by that heartless enemy of labor, Mr. Frick. One large woollen house states, according to the *Reporter*, that it has restored all but 10 per cent. of the reduction made in wages during the past two years, and means promptly to restore the rest, inasmuch as the total production of their mills is contracted for in advance, and it is good business to guard against dissatisfaction on the part of the employees. Such things are the well-known incidents of improving business, but what of the great truth that wages cannot go up till the tariff goes up? We fear that the experiences of the present year will convince workers in protected industries that ex-Speaker Reed was right in admitting, under the prodding of Mr. Cockran, that high wages were ruled by the law of supply and demand, modified by the strength and wisdom of labor organizations; and not at all by the tariff.

The New Jersey thieves whose exploits are now undergoing investigation and exposure, can never have wondered at their own moderation, for they displayed none. As was shown on Friday, they sold everything in the State-house belonging to the State except the building itself, and robbed the public treasury on all bills presented. Gov. Abbett's postage stamps and incidentals cost the State $1,200, $1,869, and $3,627 for the three years of his service respectively, as against the $285, $405, $815 of Gov. Green, his predecessor, and the $515 and $561 of Gov. Werts, his successor. But of course Abbett was a great figure in national politics, and must have had a good deal of postage to pay on his letters to Hill and Gorman and other worthies, advocating the extension of New Jersey and New York machine politics to national affairs. That all this shameless and practically unconcealed stealing could have gone on without the knowledge and connivance of other Democratic bosses, no sane man should be asked to believe.

No political movement of the present year in this country surpasses in interest the South Carolina preparation for a constitutional convention. This convention was the wish of Tillman and his faction, and was carried last fall by a very small majority. The Tillmanites might have proceeded with a high hand to pack it, but with much shrewdness they privately entered into an agreement with their adversaries "to advocate before the white Democrats of the State" a scheme of proportionate representation, county by county, and a platform for delegates common to the extent of "the following principles or basic conditions":

"(a) No white man to be disfranchised except for crime.

"(b) Such qualification of the suffrage as will guarantee white supremacy ["the Mississippi plan or something better"].

"(c) Constitution of principles, and not dealing with legislation, but leaving to the Legislature full control of the free schools, and requiring the Legislature to liberally support them.

"(d) The Constitution, when adopted, not to be submitted back to the people."

This so-called "pacification scheme" has the familiar ante-bellum air of peace at the expense of the colored American, and there is one man in South Carolina—a white man and a native—who does not hesitate to stigmatize it as "un-Christian, un-American, un-democratic," and "a conspiracy against the Constitution and laws of the nation." We refer to Mr. John J. Dargan, editor and proprietor of the Sumter *Freeman*, and an independent candidate for delegate to the convention. His position in maintaining the fullest right of suffrage for the blacks, his appeals against race prejudice, against negro lynching and oppression in every form, and for practical assistance in elevating those whom it is now sought to disfranchise, are such as might have emanated from the Boston *Liberator*. Mr. Dargan has actively taken the stump in the intervals of his hard struggle to keep his paper alive, and has naturally received the usual admonition that his "incendiary speeches" will lead to bloody strife. "Legions of white men," writing from Hartsville, have assured him that "we consider it blood economy to take the blood of one man rather than the blood of many." Mr. Dargan, with rare moral courage, responds in the *Freeman* that if they will get up a meeting at Hartsville he will be happy to come there alone and address them on the negro question. "It would save them a long ride, and have me handy for the 'heinous deed' they say they wish to commit upon me." The convention will meet on the second Tuesday in September, and it will be a pity if Mr. Dargan's name is not upon the roll. He would probably be the sole representative of the nascent Southern conscience regarding the means employed for the past eighteen years to "guarantee white supremacy."

The departure of Croker to England last week to attend the races in that country, in high health, with his pockets full of money, leaving the reformers still wrestling with the problem of getting his creatures out of the city offices, recalls once more very vividly the extraordinary character of the episode known as Tammany rule in this city. Six years ago four unknown, and all but one utterly illiterate, Irishmen determined to get hold of this great city and manage it for their own personal benefit. They may be said to have issued a prospectus of their syndicate under the name of "The New Tammany, Limited." They carried out their programme in every particular, with the consent of the citizens. They got hold of all the offices and all the taxes, and kept them for six years. One of them opened an office where he sold legislation of the State Legislature at retail to all comers. The others levied taxes on salaries and contracts, and gave the most lucrative places to bummers and semi-criminals. They played their game so boldly that they made no pretence even of decency. After six years they retired with fortunes. Three of them are now travelling and horse-racing in Europe as rich *rentiers*. Another is living among us as a wealthy gentleman toying with street-car advertising. And so firmly did they lodge their men in office that it has taken almost a revolution on the part of the respectable citizens to get them out, and the work is not yet done. Can any one recall, in tale or history, an incident so extraordinary, so picturesque, so opposed to all the probabilities of modern life? We doubt if any modern author would have ventured before now to make a novel out of it or put it on the stage. Up to the present the escape of such men without punishment would have been considered a good Gaboriau story; but their leisurely departure with riches and éclat, leaving "bye-byes" with the newspaper reporters, belongs to the region of Oriental romance, to the land of Ali Baba and the Forty Thieves.

GEN. WALKER ON BIMETALLISM.

GEN. FRANCIS A. WALKER made a speech on international bimetallism at Springfield last week. He began by referring to the prejudices and prepossessions in the public mind created by a hostile press, which he would endeavor to remove by an exposition of facts. Now we do not consider academic discussions of this sort particularly harmful, but we like to see facts stated correctly, and for this reason we shall examine some of those which Gen. Walker attempted to set before his audience at Springfield.

His first proposition was that the bimetallists are not innovators, but are merely seeking a return to the old ways. In order to show this he said:

"In 1867, the first gold monometallist conference was held in Paris. That body, in perfectly cold blood, then and there declared that gold monometallism ought by contrivance, by authority of law, by act of government, to be imposed upon the nations which had immemorially down to that time used silver as their sole money of full value. Clearly, if there ever was a case of tinkering with the currency, it was that of the conference of 1867."

What is meant by voting "in perfectly cold blood" for the single gold standard? That phrase implies premeditation, if not malice also. That Gen. Walker meant to imply premeditation is evident from all that he says about the conference of 1867, *i. e.*, a preconceived purpose to establish gold monometallism. This is exactly contrary to the facts. The conference of 1867 was not called with any design of establishing the gold standard more than the silver standard, but simply to agree upon an international coin of some metal. As the French minister of foreign affairs said at the opening session, the object in view was "to substitute, instead of the variety of monetary types actually in use, metallic coins struck in accordance with uniform regulations and placed beyond any variations of exchange." If any inference might be drawn beforehand as to the cold-bloodedness of the delegates and their previous intention to adopt one metal, such inference must have been favorable to silver, since there were only three gold-standard countries, out of eighteen, represented. These were Great Britain, Portugal, and Turkey. All the rest were either bimetallic or silver-standard countries.

The proceedings of the conference show at every step an entire lack of premeditation. Even M. de Parieu, the president of the conference, who afterwards became the champion of the gold standard in France, was so much in doubt that, after silver had been rejected unanimously as the material of the proposed international coin, he suggested that each state should be at liberty to keep the silver standard temporarily, and the resolution in favor of gold was adopted with this amendment, and with only one dissenting vote, that of Holland.

The next statement of any importance in Gen. Walker's discourse is the following:

"The United States did, indeed, at the very beginning of our government, institute a mint ratio between the two metals, and has, with only a short interval, continued that system down to the present time. But, instead of loyally accepting the European ratio, our fathers purposely set the ratio away from that which prevailed elsewhere. The market value of the two metals being at the time about 15½ to 1, the first Congress established our ratio at 15 to 1. The result of this was that we were all the time pulling away from those with whom we should have been pulling in concert."

This is in direct conflict with Hamilton's report on the Mint, in 1792, which formed the basis of our ratio of 15 to 1. It is also in conflict with the facts. The Spanish milled dollar was our money of account. It had been declared such by the Congress of the Confederation in 1785. Hamilton said that 24 75-100 grains of gold was the equivalent of this dollar in the American market, and that the dollar itself contained 371 grains of pure silver, on the average. This was the Spanish dollar in actual circulation, being somewhat abraded. Now 371 25-100 grains, the chosen weight of pure metal in the silver dollar, was exactly fifteen times 24 75-100 grains. Consequently a ratio of 15 to 1 was the market ratio here, within a very minute fraction. But Hamilton was not satisfied with this. He scraped together all the information he could get from other countries, and came to the conclusion, upon the best evidence obtainable, that 15 to 1 was the market ratio in Europe also.

Now, what does Gen. Walker mean by saying that "instead of loyally accepting the European ratio, our fathers *purposely* set the ratio away from that which prevailed elsewhere"? What was the European ratio? A report made to the French National Assembly by a monetary commission in 1790, published by our Government with the proceedings of the monetary conference of 1878 (of which Gen. Walker was a member), gives eleven different ratios prevailing in Europe at that time in addition to that of France. The French ratio was 15½, established by Calonne in 1785, but the great question, at the time when Hamilton wrote, was whether it should be changed or not. Calonne himself said that the ratio of 15½ was too high, but that he had chosen it because he had observed that gold had an advancing tendency, and he believed that 15½ would become the market ratio in a few years. The truth is, that there was no "European ratio" at that time, and that if Hamilton had looked to France to find out what her ratio was going to be, he could have learned nothing at that time, because the French themselves did not know, and did not settle the question till ten years later. It follows that our fathers did not "purposely set the ratio away from that which prevailed elsewhere." If they had desired "loyally" to accept the European ratio, they could not have found any such ratio, because it did not exist. They chose a legal ratio as close to the market ratio as possible.

We will now consider a paragraph or two in Gen. Walker's speech which involve the reasoning faculty merely. Speaking of the want of a par of exchange between gold-using countries and silver-using countries, and the losses consequent thereon, he says: "It is a cause which is entirely adequate to explain the frightful series of panics, commercial disasters, and crises which have taken place during the past twenty years." Gen. Walker is a writer of text-books on political economy. He knows the importance of explaining in clear language the processes by which economic effects are produced by their causes, especially when he is talking to laymen. His assertion is that one particular cause is sufficient to account for all the panics and crises that have taken place in the past twenty years, namely, the fluctuations of exchange between gold countries and silver countries. This would include the Australian crisis of 1893, as well as our own crisis of that year, although the dealings of Australia and America with silver-using countries were never before alluded to, so far as we can now recall, by any human being as contributing causes. We are not now controverting Gen. Walker's assertion, but merely pointing out that when a teacher of political economy makes sweeping statements of this kind, he is bound to show some chain between the cause and the effect.

One more point is all that our space permits us to examine. Gen. Walker says:

"The prepossession of the public mind in America as to the impotence of law in affecting values has been derived partly from the experience of our Revolutionary Congress, and partly from our observation, in our own day, regarding the greenback era. So that many people have come to say, thoughtlessly, that law is impotent to affect values. If, indeed, law is impotent to affect values, why was it that all the protectionists urged the passage of the McKinley act? If law is impotent to affect values, why was it that all the free-traders and revenue-reformers protested against that act and could not rest until it had been repealed?"

When people who are discussing the silver question say that "the law is impotent to affect values," they mean that the law cannot impart *value*—that is, purchasing power—to a metal, either silver or gold. If the law cannot affect values, says General Walker, why did the protectionists want the McKinley tariff? Evidently because they believed that it would raise the *prices* of those goods on which an increased duty was laid. The two things are not analogous. A true analogy would be between a tariff on foreign goods and a tax on silver mines sufficient to curtail the production and cause an artificial scarcity and a higher price. If it is Gen. Walker's meaning that the law can create a demand for silver, and thus increase its purchasing power, that is the very thing that we take leave to deny. Such a law can cheat creditors and produce a brief speculative demand for silver, but, after business has adjusted itself to the change, the law will be as impotent to create values as the fiat of King Canute was to hold back the tides. If such a

law can create values, is there any limit to them, and why should there be any?

THE RIGHT TO LABOR.

We have obtained briefs and the judge's opinion in the case of Tilt vs. Illinois, which declared unconstitutional the eight-hour law of June 17, 1893. Section 5 contained the gist of this statute, and was worded as follows: "No female shall be employed in any factory or workshop more than eight hours in any one day, or forty-eight hours in any one week." The context of the other sections seemed to indicate that the restrictions of the statute were limited to factories or workshops, or to dwelling-houses or other places where the inmates were engaged in the manufacture of wearing apparel, artificial flowers, or cigars. The decision of the Supreme Court of Illinois, by Judge Magruder, intimated its opinion that if section 5 was to be construed as applying to such occupations only, it would be unconstitutional also for the reason that it effected class legislation. But the court's opinion does not proceed mainly on this narrow view, but expressly decides that a woman is a citizen, and that the right of a citizen to make his or her own contract for labor or services is part of the protection of liberty and property guaranteed by the fourteenth amendment of the federal Constitution, by section 1977 of the revised statutes of the United States, and by the Constitution of Illinois, article 2, section 1. The court also decides that the statute is not within the police powers of the Legislature, for the reason that it is not shown that it was passed with any sanitary purpose, and that, the occupations engaged in being expressly lawful for women, the hours of each day which they should devote to such work could not be limited by statute. The court intimates that had the inhibition of the statute extended to minors only, it might, under the police powers, have been sustained.

In all of the individual cases the employers were fined under the penal section of the statute for employing women, of whom all but one were over age, for more than the time allowed. The statute is a substantial copy of that existing in all the New England States, New York, and many other States. It does not in terms prohibit a contract by a woman and her employer to labor more than eight hours a day, but imposes a penalty upon any person or corporation failing to comply with any provision of the act, which would, of course, include the employee as well as the employer.

The appellant's counsel contended, in the main, that the act places unwarranted restrictions upon the individual's right to contract, citing the above-mentioned provisions of the State and federal constitutions, the dissenting opinions of Justices Bradley and Swayne in the famous slaughter-house cases, and the various decisions in State supreme courts which have declared unconstitutional laws forbidding payment by employers in goods or commodities other than lawful money; laws prohibiting the manufacture of cigars in tenement-houses; laws prohibiting the sale or disposal of articles with a gift or reward; laws prohibiting employers from imposing a wage penalty for imperfect weaving; laws prohibiting the screening of coal before the miners are paid; laws providing for a weekly payment of wages by corporations; laws requiring contractors with a city to adopt the eight-hour day for their labor, and laws forbidding or regulating special occupations.

The counsel then went on to a consideration of the police argument, claiming that, however broad and extensive, it is not above the Constitution, and citing a line of decisions to the effect that while the Legislature might determine what laws and regulations are needed to protect the public health and secure the public comfort and safety, and their discretion in this particular is not subject to review by the courts, yet such laws must have some relation to these ends, and that, particularly, one sex could not be disqualified from any occupation, however objectionable. The sole case to the contrary—the Massachusetts case of Commonwealth vs. Hamilton Manufacturing Company, 120 Mass., 383—was disapproved of by both the counsel and the court, unless it can be justified by the peculiar provision of the Massachusetts Constitution, article 4, chapter 1, section 1, which provides that "the Legislature may make . . . all manner of wholesome and reasonable orders, laws, statutes, and ordinances, . . . either with penalties or without, so as the same be not repugnant or contrary to this Constitution, as they shall judge to be for the good and welfare of this commonwealth, and for the government and order thereof, and of the subjects of the same."

Judge Magruder, in his opinion, cited many of the cases in the brief for plaintiffs in error, and concluded that the act was unconstitutional both as being applied to certain occupations and not to others, and upon the general ground. He said:

"Aside from its partial and discriminating character, this enactment is a purely arbitrary restriction upon the fundamental right of the citizen to control his or her own time and faculties. It substitutes the judgment of the Legislature for the judgment of the employer and employee in a matter about which they are competent to agree with each other. It assumes to dictate to what extent the capacity to labor may be exercised by the employee, and takes away the right of private judgment as to the amount and duration of the labor to be put forth in a specific period. Where the Legislature thus undertakes to impose an unreasonable and unnecessary burden upon any one citizen or class of citizens, it transcends the authority intrusted to it of the Constitution, even though it imposes the same burden upon all other citizens or classes of citizens. General laws may be as tyrannical as partial laws. A distinguished writer on constitutional limitations has said that general rules may sometimes be as obnoxious as special, if they operate to deprive individual citizens of vested rights, and that, while every man has a right to require that his own controversies shall be judged by the same rules which are applied in the controversies of his neighbors, the whole community is also entitled, at all times, to demand the protection of the ancient principles which shield private rights against arbitrary interference, even though such interference may be under a rule impartial in its operation.

"Liberty, as has already been stated, includes the right to make contracts, as well with reference to the amount and duration of labor to be performed as concerning any other local matter. Hence the right to make contracts is an inherent and inalienable one, and any attempt to unreasonably abridge it is opposed to the Constitution."

The court also cited the recent case of the Supreme Court of Nebraska in which an opinion filed June 6, 1894, held the general eight-hour law of that State unconstitutional, although this law was in general operation throughout the State as to both sexes, and all classes of laborers except agricultural and domestic. This decision in Nebraska is even more noteworthy than the one we are considering, inasmuch as it was a general law limiting the hours of labor, and, so far as we are informed, the first that has been passed in the United States which applied to men as well as women or minors, and undertook expressly to deny the right of contract for a longer day than the law prescribed.

The court gave much attention to the "police power" argument, but affirmed the principle that the sanitary intent of the statute must be manifest and direct to bring it within this exemption, and that in this act "it is not the nature of the things done, but the sex of the persons doing them," which is made the basis of the claim that the act is a measure for the promotion of the public health.

Judge Magruder expressly disapproves of the doctrine of the Massachusetts case of Commonwealth vs. Hamilton Manufacturing Company, and it is noteworthy that the great questions involved in this decision should first arise in Western States, like Nebraska and Illinois, and not in Massachusetts, and that these Western courts should be the first in our country to re-pronounce boldly and clearly that old English principle which sets the freedom of the citizen above State tutelage, even when the latter presents itself under the new mask of the labor vote, with the old excuse that it is all for his own good.

THE SOLDIER CASTE.

In the United States District Court in Boston on March 26, John McDonough was sentenced by Judge Nelson to five years in the state's prison. He had been assistant superintendent of the delivery department in the post-office, and had pleaded guilty to the embezzlement of a letter. Before the sentence was passed, the counsel for the prisoner asked for leniency from the court, on the ground that he had been a gallant soldier in the late war, where he had attained the rank of major, and that he had borne a good character in the post-office up to the date of his crime. In case the sentence of five years was adhered to, it was asked that he be sent to

the house of correction instead of the state's prison. The argument of the district attorney, in which the court appeared fully to concur, is worth noting:

"He said he thought, like Col. Walker, that one who had honorably served his country on the battlefield should be held in the highest esteem by all citizens. But here was a man who had charge of all the carriers in the Boston post-office, who had assisted the authorities to detect the stealings of those under him and send them to state prison. He therefore thought that the defendant deserved only little pity at the hands of the court."

This case raises squarely an issue which has really, though not avowedly, been before the people of this country for some time. The District Court decided it in the only way which the safety of the citizens will allow. That issue is: Shall the war record of a distinguished soldier, which, of course, ended at least thirty years ago, exempt him in any and all cases, even that of detected crime of the most serious character, from treatment to which any other citizen, however respected in the community, and however well conducted except for this crime, would be subjected? Within the last ten years in Massachusetts, citizens of what is called high social position, and supposed to be beyond suspicion, have received long sentences to the state's prison for forgery or embezzlement. The good standing in which they had been up to the hour of detection, was not allowed for a moment to weigh in their favor, it being held of paramount necessity that those in less favored walks of life should see that there was not one law for the rich and another for the poor; and that, too, although the same sentence would cause treble suffering to the man of culture and delicacy. In the case of McDonough the court readily admitted the statement of his counsel that he had maintained a good character up to the embezzlement, in which he had been detected by identically the same means which he had assisted in using to detect and sentence subordinates in his department; but that could not influence the judgment, nor did his counsel expect it to. He rested his whole plea on the "war record."

It is, of course, well known that, from the moment the war ended till this day, its veterans have had a great advantage in obtaining posts of trust, public or private, over all civilians of their own generation and the next. Lucrative places have been vacated for them; others have been made for them; they have been retained in service when other men would undoubtedly have been retired. They have been exempted from the workings of the civil-service commissions, and every Government office at this moment has veterans in it who are past work yet defy any power to remove them. This has been maintained more than once on the floor of Congress to be all right; it is maintained that there is no limit to the rewards to which "the boys in blue" are entitled. One of their great champions in the last session raised the suggestion that there must be "light work" in various departments for which old soldiers might be retained when obviously useless in average work. But there can be no question that, as far as the country owes the veterans a reward in the way of official position, whether by appointing or retaining, she has paid it over and over again.

But in return for all this it is fair to expect at least a full standard of honor and honesty from the old soldier, and to hold him to the strictest fidelity—requiring much, since much was given; yet any such suggestion is loudly resented by his champions. It is usual for them to deny indignantly that there are such things as frauds in the pension roll, because that charge "belittles the character of the old soldier." In other words, an old soldier belongs to a superior caste—he is a *Kshatriya*, except that whereas the Brahminical system puts the soldier caste only second, below the priests, our system makes him distinctly first. He is to have applied to him a different rating. He must be assumed to possess all the virtues. In Plato's way of stating it in the 'Republic,' he is composed of purer metal. He is better than the rest of us because he fought. And now it is sought to push the principle one step further, and declare that when actually detected in crime, a crime tending to produce a sense of insecurity in the entire machinery of government, which comes far nearer to the people in the post-office than in any other of its operations, he must be excused from the judgment which the law has fixed for all, on the ground of what happened a generation ago.

We have no wish to carry out this idea into tedious and obvious detail. It is enough to state it as it is, and let the country see where the war spirit, which is threatening to turn the whole land upside down, will run to if unchecked. To the just punishment which the court awarded to Major McDonough we would not add one iota by a sneer or a reproach. So far from that, we would urge that in any such case there has been a terrible temptation thrust in the way of any veteran by the senseless temper, so common in the community, which encourages an old soldier to conceive that he is not to be judged as other men are, and that whereas the old moralists believed that service in war almost certainly strained the sense of right and wrong, we are, in this end of the nineteenth century, to hold that our veterans must be regarded as so stainless that they may expect leniency if they break their trust which no civilian, whatever his past life, could hope for an instant to receive. But let us be thankful that the United States Court has shown its ancient firmness and wisdom.

GOVERNMENT BY INJUNCTION.

THE Debs case has at last come before the Supreme Court. The chief question raised in it is, whether a man can be punished for a contempt by an equity judge for disobeying an injunction which restrains him from committing common-law crimes. We commented a year ago on the extraordinary use which many of the United States judges were making of their equity powers in treating the obstruction of traffic, attacks on railroad employees, and destruction of property as simply disobedience to the orders of the court. Men were, therefore, punished not for assault and battery, or riot, but for contempt of court, and, of course, necessarily deprived of the benefit of trial by jury. During the Chicago riots this assumption of criminal jurisdiction by the Court of Chancery reached its extreme limits. Mr. F. J. Stimson of Boston, the well-known legal writer, has prepared a monograph on the subject, which sets out in a striking manner the anomalies of the new system of criminal administration. He says:

"We have seen courts of equity invoked in a private law suit between individuals or corporations, to restrain not alone the other party to the suit, but all the world, with or without actual notice of a court order or injunction, not only from interference with property which is the subject of the suit, but from committing, or conspiring to commit, or aiding or advising others to commit, acts which are criminal acts, criminal at common law, or made so by recent acts of Congress, known as the anti-Trust law, or the inter-state commerce law. We have seen more. We have seen persons committing, or about to commit, such acts, arrested by the civil courts, deprived of their liberty, and punished by imprisonment, and this, as in the Debs case and others, after the emergency which made the excuse for this protective jurisdiction has long gone by. And we have seen them so punished without the usual safeguards of liberty afforded by the criminal law, without indictment, without the right to counsel, without being confronted with witnesses, without trial by jury, and sentenced at the discretion of the judge. We have seen more. We have seen courts, not content with ordering all the world what not to do, order at a word the ten or twenty thousand employees of a railroad system to carry out, each and every, the definite or indefinite duties of their employment, as directed by their superior officers, or by the receiver of the court itself; so that for any failure or omission or merely negative act on their part, they may be summarily brought into court and punished then and there, as the court may find leisure to sentence or its attorneys to file complaints."

This extraordinary exercise of equity power was justified by Judge Ross, on the ground that it is "the proud boast of equity, *ubi jus, ibi remedium.*" Last summer things went still further. The attorney-general of the United States sued out injunctions in nearly every large city west of the Alleghanies; injunction writs covered the sides of cars; deputy marshals and federal soldiers patrolled railway yards; chancery process was executed by bullets and bayonets. Equity jurisdiction has passed from the theory of "public rights" to political prerogatives. All these things have grown out of the anti-Trust law and the inter-state commerce law. The question whether under these powers thus claimed, a man can be sentenced to a long term of imprisonment by a single judge, sitting without a jury and without indictment, is the question now before the Supreme Court in the Debs case.

There is no doubt that the injunction

served a very useful purpose at the time. It became, in fact, a kind of substitute for martial law. Local government at the West had utterly broken down. The Governor and sheriffs were afraid or unwilling to protect property and arrest rioters. What was to be done in such cases nobody knew until the President intervened. So that the judges really did the community a good turn in converting contempt of court into a special constable. But it would discredit us all greatly if such practices were allowed to continue. Mr. Stimson points out that they are, after all, only a revival of the old chancery jurisdiction of the middle ages, when the chancellor represented the king in person, and was constantly called in to prevent bold barons and other wrongdoers from "going for" their neighbors, and great men from oppressing the poor. We ought at this time of the day to be able to make the criminal law equal to all emergencies. For all that the Debs rioters did or tried to do, they were liable to indictment, trial, and sentence in the United States courts. And they are just the class of men on whom the effect of departure from the regular course of law is bad. They ought not to feel that they can drive society into unusual and abnormal courses for its protection against violence. The courts which try them should be courts organized for this very purpose. The processes by which they are tried and brought to justice should be the processes by which all crime is punished, and not crimes against railroads simply. There should be no interest surrounded in their eyes by special safeguards. They should always feel when they begin rioting in railroad stations that they are attacking not a particular corporation or trade, but society itself.

THE SPEAKERSHIP OF THE COMMONS.

LONDON, March 21, 1895.

IN the House of Commons the most engrossing topic is the approaching resignation of the Speaker. It was not intended to make the announcement till just before Easter. But the news came into the hands of the *Times*, and it was published prematurely. The chair is so admirably filled by Mr. Peel that it will be hard indeed to find a worthy successor. Mr. Peel was chosen by the House in 1884, after he had been for nearly twenty years a member of Parliament, respected but wholly undistinguished, though he had filled for a short time one or two subordinate posts in the Government. A candidate is always proposed by the Government of the day, of course with very special regard to his acceptability to their own supporters and to the House generally. Mr. Gladstone's Government offered the nomination to at least two other members—the present Lord Chancellor and Mr. Goschen; and when he became at length the choice of the party, and was elected without opposition, Mr. Peel, who is the second son of Sir Robert Peel, probably owed something to the great parliamentary name which he had inherited. His lot fell on troubled times. Never before have there been so many organized groups or parties in the House. Never in living memory has party heat risen so high. It has been a period of transition during which a change in the rules of procedure, especially in the matter of the closure, has invested the Chair with new authority and delicate discretionary powers. Throughout this difficult time the Speaker, owing to remarkable gifts of character rather than to commanding intellectual power, has gradually gained an ascendancy over the House which is probably unprecedented, and is even exceeded by the esteem in which he is held in every quarter and by every member of the House.

The number of possible candidates whose names have been suggested by the press is extraordinarily large. They would make a numerous field for the Derby. Of course, most of them are rank outsiders, but the suggestion of their names has diffused a great deal of innocent happiness in many respectable families. At first there was a prevailing rumor that the Postmaster General, Mr. Arnold Morley, would be the Government candidate. He has many qualifications for a good speaker; but not the least of them, his comparative youth (for the duties of the Chair put a severe strain on the strongest man), perhaps diminished his chances. The situation changes from day to day. A few days ago the three favorites were Mr. Campbell-Bannerman, Mr. Courtney, and Sir Matthew White Ridley. Mr. Campbell-Bannerman could probably have had the post, if he desired it, with general assent and without opposition. As Secretary for War he is one of the best administrators in either house of Parliament. He is a member of long experience and genuine popularity, full of tact in the management of Parliamentary business, effective and conciliatory in debate. It is supposed, contrary to expectation, that if the duty were laid upon him, he would accept it, though he would exchange congenial duties, a high political position, and good prospects for the arduous and monotonous, though honorable and difficult, work of the Chair. But neither the Government nor the party can easily make up their minds to press this sacrifice upon him. It would mean the loss of one of the most useful front-bench men, not to speak of the loss of two seats on a division. It is understood to be now decided that he will not be a candidate.

Mr. Courtney, a Liberal-Unionist, has the advantage of several years' experience as chairman of committees and deputy speaker. He filled these offices with firmness and impartiality and marked ability. He is respected on all sides, and liked by those who know him. But, joined to the strength of his character, which could not be questioned, he has qualities which are not popular, and make many members hesitate to invite him to rule over them. Notwithstanding that, his chances would have been good, though the Liberal press has done him great disservice by trying to force him on the party. He was believed to be the choice favored by the Cabinet. But strong opposition was threatened, not only from the Conservative benches and a portion of the Liberals, but from his own Liberal-Unionist friends; and it is understood that Mr. Courtney would stand only if his nomination were likely to be met with general assent.

So far as politics is concerned, if the Liberals went outside their own party, their bias would be towards a Conservative. The Conservative candidate is Sir Matthew Ridley. In bearing, temper, and ability he is fully qualified. He has long experience of Parliament, and his reputation for capacity stands so high that it has often been matter of surprise to outsiders that he has not occupied a more prominent place when his party was in power. One reason certainly is that he takes no pains to assert himself or put himself in evidence. In fact, he is so little seen in the daily struggles of Parliamentary life that, while well known to be a capable man generally for the Speakership, he would, to a certain extent, be a dark horse. As a member said to-day, "Courtney would try to make business go, but I doubt whether Ridley would ever give the closure. But I may be wrong." The rank and file of the Liberal party are, however, not inclined to seek for a Speaker outside their own body. This reluctance has been increased by the taunt of weakness freely and imprudently made by the Tory press when Sir Matthew Ridley's competitors seemed one by one to be retiring. The Government will probably be pressed to nominate a Liberal candidate. The names just now most current are those of three eminent lawyers, the Attorney-General, the Solicitor-General, and Mr. Gully, Q. C.

Another public event of considerable importance has been the London County Council election. The Local Government act of 1888 established county councils for the first time in every part of England. The London Council has been from the first a very influential body. It represents a population, in a compact area, of four millions and a quarter—that is to say, a number not far short of the population of Ireland, and rather exceeding that of Scotland. The elections are triennial. There are 118 elected members and twenty aldermen, who are coöpted for six years, half retiring at each election. The powers of the Council are in many directions considerable, and in London its proceedings at times attract quite as much attention as those of Parliament. Lord Rosebery has twice been the chairman, and not a few other public men of note are members. There have always naturally been within the Council a more conservative and a more forward party, known as Moderates and Progressives. At the last election in 1892, the Progressives had an overwhelming victory, which gave them a majority of more than two to one. The dividing line does not correspond with that which separates the political parties. A Moderate is likely to be a Conservative, a Progressive is likely to be a Liberal. But in politics the metropolis has long been a Conservative stronghold, and only a few months after the great Progressive victory in 1892, the general election proved that London had not become Liberal, though the Liberal position was substantially improved.

During the past three years the Progressive majority has been unceasingly active. It has, among other things, acquired a large number of open spaces for the public, it has built the town bridge, it has bought up the tramways, it has become a large direct employer of labor, and it has set on foot a number of schemes of reform, such as the acquisition of the rights of the water companies, and street-improvement schemes involving the principle of betterment, for all which Parliamentary sanction was required. In these schemes, speaking generally, the Council has been supported by the Liberal majority in the House of Commons, and opposed, often successfully, by the Conservatives and the House of Lords. At the recent election the pendulum has swung back again. Progressives and Moderates are returned in nearly equal numbers, the former retaining a very small majority through that portion of the Aldermen who remain in office for another three years. The contest excited great interest, and the result, so different from that of 1892, is prob-

ably due to several causes. On this occasion the battle was fought more upon political lines than before. Therefore the tendency has been for the representation to approximate to the Parliamentary representation. Another potent cause has been the question of rates. The great improvements effected by the late Council have cost money; the rates have been slightly raised. This is a question on which the small householder is extremely sensitive, and it lends itself to catchpenny misrepresentation. Placards were to be seen of this tenor: "Workingmen, are you aware that the expiring Council has spent £1,000 a day of your hard-earned money more than their predecessor?" Another cause of some unpopularity has doubtless been the increased stringency in the supervision of music-halls and similar places of amusement. And last, but not least, some of the most active members of the predominant party were accustomed to found themselves on principles with respect to taxation and similar subjects which were sometimes stated with a breadth and crudeness that went beyond the necessity of the administrative objects which they had in view, and awakened the widespread distrust which exists, even among the masses, of revolutionary or socialistic proposals.

The work of Parliament proceeds somewhat slowly. The Government are fighting against time. The dissolution can hardly be deferred beyond the close of the present session, including, probably enough, if there is no accident, an autumn session; and as the fruit of their labors in that time it is important for them to show substantial results. It is the object of the Opposition to disappoint this hope. Their policy is the Oriental policy of delay. The Government are pledged to do all they can to pass three measures more or less difficult and portentous—viz., disestablishment of the Church in Wales, the Irish Land bill, and a liquor bill called the Local Veto bill. To all these measures the Tories are on principle opposed. But in each case there is a possibility of some defection. Most of the Liberal-Unionists are deeply pledged to disestablishment in Wales. Mr. Chamberlain wrote quite recently that, in his opinion, it must come. But he has explained that the letter written to the editor of a newspaper was private, and those scruples may be got over. An Ulster cave, led by Mr. Russell, threatens to support the Irish bill, which, in the matter of the evicted tenants, is much less drastic than the bill of last year. The temperance party has also many zealous adherents on the Opposition benches, but they have always fallen into line with their political friends.

According to the theory of the work of Parliament now favored by the Opposition, even one of these bills might be sufficient for the task of a session. Accordingly, contrary to precedent, the first reading in the case of the two bills already introduced was made the occasion of a long debate, and the second reading will be protracted as long as is found possible. But these bills are not the only occupation of the Government, and their passing is not the only result which the Opposition is desirous to prevent. There are several bills, two especially, with regard to which the spoken pledges of the Government are not so emphatic, but which are intended to meet a want in the country quite as urgent as those already mentioned. I refer to the Home Secretary's Factories and Workshops bill, and the Trades Disputes Conciliation bill, introduced by the President of the Board of Trade. The latter subject is in this country a most urgent one, and, as I dare say you know in America, an extremely difficult one. Mr. Bryce's bill proposes to give the Board of Trade a certain power of intervention with a view to bring about conciliation. It is a modest and experimental proposal. Neither of these bills could be opposed on principle, however much they might be susceptible of amendment. But the Opposition, I may say avowedly, are not willing to allow the Government to have the credit of passing non-contentious bills, except on the condition of their dropping the contentious bills. Hence the necessary business of supply has been unduly prolonged. In the discussions of it, the most interesting topic has been the large increase of the navy, involving a heavy expense, which is recognized by the nation, in spite of the earnest protests of some sincere men, as indispensable for the defence of the country. Probably the Opposition will be successful in preventing the Government from getting a second reading of any of their bills before Easter, except the Welsh Disestablishment bill.

C. D.

A GRAND OLD MAN.

MANTUA, March 16, 1895.

ON the 11th inst., at the age of ninety-one, Cesare Cantù expired painlessly and peacefully, "in the full and certain hope of a joyful resurrection." This greatest of Italian historians, whose works far exceed in number those of Tiraboschi and Muratori, was, from his boyhood to his death, a firm, devout believer, unassailed by doubt, supported throughout a life of tribulation by a profound sense of duty "here below," an unalterable faith in immortality, the continuation of existence in the "world beyond the grave." This rare, we may say unique, consistency of his religious sentiments never clashed with, nay, intensified, his patriotism, his aspirations for an Italy great, good, and true; but as his ideal differed from that of the majority (he being a federal republican, and a champion, as long as there seemed a possibility, of an Italian federation, with the Pope for supreme chief), the fickle, envious turncoats of several generations embittered his life with calumnies, defrauding him at every step of his rightful place in the new Italy, to whose independence and intellectual progress he had so largely contributed. Plagiarists and paste-and-scissors compilers pilfered his works, never naming the author; Carducci the great, Saffi the good, alone placing him on his rightful pedestal, and frankly acknowledging their debt and the debt of three generations to the modest, earnest, indefatigable Lombard. Side by side with the telegrams of the Pope, the King, the exiles of Trieste, is the following:

"The deputation of the Historical Society of the Romagna receives with grief the tidings of the death of the great worker whose intellect and sentiment comprehended universal history and the history of the Italian people.

"(Signed) GIOSUÈ CARDUCCI, President."

Cesare Cantù came of an old family of Brivio, on the Adda, impoverished at the time (1807) of the birth of this, the eldest of ten children. Cesare was destined for the priesthood, and thus obtained gratuitous education at Milan. At the age of eighteen, not feeling inclined to the sacred calling, he doffed the garb of the seminary and obtained the post of professor of grammar in the Lyceum of Sondrio, being transferred later to Como and thence to Milan. His father dying in 1827, he became the sole supporter of his mother, brothers, and sisters, maintaining and educating them with the proceeds of his teachings and pen. "Algiso and the Lombard League," dedicated to the youth of Lombardy, lovers of their birthplace, his first attempt in verse, was reviewed by the *Biblioteca Italiana* as "a work of no ordinary writer." Then of his 'History of Como,' Tommaseo, in the *Antologia*, wrote: "It would be difficult among municipal chronicles to find a history as interesting or as sapient. The precision of the facts, the rapidity and lucidity of the narrative, the simple morality, confer on the author and his country a title of honor."

Cantù, an ardent admirer of Manzoni, was, with Carlo Cattaneo and Giuseppe Ferrari, a disciple of Romagnosi, forbidden by Austria to teach even in private. The political ideal of these studious and patriotic youths was an Italian federation of states, free to follow and develop the special tendencies of each region, united as an independent nation. Cantù was the beloved disciple of the great philosopher, who intrusted him with the preparation of the statistics to be submitted to the new federation. Cantù's first public peccadillo was the epitaph on Ciro Menotti, beguiled, betrayed, arrested by the Duke of Modena, deserted by the French Liberals, faintly supported by the Revolutionists, who trusted to the proclaimed doctrine of non-intervention rather than to the watchword, "Who would be free, himself must strike the blow." I have seen the original of which I give a literal translation, with Cantù's note, "For this I was prosecuted."

"When Austrian bayonets, the betrayal of ill-redeemed Frenchmen, extinguished the spark of liberty, Ciro Menotti of Modena, martyr to Italian aspirations, fell a victim to the revenge of the Phalaris of Este in May, 1831. May his blood fructify glory and vengeance. Let us treasure his last words on the scaffold: '*Italians, put not your faith in foreigners!*'"

Towards the end of 1832, after the execution by Charles Albert of the members of the Young Italy Association, and the failure of the Savoy expedition, the unitarian doctrines of Mazzini spread rapidly in Lombardy, where it became evident to the youths impatient of Austrian rule that *partial*, *regional* attempts were fruitless; and the Government, permeating the province with spies, made numerous arrests. The trials were conducted by Zaiotti, a renegade of Trento, a brilliant writer who was especially jealous of Cantù's increasing literary fame, and who, on the publication of the brilliant work on Parini, exclaimed, "Cantù advances two steps to glory, three to the gallows." The success of his essays on "Lord Byron," "Victor Hugo and Romanticism," on "German Literature," intensified Zaiotti's envy. Cantù was never a member of Young Italy, but he was the confidant of Albera and of Balzetti, who, on the eve of his flight, consigned to him the residue of the funds for propaganda—45 lire. On November 11, 1833, he was arrested during his lecture at the Liceo, and immured in the prison in the Convent of Santa Margherita described by Silvio Pellico—"this," wrote Mazzini, "owing to the offended vanity of the Tyrolese spy Zaiotti, jealous of the popularity of Cantù, the historian, with the youth of Lombardy." Interrogated, menaced, deprived of books and pen, he maintained an absolute silence, imitated alone, in this, by Gabriele Rosa—so that, though the secrets of Romagnosi and the federalists, as well as of the unitarians, were in his keeping, no one was compromised.

To beguile the time and still the moral torture of the thought of his "children," as he called the nine brothers and sisters dependent

upon him, he wrote with a toothpick and candle-smoke on the back of a map and scraps of paper his 'Margherita Pusterla.' In this romance, considering the times and circumstances, the following prayer which he had taught to his own little sisters, is touching in its simple faith and patriotism:

"Kind Jesus, who didst love thy country even though ungrateful, and didst weep, foreseeing the dangers that menaced her, watch compassionately over mine, alleviate its sufferings, convert those who by fraud and violence oppress it, strengthen our faith in well-doing, and help me to become an honest, honorable, industrious citizen."

Liberated at the end of a year because there was no *proof* of his high treason, Cantù was deprived of his professorship, and he and his family would have been reduced to extremities had he not encountered a Turin publisher who was in search of a writer of general history. A curious contract was made, to be rescinded if the work should not take the public taste; but of the first volume 60,000 copies were sold. The publisher made a small fortune; Cantù realized sufficient to maintain his family with decency, give a dowry to his sisters, and a thorough education to all his brothers. This 'Storia Universale' has gone through 40 editions, and been translated into French and German. The 'History of a Hundred Years' and the 'Story of the Struggles for Italian Independence (*Cronistoria*)' form the vade-mecum of all students of these eventful years.

When, in 1847, the advent of Pio Nono, the reforming Pope, revived the hopes of independence, Cantù was foremost among the enthusiasts. At the Scientific Congress of Milan, at the Congress of Marseilles, and above all at Venice, his word, in the language of Ficquelmont, "was the match that lighted the revolutionary torch." For these speeches he was admonished by the police, and on the 21st of January the Archduke Raynier ordered Spaur, the Governor of Lombardy, to send on the same day four "politically dangerous citizens under strong escort to Laybach." Cantù, warned by a friend, escaped into Piedmont, returning to Milan just as the unarmed populace had driven out the Austrians and Venice had effected her bloodless revolution. He, with all the Liberals, disapproved the fusion willed by the Moderates; but when, the royal army defeated, the King, Charles Albert, entered Milan and the provisional Government resigned, Cantù, Pompeo Litta, and Anelli, all celebrated writers, formed a committee of defence, and protected the King's retreat; then, with 100,000 Milanese, emigrated to Piedmont, there to prepare the second war.

When, in 1849, Austria granted an amnesty, Cantù was excluded; later, his presence was tolerated under strict surveillance, and he continued his literary pursuits, though many of his books were prohibited by the Censor. And now we come to the epoch in his life most bitterly censured by his enemies. The Archduke Maximilian arrived in Milan in 1847, with the mission, it was rumored, of converting Venetian Lombardy into an independent kingdom, and one of his first proposed reforms was to render public instruction independent of the Austrian authorities and place it under the tutorship of the Lombard Institute. Of this Cantù was secretary. The Archduke sent for him, and he consented to compile the programme. This was his crime; it was said that he had been paid by Maximilian, pensioned, and decorated with the insignia of the iron crown by Austria. Baseless falsehoods. His only decoration was given by Charles Albert. But "mud sticks," and the calumny was repeated in 1860 by Finzi, the Mantuan, when Cantù was elected Deputy for San Salvatore and later for Caprino. The fact that he entered Parliament and took the oath to the King and Constitution is a proof that, though ever a devout Catholic and an opponent of all the laws which limited the Pope's spiritual power or sequestrated ecclesiastical property, he yet accepted Monarchy and Unity, retaining his predilections for federal institutions. His patriotism and literary merits, his whole life spent in the service of his country, entitled him to a seat in the Senate; but neither the Moderates nor the Liberals offered him this (I believe) desired honor. Some objected to his admission (the sole layman) to the Œcumenical Council, his devotion to Pio Nono, his admiration of Leo XIII.; "and yet," he answered, "I have never sought for or received aught from any pontiff, and from the present one I have never asked for anything but his blessing, and I trust that he will send me from my deathbed to the other world comforted by his benediction." Even the pension which, as a one-time professor under Austria dismissed for political motives, was his due in virtue of a law passed by Victor Emanuel, and the medal of 1862 for civic valor, were grudgingly granted. He was deprived of the secretaryship of the Lombard Institute, and only from the sheer impossibility of denying some recognition of his merit was he appointed head of the State Archives of Lombardy.

This was fortunate, for when the Austrians quitted and the Piedmontese entered, this precious deposit of Lombard history was pilfered and despoiled; whole series of documents between the years 1844 and 1848 are missing. Some of them were recovered from bookstalls and even grocers' shops, where they were used as waste paper, by Cantù himself, who set to work on a public and private catalogue. In 1886, when at work on the life of Mazzini, I was introduced to the illustrious old man, and was privileged for a month to work in his own study and to use his private catalogue. To this kindness I owe the numerous documents published in that biography and in later works. Seeing the amount of evidence there collected that shows, in the *procès-verbal* of the prisoners' answers to their judges and in their confrontations one with another, the weakness of this, the retractation of that accused, during the trials of '21, '33, and '53, it says much for the generosity and magnanimity of Cantù that in none of his answers to calumny or to his detractors (many of whom were the weak-kneed culprits who afterwards traded on their patriotism) did he ever make use of the knowledge thus acquired. Traitors to Italy, spies, provocative agents he denounced freely, but spared all whose spirit was willing but whose flesh was weak; and in allowing me to peruse the documents, he made it a question of honor that I would submit to him all notes or extracts.

There he worked from ten to three, never doing a line of his own literary work, being, as he said, "paid for his time by the State." Sometimes a date or a document would awaken "a reminiscence," of the arrests of 1821, of the contempt of the Milanese for the Austrians, of the delirium of the Moderates for the fusion; and then one listened with bated breath to his rapid, pithy sketches of this scene, of that episode. Among my treasures I reckon his 'Cronistoria,' his gift with his autograph, and a rare pamphlet on the great trial of Mantua. Outside his "workshop," and in his modest but comfortable home in Via Morigi, where he died, he was a different man; bright, genial, courteous, delighting in the society of children and ladies. His receptions were attended by the élite of Milan and by distinguished foreigners; every guest was called on to recite from memory some verse or extract from foreign or Italian authors: Mazzini or Gioberti, Manzoni or Carducci—the choice was free; vocal or instrumental music varying the entertainment. Children adored him and were his tyrants; on all his birthdays, flowers and gifts from loving needles filled his rooms, the children recited their poems or performed childish plays, and the older he grew, the more he clung to their presence.

Some real satisfactions were his. In 1883 he was presented with a gold medal by his world-wide admirers. On one side is his portrait, on the other the inscription:

Historicorum Italorum
sui temporis
clarissimo
Anno MDCCCLXXXIII.

At the presentation were assembled the authorities of the State, the province, the commune; representatives of Italian, French, German, and English scientific institutes; workmen's societies, and crowds of admirers and lovers—of Cantù, not of his all too lately recognized greatness. Then a marble medallion was sculptured for the balcony leading to the Archives:

To Cesare Cantù, in his lifetime,
Anno 1883;

while his fellow-citizens of Brivio affixed another medallion to the house where he was born. He was then nearly eighty years of age, yet had the courage to thoroughly revise and augment his Universal History. Rising at dawn and working uninterruptedly for eight hours every day save Sundays; of simple, temperate habits, a tenacious memory, and an extraordinary power of concentration, one can understand the amount of manuscript produced, yet still the mere list of his books is amazing. His last published work is the correspondence of the diplomats of the Italian Republic and the Kingdom of Italy (Napoleonic period); and the Annals of Manin. Only lately, suffering from rheumatism, did he use an amanuensis. His last unfinished work is a romance, which is in reality an autobiography; and just before his last illness he said to a friend, "Some one else will finish it."

His end came gently; worn-out nature sank to rest. Cantù to the last retained clear consciousness, was comforted with the Pope's benediction, as he had hoped to be; appreciated the message from the King and the numerous Italian and foreign scientific and literary societies of which he was a member. But the inquiries that pleased him best were those of his native Brivio, which he had chosen as his last resting-place. J. W. M.

Correspondence.

A CRITERION OF THE DIRECT TAX.

To the Editor of The Nation:

Sir: I have read with much interest your very able editorial upon "Income Taxes in 1787," in your issue of March 21, in which you show what meaning was attached to the term "direct taxes" by the framers of the Constitution. Will you permit me to add a word by way of supplement, which I have not seen suggested, by either court or counsel, in any case

heretofore, or now, before the United States Supreme Court?

It is illogically claimed by one of the justices delivering the opinion in Hylton vs. United States, 3 Dallas, that the term under discussion could not embrace such a thing as "carriages," because an apportionment of such a tax would impose very hard and onerous taxation upon those States in which few carriages were owned. Hence, the learned justice concludes, the term "direct taxes" could not have been intended to embrace personal property.

Does this follow? It will be conceded that the great leading idea of the Constitutional Convention, running through the whole legislation on this subject, was *equality* of taxation—uniformity, as the Constitution expresses it when dealing with "imposts, duties, and excises." It will be further admitted, I apprehend, that it was the equality of the burden to be imposed which the Convention was aiming at when it required that direct taxes should be apportioned among the States according to census and representation, however much it may have fallen short of its purpose. Now, keeping this central idea in view, does it not rather follow, where such an apportionment would produce inequality, not that such a tax is an indirect one, but that it is a direct tax which Congress has no power to levy—in one word, that the power conferred upon Congress to levy a direct tax is necessarily qualified by the implied proviso that it is such a direct tax as can be equitably apportioned? Whether it is such a tax or not, Congress must in the first instance decide, leaving the ultimate determination of the question to the courts.

It needs no argument to show that indirect taxes cannot be apportioned among the States; hence the substitution of the word uniform for apportionment—both expressions, however, being used to carry out the one central idea which was dominating the mind of the Convention.

A word more upon the subject of uniformity: It is a curious instance of want of uniformity in the act that it compels those who *rent* their family dwellings to return as part of their income the rent they pay out of that income, for which they are allowed no deduction other than the $4,000 exemption, while those who own their residences escape the burden so imposed upon renters. The latter are not required to make any return of the yearly value of their dwellings as part of their income.

INDEX.

AUGUSTA, GA., March 26, 1895.

THE LATE PROFESSOR BLACKIE.

TO THE EDITOR OF THE NATION:

SIR: The death of Professor Blackie of Edinburgh must have made many a heart sad, for, though the number grows less and less year by year, still students of his are scattered over the English-speaking world, and every recollection of the dear old man is a loving memory.

He had been transferred from Aberdeen to Edinburgh in the fifties. It was currently supposed among us youngsters that his hereditary theological opinions had been shattered while a student in Germany, and that when he accepted a chair in Aberdeen he signed the Confession of Faith with a pen, but repudiated it with his tongue. However that may be, he was a regular attendant at Dr. Guthrie's church, and a devoted admirer of that great preacher and (better still) human embodiment of gentleness and goodness. Who of us can forget Blackie of a Monday morning, rushing, as was his wont, out of his retiring room on to the platform, shaking his long, straggling locks out of his eyes, and trying to insinuate his awkward, wiry arms into his gown, greeting us with the question, "Gentlemen, did you hear Dr. Guthrie yesterday? He used exactly the same simile as Homer did, and I know he did not copy him."

My introduction to Blackie was away back in those mid-century days. I came from Germany after the session had opened, and applied for admission to his class, but asked for a short respite for the payment of my fee. This he readily granted, filled up my ticket and stuck it into the looking-glass in his retiring-room. Some weeks after, I followed him into his room to pay my debt. He looked over his list and assured me I had paid. I assured him to the contrary, and he protested, till I pointed out my ticket on his mantelpiece. Then, in the exuberance of his pleasure, he literally danced about the room, his gown streaming behind him, and explained that as he had settled his accounts for the year with Mrs. Blackie, here was a clear ten guineas of pocket money to spend as he might think best.

Our weekly treat was the hour he devoted to reading us selections from his translation of Homer—a treat only excelled by Aytoun's recitations of Scottish Ballads, in his lectures on that subject.

Every one knows that Blackie's hobby was admiration for the modern Greek and modern Greek language. He advised us to buy and read modern Greek works. I still have a collection of Greek tracts published by the Religious Tract Society, the only modern Greek literature I could find. Fired by Blackie's enthusiasm, we boys did try to speak Greek to one another out of class hours.

But while inspiring us with his likes and dislikes, no professor had his class under more perfect control. A look or a gesture sufficed to arrest the slightest approach to unruliness, which was only too prevalent in other classes Poor old Pillings still pretended to teach Latin out of his 'Eclogæ,' and fretted and fumed over the insubordination of his class. The more he lectured and rated his class, the more the class enjoyed it. At length a mischievous fellow applauded the close of one of the poor old Professor's tirades by exploding a firecracker. It was impossible to locate the exact point of the explosion, so the old gentleman was foolish enough to tell us that as we issued he would stand at the door and demand of each student on his honor if he were the man. When the critical moment came, there was a rush. The students rushed, old Pillings rushed; but half the class, and of course the culprit, got out before he barred the door.

Academical life was not dignified in old Edinburgh. I wonder whether it is more so now. Not only was it not dignified, it was more or less brutal. Lads were not humane then. The professor of all others in the academical department whose name added lustre to the faculty was the renowned philosopher Sir William Hamilton. His face was as full of dignity and intelligence as ever, when at rest; but the old gentleman was paralyzed. Poverty compelled him to retain his professorship. He was carried into his chair, and his lecture read. Sometimes, however, he could not restrain himself from trying to utter or expand the thoughts which had made him famous. Then the contorted features and broken sentences, which should have moved his audience to tears, only excited to jeers and risibility the young barbarians who filled the benches. It was a pitiable sight and a deplorable exhibition. *Eheu!* how vividly the old quadrangle is photographed on one's memory, and the men, now nearly all shades, students as well as professors, who thronged it!

J. DOUGLAS,
A PRIZE-MAN of 1855–'56.

NEW YORK, March 29, 1895.

THE NEED OF A NEW REVIEW.

TO THE EDITOR OF THE NATION:

SIR: Kindly permit the passing mention here of my second letter under this caption, held by you several weeks in the hope that others might evince interest, but finally published in the *Citizen* of Philadelphia, the new organ of university extension. The editor of the latter will gladly send the (March) number to any one interested. Numerous concrete illustrations were there offered. But a more sweeping assertion may be ventured.

Let any specialist in literature, history, etc., write a paper of, say, twenty thousand words, upon some larger aspect of his work, in such language and form as he would employ towards his associates in the college faculty, or at a union meeting of learned societies. He will seek in vain for an American editor who will even *read* the essay with a view to publication! (No one knows how many such studies already exist; but from the pigeonholes of a single famous desk, not a hundred leagues from Miss Scott's door, a dozen notable but unpublished Humanistic essays could undoubtedly be extracted.) Such were not the conditions when Longfellow was a professor at Bowdoin. It ought not so to be to-day.

But if founded merely by or for one university, a new review would probably hasten that multiplication of local and special publications which is the plague of German scholarship. Indeed, rivalry would soon repeat the story of the dragon's teeth!

Now it was precisely the earnest study of history and literature that taught our fathers how to create a large and lasting political union. Will professed devotees of those disciplines be slower to learn the same lesson than are our business corporations and creative industries? Must scholars be the last to realize the benefits of combination, correlation, community of interest? It is quite possible for twenty universities and colleges to unite in supporting an institution controlled by none and therefore doubly helpful to all. That, and much more, the American School at Athens has taught us.

But the interest is wider than the universities. There are many thousands of earnest intelligent men and women in America, many of them educated by other experiences than academic life. Has our higher scholarship no large and effective message to them? Are there no results from special research which can be applied to the national and social life of the whole people? If from such an appeal the lover of learning for its own sweet sake would fain turn away with a supercilious smile, let him at least not turn back to the classics, where Cicero will exclaim to him: "Ceteros pudeat, si qui ita se litteris abdiderunt ut nihil possint ex iis ad communem afferre fructum"! Nor will the first sentence of the 'Politics' bring him any comfort from the most learned of ancient scholars.

WILLIAM CRANSTON LAWTON.

3737 LOCUST STREET, PHILADELPHIA.

THE BOOKMAN AGAIN.

To the Editor of The Nation:

Sir: In your issue of March 28, I notice a criticism of the new monthly, the *Bookman*, regarding the character of its English. Among the quotations cited to show the bad English is the following: "This novel . . . is laid among the scenes and characters of old Virginia."

The novel referred to is 'Henry Esmond.' The *Bookman* must have been thinking of 'The Virginians.' What would Lowell say to this error? M. L. Langley.

Newport, March 29, 1895.

SACHER-MASOCH'S FIRST NOVELS.

To the Editor of The Nation:

Sir: Noting the statement in your issue of this week that Sacher-Masoch began to write fiction about twenty years ago, and that 'Kaunitz' (1873) was his first novel, permit me to say that Bornmüller's 'Schriftsteller-Lexicon,' which I have generally found accurate, gives the following titles and dates: 'Eine Galizische Geschichte' (1866), 'Die Geschiedene Frau' (1870), 'Das Vermächtniss Kains,' erster Theil (1870), 'Die Republik der Weiberfeinde' (1872), and 'Maria Theresia und die Freimaurer' (1872). The same authority gives for his first novel published by the *Revue des Deux Mondes*, the date 1871. It is a small matter, but perhaps worth correcting.

William Morton Payne.

Chicago, March 19, 1895.

A GRAMMAR-DICTIONARY.

To the Editor of The Nation:

Sir: Librarians and others frequently have occasion to consult dictionaries of foreign languages of which the grammar is unknown or unfamiliar. In these cases it would be a great convenience if a brief grammar could be prefixed. This grammar should contain tables of declensions and conjugations, lists of irregular verbs, with their principal parts, and the general rules of the language, and might easily be condensed into four to eight pages. Whitney's 'German Dictionary' contains a list of irregular verbs in English and German, and Harrison and Baskerville's 'Anglo-Saxon Dictionary' includes an extended grammar; but with these exceptions I know of none of the commoner dictionaries which have such a help.—Yours truly,

Gardner M. Jones, Librarian.

Salem Public Library,
Salem, Mass., March 30, 1895.

Notes.

Subscriptions may now be sent to the Johns Hopkins Press, Baltimore, for Dr. Stephen B. Weeks's 'Southern Quakers and Slavery,' a work embracing some 300 pages octavo. Dr. Weeks has just published among the Bibliographical Contributions of Harvard University a very meritorious Bibliography of the Historical Literature of North Carolina—a State in which the Quaker settlements best endured the anti-slavery exodus that helped to people Ohio and Indiana.

Ginn & Co., Boston, promise in the course of the summer 'Money and Banking,' illustrated by American history from the settlement at Jamestown to the present day, by Horace White.

Dr. Horace Howard Furness's Variorum edition of the "Midsummer Night's Dream" is now passing through the press of J. B. Lippincott Co.

Roberts Bros.' announcements for the present month include a 'Life of Prince Bismarck,' by Charles Lowe; Echegaray's 'Mariana,' translated by James Graham; 'Tales of Mean Streets,' by Arthur Morrison; and a 'Handbook on Tuberculosis among Cattle,' by Henry L. Shumway.

Macmillan & Co. give notice that Prof. McCurdy's 'History, Prophecy, and the Monuments,' of which vol. i. has been for some time published, will be completed in two additional volumes instead of one, as contemplated. The same house is about to issue 'Elements of Palæontology,' from the German of Prof. Karl A. von Zittel, by Charles R. Eastman, with 2,000 figures.

The 'Reminiscences' of Bishop Clark of Rhode Island; 'Historic Doubts as to the Execution of Marshal Ney,' by James A. Weston; and 'Civic Christianity,' or the relation of the Church and the individual to the work of social reform, by the Rev. Wm. Prall, D.D., are among the spring publications of Thomas Whittaker.

Henry Holt & Co. have nearly ready 'The Ways of Yale in the Consulship of Plancus,' by Prof. Henry A. Beers.

'Landscape Gardening as applied to Home Decoration,' by Samuel T. Maynard of the Massachusetts State Board of Agriculture, will be brought out by John Wiley & Sons, together with a 'History of Rensselaer Polytechnic Institute,' by Prof. Palmer C. Ricketts, with illustrations.

Frederick A. Stokes Company publish this year 'Under Summer Skies' (Egypt, Palestine, and the Far East) and 'On Sunny Shores' (Greece and Italy), two books of travel by Clinton Scollard, with illustrations by Mrs. Margaret L. Randolph; and 'Thoughts of William Ewart Gladstone,' compiled by G. Barnett Smith.

'The Major's Favorite,' by John Strange Winter, will be issued by J. Selwin Tait & Sons in a few days. The same house will shortly publish the first of its "Zenda" series of graphic copyright fiction.

Estes & Lauriat, Boston, issue directly Charles Nodier's story of 'Trilby, the Fairy of Argyle' (1822), translated by Nathan Haskell Dole.

Another political novel, 'Senator Intrigue and Inspector Noseby: A Tale of Spoils,' by Frances Campbell Sparhawk, will bear the imprint of the Red-Letter Publishing Co., Boston.

We are informed that all of Prof. Arber's publications, with the exception of the 'Transcript of the Stationers' Registers,' have been taken over by Archibald Constable & Co., London, who in future will be sole publishers of them.

A second edition of Lady Jeune's 'Lesser Questions,' which we reviewed at length some months ago, has just been put on the American market by Dodd, Mead & Co. It affords much food for wholesome reflection.

'The Military Career of Napoleon the Great,' by Montgomery B. Gibbs (Chicago: Werner Co.), is one of the hero-worshipping volumes, happily less numerous than they once were. Apocryphal anecdotes are collected with care, and authentic ones are distorted and colored to brighten the glories of the idol. His unscrupulous personal ambition is represented as patriotic devotion to France, and his crimes, like his *coup d'état* of Brumaire and his seizure of the Spanish royal family, are described as innocent acts. Gross blunders are made in history, and absurdities occur in battle-descriptions, so that the general result may fairly be called a sensational romance.

Of a very different sort is another Chicago publication (A. C. McClurg & Co.), 'Napoleon Bonaparte's First Campaign,' by Lieut. Sargent, Second United States Cavalry. This is a history of the famous campaign of Italy in 1796, analyzed for the use of military students. The work is so clearly done, and the sketch-maps so well illustrate the successive stages of the campaign, that the general reader can follow the story with satisfaction, and understand wherein Bonaparte was really great. A fuller system of foot-note references to authorities would add much to the value of the little volume for students' use.

The first volume of the Transactions of the Jewish Historical Society of England contains several scholarly essays, the most notable of which are C. Trice Martin's "Domus Conversorum," Joseph Jacobs's "Little St. Hugh of Lincoln," and Lucien Wolf's "Cryto-Jews under the Commonwealth." The volume is well printed and has some excellent illustrations, including many facsimiles of old documents. In his inaugural address, delivered on November 11, 1893, the president says: "We were told that Anglo-Jewish history was a very small affair, that it was not likely to add much to the general history of our race, and that it would throw no light on the annals of our country." Such statements betray ignorance of the contents of the Jewish records in the Public Record Office. The existence of the Jewish Plea Rolls of the thirteenth century would in itself justify the foundation of this Society, and their publication would throw much light on the general constitutional and social history of England. The volume before us should dispel all doubts regarding the *raison d'être* of the Society.

'Lovell's Gazetteer of British North America' (Montreal: John Lovell & Son) is a revision and extension of the original issue of 1881, and the territorial development in the meantime has fully warranted the labor of overhauling. The work consists of two chief parts, the gazetteer proper, and a so-called "Table of Routes," or one line directory of places, showing the country or district and province in which each is situated, and the most convenient points from which it is accessible by railroad or steamer; a key to the appropriate route being furnished elsewhere. This is a very convenient feature. The key further exhibits the stations on the line of each road, with distances in miles. The publisher tries to take a cheerful view of the material prospects of the Dominion, yet is forced to regret its slow increase in population—only 600,000 from 1881 to 1891, and the total in the latter year falling short of 5,000,000. One must accordingly do some serious reading between the lines when he encounters a list two and a half pages long of "railways subsidized by the Parliament of Canada," ranging from 2,000 miles down to three! Half-a-dozen maps of the principal divisions of the Dominion would much have heightened the value of this Gazetteer, especially for sportsmen, to whom the compiler has purposely catered.

Ginn & Co. publish a thin volume, by William Ordway Partridge, entitled 'The Technique of Sculpture.' The first half of it is devoted to "History," and we can conceive of no one to whom it would be of use. The second half is devoted to "Practice," and this part contains some practical directions which might prove useful to any one so ill-advised or unfor-

tunate as to attempt the study of modelling without a master. Directions for setting up a skeleton or for making a piece-mould do not, however, constitute a treatise on the "technique of sculpture," even when accompanied by vague remarks about the ideal or recommendations to study phrenology.

'Physiology for Beginners' (Macmillan) is stated in the preface to have been supervised by Professor Michael Foster, but actually written by his senior demonstrator, Dr. L. E. Shore. A commendable feature is the prominence given to demonstrations and to the examination of the viscera of some animal by the student himself. But there are many and considerable defects in the text and illustrations in view of the announcement that the work is "intended for those who have no previous knowledge of the subject." For example, on p. 78 the pupil is told to place a sheep's heart for study so that the apex is away from him; but on the opposite page the organ is represented with the apex toward him. One of the two most important and obvious differences between the human and sheep's hearts is the presence in the latter of a moderator band; yet this is neither mentioned nor shown in the figures. Why, too, should the text be continually burdened by the word *called* before the commonly accepted names of the several organs? It is refreshing to note the omission of the perfunctory, inadequate, and misleading chapters on stimulants and narcotics that characterize most of the recent American text-books; but the ideal 'Physiology for Beginners' has yet to be written.

The subject of perfumes in the vegetable kingdom is treated of pleasantly, though not in a very learned way, in Donald McDonald's 'Sweet-Scented Flowers and Fragrant Leaves' (Scribners). The book contains a rambling "historical sketch" of the general subject, redolent of jonquils, wallflowers, and roses, followed by an alphabetical list, 136 pages long, of sweet-smelling plants. Many of the names are coupled with more or less interesting remarks, sometimes about the nature or the cultivation of the plant, sometimes as to the character of the odor. Under the word "Rosa" is a long and fairly well digested account of roses, in which some of the most highly scented varieties are specially mentioned. Sixteen colored lithographs adorn the book, mostly well selected, as the Maréchal Niel for a rose; but to give a figure of a commonly cultivated Asiatic magnolia, and call it in the list of illustrations *Magnolia grandiflora*, is surely an injustice to one of the very noblest blossoms of the American forest.

On April 1, when Bismarck completed his four-score years, a volume entitled 'Neue Tischgespräche des Fürsten Bismarck,' by Heinrich von Poschinger, was to be published by the Deutsche Verlagsanstalt in Stuttgart and Berlin. If the extracts from this work which form the leading paper in the February number of the *Deutsche Revue* may be taken as a fair specimen of its contents, the book promises to be an amusing, though from an historical point of view not particularly valuable, contribution to contemporary Bismarckiana.

Tourists who can read German, and who have an ocean journey to make, may well possess themselves of Justus Perthes's pocket 'Sea-Atlas' (New York: Westermann), which aims to answer exactly, yet in a manner clear to the ordinary mind, questions likely to be asked as to sea terms, observations, rate of speed, signals, rules of the sea, lighthouses, tides, winds, storms, etc., etc. Besides explanations and tables on these heads, there are numerous maps of winds and currents and temperature, and a great many harbor-charts. Two scales have, almost without exception, been used, and make comparisons easy. The little book should be a relief to the tedium of the voyage.

Mr. Edward W. James, whose valuable contributions to the *William and Mary Quarterly* we have from time to time noticed, has begun publication of an elegantly printed *Lower Norfolk County (Va.) Antiquary*. The only definite announcement about it is, that it "is intended for the purpose of making known and perpetuating the history of this section; and as the editor and proprietor is doing this exclusively for his own pleasure, there will be no notes and no queries—no questions asked and none answered." Still, as librarians who may desire a file of the *Antiquary* will have to put a question as to terms and conditions to Mr. James, we will mention his address, which is 824 Park Avenue, Richmond. He prints the censuses of slave-owners and slave-holdings or hirings in Princess Anne County for 1771–1774 and 1860, the defects of the latest record being occasionally supplied by personal testimony that a certain person "at the emancipation proclamation" owned 19 slaves, and another "lost 17 by the *war*." He also copies the will of Elizabeth Kelsick, in which bequests of negroes and of plate run side by side. Much space is given to the inception of the Norfolk Academy in 1761, and to troubles with its master in 1796. There are many genealogical and historical foot-notes showing wide research. The whole number is very readable and instructive.

The March *Portfolio* (Macmillan) is devoted to 'Claude Lorrain.' Mr. George Grahame takes a somewhat insular view of his subject, and discusses Ruskin and Turner a little more than seems necessary to a non-British reader, while he fails to note Claude's influence on the greatest of modern landscape-painters, Corot; but he succeeds in giving a not unfair account of Claude's place in art, and a notion of the quality of his very artificial charm. The illustrations are, as usual in this publication, excellent.

There is a very timely account of the Island of Formosa in *Petermann's Mitteilungen* for February. The interior is apparently still but little known, the Chinese authority being limited to the western coast-country, the extreme northern part, and a narrow strip of the east coast. The Chinese are gradually working their way inland, cutting down the forests and replacing them with indigo and tea plantations. Much of the soil is extraordinarily fertile. In some places there are three rice-harvests in the year, and tea-leaves are picked three times—"in many places, indeed, seven times"—a year. Anthracite coal of good quality is found in large quantities and close to the sea, a thing of great importance to a maritime power like Japan. Alluvial gold has also been discovered in the beds of some of the northern streams. The Chinese have built a railroad from the port of Kelung a distance of about 100 miles, to a town near the west coast. An excellent map accompanies the article. There is also a reproduction of the Government map showing the extent of malaria in Italy, and constructed from the death returns for the three years 1890–'92. During this time the deaths from malaria numbered 49,407, or 54 in 100,000. The disease is confined almost entirely to the part south of the latitude of Rome, though only six of the sixty-nine provinces are wholly free from it. Sardinia and Sicily suffer the most, the death-rate from malaria being 8 in every 1,000. Rome is rapidly improving, the number of deaths having fallen from 650 in 1881 to 189 in 1893, notwithstanding the great increase in population.

Léon G. Pélissier's article, "La Matière et les Matériaux de l'Histoire du Premier Empire," in the *Revue Internationale de l'Enseignement* for February, is a succinct exposition of the principal divisions of the subject-matter claiming the attention of the historian of the epoch, followed by a discriminating survey of the material at his disposal. The distinctive character of this "drame de dix ans" and its actors, the novel and exceptional phenomenon presented by the imperial court and family, the diverse elements and changing ideals of the armies, are drawn in clear outlines. In his estimation of the historical literature of the epoch the writer points out the influences and motives determining the character of the publications previous to 1880, about which time, in consequence of causes partly indicated in the essay, a new phase, "purely and strictly scientific," of Napoleonic literature begins. The same number of the *Revue* contains that part of a report by M. Georges Blondel to the minister of education which treats of the work in the social sciences done in the German universities.

Two documents, both reprints, lately issued by the Bureau of Education (Nos. 214, 215), sum up the present condition of the interesting experiment of domesticating reindeer in Alaska, of which we have heretofore taken notice. One is the report on education in that Territory (1891-'92), by Dr. Sheldon Jackson, the General Agent; the other is his report (1894) on the introduction of the deer. Many of the numerous illustrations are common to both. The matter is good reading, and the prospect, if only whiskey can be banished, is very cheering.

We have received from F. Gutekunst, Philadelphia, his panel photographic portrait of the late Richard Vaux of that city, a man of exceptionally varied experience in law, diplomacy, legislation, and executive authority. The likeness displays the well-known eccentricity of the ex-mayor's personal appearance, and gives a remarkable impression of virility.

At two meetings of the "Congregation of the University of Oxford" held after the one reported upon in the *Nation* of February 28, the statute establishing the new (post-graduate) degrees of *B.Litt.* and *B.Sc.* has taken what will be its final shape. Technically the new degrees are not yet established, for the statute as amended has still to be voted upon by the "Convocation of the University of Oxford." "Convocation" includes not only the 436 Masters of Arts in residence who constitute "Congregation," but practically all others who hold that degree. As a matter of fact, Convocation is sure to pass a statute like the one now in question, since there is the greatest possible unanimity in favor of it. The most important of the new amendments lately passed to the statute is the one cutting down the period of residence required from three to two years. It was held that at least two years' residence must be demanded for the new Oxford degrees, no matter what work may have been done or what degree may have been taken elsewhere, because no satisfactory scheme of advanced work could be framed for a year. Throughout the discussions at the three meetings of Congregation, there was a constant preoccupation with possible candidates who might be tempted by the new de-

grees to resort to Oxford from the American universities.

—In lieu of the frequent meritorious and needful article that prods the reluctant patriot, the *Atlantic* presents this month a triplet of papers admirably adapted to stir patriotic sentiment at its springs and sources. A war episode is what is, perhaps, least of all suggested by the title of a short poem, "While the Robins Sang." Nevertheless, the reader finds one in it, told in Tennysonian vein and measure, with some of the softening and mellowing associations with nature that lift it towards the rank of poetic legend that wears. Mrs. Earle's "Flower Lore of New England Children" shows, if one chooses so to look at it, when and where the finer instincts of nationality may be bred in the bone; while a tale, "Dumb Foxglove," by Annie Trumbull Slosson, of the plain folk of New England, falls not far short of dissolving the eye into ecstasy of pity touched with admiration. Dr. Birkbeck Hill again proves one of the pleasant uses of leisure that has been earned by scholarly labor, by lingering with the reader, in "A Talk over Autographs," among those in his own large collection, as well as among his equally ample reminiscences of some of their writers. An interesting study of *Macbeth*, by John Foster Kirk, is built not upon the scaffolding of Shaksperian glossaries and grammars, but upon the basis of an understanding of the natural ways of flesh and blood. Therefore, although its writer's reading is wide enough to bring to bear on it powers of comprehension that are freely used, this is a piece of literary criticism through which the *Macbeths*—for the study is of the pair—lose nothing in human reality, while their motives of action and shades of character gain skilful interpretation. But the article *par excellence* of the month will undoubtedly seem to many readers C. T. Copeland's "Robert Louis Stevenson." An enthusiasm at once so discreet and so ardent needed only the finished form of expression it has found here to render it complete. Elizabeth Stuart Phelps and Gilbert Parker continue to fill the space allotted to serials.

—In the *Century* the altitude of two bright particular stars in the artistic heavens—the one Mme. Réjane, the other Bernhard Stavenhagen—is briefly but excellently taken by Justin Huntly McCarthy and by Henry T. Finck. Mr. Finck gives an interesting outline of past conditions of piano-playing, and makes his criticism comprehensive enough to be of some measure of service to the reader who wishes to increase his pleasure in beautiful music by an intelligent appreciation of the principles on which its beauties rest. Excellent likenesses also accompany each of these papers. A somewhat sensational interest attaches to the seriously scientific article by Thomas Commerford Martin on the recent electrical work of Nikola Tesla, inasmuch as on March 13 Tesla's laboratory was destroyed by fire, leaving the illustrations to this article the only record of some of his experiments. Among these, photography by phosphorescence lends itself best to popular illustration and description. Readers with a taste for articles of adventure founded on facts will find no stint of either in the lengthy account of our former privateering compatriot, Paul Jones. A liberal number of pictures support the interest of this narrative, which is signed Molly Elliot Seawell. Other readers, who object to taking their fiction with interruptions, will, after next month, be able to follow Mrs. Burton Harrison's 'Errant Wooing' from beginning to end without pause. Mr. Crawford's 'Casa Braccio' and the Life of Napoleon will, on the contrary, still continue their monthly course.

—Notwithstanding the fair promise held out by names on its title-page, a search through *Scribner's* for pictures or papers above mediocrity proves somewhat delusive. Mr. Abbey contributes to the numerous Easter illustrations, and Mr. Lang writes of Prince Charles Stuart. The latter, however, fills a generous number of pages with an accretion of details, in a fashion that better represents the painstaking methods of an historical "Seminar" than his own particular powers of literary fusion or luminous presentment of individuals. Mr. Abbey's subject, representing an old English custom of the queen and her ladies creeping "with dyvers giftes of egges and apples" to the foot of the cross on Good Friday, is admirably chosen; his picture, unfortunately, is void of the spirited qualities of life and action usually to be found in his work. It is not surprising that the part of the month's instalment of Robert Grant's 'Art of Living' which turns upon the effects of a college education for daughters, should, though liberal in view, be lacking in novelty. A subject that has been so done to death in print probably needs a timely rest to recruit its exhausted vitality. But the duty of men of means and social position to practise the doctrine of democratic equality in the schooling of their sons is a comparatively dormant question of education, which Mr. Grant vigorously rouses. The withholding of the sons of such men from the public schools is discussed in relation to the welfare of the sons themselves, of the community, and of the public. Boarding-schools, their Anglicizing tendencies, and their advantages and disadvantages for prospective American citizens, also come in for a share of sensible comment.

—An allied topic is wisely treated in the Editor's Study of *Harper's*, under the heading "Social Position of Teachers." It is instructive to notice that while Mr. Grant finds in the anxious but selfish mothers of the well-to-do classes the potent enemies of the public schools, Mr. Warner likewise arraigns women of the same class as the force inimical to the social claims of teachers of their own sex. This is evidence of the encouraging type that tends to make a strong case against the parties accused. Of this number's two articles of practical import, one is on "Recent Progress in the Public Schools," by the Commissioner of Education; the other deals with the portion of population that is not affected by schools or their methods. Unpretending as is this second article, "Club Life among Outcasts," by Josiah Flynt, it deserves a widespread circulation. Especially is its place in the hands of members of settlements and workers in the slums of all shades and varieties. Philanthropic effort and brotherly influences are in no wise met by discouragement, but levels of humanity whither, the writer claims, these must be preceded by law and government, punishment and sequestration, are described from the standpoint of an acquaintance gained by drastic means, and sufficiently intimate to give weight to the author's views. Arthur Symons has handled his paper, "Venice in Easter," with capital literary skill. The reader accustomed, however, to accept the City of the Doges in the serious mood of a Ruskinite will have to stretch his catholicity of taste to its limits to include a liking for these decadent "impressions and sensations." The leading article, "Our National Capital," is composed in the style that the magazine might safely leave in undisputed possession to the newspaper.

—In the February number of *Nord und Süd* (of which Paul Lindau is still the editor), J. B. Horn has an interesting article on Wagner's "Meistersinger," apropos of the Hans Sachs celebration. Thirty years ago, he points out, the prolific cobbler-poet was known to Germans only through histories of literature. To-day his name and personality are as familiar as those of any historic personage. Wagner's humorous opera has done for him what the historians and philologists could never have accomplished. Herr Horn gives the history of this opera, and shows how Wagner altered and improved it in successive versions before it was wedded finally to the music. His basis of comparison is chiefly the facsimile of the first version of the poem which B. Schott of Mainz issued to celebrate the twenty-fifth anniversary of the opera's first performance at Munich. The publishers also placed at Herr Horn's disposal a number of letters written to them by Wagner in 1861 and 1862. In one of these he says, in regard to his "Meistersinger" plan: "The subject involves a good deal of sentiment and drollery (*viel gemüthlich-Drolliges*), and I pride myself on having hit upon something entirely unexpected and unique in this entirely original conception of mine. Its style, in the poem as in the music, is to be thoroughly easy and popular, and its prompt success on the stage will be further insured by the circumstance that this time I need neither a so-called first tenor nor a great tragic soprano." It is well known that Wagner conceived and sketched the plot of his only comic opera as early as 1845; and in 1861 he wrote that he had postponed this merry work in the belief that he would be more disposed to carry it out in the serene atmosphere of old age. His method of composition is illustrated by the remark made in January, 1862, "The music is already complete in my head," where it remained in part till the completion of the score in October, 1867.

—Prof. Reuter of the Christianeum of Altona, whose valuable contributions to the study of Rückert we mentioned a year ago, now gives us in the "Yearly Programme" of that institution another batch of information on the poet's private life, largely from hitherto unpublished letters of Rückert himself. These letters, covering the last years of Rückert's stay at Erlangen and the first years of his connection with the University of Berlin, are interesting chiefly from the pathological point of view. They show a man who, hemmed in by narrow surroundings, oppressed by bodily sufferings, soured by the discrepancy between his inner riches and his outer limitations, has lost his native elasticity, so that he fails at the very moment when he is called to a larger and more suitable sphere of action. It is hard to recognize here the poet of the "Geharnischte Sonnette"; and it is truly pitiful to read such a reflection as the following, written in the first year of his stay at Berlin: "My position here is perfectly untenable and inane, and I must try to get out of it and back to my former solitude. Schelling has monopolized the interest of the public, and the King is entirely bewitched by Tieck. If the curious crowd which thronged into my first lecture had only received me with some token of recognition, I might have gone into it with some zest. As it is, I strike my sails." No wonder that the last twenty-five years of Rückert's life ripened so little poetic fruit. His work was done when he finished 'Die Weisheit des Brahmanen.'

—The third volume of the collected writings of Ludwig Bamberger is entitled 'Politische Schriften von 1848 bis 1868' (Berlin: Rosenbaum & Hart), and consists of newspaper and magazine articles setting forth the aspirations for German freedom and unity cherished by the uncompromising Liberal party that inaugurated the Revolution of 1848. The achievement of German unity by far different methods and with far different aims has tended to discredit those early strivings, and to give a grotesque air to much of the ardent writings in which they found expression. Bamberger's articles, however, are so impressive by reason of their evident sincerity, and so attractive by virtue of their literary finish, that their republication cannot fail in some measure to rehabilitate, in the eyes of the present generation, the generous if misguided aspirations of the handful of ardent patriots who threw themselves into the hopeless struggles of those distant years. Some of the causes of their rapid failure are clearly sketched in Bamberger's graphic account of the rising in the Palatinate in May and June, 1849. The incompetence of the leaders and their lack of material resources were so great that the revolt could have been crushed in a week if the Governments had not been frightened out of their wits and had not immensely overestimated the strength of their assailants. The volume concludes with the original French version of the articles on Bismarck which appeared in the *Revue Moderne* in February, 1867, and at once gave Bamberger a European reputation.

—At Stationers' Hall, London, the International Society of Wood-Engravers—as the English Society calls itself—has just been holding an exhibition of its members' work. The show came at an opportune moment, for in England much has recently been heard, from certain quarters, of the depressed condition of the art and the chance of its complete disappearance in the immediate future. Altogether, to one who has only read the articles that have been written, the wood-engraver might already seem as doomed as the dodo. But the exhibition explained that wherever the evil lies, it is not with the wood-engravers themselves. A correspondent writes to us:

"From the large engraving departments of houses like Cassell's and the *Graphic*, strong and exquisite work on the wood is still turned out. There are independent engravers like Mr. Donner, whose block after Titian's 'Bacchus and Ariadne' approaches even Mr. Cole's Old Masters; like Mr. Whymper, whose engravings for his 'Scrambles among the Alps' will always make that volume a prize to the collector of this century's good illustrated books; like Mr. Biscombe Gardner, who is following the example of Kruell in publishing his engravings separately, without text: like Mr. Babbage. and still others, whose names, however, are but names unfortunately to the multitude. All these men exhibited in Stationers' Hall. There was also one block by Cole; there were also specimens of the really excellent color-printing done by Bong, the German, for *Moderne Kunst*, now published in London in an English edition. If the designs for this magazine are commonplace and, at times, somewhat vulgar, the fault is not the engravers', and, certainly, engraving and printing have both reached a very high degree of technical perfection. The absence of cheap work from the collection seemed to explain the influence 'process' has had upon the trade, though not upon the art. The cheap wood engraver cannot compete with process, but his eventual disappearance is scarce to be regretted. On the other hand, as yet half-tone process cannot touch, in measure of accomplishment, the really fine wood-engraving—a fact which is fast being realized now that the first transports over process have been modified by time. Even in France, where the Guillaume process had for a while such a vogue, there is seen on every side a return to wood-engraving. In England the signs of return are not so marked as in the United States, though, singularly enough, a sixpenny publication like the *Idler* has begun to use wood blocks. Some houses, that have their own staff of engravers, are apt to put their best work into the hands of foreigners. And the great majority of publishers prize cheapness so much above excellence that a bad process block has far more charm for them than a good engraving. There are exceptions, of course."

GRIFFIS'S RELIGIONS OF JAPAN.

The Religions of Japan. By W. E. Griffis, D.D. Charles Scribner's Sons. 1895.

THIS work enjoys the advantage of meeting a want not only long felt, but expressed. The religions concerned are three: Shinto, the ethnic cult, with Confucianism and Buddhism, both imported though fully naturalized faiths. The first of these religions an authority like C. P. Tiele declined to treat in 1877, for want of reliable data ('History of Ancient Religions,' x.). Ten years later C. Saussaye ventured a page on the basis of the same rejected data, and necessarily with indifferent success. The better authorities tabulated two years later in his second volume of the 'Religionsgeschichte' came too late to aid the account in the first, of course. No other writer at once accessible and reliable has since attempted an account of Shinto. With Japan's other two religions, Confucianism and Buddhism, the case has been yet worse. No accredited writer has so much as attempted them, and students have been left with the natural though false notion that the Japanese forms simply reproduced the Chinese recently become familiar to us.

Dr. Griffis, then, undertook the much-needed task of coördinating the varied special treatises now accessible, and brought to it an invaluable preparation of personal acquaintance for four years with the faiths described. The result is in general an excellent compendium of the religions of Japan, which must come into immediate and general demand, and of which every future treatment must take account. As to the contents, let no one imagine that Japan is in religion, any more than in art and politics, a mere replica of her congener on the mainland. Upon all three of her religions—native and imported alike—Japan has set the stamp of her peculiar genius, much to the mortification of her elder, China, who, like some other countries, is much averse to being improved upon.

The almost total strangeness of the Japanese religious field to the Western reader calls for a specification of the characteristic facts described in the work before us. First as to Shinto. Here most students will for the first time learn that phallicism has prevailed in far-Oriental Japan, though all previous accounts of it have given India as its eastern limit. The requirements of a book meant for general circulation excluded much no doubt known to the author on this subject, and he refers (p. 381) the reader desirous of details to a monograph by Dr. Edmund Buckley of the University of Chicago entitled 'Phallicism in Japan,' and now ready at the University of Chicago Press. Another feature of special interest is the account of the fusion of Mikadoism, or belief in the Mikado's divine descent, with sun-worship, in order to confirm by religious supremacy that military ascendancy which the invading Mikado's tribe had won over earlier settlers. The specialist in hierology will note the bearing of this fact upon the present advocacy by H. Spencer, C. P. Tiele, and others less known of animism as the sole source of religion; for here is an animistic Mikadoism attached as something inferior to a widely spread, unquestioned and *independent* sun worship which shows no sign of an earlier derivation from aught else, and therefore points to naturism as a principle of religious origins coördinate with animism, as Max Müller, Saussaye, and others contend. Next comes a specimen or two of the very peculiar Shinto rituals, and a partial account of the myths and morals of the 'Kojiki,' the chief Shinto scripture. Of these rituals, that for the "purification of offences" has an obvious value in its bearing on the problem of expiation in general. Last we note an account of the very instructive phenomenon of arrested development caused in this case by the advent of Buddhism.

The treatment of Confucianism in Japan affords a rare insight into the mainsprings of the every-day life of the Japanese; for the to us exceedingly strange mutual toleration and even reciprocity of the three Japanese religions assigned secular morality to the charge of Confucianism, while the future world was provided for by Buddhism, and the past world cosmologically explained by Shinto. It appears that Confucianism bore in Japan its well-known Chinese fruits of servile obedience from inferiors, with unhampered control by superiors, an obsolescent form of which the modern traveller sees and admires in the exquisite politeness of even the poorest Japanese, while he knows nothing of the frightful cost at which it was secured. The duties of the "five relations" of society which form the essence of this Confucianism are stated and contrasted with the ethics of Christianity. Of the admissibility of such contrast no doubt can remain after reading the specifications here made, though judgment as to its degree will naturally vary. Whether the relation examined be that of sovereign and minister, of father and son, of husband and wife, of older and younger brother, or of friend and friend, it appears plain that while the *words* are mostly the same, the ideas connoted sometimes differ so much as to prove repugnant to us. Occasionally the words used reveal the difference, as in the case where the Japanese language contains no equivalent for brother, but always adds the important element of older or younger; and again where chastity must be translated by *teiso* or *misao*, both, however, meaning *womanly* virtue. "A circumlocution is needed to express the idea of a chaste man." This imperfectly developed Chinese morality took a downward step in Japan when, in accord with the old Mikadoism, it made the first relation—extended to include retainer and lord—paramount over the other four, even that filial relation which dominates in China. This change occasioned such bloody results that "no Moloch or Shiva has won more votaries to his shrine." The Confucianism that from the seventeenth century opposed Buddhism and dominated the *samurai* (literary and military) class was the medley made by Chu Hi, "the ethics of Confucius transfused with the mystical elements of Taoism and the speculations of Buddhism."

While but 97 pages are devoted to Shinto and only 54 to Confucianism, 170 are assigned to Buddhism, and this distribution, which is fair, indicates the salient fact that Buddhism has so far dominated Japan that on the whole Japan, with both its good and its evil, must be declared a Buddhist country. Here the introduction and growth of the religion, retaining the name but so little of the teaching of its

famous Indian founder, are sketched in striking colors. Noticeable are the facts that here, as in India, Buddhism early won the allegiance of the court, whence influence and wealth accrued, and that conquest of the people was further much facilitated by that appropriation of the Shinto cult and property which modern Shinto reformers stigmatize as simple robbery. This latter course, so characteristic everywhere of Buddhism, took chief shape in the formation of a sect named Ryōbu, "two faced," in which, on pantheistic principles, hundreds of the myriad Shinto deities were catalogued, under the term Gon-gen, as temporary manifestations of some Buddha; Amaterasu, regent of the Shinto pantheon, herself becoming an incarnation of Amida.

Of the twelve Buddhist sects introduced into or developed in Japan, five of the earliest group have long since disappeared, while the sixth is unimportant, the two mediæval sects called Tendai and Shingon are still powerful, and three of the four modern—*i. e.*, twelfth- and thirteenth-century sects, called Jōdō, Shin, and Nichiren—claim special attention as Japanese transformations of the Buddhist faith. The Tendai is philosophical, pantheistic, and Jesuitical, the Shingon is mystic and esoteric, a certain Zen sect, belonging to the modern group, reacts from expression in ceremony and scripture, and declares for the principle, "Look carefully within and there you will find the Buddha."

The three Japanese sects show the common trait of "universalism and democracy," though the Nichiren approximates to Romanism and the Jōdō and Shin Shu to Protestantism. While the Jōdō rather caricatures Protestantism, the Shin Shu so nearly approaches it that surprise amounting to shock certainly awaits the learner in this field. Those who have long relished the remarkable parallels between Buddhism and Romanism will find those between Buddhism (as Shin Shu) and Protestantism equally remarkable, though to them no doubt less appetizing. But truth must shine forth all the brighter, whatever happens to Romanism or Protestantism. Justification by faith alone, instantaneous conversion and sanctification, searching the scriptures, morality as important as and indeed the proof of faith, city evangelization, home and foreign missions, combined with rejection of penance, of fasting, of food-proscriptions, of pilgrimages, of monasticism and of amulets, conspicuously distinguish the Shin Shu or "Tree Sect" from every other Buddhist sect outside or inside Japan. The Buddhist Luther, by name Shinran Shōnin, promulgated his doctrines 1203 A. D. Shin Shu is by far the most numerous sect in Japan, and, what is most important of all, seems not incapable of further reform under the new influence of Christianity.

The account of Buddhism concludes with a chapter on its vast influence as a civilizing force in Japan, and traces to its doctrine of *karma* that spirit of hopeless resignation so characteristic of the East. The characteristic traits of Christianity and Buddhism are strikingly contrasted in one passage (p. 307):

> "'As sad as a temple bell' is the coinage of popular speech; . . . whereas the general associations of the Christian spire and belfry, apart from the note of time, are those of joy, invitation, and good news, those of the tongueless and log struck bells of Buddhism are sombre and saddening. 'As merry as a marriage-bell' could never be said of the boom from a Buddhist temple, even though it pour waves of sound through sunny leagues. There is a vast difference between the peal and play of the chimes of Europe and the liquid melody which floods the landscape of Chinese Asia. The one music, high in air, seems ever to tell of faith, triumph, and aspiration; the other, in minor notes, from bells hung low on yokes, perpetually echoes the despair of pessimism, the folly of living, and the joy that anticipates its end."

The book closes with an account of the century of Roman Christianity in Japan, and resultant two centuries of exclusion of all foreigners except the Dutch to a very limited extent.

It remains to indicate some limitations and errors which might misguide those not having access to the sources. First, then, the treatment of Shinto rather suggests than supplies the need for a technical account of that cult. Of 'Kojiki' and 'Yengishiki' only stray excerpts and not complete analyses are given, while no interpretation of either is attempted (p. 66), though eclipse, rain-storm, moon, and lightning form the bases of very neat myths never yet disentangled from their context. Mr. Percival Lowell's recent valuable discovery of trance-possession in Shinto should have been embodied in the work. No account of the leading figures in the Shinto pantheon is given, nor are Shinto magic and divination alluded to. The exceeding polygamy of the ancient rulers even with paternal sisters is overlooked, the unique shrines of the Sun-goddess and Moon-god are not described, nor the remarkable communion service called *kagura* as performed at these shrines. Plant and animal worship are illustrated but not described. Many or all of these topics were no doubt excluded by the scope of the book and the Morse lectures which it records, but not the less need pointing out. A *handbook* of Shinto, therefore, remains as much a desideratum as ever.

As respects Confucianism, a fuller account of the 'Teishu' from the sources will better ground insight into this so influential factor in Japanese life. The treatment of Buddhism is untechnical, but good; and especially worthy of commendation, both from the polemic and scientific standpoint, is that fairness which enables the author to both see and state the Christian parallels for what have too often been regarded as follies peculiar to Buddhism.

The following we judge to be palpable errors: "Shamanism or Animism," p. 15, whereas shamanism is not conterminous with, but only one of the myriad forms of, animism. "And if, etc.," p. 16, whereas animism is not a "more exact," but only more general, term than shamanism. The amulet is wrongly considered a fetish, p. 24, since it belongs to magic, being a pledge of the guardianship (Jap. *marmori*) of the deity, whose name it bears (cf. Saussaye's 'Religionsgeschichte,' i, 43–4). The account of the creative pair given on p. 64 is a phallic myth garbled *without warning* for polite presentation. Dr. Murray, in his recent 'Story of Japan,' sinned yet more against science, for he garbled the same myth after premising, p. 36, that "the only way to treat history is to give its early legends in as nearly the form in which they had been handed down as possible." The dragon referred to on p. 75, note 23, should have been interpreted as the fire-fiend it really is. On page 85 the coition hut should have been cited along with the parturition hut and the hut for the dying, which last should, according to 'Kojiki,' p. 97, be hut for the *dead*. The error on p. 103, whereby Confucius is represented as a student of the 'Hsiao King,' which very book records conversations between himself and Zang-Zze ('Sacred Books of the East,' iii., 451), is plain enough. To the King mentioned should be added Li Ki and Khun Khiu. The confident assertion on p. 103 that "the pre-Confucian faith was monotheistic" is sure to mislead the inexpert. With such scholars as C. P. Tiele and A. Reville holding strenuously to the opposite view, all talk about "almost universal agreement" is unjustified (cf. Reville's 'La Religion Chinoise,' p. 127). The introduction of the Japanese form Shaka is an anachronism at p. 160, and Gautama, the Buddha, was of the Sakya clan, not, as stated in the text, of the Muni clan. Muni means 'sage,' and Sakya muni 'sage of the Sakyas.' The erroneous substitution of Fudo for Kwannon on p. 279, was probably a pure mishap, since the idol is well known to all in Japan. The calyx of the lotus specified on p. 303 should be torus, or receptacle. We can recall no case in which Shaka's image occupies the centre of a Japanese temple, as stated on p. 303. Indeed, even small images of the founder of Buddhism, as of Maitreya (Jap. Miroku), the original Bodhisatva (Jap. Bosatsu), are uncommon.

That an early second edition will allow opportunity for the correction or vindication of these citations, we cannot doubt. It is, moreover, much to be hoped that this book will prove an incentive to other scholars in and out of Japan, applying rigider methods and more technical data, to devote an entire treatise to each of the religions here sketched in one.

SIR ROBERT DUDLEY.

Life of Sir Robert Dudley, Earl of Warwick and Duke of Northumberland. By John Temple Leader, M.P. for Bridgewater from 1835 to 1837, and for Westminster from 1837 to 1847, Knight Commander of the Order of the Crown of Italy. Illustrated with Letters and Documents from original sources, collected by the author and hitherto inedited. Florence : G. Barbèra.

The union of heroic action with intellectual culture and aspiration characteristic of the Elizabethan era, which is so conspicuous in Raleigh and Sir Philip Sydney, shows itself not less remarkably in the subject of this biography, Sir Robert Dudley, who styled himself Earl of Warwick and Duke of Northumberland. Dudley set out as a soldier, but, his biographer tells us, "had from his youth a natural sympathy for the sea"—perhaps, we may add, for the cargoes of vessels navigating the sea, since in him, as in most of his compeers, there was manifestly a strain of the buccaneer. In 1594, when only twenty-one, he made a voyage of discovery in which, though he failed to find his way to an empire the people of which powdered themselves with gold-dust, he discovered Guiana, took Trinidad, and captured prizes. In a subsequent voyage of discovery and plunder he, in a small vessel with a crew reduced by sickness, fought a great Spanish ship for two days, and left her in a sinking condition. Other daring actions followed. In 1596 Dudley, in the absence of his uncle, the Earl of Nottingham, who was High Admiral, took the command of the English fleet; and in the year following he commanded the vanguard in the battle of Cadiz. At the same time he was profoundly studying the art and theory of navigation. He was one of the first to adopt sailing by great circles, and he constructed an elaborate instrument for finding the tides. He was a scientific ship-builder and the master of the art of fortification. He was a mathematician, and wrote on perspective. Medicine did not escape him, and he naturally produced a universal remedy. He was at the same time an

economist and a politician, though in the latter character he showed little sagacity by compromising himself in Essex's Rebellion. Such a range of pursuits was, of course, possible only in an age in which the field of knowledge was narrow and capable of being embraced by a single mind. But the result was an approach to all-round excellence and harmonious development such as the world is not likely to see again. We have far greater men in different lines than the sixteenth century had, but we have no Walter Raleigh, Philip Sydney, or Robert Dudley.

Robert Dudley's family history, however, is one of many proofs that the moral virtue of the age (so far, at least, as the upper classes were concerned) was not on a par with its energy in action, or its intellectual splendor. There was an interregnum between the fall of the Catholic and the rise of the Protestant morality. The court of the virgin Queen was more remarkable for brilliancy than purity. Robert Dudley was the son of the Earl of Leicester, the unworthy, or perhaps too worthy, favorite of Elizabeth. After the death of Amy Robsart, Leicester married Lady Douglass Sheffield, but he concealed his marriage, fearing, as was conjectured, the Queen's wrath, and being unwilling to dissipate the flattering belief that he had been married to her in secret. Growing tired of Lady Douglass Sheffield, he drove her away, after, as she swore, practising on her life with poison, and married the widow of Lord Essex, with whom he had for some time been intriguing, and the death of whose first husband was ascribed by a tattling world to the skill of an Italian physician in the employment of his successor. It is difficult to see why the biographer who recounts these facts should scout as manifestly unfair the belief that Amy Robsart was murdered. A jury, he says, found a verdict of "mischaunce." But under whose influence was the jury empanelled, and what amount of evidence does Mr. Leader suppose would have sufficed in those days to make a jury find the lover of the Queen guilty of the murder of his wife? The verdict of mischaunce serves only to crush by anticipation the desperate hypothesis of suicide to which defenders of Leicester now resort.

Leicester in his will bequeathed to Robert Dudley a large estate in reversion, but, to please the last Lady Leicester and her friends, designated him as his base-born son. This piece of meanness led to litigation about the succession to the earldom, in which Robert Dudley's claim was overborne by the interest of the Dowager Lady Leicester and her party. He, however, afterwards assumed the titles of Earl of Warwick and Duke of Northumberland under a patent of the Emperor Ferdinand, who thus exercised for about the last time in relation to England his shadowy power as the universal Cæsar.

Disgusted by the injustice with which he had been treated, Dudley cast off his nationality, left England, and settled in Tuscany. He at the same time cast off the national religion and became a Roman Catholic; a change perhaps not very repugnant to the English nobleman and courtier of that day. But he went further and changed his wife. As a mere boy he had been contracted to Frances Vavasour, but the marriage had been forbidden by the Queen. He then married Alice Leigh, by whom he had children. He now left Alice behind him, though she was willing to follow him and turn Catholic, took with him Elizabeth Southwell, who pretended a wish to become a nun, and married her under a papal dispensation from the law of consanguinity, Alice and her children notwithstanding. His plea for repudiating Alice was that his marriage with her had been against the law of the Church because Frances Vavasour, to whom he had been precontracted, was still living at the time. Indiana divorce is not original after all.

Dudley joined the court of the Duke of Tuscany, built himself a palace at Florence, and became the Duke's master of marine, naval architect, and adviser on commercial affairs. To his inspiration Leghorn owed her position as a port and her prosperity. At Florence he ultimately harvested the observations and experiences of his life in his *opus magnum*, the 'Arcano del Mare,' a work in four bulky and sumptuous volumes treating of longitude and the means of determining it; discipline, military and maritime, naval architecture, and scientific navigation, with a great number of maps, charts, and diagrams. The work, though its science has, of course, been superseded, has still a high value in the eyes of book-collectors, and the first edition fetches a large price. It could scarcely have been brought out in England at that day.

Though he had renounced his nationality, Dudley had not lost interest in English politics or even his connection with the English Government. He was employed in a negotiation for a marriage between Prince Henry, the son of James I., and a Princess of Tuscany, which, if it had come to light, would probably have set Protestant England on fire, as did afterwards the negotiation for a marriage between Prince Charles and the Infanta of Spain. His inventive genius also struck out a plan for bridling the "exorbitances" and "impertinences" of Parliament, which he embodied in a tract addressed to James I. He proposes simply to build a fort in each of the chief towns, and garrison it with a soldiery, which is either to be foreign or at least to be drawn from a different part of the country. There can be no doubt that this remedy for Parliamentary impertinence, could it only have been applied, would have been at least as efficacious as the powder composed of antimony, scammony, and cream of tartar with which Dudley proposed to cure all bodily disease. The tract came to light at the time of Strafford's execution, immediately after which it was published by his enemies and coupled with his name. Dudley, when he wrote it, must have completely lost touch of England. With the air of Tuscany he had imbibed the political principles of De Medici. It is remarkable, however, that, like Bacon and Strafford, he means his monarchy to be still Parliamentary, though Parliament is practically to do the will of the Crown.

The work is a welcome little addition to our knowledge of the Elizabethan group, and credit is due to the house of Barbèra for the accuracy with which it has printed an English book.

Chapters from Some Unwritten Memoirs. By Anne Thackeray Ritchie. Harper & Bros.

In a book of reminiscences written by one born in a great literary set we instinctively look first for something new about those who provoke eternal curiosity. Mrs. Ritchie's memoirs contain nothing very new, but much that is perhaps more satisfactory in the shape of casual personal impressions of people very well known to the world through their books and pictures. Whether by accident or design, she refrains from mentioning those who seemed to her disagreeable, and permits us contentedly to dwell in the belief that her father's friends were as nice as they were clever. One or two anecdotes illustrative of Carlyle's acerbity are narrated, but there is no doubt that Mrs. Ritchie's memory of him is affectionate as well as reverential. Of Dickens she says the pleasantest things imaginable. The Dickens parties were the delight of the Thackeray children, and the sketch of one of those wonderful entertainments presents rather a pretty vision of the two rivals in popular esteem. The children, having supped, were romping in the hall when suddenly

"their noise became a cheer, and then another, and we looked up and saw that our own father had come to fetch us, and that his white head was there above the others; then came a third final, ringing cheer, and some one went up to him—it was Mr. Dickens himself — who laughed and said quickly, 'That is for you!' and my father looked up surprised, pleased, touched; settled his spectacles and nodded gravely to the little boys."

To those whom Mrs. Ritchie calls "his inconvenient little girls" the father was the centre of the universe—not a remote, awful abstraction, but a big, companionable, spectacled household god, especially adorable for his jokes and his activity in devising treats. On his books no opinions are offered, excepting that in 'Pendennis' his daughter seems to hear him talk. There is not a word of direct eulogy, but, by the narration of incidents that for no particular reason impressed themselves on a child's mind, the reader comes to share the writer's conviction that Thackeray was one of the wisest, bravest, and kindest of men, with the added suspicion that he was at heart one of the saddest. That he did not propose to aggravate the sorrow of existence by a too strict devotion to propriety is shown by his bad behavior at a party which he was giving in honor of the long-repressed volcano of Yorkshire, lately erupted in 'Jane Eyre' and reluctantly submitting to limited exhibition in London. The little girls were much in evidence at the party, and late in the evening, on a predatory excursion from drawing-room to dining-room, saw their father slipping out the front door. They told the guests, with indiscreet politeness, that he had gone out, but would surely come back very soon. However, he did not come back, and, long after, it was explained that the lioness wouldn't show off, that the party was intolerably dull, and so he had just gone off to the club. It is interesting to speculate on the probable reflections of the sombre, intense Miss Brontë, thrust into such a cheerful, friendly family life as the Thackerays'. Some one told Mrs. Ritchie that, after a dinner with them, she "remarked upon my father's wonderful forbearance and gentleness with our uncalled-for incursions into the conversation." Viewed through her own experience of the paternal relation and her submissive attitude to all men (except curates, the kind she knew best), the frank fondness of a great man for his children, girls at that, must have been too bewildering for comprehension, too trivial for approbation.

The Thackeray children spent a good deal of time with their grandmother in Paris, where they saw sights and people remarkable and otherwise, now evoked from the past and presented with graphic and graceful touch. Here and there we feel the father's manner, a ray of his humor, a shaft of his intuition; but the whole is in Mrs. Ritchie's own way—a very delicate and fine one, and never a tinkling echo of the voice of 'Vanity Fair.'

The Aims of Literary Study. By Hiram Corson. Macmillan.

PROF. CORSON'S work contains, in a small compass, much that deserves the attention of those in particular who are teaching literature, and of the general reader hardly less. At the outset the writer cumbers himself unduly with some of Browning's psychology as it appears in "A Death in the Desert," and there is danger that the reader will be discouraged in the porch with the iteration of such disagreeable circumlocutions as the "What Does" and the "What Knows" and the "What Is"; but after the first few pages there is less of this, though in general a simpler terminology would be to the advantage of the doctrine which Prof. Corson has to preach. There is another drawback in his style, which, for one so thoroughly acquainted with the world's best literature, is singularly devoid of charm, and this suggests a doubt whether converse with good literature is the best way of learning how to write—or would, if Prof. Corson were not such an ardent devotee of Browning, like whom he dearly loves a parenthetic clause. He brings a railing accusation against the professional teachers of literature: they make its study a matter of intellectual knowledge and not of spiritual apprehension; they deal first and almost exclusively with the details that should come last and be subordinate. He would not have the historical connections of literature much insisted on. What is called the Philosophy of Literature he would call the Physiology of Literature. The method of M. Taine, accounting for all the phenomena of genius by circumstances of time and place, has for him no attraction. "A sympathetic, and, therefore, a synthetic response, must, in some measure, be given to a creation of genius, before the analytical faculty has or can have anything to do." And yet Prof. Corson has the liveliest sense of the vital and organic relations of the forms of literature to its spiritual essence. It is because of the inseparable unity of the form and spirit that he deprecates and denounces the custom of setting students at work to paraphrase in prose the language of the poets.

The last third of his book is devoted to the thesis that the best response to the essential life of a poem is to be secured by the fullest interpretative vocal rendering of it. He finds an admirable account of what reading should be in the Book of Nehemiah: "So they read in the book of the law of God *distinctly*, and *gave the sense*, and *caused them to understand the reading*." The first point is clear enunciation, the second relative emphasis, the third is spiritual appreciation, and this, Prof. Corson contends, cannot be effected by the eye so perfectly as by the voice when it is properly trained. He begs us to consider what the result would be if the reading voice were cultivated as widely and conscientiously as the singing voice is now. The voice is for him what the Greek chorus was—the interpreter of the poem. His gospel on this head is that according to Dr. James Rush, whose 'Philosophy of the Human Voice,' published in 1827, seems not to stale with age. Some of Prof. Corson's suggestions may be hard to realize, but not a few are entirely practical, and a wide reading of his book by those engaged in literary teaching would be productive of much good.

Graded Schools in the United States of America. By Mary H. Page. Pp. 71.

Methods of Education in the United States. By Alice Zimmern. Pp. 178.

The Education of Girls in the United States. By Sara A. Burstall. Pp. 204.

The Training of Teachers in the United States of America. By A. Blanche Bramwell and H. Millicent Hughes. Pp. 198. London: Swan Sonnenschein & Co.; New York: Macmillan & Co.

THESE volumes embody the separately written reports of the five women teachers, English or Welsh, who in 1893 were awarded by the trustees of the Gilchrist Educational Trust travelling fellowships "for the purpose of studying and reporting upon Secondary Schools for Girls and Training Colleges for Women in different parts of the States." Although none of the reports can pretend to the rank of an educational classic, and each in a measure goes over ground covered by the others, they are as a group worthy of the attention of all whom the making of our national characteristics, mental, moral, and physical, may concern.

Where coeducation is so widely practised in public schools and in colleges, it is impossible to write exclusively of the education of women or girls. But Miss Burstall in particular gives space in her report to the colleges for women, reaching the general conclusion that at such colleges the customary exaction of fifteen hours' per week attendance on lectures takes away "one of the greatest privileges of English college life among women—time to think." Of course she and her colleagues are told much about the place education holds as a national institution. Nevertheless, "the enormous inequality of American schools, greater than any that can be found in England," soon becomes evident. Reasons for this are found in the disproportion of salaries—sometimes a starvation wage—and in the licensing of teachers to a single grade, whereas in England "even the smallest children of the school are allowed to reap some advantage from the presence of university-trained teachers." In nothing, however, are grosser discrepancies shown than in the teaching of citizenship. From a text-book in use in New York schools, Miss Zimmern culls, among others, the following choice extract: "We have no King John who can imprison us at his will, or smother innocent little boys. We have no Queen Elizabeth to dictate how we shall worship the ever-living and true God. None such are found in this glorious Republic, in which the supreme power is vested in the people." Add to this that from the primary department upwards children are taught to believe that "America licks creation," and we have the corner-stone for the self-satisfied blatancy which stands to the average American for patriotism.

An interesting distinction made by the same writer is that, broadly speaking, American teaching aims at oral, English at written, work. The result of the former method is that pupils become self-reliant, quick and ready of expression, but not neat, methodical, or accurate. "English teachers would be greatly shocked at the style of much of the American written work. American teachers would be even more shocked at the untidy, scrappy answers given by many of our pupils," and "at their inability to think quickly." (Zimmern, p. 48.) The measure of truth in these observations will be borne out by the experience of any one with a large correspondence among women college graduates, of whose handwriting and spelling, unreformed from the grammar and high-school periods, an upper-class English tradeswoman, or one with a secondary education only, would too often be ashamed.

The ingenuity of American teaching is, on the other hand, never shown to better advantage than where lessons in civics combine, as in a Massachusetts high school, enthusiasm and interest for the subjects with absolute impartiality. (Burstall, p. 92.) There is united testimony to the American pupil's power of self-discipline, sense of responsibility for the large measure of personal liberty allowed in schools, and capacity, unknown under the different conditions of the older country, for the independent use of books and libraries. Unfortunately, no provision could be discovered for enabling pupils to develop along their own lines at varying rates, and the wise remark is made that a country robs itself in depriving the boy or girl who possesses special talents of the opportunity of cultivating them. Repeated comments on the high temperature of schoolrooms—to which is partly attributed the delicacy and excitability of American girls—must be accepted as true, with the admission that we thus at once sap youthful vigor and lay the foundation for the abnormal liking for over-heated rooms and the insensibility to foul air which are among our worst national peculiarities.

That teaching is a profession which, like every other, requires technical training, is the belief that underlies the investigations of Misses Bramwell and Hughes, themselves trainers of teachers. Of what has already been done in this country in providing pedagogical instruction—in more or less competent State or city normal schools, in training-colleges, and in university departments of pedagogy—and what left undone—noticeably in the omission of practising schools like the one at the German University of Jena, in connection with such departments—their volume gives a very fair epitome. It is to be remarked that although the women's colleges turn out teachers in such large numbers, not one of them figures in the list of institutions having departments of pedagogy worthy of the name of such. The idea that college graduation alone equips for successful teaching is, however, losing ground among thoughtful persons, especially those whose acquaintance with graduates of both sexes is most intimate. A knowledge of what is newly called, with a distinction unpleasantly suggestive of educational cant, child-nature, is not handed out with the degree. Neither will the best training-college be able to impart it to those who have not understanding. But until correlation is established between the minds of teacher and pupils, the correlating of subjects and systems will be labor largely spent in vain.

A History of Amherst College, from 1821 to 1891. By William S. Tyler, D.D., LL.D. New York: Frederick H. Hitchcock.

THIS book, as it originally appeared soon after the fiftieth anniversary of the college in 1871, was an account of its first half-century. Prof. Tyler has now greatly abridged it, omitting the bulky and less relevant portions, completing his story of President Stearns's administration, and adding that of President Seelye. The newly written part cannot fail to strike many of the alumni and friends of the college as lacking that entire fairness desirable in such a record; as conspicuous in its omissions; as partial if not partisan; as in some sense an opportunity used for eulogizing personal friends, occasionally with lavishness, while other names which will occur as quickly and favorably are dismissed with barest mention. Those who best know the story of the institution

from 1821 to the beginning of President Gates's administration in 1890 will be forced to read largely between the lines, and it is a pity that the unwritten portion cannot be perused by all its readers. As the recognized official historian of the college, Prof. Tyler has, of course, bestowed much painstaking care upon the work, and a good general idea is given of the early years when friends were few and funds small. The book cannot be neglected in the history of higher education in New England, and to the average reader will probably tell enough.

Certainly Amherst had a varied experience; its mere founding, against bitter opposition, foreshadowing in some degree the trials which followed its establishment. Dr. Moore, called from Dartmouth to the Presidency of Williams College in 1815, was invited to become the first leader of an embryonic Amherst six years later. He accepted the trust, and many Williams students accompanied him to the new institution, thus stirring in the Berkshire college a strife of strong feeling by no means extinct. The first President of Amherst came to no bed of roses, and he passed away before "his beloved college had even been recognized as a college by the Legislature, dying, like Moses on Pisgah, in sight only of the promised land." But the number of students increased, and prosperity seemed approaching, when, under President Humphrey, a disastrous reaction set in, reducing the college to the verge of dissolution. President Hitchcock then took the reins in his stalwart hands, bringing brighter days, valuable friends and patrons, and an enduring reputation in science. Under the fourth President, Dr. Stearns, a period of scholarships and prizes set in, and a remarkable system of gymnastic and hygienic exercise was instituted; the old Barrett gymnasium, erected in 1859–60, being the first college gymnasium in the country. Funds now rapidly increased, for President Stearns was emphatically a man of affairs, and during his administration of nearly a quarter of a century, from 1854 onward, six new buildings were added to the group on College Hill, and many additional chairs established. Followed by President Seelye's wise and scholarly incumbency, the years from 1876 to 1890 saw many advancements, among them the inception of the plan of student self-government, so called, and a greatly enlarged system of electives. President Seelye, at the time of his appointment, had been for eighteen years Professor of Philosophy in the college, was then a member of Congress as well, and the first and only Amherst alumnus ever elected to the office of President. His administration was as successful financially as intellectually, the long list of gifts and bequests bearing evidence of his practical abilities, and at his resignation, in 1890, the college was left in a condition of heretofore unequalled prosperity and hopefulness. Dr. Gates began his duties as President in the autumn of 1890, although not formally inaugurated until the following Commencement, and the distinctive years of his administration are not touched upon.

In the matter of absolute impartiality in the telling of an interesting story, Prof. Tyler's history certainly leaves something to be desired; indeed, abundant room is left for a future historian to go over the same ground, writing from a broader and more generous survey of the facts and the men, and with ampler justice to all concerned.

An Æthiopian History. Written in Greek by Heliodorus. Englished by Thomas Underdowne anno 1587. London: D. Nutt. 1895.

So many resurrections of buried authors are taking place in these latter days that one might suspect there was some kind of a literary doomsday toward. Of these long-entombed worthies, the latest to burst his cerements is Thomas Underdowne, whose version of the 'Æthiopics' of Heliodorus has just been added to the "Tudor Translations."

Heliodorus is himself a rather piquant personality, whether regarded as a Christian bishop who resigned his mitre rather than abandon his romance, or as a Phœnician pagan who traced his pedigree back to the Sun. But his most innocent and virginal tale is interesting as the parent of a long line of romances of love and adventure, including the 'Arcadia' of Sidney, the tomes of Calprenède and Scudéri, and thus the grandparent of the modern novel. And Underdowne's version is still more interesting as a remarkable example of a translation that surpasses the original. Heliodorus's language is rather colorless and jejune, while Underdowne's version is a masterpiece of Tudor English. The man was a born stylist, and had the secret of that incomparable prose which is familiar to all in the Authorized Version. Open where you will, you come upon such sentences as, "Surely this deede was not without much glorie, for he who was their maister waited upon them, and he who tooke them prysoners was content to serve them." His slightest descriptive touches are full of life: "Calasiris carried Cariclias quiver wrapped in a torne and naughty peece of leather, the wrong ende downeward, on his shoulders, as if it had bene some other thing." He has the secret of the long, harmonious, and perfectly organic period of Hooker. Here is the half of one:

"When he came in and sawe her sittinge in her chaire of estate, clothed in purple and clothe of golde, glorious with jolly jewels, and her costly bonet, finely attyred and decked, with her garde about her and the chiefe magistrates of the Persians by her, he was not abashed a whit, but rather the more incouraged against the Persian braverie, as though he had quite forgotten that whereof he talked with Cariclia as touchinge reverence and worshipping, so that he neither bowed knee nor fell downe to her, but holding up his heade alofte, said, Arsace of royall bloude, God save thee."

The editor, Mr. Whibley, has prefixed an excellent introduction, and the publishers have dressed the book in paper and type that make it a delight to the eye.

The History of Florence, Mass. Edited by Charles A. Sheffield. Florence: The Editor. 1895.

THE handsomely illustrated small folio, 'Northampton: The Meadow City,' has been closely followed up by the above supplementary work on a manufacturing, yet still rural, suburb of Northampton. It, too, is illustrated with exceptional discrimination. Mr. Sheffield has displayed great diligence in exploring the early local history of the place, but he approaches a wider public only in the seventh chapter, which deals with the mulberry fever and silk enterprise of which Samuel Whitmarsh was the originator. The failure of this speculation paved the way for the formation of the Northampton Association of Education and Industry, with whose entrance upon the scene in chapter viii. Mr. Sheffield displays if not the main motive of his researches, at least by far the most interesting feature of his narrative. Hitherto the chief source of information has been a truthful but rather abstract account of the "Northampton Community" in Noyes's 'History of American Socialisms.' Mr. Sheffield now supplies from the records and letter-books the most useful details, the text of circulars and constitutions, the names and portraits of leaders and members, and sets forth clearly the causes of failure, as well as the permanent legacy of the experiment. One stage, however, in the transformation of Whitmarsh's Northampton Silk Company to the Community is apparently overlooked by Mr. Sheffield. The purchase of that company's plant and property he implies on p. 68 to have been made for the socialistic purpose from the beginning, but the truth is that it was a purely commercial transaction, and that "the community fever," supervening directly upon "the mulberry fever," gave a new direction to the thoughts of Messrs. Hill, Conant, Benson, and Adam. This is confirmed by the document on p. 73, in which Conant and Adam, representing "the owners of the property known as the Northampton Silk Factory Estate," approve of the principles laid down in the Community's circular, and offer to sell out to "the *projected* Northampton Association of Education and Industry."

The omission is important, for Mr. Conant, on whom the greatest reliance was placed for business success, with two others, withdrew in the following year (1842), and Prof. Adam accounted for it by the fact that "their object in joining us appears to have been, from the first, *pecuniary* advantage, not *moral* improvement or *social* usefulness." They had been, in other words, momentarily carried away by the sentiment of the hour. "Ils ne mouraient pas tous," Lafontaine says of the beasts and the pest, "mais tous étaient frappés." The pure industrial ability of the community felt itself hampered by the moral and social attachments, and accordingly got out before the crash. The educational side was equally hampered by the industrial condition, and was seriously crippled by the withdrawal of Prof. Adam (who had held the Oriental chair at Harvard). In the end, Florence's best endowment was from the industrial sequelæ of the community; yet the philanthropic spirit of Samuel Hill and his coadjutors has its monument in excellent schools and a finely housed lyceum and library—to say nothing of Alfred Lilly's outside benefactions to the neighboring Smith College.

The Northampton Community has shared the fate of Brook Farm in being without a chronicle of its every-day life, as well as of its progress from beginning to end, by one who lived through it all. It has had much less notoriety than Brook Farm, and had no literary man of genius like Hawthorne for an inmate, or like Emerson for a sympathetic if wary visitor. Still, among its visitors and occasional inmates many famous names are to be met with, especially in the abolition world; and David Lee Child was trying to raise beet-sugar in the neighborhood while his wife, Lydia Maria Child, edited the *National Anti-slavery Standard* in New York. That remarkable woman, Mrs. Stowe's "African Sibyl," Sojourner Truth, was one of the most picturesque figures of the Community, and Frederick Douglass, who gives here his reminiscences of it, has a for him unusually harsh word for his countrywoman as one who "seemed to feel it her duty to trip me up in my speeches, and to ridicule my efforts to speak and act like a person of cultivation and refinement." The greater of the two colored orators perhaps never forgave Sojourner for her once punctuating his gloomy

discourse on the prospect of emancipation with the sharp recall to a higher power—"Frederick, is God dead?" There was another colored American at Florence, David Ruggles, who, though blind, carried on a successful water-cure on the fatal Mill River, to which Southerners came later when it had been acquired by the German Dr. Charles Munde—though some quit it as soon as he cast his vote for Abraham Lincoln. Dr. Munde, by the way, is said by Mr. Sheffield to have wished to call the river the Arno, and the place Florence, and to have really been the author of the latter appellation. We, for our part, had supposed the story true which made the selection a shrewd device of the silk-manufacturers, who could thus use "truthfully" an Italian label for their sewing-silk, and so compete with the imported article.

A Student's Manual of English Constitutional History. By D. J. Medley. Oxford: Blackwell. 1894.

THIS book has two striking features: it entirely ignores political history, and its arrangement is purely topical. In his preface Mr. Medley states that the few existing text books on constitutional history are unsatisfactory, because they subordinate the development of an institution to the details of general or political history—to details concerning changes of dynasty and deeds of particular men. We do not believe that this statement is correct; it does not apply, for example, to the well-known text-book of Bishop Stubbs. Moreover, it is impossible completely to separate the growth of English institutions from the political details. The constitutional history of England was profoundly influenced by the nature of such events as the Anglo-Saxon invasions and the Norman conquest, and by the personality of certain kings, and it is impossible to comprehend the constitutional changes of some reigns without a careful study of the political movements of the time.

The other characteristic feature of the book is its topical arrangement. Its eleven chapters deal with distinct subjects; there is a consecutive history of each institution from the earliest to the present time. Most text-books err in having too many divisions into periods; the student's attention is distracted from the growth of a particular institution when he is hurried from one topic to another in a narrowly limited period. The remedy for this evil is to make each period cover several centuries. But Mr. Medley goes too far in this direction; his work is not divided into periods. Chronological subdivisions of some sort are necessary because the institutions of an age (for example, the Anglo-Saxon period) are correlated; an understanding of one institution postulates some knowledge of certain others, and their interrelation differs in different periods. Moreover, in some chapters of this book it is assumed that the student knows something concerning institutions which are examined in detail in a later chapter. For example, on page 15 the Witan is referred to, but it is defined and explained on page 102, in chapter iii. Thus the work will be more useful to persons who have already studied the whole subject than to beginners.

The chief excellence of this text-book is that it brings together many of the results of recent research—the conclusions of such writers as Seebohm, Vinogradoff, Maitland, and Round. It contains much fresh material in a compact form. But we fear that the desire to compress many facts into a small space often leads to obscurity. Mr. Medley's brief exposition of some subjects (for example, uses and strict settlements, in chapter i.) is unintelligible to the average educated reader and quite incomprehensible to the average college youth; and his references to collateral reading are too meagre to enable students to supplement his statements.

Nicolai Ivanovich Lobachevsky. By A. Vasiliev. Translated from the Russian by George Bruce Halsted. Austin, Tex.: The Neomon, 2407 Guadalupe Street. 1894.

A GOOD many interesting particulars about the non-Euclidean geometry and its author can by searching be picked out of this ill-arranged pamphlet. Lobatchevsky was born in 1793 in the town of Makarieff, some forty miles above Nizhni-Novgorod, on the Volga. His father was a peasant (Ch. Rumelin says an architect, forgetting, apparently, that a *Bauer* is not usually a *Baumeister*). He was entered at the newly founded University of Kazan in 1807. He must have impressed his parents with his genius. Prof. Vasilieff tells us he was a passionate boy. His behavior was always reputed bad. Later there was some terrible storm of passion which left him for the rest of his life taciturn and stern. He took the degree of master in 1811. After graduation he entered the Observatory and studied practical astronomy under J. J. Littrow (whose name Dr. Halsted spells Lettrov). In 1814 he was made adjunct professor of mathematics, and in 1816 full professor. But the University of Kazan was hardly a regular university, and he had to teach astronomy also; and for some time physics and chemistry besides. "One of these lectures," the only one on chemistry, Prof. Vasilieff tells us, "was accompanied by experiments." In 1825 Lobatchevsky added to his duties those of librarian to the University, and so continued for ten years. It was about this time that one Magnetsky was rector of the University, and the dire administration of this religious fanatic and barbarous foe of science is evidently a familiar tradition of horror in Kazan to this day. In 1827 Lobatchevsky himself was elected to the rectorship, which he held for nineteen years. In 1846 he retired from the University, and went to live in a village which belonged to him, Belovoliskaya Slobodka, on the Volga, near the mouth of the Kama River. He was now appointed curator, or assistant curator, of the district of Kazan. He interested himself vastly in agriculture, becoming the president of his branch of the Imperial Economical Society, and taking the medal of the Imperial Agricultural Society for his improvements in the treatment of wools. Finally, he became blind, and in 1856 died.

Kazan was not the *milieu* for a man of genius, especially not for so profound a genius as that of Lobatchevsky, and he did little mathematical work beyond writing text-books. What little he did publish was received with derision and contempt. Who in Russia in 1834 could possibly see any sense in the contention of Lobatchevsky that it was one thing for a curved line to be continuous, and quite another for it to have definite tangents? The mathematicians of Western Europe did not become aware of the distinction until nearly 1880, when Weierstrass suggested that a line might be wavy, and these waves carry smaller waves, and those still smaller waves, and so on *ad infinitum*. Down to this day there is but one text-book on the differential calculus (that of Camille Jordan, in its second edition) which introduces the distinction. All of Lobatchevsky's writings are marked by the same high strung logic, and there is nothing a semi-civilized people respects less than extremely accurate thought.

Lobatchevsky made some experimental researches in terrestrial physics. He was also one of the first carefully to observe and call attention to the solar corona. It is a marvellous instance of man's stupendous power of shutting his eyes to plain facts that this phenomenon, one of the most startling, not to say thrilling, in nature, was not enough noticed to receive a name until 1851. But it was observed by Lobatchevsky at the eclipse of 1842, July 8,* and described with care. He also gave a theory of it which, as reported by Vasilieff and translated by Dr. Halsted, seems pretty puerile.

According to the evidence adduced by Prof. Vasilieff, it appears that both the reputed authors of the non-Euclidean geometry, Lobatchevsky and Bolyai, probably derived their first knowledge of it indirectly from Gauss. A letter is extant, written in 1799 by Gauss to Bolyai's father, which contains a very plain hint of the thing. And Vasilieff now informs us that Lobatchevsky's teacher of mathematics was J. M. C. Bartels, who had been the teacher and devoted friend of Gauss, from 1785 to 1807, when Bartels went to Kazan. It is next to impossible that, coming then into very intimate relations with Lobatchevsky, he should not have mentioned Gauss's studies in the non-Euclidean geometry. However, Gauss was not the first discoverer. Lambert in 1785, in a printed book, spoke plainly of a space where the angles of a triangle should sum up to less than 180 degrees, and mentions one of its most remarkable properties. Gauss most likely knew of this. Nor was Lambert first in the field, for the Jesuit Saccheri had discovered the thing before 1734.

Letters and Sketches from the New Hebrides. By Maggie W. Paton (Mrs. Dr. John G. Paton of Aniwa). Edited by Rev. Jas. Paton. A. C. Armstrong & Son. 1895. Illustrated. Pp. xiii, 382, 8vo.

IT would be hard to find a more truthful or graphic picture of missionary life than is contained in these letters. Writing only for her family circle, Mrs. Paton was not hampered, as the missionary generally is, by the necessity of interesting and stimulating the contributors to her support. Nothing is out of proportion, therefore, in her picture. She describes the failures as carefully as the successes, the comforts no less than the hardships of her life. And, what is perhaps rare in missionary literature, the somewhat sombre narrative is not infrequently enlivened by humorous touches. In an account of the manner in which the natives dressed for church, for instance, she says: "One man, I remember, came prancing in, looking so delighted with himself in a snow-white vest—absolutely nothing else! Another came stalking majestically, with a woman's skirt pinned round his throat and the tips of his fingers appearing at the bottom of it." All this she bore with praiseworthy self-control until her husband's whispered words, "Shouldn't we be grateful to God to see them all coming out to church *so nicely dressed*," sent her into

*This is the local civil date, N. S. The O. S. date was June 26. Prof. Halsted gives it as July 26, bringing the month to N. S., but not the day. Poggendorff (Wörterbuch) makes it June 8, bringing the day to N. S., but not the month. A "Boston Almanac" for that year, referred to for the date, gives it as July 7, which can be defended as being the *Boston time* of the beginning of the eclipse. Herschell's 'Outlines' also gives it as July 7, being the Greenwich *astronomical* date of the greater part of the eclipse. Such is the treatment minor dates receive. No other books were referred to. Not one was right.

"prolonged convulsions." During one of her frequent illnesses he acted as cook, and she gives his recipe for making water gruel: "Equal parts of meal, sugar, and water (a cupful of each for one dose); boil all together till there is a smell of singeing, whereby you know it is sufficiently cooked!" The most interesting and valuable passages are the sketches of the life of the natives, in which she characteristically brings out the weakness as well as the strength of their religious impressions. Very vivid, too, are her descriptions of the hurricanes and earthquakes—in one day there were ten shocks—to which the New Hebrides Islands are subject. We have grave doubts, however, of the wisdom of printing letters intended only for the narrow circle of the writer's family. The privacy of life is almost certain to be rudely invaded, the most sacred feelings to be needlessly exposed to the public gaze—as is in a measure true of this book. There are some merely trivial passages in which no one but those immediately concerned can have any interest; and there are others (most pathetic and powerfully written, no doubt) descriptive of scenes from which all but the nearest should be shut out.

The book is very attractive in its appearance, and contains several interesting pictures of natives and landscape in the islands, including some reproductions of sketches by the author.

Selections from the Correspondence of Thomas Barclay, formerly British Consul General at New York. Edited by George Lockhart Rives. Harper & Bros.

THE correspondence printed in this volume has a high historical value. Thomas Barclay was a native of New York, of Scotch descent. The Robert Barclay who wrote the 'Apology' for the Quakers was of his family, and had induced a brother, the immediate ancestor of Thomas, to emigrate to America. A son of the emigrant took orders and labored in Albany and among the Indians. He was succeeded by his son, the father of the writer of these letters. Thomas was born in 1753, entered King's College in 1768, married a De Lancey, and remained loyal during the Revolution, serving in the Loyal American Regiment for seven years. At the peace he went to Nova Scotia with a large number of loyalists, where he resided until appointed by the King a commissioner to determine the true River St. Croix on the northeastern boundary. His services in that negotiation led to his becoming H. B. M. Consul-General at New York, an office he held until the war of 1812 interrupted all relations between Great Britain and the United States. In that war he was the agent for the British prisoners in the hands of the Americans, and at the return of peace was the English commissioner to determine the Northeast boundary. He died in 1830.

The bare mention of these various commissions is sufficient to indicate the estimation in which Barclay's ability and services were held by the British ministry, and in no case was their confidence abused. This in itself is high praise of his judgment and diplomatic qualities, for it was a period of great and increasing friction between the United States and England. The Revolution left many questions undetermined: the treatment of loyalists, the payment of debts due to the British, the surrender of the posts, compensation for slaves, and boundaries. These, and the claims of England as to impressing seamen, were sufficient to maintain a strained relation between the two countries, out of which war eventually came. It is difficult to appreciate the intensity of feeling shown on these questions, and for the first time the British side is temperately and intelligently stated in Barclay's letters. Although the consul-general, he experienced difficulty in securing a fishing-boat at $300 a week to carry his despatches to the commander of the British ships in the harbor, the men asserting they "could never again return to New York." For a time the city was practically blockaded; and when a shot from an English vessel killed a man on board an American sloop, a mob collected, burned the British colors, and even proposed to ransack the consul's house, and detain him as a hostage till the English captain had been delivered up to be tried for murder. For a week Barclay was unable to leave his house. This was years before actual hostilities.

This outburst of popular feeling was the result of accumulated insults through impressments; yet the claims of the English merited attention. Whenever one of their war ships reached America, desertions would occur. To make good the losses, men were forcibly taken from American vessels, under the plea that they were subjects of the King. To guard against this abuse, certificates of citizenship, or protections, were issued, and even to some who had not been in the States a month. "Let the Scotch accent or Irish brogue be ever so strong, it is to have no weight where opposed to a certificate of citizenship." It was difficult to remain judicial when pressed by the unjustifiable acts of the British captains on the one hand, and the equally strong and indefensible acts on the part of the Americans. Barclay in this never overstepped the proper bounds, and the tone of his correspondence is admirable. He chided captains and even the British minister for extreme measures, and recognized the justice of the American claims in cases where the naval authorities were against him.

It would be too long a story to point out the many interesting and valuable points of the long official career covered in this correspondence. The personal and historical incidents are numerous. Hamilton is employed to defend a loyalist, and Barclay deemed him "the ablest counsel" in New York. When Hamilton fell in the duel, Barclay wrote: "I consider him even as a loss to his Majesty and our Government, from the prudence of his measures, his conciliatory disposition, his abhorrence of the French Revolution and all republican principles and doctrine, and his very great attachment to the British Government." The visit of Jerome Bonaparte to America is touched upon; Barclay strove to have him intercepted on his return voyage to France. Glimpses of Newport and New York life give a pleasant social background to the severer official duties, and the sharp contrast between life in Nova Scarcity (as Scotia was called) and the new States is developed in so uncomplaining a manner as to make us sympathize with the exiled loyalists, rather than with the now independent patriots.

The editing of these letters has been a labor of love on the part of Mr. Rives, but it demands more than a passing notice. The difficulties were great, as the references are often obscure and call for an intimate knowledge of state affairs and family connections. It is rarely that we have seen such a task so judiciously performed, and the balance of Barclay's mind is reflected in the notes of his editor. Mr. Rives's temperate treatment of disputed matters is a model for those who write political pamphlets in the guise of history.

A Philological Essay concerning the Pygmies of the Ancients. By Edward Tyson, M.D. 1699. Now edited, with an introduction treating of Pigmy races and fairy tales, by Bertram C. A. Windle. [Bibliothèque de Carabas. Vol. IX.] 8vo, pp. civ., 103. London: David Nutt. 1894.

LOVERS of quaint lore are under especial obligations to Prof. Windle for his reprint of Dr. Tyson's essay, and to the publishers for the very attractive form in which it appears. The original work, of which this was a part, was entitled '*Orang-Outang, sive Homo sylvestris:* or, the Anatomie of a Pygmie,' and is interesting as "the first attempt which had been made to deal with the anatomy of any of the anthropoid apes." After the scientific part of his subject has been treated, the author endeavors to prove the truth of the belief of the ancients in the existence of a race of pigmies, which was nearly universally doubted in his days. Only he held that the "little people" who, in Homer, fought with the cranes, and, in Ctesias, "do attend the King of India," were apes. This view he presents in the charming style characteristic of the best authors of his time, and with a scholarship shown in a wealth of quotations from classical and mediæval writers.

The introduction by the editor is a worthy accompaniment of the essay, both from the manner in which it is written and the knowledge of the general subject displayed. He treats first of the geographical distribution of the pigmy races according to our present information, dwelling particularly on the dwarfs of Central Africa. He seems to have overlooked the best description of this race, that given by Dr. F. Stuhlmann in his monumental work on the last expedition of Emin Pasha. An identification of these races with those described by the old writers is followed by an attempt to give some idea of the localities and dwellings of the little folk of story and legend, as the mounds, barrows, caves, rocks, trees, and water. The origin of this fairy mythology, Mr. Windle holds, at the close of his interesting review, is not to be explained wholly by a single fact, as, for instance, a dim memory of the mound-dwellers, as some have maintained. The idea, so widely diffused, of the existence of "little people" is of a most complex nature, though "the souls of the departed and the underground world which they inhabit are largely responsible for it."

SOME OF

HENRY HOLT & CO.'S

Recent English Text-Books.

Descriptive Educational Catalogue free on application to Messrs. Henry Holt & Co., 29 W. 23d St., New York.

PANCOAST'S INTRODUCTION TO ENGLISH LITERATURE.

Critical and Historical. 16mo. 475 pp. Teachers' price, $1 25.

The Nation: "The style is interesting, the conception broad and clear, the biographical details nicely subordinated to matters more important; . . . not even the dullest pupil can study it without feeling the historical and logical continuity of English Literature."

Prof. G. R. Carpenter of Columbia: "The best text-book of the sort in the field."

Prof. C. T. Winchester of Wesleyan Univ., Middletown, Conn.: "It combines brevity with interest as no similar manual has succeeded in doing. I propose to use it with a college class next year."

A. J. George, Newton (Mass.) High School: "The criticism is of the kind calculated to stimulate investigation rather than to supplant it. I am disposed to give the book a trial in some of my classes."

Miss M. G. Taylor, High School, Ann Arbor, Mich.: "I like the book exceedingly." (Introduced.)

LOUNSBURY'S HISTORY OF THE ENGLISH LANGUAGE.

New Edition from New Plates. Enlarged about one-third XIV+505 pp. 12mo. Teachers' price, $1.12.

Prof. A. V. Williams Jackson of Columbia: "I have used it regularly for nine years with my classes. This new edition I welcome heartily, and shall of course use it."

BRIGHT'S ANGLO-SAXON READER.

New Edition with Grammatical Introduction, VIII+ 385 pp. 12mo. Teachers' price $1.75.

Prof. Ewald Flugel of Leland Stanford, Jr. Univ.: "I am going to use as a text-book Bright's Reader, the best book of its kind by far."

TEN BRINK'S FIVE LECTURES ON SHAKESPEARE.

Translated by Miss Julia Franklin. 244 pp., 12mo, gilt top. Teachers' price $1.

The Outlook: "The book of a man who speaks from a full knowledge, both intellectual and sympathetic, of his subject, and who has mastered that material in its spiritual aspects. . . . No single volume on the great dramatist is, in our judgment, superior in value to this modest, but extremely able work."

ENGLISH READINGS.

FORD. THE BROKEN HEART. (SCOLLARD.) Bds., *40c., clo., *70c.

C. H. DITSON & Co., N. Y. J. E. DITSON & Co, Phila.

Seasonable Books.

With the Wild Flowers.

By E. M. HARDINGE. 16mo, cloth, illustrated. $1.00.

This delightful little book carries the reader through the whole season with the wild flowers, as they make their appearance. It is written with imagination, humor, and the quality of thoroughly interesting and entertaining the reader without sacrificing either accuracy or detail.

The Amateur Aquarist.

By MARK SAMUEL. 16mo, cloth, illustrated. $1.00.

An American book indispensable to every aquarium owner. It contains Complete Instructions for making a Self-sustaining Aquarium, requiring Change of Water but Once a Year, and tells How, When, and Where to find suitable water plants and fishes. It contains over Fifty new Illustrations from Life by which to identify specimens.

"The book is one of the necessaries of life to the youngster who either has or is dreaming about an aquarium."—*New York Herald.*

Amateur Photography.

A Practical Guide for the Beginner. By W. I. LINCOLN ADAMS, Editor of "The Photographic Instructor." Illustrated, paper, 50 cents; cloth, $1.00.

"It gives fully all the information that the beginner who is more than a button presser wants. The chapters on portraiture, flashlight work, and orthochromatic work are full of interest to the past master as well as the beginner. The tables in the appendix are well worth the study of amateur and professional."—*The Journalist.*

Critical Studies of Poetry.

The Nature and Elements of Poetry.

The first series of Lectures delivered, in 1891, on the Percy Turnbull Memorial Lectureship of Poetry at Johns Hopkins University. By EDMUND CLARENCE STEDMAN. With Frontispiece after Dürer, Topical Analysis, and Analytical Index. *Third Edition.* Crown 8vo, uniform with previous volumes, gilt top, $1.50; in fancy style, $1.50.

CONTENTS: Oracles Old and New; What Is Poetry? Creation and Self Expression; Melancholia; Beauty; Truth; Imagination; The Faculty Divine; Passion; Insight; Genius; Faith.

"A wholesome and refreshing wind blown from the clear cold heights of philosophy and art. The lectures have the practicality of modern thought, While they are the talk of a poet about poets, they are addressed to the great body of readers and students of English literature. To all liberal minds and hearts this volume will have a message of helpful guidance and encouragement."—*Boston Transcript.*

Victorian Poets.

By E. C. STEDMAN. With Topical Analysis in margin, and full Analytical Index. *Twenty-Fourth Edition.* Revised and extended, by a Supplementary Chapter, to the Fiftieth Year of the Period under Review. Crown 8vo, $2.25; half calf, $3.50.

"Mr. Stedman deserves the thanks of English scholars. He is faithful, studious, and discerning; of a sane and reasonable temper, and in the main a judicial one; his judgment is disciplined and exercised, and his decisions, even when we cannot agree with them, are based on intelligent grounds."—*The Saturday Review* (London).

Poets of America.

By E. C. STEDMAN. With full Notes in margin, and careful Analytical Index. *Thirteenth Edition.* 12mo, $2.25; half calf, $3.50.

CONTENTS: Early and Recent Conditions; Growth of the American School: William Cullen Bryant; John Greenleaf Whittier; Ralph Waldo Emerson; Henry Wadsworth Longfellow; Edgar Allan Poe; Oliver Wendell Holmes; James Russell Lowell; Walt Whitman; Bayard Taylor; The Outlook.

"No such thorough and conscientious study of the tendencies and qualities of our poetry has been attempted before, nor has any volume of purely literary criticism been written in this country upon so broad and noble a plan and with such ample power. . . . Mr. Stedman's work stands quite alone; it has had no predecessor, and it leaves room for no rival."—*New York Tribune.*

The Growth and Influence of Classical Greek Poetry.

The second series of Lectures, in 1892, on the Percy Turnbull Memorial Lectureship. By R. C. JEBB, Litt. D., LL.D., Regius Professor of Greek in the University of Cambridge, author of "Attic Orators," "Modern Greece," etc. Crown 8vo, gilt top, $1.50.

CONTENTS: The Distinctive Qualities of the Greek Race as expressed by Homer: Greek Epic Poetry; Greek Lyric Poetry; the Course of its Development; Pindar; The Attic Drama; The Permanent Power of Greek Poetry.

"Prof. Jebb so well combines all the powers requisite for the interpretation of Greek literature to the modern mind, that Johns Hopkins University was fortunate last year in securing from him this series of eight lectures."—*Literary World,* Boston.

"We know of no book upon the same subject and upon the same scale which is of equal excellence.—*London Times.*

Latin Poetry.

Lectures Delivered at Baltimore on the Percy Turnbull Memorial Foundation, by R. Y. TYRRELL, Professor in the University of Dublin. Crown 8vo, gilt top, $1.50.

CONTENTS: Introductory; Early Latin Poetry, especially the Drama; Lucretius and Epicureanism; Catullus and the Transition to the Augustan Age; Virgil; Horace; Satire, Persius and Juvenal; Poetry of the Decline.

"These chapters are delightful examples of literary analysis and criticism, including little biography or literary history. The writer asked not what were the works of each poet but what was his work; how he looked out on the world, and what was the world on which he looked; whether he had a message to state, and how far he succeeded in telling it. . . . The reader who may perhaps occasionally dissent from the conclusions, always finds himself stimulated and refreshed."—*Literary World,* Boston.

·NEW YORK·

The Nation.

NEW YORK, THURSDAY, APRIL 11, 1895.

The Week.

SENATOR HILL'S opposition to the income tax was long ago set down, by all not too bright and good for human nature's daily food, to the credit of his contract to beat the tariff bill at all hazards; and the Supreme Court's decision scarcely wins for him that great rank among jurists and pure-minded patriots which he is modestly claiming. He has nothing to say about the one salient fact relating to his connection with the decision, namely, that but for his intriguing opposition to the nominations of Messrs. Hornblower and Peckham to the Supreme bench, Monday's decision would almost certainly have been against the law *in toto*. When even Justice Gray, who wrote the last legal-tender decision practically ascribing unlimited powers to Congress, was found against the income tax, it is safe to say that no New York judge would have been for it. Hill's scheming fight against honest New York Democrats who had denounced him and his political crimes in proper terms thus leaves him responsible, more than any other man, for the failure of the court to overthrow the income tax root and branch.

Many of the sages of the Republican party have now indicated the course they will pursue on the tariff and currency questions in the next Congress and the next Presidential campaign. The net result of their wisdom seems to be that they will do nothing and say nothing to give offence to a single voter. Ex-Speaker Reed gave out an interview on March 16. All he would say was, that the next House was going to be a body of remarkable ability. Would it do anything with the tariff? Not a thing. Would it touch the currency? Dead silence. The interviewer should have been more discreet than to ask this question of a man who was not yet over his terrible experience in the House between the fires of the jeering Populists, the nagging Democrats, and the amazed sound-money Republicans. Col. Henderson admitted, the same day, that the silver question gave him some uneasiness, but defied those prophets who said his party would split on that issue. His idea was that keeping still hard enough would make irreconcilables get on together peacefully. Congressman Grosvenor spoke up for McKinley vs. Reed on March 19. He was for going in headlong for protection. Having won the election on that issue, why drop it when victorious? As to silver, let the country rest assured. Currency difficulties would be settled (way not mentioned) by the only party that had wisdom and patriotism enough to settle anything. McKinley startled the country for a day or two by a report that he was flatly out against free silver; but, as was generally expected, he denied later that he had said anything of the kind. Chairman Manley of the national committee went abroad on March 22, leaving behind him the exhortation to forget all about the silver question and turn in and elect a Republican President. All this reduces the Republican policy to bald opportunism, or, in vulgar phrase, waiting to see how the cat will jump.

Ex-Speaker and to-be-Speaker Reed is not so much disposed as he once was to sneer at economy in Government expenditures. He says, "It is sincerely to be hoped that any effort made by the next Congress to keep down the appropriations may have the support of public sentiment and popular forbearance." But how does he propose to keep them down? By asking the grabbers to please not to grab, the jobbers not to job, and the log-rollers not to log-roll. He remarks: "If each portion of this country should be reasonable in its demands, the total also would be reasonable." That's as clear as a sum in simple arithmetic, but who is to determine what is reasonable? who is to hit the unreasonable snouts a rap and make them back away from the trough? Mr. Reed does not say. Yet nothing can be more certain than that the hungry mob in the next Congress will trample on their nominal leaders, just as they did in the last Congress, unless some clear and resolute plan to hold them in check can be devised. With his great prestige and power as a Speaker, Mr. Reed will have a fine opportunity to make the next House an economical House—either by changes in the rules or in the organization, or by his personal control, or by extending party discipline to the appropriations. In this respect, and in directing currency legislation, he has his political marring or making in his own hands, and it will be interesting to see if he has in him the stuff of a true leader.

An amusing commentary upon the loud-sounding talk of New England filibusters about "American interests in Samoa" is found in the report just rendered by Mr. W. L. Chambers, United States land commissioner to Samoa. Mr. Chambers was one of three commissioners appointed by this country, Great Britain, and Germany, under the provisions of the Berlin Treaty, to adjust and settle claims by aliens to land in Samoa. The total number of claims filed before the commissioner was 3,942, of which 307 were American, and they aggregated 1,691,893 acres, while the islands contain but 950,000 acres. Only 8 per cent. of all the claims were confirmed, and the vast bulk of the acreage claimed by Americans was rejected "because of the manifestly inadequate consideration given for it, and because the titles were defective under several of the provisions of the treaty." About 21,000 acres were confirmed to Americans, and most of this land belongs to a corporation composed of San Francisco stockholders. Mr. Chambers heard of only nineteen bona-fide American subjects in the country, exclusive of officials, and he does not believe there are thirty Americans there all told, including those who claim citizenship through naturalization. As for Pago Pago Bay, the claims of the United States Government were examined and confirmed, but Mr. Chambers reports that they are of little value, since the bay is so small that not more than three or four ships can be anchored there in case the wind is blowing either into the mouth of the harbor or off shore. Altogether the revelations made by our land commissioner are sufficient to shut up the political highwaymen who are for our seizing territory in every part of the world—so far as Samoa is concerned; except that nothing makes any impression on people in such an intoxicated mental condition as Senator Frye's.

The *Tribune's* rebuke of this Senator for his filibuster's swagger about Cuba, and the *Independent's* denunciation of him as a buccaneer, have roused him to fresh fury. He will not take an "insult" from any nation on earth. If France or Great Britain takes him for a man who will meekly submit to an "aggression," or who would not pour out his dear blood for the Monroe Doctrine, they are very much mistaken. In fact, he is ready to seize, fortify, and hold "against the world" all the islands on the map, and "would reach out to take whatever, in our opinion, was, or might be, necessary to our future commercial supremacy." All this sounds like the wild mutterings of a man in a condition which is supposed to be unknown in prohibition Maine. Men who have stayed themselves too fondly with flagons defy "the world" in this fashion, see horrid things about to commit aggressions on them, and do as much "reaching out" as Senator Frye himself. The police, however, or the hospital, or an early grave usually gives their friends surcease of sorrow on their account. But no little thing like that will stop Frye—nothing less than the Senate chairmanship of the committee on foreign affairs, we are convinced, will soothe his pain.

The antics of the nineteen men who now constitute the republic of Hawaii are actually amusing in their audacity. When they declared martial law, they expressly stated that "the courts will remain in session and conduct ordinary business as usual," except as to the issue

of writs of habeas corpus. Yet hundreds of citizens were seized without warrant, imprisoned without arraignment, and tried for suspected treason before a military commission, being denied the right of trial by jury guaranteed by the Hawaiian Constitution. The situation is closely analogous to the famous Milligan case passed upon by the Supreme Court. Milligan was convicted of treasonable conspiracies by a military commission and sentenced to be hanged. But the Supreme Court intervened, and decided that in a place where actual war did not exist, and where the civil courts were open, no man could be deprived of life or liberty by a military commission. That was not "due process of law." The Hawaiian nineteen seem to have heard of this decision, and so have gone to work and passed acts validating all that they have done. As executive they override the laws and Constitution, and then as Legislature the same precious nineteen pass acts declaring all they had done to have been "within the constitutional authority of the President," and that no suit for damages or prosecution for malfeasance in office can be brought against the Government or any officer thereof. This is a little the boldest trick that the usurpers have played yet. They admit that they have imprisoned and fined citizens without due process of law, but scornfully remind their victims that they are the legislative branch, as well as the executive and judicial, and that no redress can be had. But, of course, no one but a *Kahuna*, or a man whose chastity or liberty-loving principles are under grave suspicion, will see in such conduct anything but pure devotion to free institutions and religion.

The Platt faction in the Legislature have been taken aback by the discovery that Mayor Strong can absolutely veto any bill relating to this city which is not passed fifteen days before the adjournment. The Lexow police-reorganization bill is the one most exposed to this danger, for although the Legislature can pass such a measure over the mayor's veto, it would be very difficult to get the votes to pass it, and still more difficult to hold the Legislature together for that purpose if the usual time for adjournment had arrived. Various projects are mooted for getting around this provision of the Constitution, but fortunately we have courts to interpret and enforce that instrument. An opportunity for the exercise of their powers may perhaps be offered in the case of a bill relating to the city of Brooklyn which was returned "*Not* accepted" by the mayor of that city, but was stamped "Accepted" by a clerk at Albany and sent to the Governor, who thereupon signed it. Inasmuch as this bill lacks one of the constitutional requirements for the validity of a law, it must be considered waste paper, since otherwise all bills relating to cities might be treated in the same way, and thus this provision of the Constitution rendered nugatory.

Lieut.-Gov. Saxton confirms Mr. Depew's view that Platt's hold upon the Senate is so strong that there is little chance of any of the reform measures for this city becoming laws. Thus high Republican authorities admit that, so far as legislation is concerned, Tom Platt is the Republican party of the State of New York. The *Tribune*, another high authority, says that the secret of Platt's power is corruption, that he owns the Republican Senators body and soul because he has bought them with the money which he receives from corporations as the price of legislative immunity. This is the Republican situation as described by Republicans. There is no Mugwump malignity in the picture. Tom Platt tells the people of the State, and especially the people of this city, that they shall have no legislation except what he wishes to give them, and that he will give them only such as he is paid his price for. He will keep Tammany thugs upon our police-justice bench, will refuse to allow us to reform our police and school departments, and will even refuse to take away from the control of Tammany's boss the legal real-estate sales of the city. There is no subterfuge about him. He takes his position openly, and defies anybody and everybody to make him budge from it.

We are glad to see educators and clergymen moving against the bill to make military drill in the public schools compulsory. The Brooklyn Board of Education passed a resolution against it last week, requesting the Brooklyn members of the Assembly to oppose its passage. In defence of the bill it is urged that the physical benefits to be derived from regular military drill would be valuable. But physical training of various kinds is now voluntarily provided in most of the schools, and there is no more reason for prescribing the particular form than there is for compelling arithmetic to be taught in a certain way. Moreover, the bill is mandatory and would entail a great expense—much greater, certainly, if it were to be carried out thoroughly and generally, than the $100,000 named in it. But the gravest objection is that the bill springs from the same senseless and brutal war-spirit that is making wreck of so many public reputations, and continually threatening to embroil us with other nations. What its promoters really have in mind is, not physical exercise, not parades and displays, but the spreading in childish minds of the idea that fighting is the noblest occupation of man, that we are all the while exposed to insults and aggressions, and must be ready to whip all creation on call. Now, the boys have too much of this idea already. It is in their minds that the furibund patriotism of Lodge and Frye finds most admiration—in fact, so far as we have observed, its only admiration. What they need, together with their fellow-juveniles in the United States Senate, is, not military drill, but instruction in good manners, in the arts and love of peace, and in ambition to make the country decent and habitable instead of feared. We are confident that the humane and educated sentiment of the State needs only to be appealed to in order to show that it is solidly and strongly against compulsory military drill in the schools.

The report of the legislative committee which investigated the Brooklyn strike is of more value than such a report is apt to be. It presents a clear summary of the causes that led up to the strike, fixes the responsibility for the practical paralysis of government that followed, and expresses sound views on the question of arbitration. Mayor Schieren is rightly held blamable for "weakness and want of energy" during the early days of the strike, and is declared to have "shown a most marked lack of fitness and capacity for the office." The committee say that the situation became serious only "when the disorderly elements realized the nervelessness and want of energy of the municipal government," and they express the opinion that with an able, firm, and thoroughly energetic municipal administration there would never have been any necessity of calling upon the militia. This is the conclusion that was reached upon the newspaper reports by all competent judges at the time, and the comprehensive review of proceedings here given leaves no doubt upon the point. We do not recall an instance in this country where a city government so shamefully and inexcusably failed in the discharge of its first duty to keep the peace. The radical error in all the dealings of local authorities with strikes lies in the habit of waiting for the mob to get bold before acting.

In discussing remedies to prevent the recurrence of such strikes, the committee makes short work of the compulsory arbitration plan, "because it can conceive of no really effective way in which the employees can be subjected to the decrees of the board of arbitration in the same manner in which the company can, without a wholly unjustifiable assault upon the principle of individual liberty to contract." It is recommended that the existing board of arbitration be required, whether invited or not by either party, to investigate all strikes and report its conclusions as to which party is at fault; the theory being that this course will enlighten public opinion and thus do some good. As for the ten-hour law, doubt is expressed whether it is constitutional, or whether any such law can be passed that will obviate the necessity for an agreement on the subject between employers and employed. The most important feature of the report is a recommendation that the employees of corporations exercising public franchises should be made "quasi-public servants,"

and as such be guaranteed the right of notice and hearing before discharge, while on the other hand required to give proper notice before abandoning such service. To carry out this idea, the committee has drafted an act providing that all employees on railways must be licensed, that such licensed employees must give fifteen days' notice of an intention to leave, and that any employee violating this or other conditions shall forfeit his license, which would prevent a motorman who thus lost his license in Brooklyn from again getting a place in that capacity anywhere in the State. As to this and all other plans, however, the committee sensibly say in conclusion that they "do not believe that there is any radical legislative remedy," and that "the only ultimate cure must come naturally from better relations and a greater feeling of sympathy between employers and employed."

The Voorhees investigating committee is besought from all parts of New Jersey to come and show up local rottenness. All the big cities are morally sure that they have been robbed, several of the counties are certain that their officials have not got suddenly rich on air, while State contracts for printing, the summer encampments of the militia, the doings of the World's Fair commissioners, and the deposit of State money in favored banks are all alleged to be over-ripe for investigation. This cry of the misgoverned is not peculiar to New Jersey. Legislative investigation is coming to be looked upon more and more as the great defence of taxpayers against municipal robbery. The slight beginnings of such an inquiry in Philadelphia showed what might have been laid bare in that city if the bosses had not taken fright and broken the whole thing off short. In some Ohio counties taxpayers' leagues have been formed to guard against oppression and fraud at the hands of county officers. Some large investors holding Western real estate have decided to contest all municipal and county taxes levied on their property, on the ground that fraud attaches to most of them, and that it is a saving of money to fight them in the courts. The part that legislative inquests have come to play in the affairs of this city and State indicates the part they might play in many cities and States. In fact, if the framework of government were now to be framed *de novo*, to fit actual needs and demands, a permanent investigating committee, with full powers, ready to go on call to any part of the State, would be a most popular institution.

Gov. Holcomb of Nebraska, in an excellent message, week before last, vetoed the bill providing for the payment of a bounty from the State treasury on sugar manufactured from beets. He withheld his approval on the ground that the act was "in the nature of class legislation and of doubtful constitutionality," and pointed out that through it the rights of property of the many who do not raise beets were invaded, and their means taken to advance the welfare of those who are engaged in this business. The Governor went to the executive office from the Supreme bench, and he showed clearly that the great weight of judicial authority was against the constitutionality of the measure. On grounds of the public welfare he opposed the proposition as inaugurating a policy which would inevitably cause other industries to "knock at the door of each recurring Legislature, praying for the stimulus of a bounty to be taken from the pockets of the people," and he declared that such bounties could as reasonably be asked for irrigated land, alfalfa fields, manufacturing plants, and numerous other enterprises as for the raising of a single agricultural product. Unfortunately, the Governor's message was addressed to legislators who were not open to conviction, and the bill was passed again over his objections by more than the requisite three-fifths vote.

Civil-service reform makes progress not merely by such a great victory in an election as was won in Chicago on Tuesday week, but also by the steady acceptance of its principles as they apply to a host of important offices under the federal Government all over the country. For example, a new postmaster has just been appointed in Cincinnati. Under the spoils system as it prevailed fifteen years ago, such a change would have involved a "clean sweep" among the scores of employees, and the substitution of a Democrat for every Republican. But under the civil-service law the new incumbent finds that he can make appointments to only four places, all the rest being subject to competitive examination; and he says that he is "glad of it." So is the whole business community. As for the spoilsmen, they are fast losing their interest in changes among heads of offices, when almost every subordinate position comes under the merit system. In this way public sentiment in one city after another is coming to accept civil-service reform as the natural and proper thing.

English politics is at that stage of the game when the finest points of play count the most, and it looks as if the Conservatives were doing their full share of the blundering. Their relations to the Liberal-Unionists are strained almost to the breaking-point over the speakership question, and particularly over candidates for two vacant seats in the House. Mr. Courtney might have been chosen Speaker if his own party colleagues would have supported him. The Government offered him the nomination, but Mr. Chamberlain, who is now about as stiff a Tory as he is a socialist, would not have it, and forced the separate nomination of a Tory, Sir Matthew Ridley. Then there is the bye-election for Warwick and Leamington, a Liberal-Union seat, notwithstanding which the Tories persist in running a candidate, in violation, so it is asserted, of the compact of 1886. Mr. Balfour has tried to stop this, but the hot-headed young Tories will not listen to him, and say they are going to win every seat they can, Liberal-Unionist or not. If this spirit of triangular fighting should be carried into the next general election, the Conservatives would be dished. So they will be, even more surely, if Balfour succeeds in committing his party to bimetallism. His Mansion House speech on Wednesday week will have to be repudiated by the Tories, or else he will have to be repudiated. Sir William Harcourt is entirely ready to see the Philistines delivered into his hands on that question, and a campaign for the gold standard, a Radical budget, Welsh disestablishment, and Irish home rule could have only one result in Great Britain.

There has undoubtedly been a little more amity in the relations of France and Germany of late. Kaiser William's telegram of sympathy at the time of Carnot's assassination was well received in France, as was his pardon of the French officers caught suspiciously beyond the frontier. Artistic intercourse has been resumed to a certain extent: the French painters exhibited at Munich last year and will exhibit at Berlin this year, and Wagner and Sudermann win triumphs at Paris. These mollifying influences have had the effect of leading many people to ask what real reason there is why Germany and France might not be good neighbors, and "symposia" on the subject have been printed almost simultaneously in the two countries—in the *Rundschau* and in the *Mercure de France*. Like most affairs of the kind, these gathered views of professors and publicists abound in general expressions of benevolence, but show their entire futility and radical divergence as soon as details are touched upon. Thus, Prof. Dahn of Breslau says there is no reason in the world why Germany should not be on good terms with France, only the French must get over their foolish notions of "revanche." That has been the trouble all along. After Waterloo it was "*revanche* for Waterloo," and after Sadowa it was revenge for Sadowa, and after Sedan it was revenge for Sedan. If the French would only learn to pardon the Germans for having beaten them, all would be well. Not at all, says M. Spronck; the French have no ill feeling against the Germans. This talk of an inextinguishable race hatred is all nonsense; only, we cannot stand, no self-respecting people can stand, the violent annexation of a portion of our territory. There you are! Each country is willing and anxious to be neighborly, but there is really no living with the other.

THE INCOME-TAX DECISION.

THERE are several curious things about the income-tax decision. One is that, in the general opinion of the bar and the public, several decisions of the court had already settled that an income tax was not a direct tax but an excise, and by implication that Congress could, under the Constitution, call a tax anything it pleased, and that, therefore, the apportionment and uniformity restrictions of the Constitution had no particular value. So strongly was this opinion held that Mr. Carter did not think it necessary to say much about the law in his argument, but relied mainly on the sociological value of the tax, and the danger of interfering with the taxing prerogatives of Congress. Moreover, the public mind was deeply impressed with the idea that the court would on general grounds of policy never disapprove of any tax that Congress thought fit to enact, and that it rested with Congress to observe the constitutional limitations on its own powers. It now appears, however, that, in the opinion of six out of eight judges, the taxation of rents or income from land has, as a direct tax, not apportioned according to population, always been unconstitutional, and, more than this, that "in no previous decision of this court has this question been adjudicated to the contrary of this decision." So that the "stare decisis" bugbear goes at one fell swoop.

But now comes another anomaly. Of these six judges, two, Justices Shiras and Brown, held that a tax on rent or income of land was a direct tax, and therefore unconstitutional, but that a tax on income derived from any other source—labor, gains in trade, or interest on money invested in personalty—was not a direct tax, and as to these refused to find the law unconstitutional. As the court was equally divided on this matter, no opinion was written about it. But this is really a great misfortune, for there is nothing the public needs more than an account and explanation of this very distinction. If these gentlemen had said that Congress could make its own nomenclature for administrative purposes, and make a tax direct or indirect under the Constitution by merely giving it a name, our mouths would be closed. But they do not take this position. They say, as regards the rent of land, that it is the duty of the court to examine the nature of the income, and to see whether Congress has rightly named it or not, for purposes of taxation, and they found that Congress has here erred in its nomenclature. It would, therefore, be most interesting to hear from them why a tax on a salary, or on the interest on railroad bonds, or on money lent, is not a direct tax; what it is which enables Congress to follow up the man with a five-thousand-dollar salary and levy on him, while letting the ten-thousand-dollar land-income man go free. The silence of the court on this point may be technically proper, but it is, from a political point of view, damaging to the judges. Judges Brown and Shiras ought, for their own sakes, to seek some extra-judicial mode of letting light in on this mystery. It is causing much comment and much dissatisfaction and calling forth many uncomplimentary observations. The man who undertakes to show that a tax on income from any source is not a direct tax, has a very serious task before him, and cannot begin too soon.

The history of this tax, from its first appearance in Congress down to this moment, is one more very striking illustration of the folly of thinking or talking of taxation as a "science." The history of taxation from the earliest ages has been the history of the attempts of one class to make other classes pay the expenses, or an undue share of the expenses, of the Government. Aristocrats have always been trying to shift the taxes on to the people, and the people on to the aristocrats; the landed interest on to the commercial and the commercial on to the landed. There has not been a single instance of the coming together of a community to contrive a scheme of perfect fairness and equality for everybody. Every fiscal system the world has ever seen has been always in a state of convulsion through the efforts of some class of persons to prevent these taxes from being oppressive, or to make them unduly light. And no government has ever yet formally surrendered the claim of right to use taxation as a means of promoting or discouraging certain occupations, habits, tastes, and tendencies.

These notorious facts make our discussions of "scientific taxation" not exactly ludicrous, but extremely academic. Mankind is not ready, or half ready, for scientific taxation. Taxation in any particular case has to be judged by reference to the nature of the Government, the political habits of the people, and the relation of the different classes of which the community is composed to each other. No one can say whether any particular tax is good or bad till he knows who is to pay it and how it is to be collected. It may be said, *a priori*, that there is no civilized community less fit to-day for a direct income tax than the United States. It is a beautiful, scientific, Smithian tax, *in vacuo*. What it is in the very gross and palpable milieu in which we live, may be seen in the history of the tax which the Supreme Court passed on on Monday. It was concocted without notice by the highest legislature in the country, not so much to raise money as to punish certain people for being saving and successful and for holding odious views on currency. In the eagerness of its promoters to get it ready for purposes of persecution it was so loosely and hastily drawn as to be unworkable. When its constitutionality came to be examined by the Supreme Court, seven judges said one part of it was unconstitutional; six judges said another was unconstitutional; and they all divided evenly about the rest of it. So that if we said it had ended in national disgrace, we should not be far wrong.

CORPORATE METHODS.

THE references in the London *Economist* to the depreciation in the prices of securities owned in Great Britain, in which American bonds and shares are put in the same table with South American issues, leads naturally to a phase of the general subject that has had more than its due share of attention in England. We refer to the lack of confidence in our railway securities which the leading foreign financial periodicals are fond of attributing to fraud and mismanagement in the conduct of our railway companies.

It would be proper to challenge this oft-repeated statement of these London weeklies and ask how many railway bonds have been returned to us from this cause only. Foreign financial papers are often led astray in matters American. We know, for illustration, that all of them advised against the purchase of the recent issue of United States "coin" bonds. Scarcely a London paper spoke a favorable word; and yet the English investors, with an instinct more true than the fine-spun reasoning of their would-be advisers, subscribed for the amount of these coin bonds many times over, while the same bonds have since continued to advance in price in London. It seems difficult at times for the English financial writer to judge of financial and commercial matters in the United States.

We are far from wishing to say that fraud or dishonesty has not in some instances disgraced American corporate management, nor have we condoned such instances when made public. Yet two things may in fairness be said: first, that the majority of our corporations are well and honestly managed, according to the best judgment of the officers and directors, whose fault may be too great optimism as to business results; and, second, that what has been called mismanagement may in many cases be traced to the influence of our present critics, the Englishmen themselves. We need not go far to find illustrations. The present controversy in London over the affairs of the Grand Trunk Railway furnishes an example. That company has never been under American influence; its directors live in London and its officers have been wholly English; and yet the accountant reports that the Grand Trunk has systematically concealed its losses and overstated its income by carrying the deficits of its auxiliary roads as "loans" in its balance sheets—a trick supposed to be peculiarly American. It is also now shown that the Canadian Pacific, too, has in the past not stated its earnings correctly.

Even where no direct charge of unfairness need be made, it has in our history often happened that a particular transaction under condemnation arose as a result of a policy formed abroad. The affairs of the Louisville and Nashville road have for years provided examples. At times this company has found itself obliged to sell its bonds at very low prices in order to meet a pressing need for money—crises which were forced upon the company by the demands of English holders of the shares that the accounting should be construed so as to take from operating expenses or from branch-line losses every dollar which could by any stretch of interpretation be called a charge to capital. In this way dividends were alleged to have been earned and the money borrowed, until the lack of ready cash and the declining credit forced such sacrifices as we have just mentioned. The Louisville and Nashville is now, under American advice, charging all small improvements to current expenses, and is deducting some long-standing fictitious branch-line assets from surplus revenue; a policy begun not a moment too soon. If this company had gone on as before, and if, as a consequence, the shares had in time become worthless, whose would the fault have been? Very likely we should have heard a great deal of talk about "the lack of confidence in American methods" which such a disaster would have called from the London financial editors. The Atchison disclosures are fresh in the public mind, and public indignation is still directed against those who were immediately guilty. But, going back of these, who might claim to have inherited a policy from their predecessors, shall we say that the blame should lie altogether on American shoulders?

The wishes of those who have furnished a good part of the capital to build American railways have always had an influence, sometimes a preponderating influence, upon American management. The general demand of these foreign investors has always been for the payment of all possible returns, no matter what the future consequences might be. An income or preference bond, whose dividends are admittedly contingent upon success, will be drawn (as in the Reading case) so as to allow no earnings to be used for any other purpose, no matter how necessary. An example of this spirit is the remarks made by a shareholder at the Canadian Pacific meeting in Montreal last week. This gentleman moved that the operating expenses be reduced to 50 per cent. of the gross earnings, that all high officials be retained without salary, and that no stipend higher than $500 or $1,000 per year be paid to anybody. This same shareholder further suggested that half the stock be changed into 4 per cent. debenture shares which should then receive a dividend. Shareholders are not often as foolish in their remarks as this one, but those who are familiar with corporation affairs know that a dividend, no matter how obtained or at what cost to the future, is too often the only object aimed at; and that this is particularly true of foreign shareholders. If, under the stress engendered by such a policy, the directors should cause statements to be put out showing a fictitious prosperity, in order that the payment of dividends should appear to have been justified, we may, without pardoning their offence, say that the facts of the case furnish the explanation of their conduct. Of course, no American railway officer or director should allow himself to be put in such a false position, but the blame for the after results of such a policy should be divided with the foreign or domestic share or bondholder who insists upon the payment of interest or dividends in the face of commercial facts.

WELSH DISESTABLISHMENT.

The bill to disestablish the Anglican Church in Wales passed its second reading last week in the House of Commons by something more than the normal Liberal majority. This was a foregone conclusion. So is it that the bill will be thrown out incontinently by the Lords. More than one Conservative, when hard-pressed in the debate, fell back triumphantly upon "those in another chamber," who would see to it that the sacred cause, etc., no matter what the Commons might irreverently undertake. This new argument *a fortiori*—this taunting cry, "Well, you can't have it anyhow"—did not, however, serve to chill debate, which was warm and able on both sides. Though it is certain that the bill cannot become a law in this Parliament, its discussion brought out many characteristics of both religious and political life in Great Britain, and was far from being a mere beating of the air.

The argument for disestablishment was set forth by Mr. Asquith in a speech which Sir Michael Hicks-Beach, who followed him, was frank enough to call "an intellectual treat of no mean order." He began by showing that establishment in the strict sense of the term had been abandoned long ago in England. When heresy was a crime, and when a dissenter was exposed to every kind of civil and political disability, then there was an established church; but the moment the nation refused longer to support that kind of establishment, that moment it became a question only of expediency how much recognition should be given the church, and in what parts of the kingdom, by the law of the land. Now, here were the Welsh, by the test of segregation and language and tradition as separate a nationality as the Irish, demanding that what had been done for the Irish in 1869 should be done for them in 1895. That a great majority of the Welsh asked for this as an act of justice, there could be no doubt: thirty-one out of their thirty-four members of the House were there to speak to that point. The question was whether the law should continue to force three-quarters of the population of Wales to support an establishment to which they were hostile. It would be better for them, it would be better for the church, Mr. Asquith maintained, to grant their request.

The precedent of Irish disestablishment is a hard one for the Conservatives to get over. For the Irish bill even Lord Salisbury voted in 1869. The gloomy predictions made by the bishops then have distinctly failed of fulfilment. Ireland has not relapsed into heathenism, nor has the Anglican Church in Ireland vanished. On the contrary, it is stronger and richer than before disestablishment. One of the most effective retorts in the whole debate was the citation of the opinion of the Protestant Archbishop of Dublin, Lord Plunket, against his own brother. The latter, in a speech of old-fashioned and moving Irish eloquence, opposed the bill, but found it hard to explain why a measure which his brother, both as Bishop of Meath and Archbishop of Dublin, said had worked admirably for both people and church in Ireland, might not be expected to do the same in Wales. Lord Plunket affirmed that it was a peculiarly fortunate thing for religion that the church was not put in the position any longer of harrying Irish tenants for tithes at the same time the landlords were harrying them for rents.

The Conservative argument against the bill is made up of sentiment, of history, and of what we must call cant. For their sentimental attachment to the Established Church no one can blame them. Their fears that the next move will be against the establishment in England itself are not without justification. But the "entering-wedge" argument ought never to overbear considerations of present justice and political expediency. In history the Conservatives are mighty. The Welsh church is a national church, antedating the Reformation, and preserving an unbroken historical continuity. But if you say that the nation can do what it will with a national church, it instantly becomes, in Conservative hands, a private corporation. As one of the Liberal speakers humorously complained, when you talked of disestablishment, you were attacking a national church, but when you talked of disendowing, you were attacking private property. The canting argument was that venerable one, brought out again by Sir Edward Clarke amid the laughter of the House, that the establishment gave every Welshman the "right" to partake in the services of the church, and the privilege of "fairly and rightly claiming the consolations of the Christian religion." When one is able to point to many parishes where service is held only once a month, and where the audience is made up of the clerk, the sexton, the gamekeeper, and the servants of the squire—at the same time that dissenting

churches in the same place are full to the doors—the attachment of the Welsh to this precious "right" can be guessed. They would surrender it without a struggle, and take their chances as to the consolations of religion.

Mr. Asquith's appeal to the independence and dignity of the church itself was finely conceived. How intolerable was it for a spiritual organization to be tied hand and foot in matters both of ritual and doctrine by the interpretations of secular courts! In this sentiment he was certainly at one with the choicer spirits in the church itself, as they have seen, during the past half-century, the subtle and delicate things of ecclesiastical teaching and practice profanely handled by lawyers. How Dean Church groaned over this state of things, his lately published correspondence shows. As for political influence, vastly more might be wielded by the church if disestablished. One of the speakers gave a Radical definition of the union of church and state. It was the system under which we kick the parsons; if the union was broken up, the parsons might kick us. But it is vain to expect disestablishment as yet. The accredited spokesmen of the church will prove again their title to the love of the people by voting against the Welsh bill, just as they voted against the abolition of slavery and the slave-trade, against the reform of the penal code, the reform of Parliament, Catholic emancipation, the civil liberty of dissenters, and almost every other measure which marks the political and moral progress of the century.

THE AMERICAN HISTORICAL REVIEW.

VARIOUS calls have of late made themselves heard, in the *Nation* and elsewhere, for a literary review—a sort of *North American Review* regenerate. Less public attention has been given to an equally distinct and perhaps more pressing need—that of a review devoted to pure history. Nobody knows precisely what "pure history" is: it appears to be the history that one is most interested in, in contradistinction to the history in which some other person is interested. Nevertheless, it is clear that there is no vehicle which conveys articles on history, as distinguished from economics, sociology, and political science. The transactions of learned societies are principally confined to their own members; the two economic journals and three reviews of political science offer a bare foothold to historical articles directly bearing upon their sciences. The illustrated magazines and the existing reviews subordinate history to other interests.

To be sure, there is always the *English Historical Review*, which one would as soon think of criticising as of criticising London Bridge: solid, substantial, useful, and mortal heavy—but the only thing of the kind in the English language. It, however, has not much relation with this country, its historians or history. If it be true, as Mr. Bryce is reported to have said, that in the United States is to be found the most active historical centre in the English-speaking world, that centre needs a mouthpiece. Such an agency has now been provided. Inasmuch as the proposed historical review is intended to be national in its character, and has already the support of a large number of representative men in all parts of the Union and in Canada, it seems suitable to set forth the plans that have just been formed.

The idea of such a review has lain in many minds; and a few weeks ago the historical departments of two universities, Cornell and Harvard, conceived at the same time and independently the plan of suggesting coöperation to others interested in history. The two tentative schemes were merged in a call signed by men representing six universities to meet in New York and discuss the question. Of the fifty persons addressed only two answered discouragingly, and a conference of twenty-six persons met on Saturday, April 6, in a room which the Reform Club kindly placed at their disposal. Most of the seaboard universities were represented, from Dartmouth to Pennsylvania; though only one delegate appeared from a Western university, letters were received from many institutions as far west and south as Texas and California, explaining that distance, and not lack of interest, prevented attendance. If there be other matters on which Yale and Harvard disagree, they fraternize on things intellectual; the Cornell lion and the Princeton lamb harmonize on history. Plainly the brotherhood of the colleges is advancing. Their connection with the literary work of history also grows stronger. Bancroft, Prescott, Hildreth, Parkman, Henry Adams, and Rhodes wrote their histories without direct connection with the colleges. Tuttle, McMaster, Winsor, and Von Holst have written in the midst of college work. Both classes were, however, represented in the conference. Five eminent historical scholars not connected with colleges were present, and others gave in their adhesion by letter.

The first troublesome question which the conference faced under the energetic chairmanship of Prof. Sloane was the financing of a review. The absolutely essential expenses of printing even a quarterly are considerable. No such periodical can flourish without the supervision of an able man, well paid for whatever time he finds it necessary to spend upon the review; to attract the best writers, payment must be assured for reviews and for some at least of the articles; and the cost of business management is to be reckoned in. To meet these necessary expenses various plans were suggested; it was felt that to insure the proper conduct of the Review, whatever publisher undertook it would reasonably expect a guarantee during the early years of the enterprise, and the conference therefore voted to raise two thousand dollars a year for a term of three years as a guarantee fund. Such pledges were at once made in behalf of the historical friends of several universities as to make it reasonably certain that the necessary sum will be speedily subscribed.

The question of management was also difficult. It is of first importance to invest the Review with a national character; on the other hand, it is essential to have a compact management, and to hold one person responsible for the details. The plan adopted includes both these advantages. The conference voted to create a board of advisory editors, to be responsible to the guarantors; that board to arrange for publication and to select a managing editor. The persons chosen for the preliminary term of one year were Profs. George B. Adams of Yale, McMaster of Pennsylvania, Sloane of Princeton, Morse Stephens of Cornell, and Hart of Harvard. A Western member is to be added. The choice of the managing editor has not yet been made, but it is expected speedily to pitch upon an active young man, well versed in history and experienced in book-making.

Out of several names suggested for the new quarterly, that of the *American Historical Review* was selected. It is understood that the new review will include contributions on any interesting field of history, and that it will recognize articles on contemporaneous events and institutions as historical, if written from the historical standpoint. In addition to the leading articles, hitherto unpublished documents will appear, both American and foreign. Especial attention will be given to reviews prepared by experts, both signed and unsigned, and to notes of current news about historians and their works and the historical activities of the universities.

That the *Review* will have the aid of able contributors is certain from the promises of support already received; that the guarantee fund will speedily be established is likewise probable; but final success must depend on the character of the work done, and the interest of the public in supporting a general historical periodical.

THE STUDY OF HISTORY AT OXFORD.

UNDOUBTEDLY the study of mediæval and modern history "flourishes," in a sense, at Oxford. During the last quarter of a century there has grown up a large "Honour School" (or Department) of Modern History (including therein mediæval); there are a score or more of hard-working history tutors who direct the studies of the "history men" in the several colleges and lecture to all comers; and every year more than a hundred men take their bachelor's degree "in history," commonly after two years' study in this particular field. And the School has gained not only in numbers, but also in academic respect. It undoubtedly still attracts a good many men who believe, with some reason, that it is easier to get a fourth-class in history than the pass degree; its numbers are swollen by the crowd of men who are practically coerced by their colleges into reading for "an honor degree," when probably it would do them more good to read for a pass. But it also appeals to an increasingly large number of really able men, especially among those who look forward to a political career; and it is not uncommon for men who have already distinguished themselves in some other department to seek additional honors in this. A first-class in history still ranks hardly so high in university opinion as a first in "Literæ Humaniores"—a department which combines classics and philosophy and ancient history in a manner theoretically unsatisfactory, but practically productive of some good results. But it certainly stands as high as a first in any other "school." It is, in fact, generally understood to imply not only ability, but also the acquisition of a solid body of definite knowledge.

The credit for this result is certainly due in part to the excellent tutors who have given themselves without stint to the work of instruction and organization. But that other causes have contributed may be readily seen from a comparison with Cambridge. The Cambridge History School, it is generally allowed, is by no means in so prosperous a condition. The chief explanation must be found in the fortunate dominance in Oxford of the influence of Dr. Stubbs, working in harmony with certain tendencies already strongly de-

veloped in the University. Dr. Stubbs had, indeed, no aptitude for teaching large classes; his work was rather to provide the material upon which teachers might work. In 1870 appeared his volume of 'Select Charters and Other Illustrations of English Constitutional History'; in 1872 the School of Modern History began its independent existence, apart from Law; in 1874 appeared the first volume of Dr. Stubbs's 'Constitutional History.' Now, in the School of Literæ Humaniores, or "Greats," as it is expressively called—in which most of the history tutors had received their training—the work of students had long centred in the exact and even verbal mastery of prescribed classical texts. There was an unconscious desire for something of the same sort in the new historical teaching; and with one accord the tutors fell upon the 'Select Charters.' Ever since, while English constitutional history has constituted the most important portion of the work of the School, the backbone of the constitutional history has been the 'Select Charters'—though it comes no later than the reign of Edward I. The interleaved and underlined 'Charters' found a congenial place by the side of the interleaved and underlined 'Ethics.' The fears which had been entertained lest the brilliant "essay" should give its tone to the School could now slumber; history became as exact a study as old-fashioned classical scholarship could demand; and Oxford was content. The subsequent development of the School has continued to be marked by like characteristics. In foreign history "special subjects" are set before the more ambitious students to choose among, and in each there are prescribed texts; even in political philosophy there are prescribed authors.

Far be it from us to condemn the exact study of original documents: it is, indeed, the beginning of wisdom. Before we let a student talk at large about the significance of Magna Carta, we may very properly ask him to show that he has read it; and, as it chances, the grammatical sense of its clauses is a matter about which it is a good deal easier to be sure than about their practical effect. But it is a pity when the study of a certain set of documents, however carefully selected, is held to dispense the student from further inquiry. And this has unquestionably been the case at Oxford. Anxious to get good "classes" for their men for the sake of their college, knowing that an intelligent consideration of the prescribed texts will suffice for that purpose, and fearing that there may not be time for anything else, tutors have, as a rule, refrained from suggesting anything else. And, accordingly, every year students obtain the highest honors Oxford has to give who have never so much as seen the outsides of Domesday, or the Hundred Rolls, or the Statutes of the Realm, or Madox, or Rymer, or Dugdale, or Ducange.

But to understand the present position of historical studies in Oxford one other important factor must be noticed, and that is the tutorial system. During the last thirty or forty years the tutorial system—itself the outcome of reform and academic earnestness—has become an engine of extraordinary power and velocity. With higher requiremen s for the examinations, with acuter rivalry among the colleges for distinction in the examinations, there has been a constant tendency for the hard-driven tutor to lose the ardor of science in the practical needs of the schoolmaster. And, of course, to such a teacher a neatly rounded body of doctrine, respectable for the authorities it relied on, was a great convenience. Out of the three majestic volumes of Dr. Stubbs's 'Constitutional History'—in spite of the uncertain sound they gave on some matters of importance—was rapidly collected a comparatively simple set of facts and formulæ. To piece them out for more recent centuries, recourse was had to the material so easily accessible in Hallam and Erskine May; and the edifice was complete.

We have been insensibly led into these observations by turning over the pages of Mr. Medley's new 'Manual of English Constitutional History,' already briefly noticed in these columns. It is an excellent specimen of the present Oxford style of approaching history, both in its merits and in its weaknesses. It is stuffed full of facts well chosen and arranged; it is severely business-like—no rhetoric here! And he who, driven by the thirst for a "first," "gets it up," will have laid an excellent foundation. On the other hand, it approaches so nearly to being the Dictionary of Institutions—each taken separately and traced chronologically—which the author longs for, that the student who trusted to this alone would have no inkling of the actual working of the institutional machinery at any one period. For, while it is true that we cannot understand an institution without knowing its earlier and later history, it is equally true that we cannot understand it without knowing its relation to contemporary conditions. Still, the weaknesses of the volume are almost redeemed by the quite new interest which is shown in recent historical work outside tutorial lines. On several fundamental points Mr. Medley does what would hardly have been dreamed of a few years ago—gives a fair statement of opposing arguments, and attempts a judicial balance. It is significant that almost all the names of living scholars cited by him belong to men outside the tutorial circle. Perhaps a period is approaching of Reconstruction. Hitherto, however, the office of Oxford has been to hand on "the deposit of faith"; and we are not altogether without fear that even a reformed constitutional history may prove pliable to tutorial exigencies.

POLITICAL STAGNATION.

London, March 21, 1895.

There must be some incentive to the present extraordinary interest in the life of Napoleon, apart from the recent publication of memoirs relating to his times. Might we not suggest the longing of the human mind for something decided, for something dramatic, to consider and rest upon, in the present platitude of political and social affairs? There is no great hope now vividly before the civilized world; there is now no great personality from whom much appears to be expected; and there have been bitter disappointments and disillusionings. Few could now sing with the enthusiasm prevalent in the forties of the "good time coming." The preparations for war are greater than they ever were before. Cries for economy and retrenchment carry few with them. The great manufacturing centres of England, once the nursing-homes of Liberalism, are hotbeds of Conservatism. Affairs in Italy are a disappointment. Few now feel, as did Mr. Bradlaugh and others twenty-five years ago, that republicanism is at all imminent in these countries. Neither France nor Brazil is an encouragement to immediate change, however much we may feel assured that republicanism is the only principle upon which states can in the future safely rest.

Great economic principles, again, are questioned to a degree that they do not appear to have been a quarter of a century ago. Who could have believed, in the fervor of the free-trade agitation under Bright and Cobden, that protection fifty years thence would fetter commerce in some respects more firmly than ever—especially in the free colonies of the mother of free trade? We are compelled to the sad conclusion that it was self-interest and not principle that carried free trade—for since then in British communities no abstract economic principles appear sufficient to withstand the force of supposed self-interest. I know of scarcely anything more discouraging on this side of late years—anything more illustrative of the truth that life upon all points must be a perpetual contest, that humanity can never hope to rest on its oars and glide down the stream of time in happy unison regarding any great principle—than the establishment within the last few months of the Bimetallic League, a powerful organization, numbering among its vice-presidents and upon its executive council scores of members of Parliament, many of them most able and clear-sighted.

There is, however, no warrant for our taking a pessimistic view of human affairs. Men and women were, upon the whole, never freer and happier. But, being freer and happier, they are not generally progressing on the lines anticipated by ardent reformers. If there is more temperance than formerly, there are more intoxicants consumed, the interests concerned in their production and distribution are more powerful than ever. The publication of newspapers has vastly increased, yet a larger proportion than ever of those newspapers is devoted to sport and betting. Here, at least, judging by such newspapers, fifty are interested in a cricket-match in Australia for one really concerned regarding the atrocities perpetrated in Armenia—atrocities for which, by its support of the Power that commits them, this country is primarily responsible. There can be no more striking exemplification of the current political deadness than the calmness with which news of the events now proceeding under Turkish rule is received. The *Speaker* writes:

"When we look back to 1876, and recall the great uprising of public opinion in that year, and compare it with the lethargy which prevails to-day, we are filled with surprise. . . . The motive for it is just as great as it was in 1876. The same cruelties are going on, and they are going on now, as they went on then, because English statesmen and the English people have made it possible for the Turks to commit them."

The indefiniteness of the result of the last election here may have something to do with the present depression and apparent hopelessness. Parties have been so nearly balanced. Only such reforms have been carried as the Conservatives did not vehemently oppose. Mr. Balfour's or Mr. Chamberlain's utterances upon any subject affect more its ultimate acceptance or rejection than anything that can be said by Sir William Harcourt or Mr. Morley. The Conservatives exercise their influence principally through the Lords; but public opinion has not shown any disposition effectively to deal with the constitutional powers of the Lords. The ultimate effect of Liberal measures passed for Great Britain generally appears to be to turn the beneficiaries into Conservatives. The recent County Council elections are a remarkable illustration of this tendency.

Mr. Parnell's fall and the subsequent divisions in the Irish ranks have had a depressing effect. We miss Mr. Gladstone's strength and buoyancy and lofty breadth of view. The

Liberal leaders have set the pace rather by their more cautious than by their advanced and energetic adherents. The increase of the electorate, the congested condition of Parliamentary business, the power of the "interests," the labor question, have further tended to induce a feeling of helplessness and lassitude. Under a restricted franchise it appeared possible to reach the electors regarding any great question, concerning any great wrong. The task of rousing public opinion is now almost herculean. Formerly it was sufficient to win a few great centres. Now the electors must be followed into every hamlet and every local gathering—with the possibility that, after all is said, some local interest, some local whim, may prove more powerful in influencing votes than the finest principles best expounded. The defective constitution of Parliament for the despatch of business must before long make itself apparent to all: six hundred and seventy men, every one of them with the power of having his finger in every other's pie; three principal nations, aggregating thirty-eight millions, with different histories, different customs, different religions, different laws, generally legislated for by separate acts; the representatives of two lounging in the lobbies, smoking-rooms, libraries, and at the bars while the affairs of the third are being discussed, and then voting not according to knowledge, but in answer to party exigencies, personal friendships, or political and religious prejudices; a Parliament responsible for the life, liberty, and happiness of three hundred millions of the human race in India. "We are all members for India," complacently declares the secretary for that continent, in answer to an appeal that there should be some influential native representative on the Indian Council; yet when the affairs of India come up for discussion, these, her members, clear out and leave decisions on the most vital questions mainly to officials and ex-officials. There is an entire absence of proportion in the time and attention given to affairs. Parliament is becoming more and more paralyzed. The individual member is increasingly helpless. All this has a deadening and depressing effect on the public mind and conscience. Parliament may be in some respects ahead of other legislative assemblies in the world, but that is no reason for the neglect of reform where reform is necessary.

The "interests" are more powerful than ever—more upon the alert and better organized. We must recognize that with most men the chance of material loss or gain to them or their class or their descendants is a stronger impetus to political action than principle. Modern economic conditions have largely increased the profits derived from breweries and distilleries; the conversion of so many of them into limited-liability companies has extended the number of those sharing their profits. The prospect of disestablishment in Wales and Scotland brings the enemy very near the door of those interested in the maintenance of the vastly more important English establishment. The liquor interest and the Church are more than ever inclined to range themselves against the party of reform.

But if the selfishness of the classes tends to clog the wheels of progress and breed discouragement, no less so does the selfishness of the interests among the masses. It cannot be doubted that the withdrawal from the field of many able and once hopeful friends of progress after the next dissolution will be due to the difficulty of accepting principles now so largely in the ascendant regarding labor. Trade interests are, with too many, taking the place of considerations as to general interests. As I lately talked with one of the most enlightened and by disposition hopeful members from the north of England upon this subject, he deplored the decadence in public feeling. "Intelligent artisans of the best type, who used to be stanch supporters of Liberalism in the aggregate, are more and more shutting themselves off into the narrowness of trade and sectional affairs." This was, in truth, to have been expected. Reformers had no warrant for the belief that when the masses learned to read they would not at first prefer the sporting papers and *Police News* to the publications of the Society for the Diffusion of Useful Knowledge; that when they came into their heritage of power and influence they would be less likely than their superiors in education and refinement to use their position for their own immediate gain.

These considerations must not discourage us. They are, however, arguments against littleness in politics, against delusive expectations that anything great can be accomplished except through steady work, to which no part of the mind or conscience should be sacrificed; except through the people at large really being worthy of, really desiring, those changes desired for them. If the individual becomes of less and less account in the progress of the race, the occasions become fewer and fewer upon which there are calls to dash ourselves individually against the bars of circumstance. We are each bound to do our part—there are fewer and fewer occasions for complete sacrifice.

The fate and fortunes of Ireland partake in the general apparent stagnation. There are splits and differences where once appeared an unbroken phalanx. The force of individual, trade, and class interests is apparent there as well as here. The country is improving everywhere under recent and expected land reform. I cannot recollect the trading classes in Dublin ever being more generally prosperous, there being fewer unoccupied residences in the suburbs. The opinions of those are unchanged who, through the past twenty-five years, have taken a prominent part in the struggle for home rule. Some are growing old; others are being broken down. As yet young Ireland is not showing much disposition to throw itself into the contest. It appears more interested in amusement. All depends and should depend upon the Irish people at large. If they have not the vigor to compel efficient cohesion, to fill gaps in the ranks, to keep up supplies, no amount of eagerness and devotion on the part of a few can carry the movement to success. The British Liberals have redeemed their pledges. The British people are showing much the same apathy regarding the Irish as on other questions of general importance. It remains with the Irish people at home and abroad to dispel this apathy. The modern study of sociology tranquillizes if it cools. Causes and leaders are what their supporters make them.

Correspondence.

TRUST THE PEOPLE.

To the Editor of The Nation:

Sir: Until lately Chicago has been rather a doleful place for any man who believed in decent municipal government. The spoils system has flourished in a truly wonderful way from a time whereof the memory of man runneth not to the contrary, and it had become second nature to the average Chicagoan, on learning that a person had been appointed to a place in the city administration, not to inquire what his qualifications were, judged from ordinary business standpoints, but to wonder what primary the appointee had manipulated and for whom. A position like that of oil inspector, for instance, had always been determined, not by the applicant's knowledge of such sublunary matters as chemistry, etc., but by his "influence." Knowledge of political, not molecular, pull got the job. We had been brought up to believe that any man not a jabbering idiot could fill the position of sealer of weights and measures well enough; positions in the Health Department did not imply knowledge of medicine to any preëminent extent, and subordinate positions in the Law Department could be filled by any useful quasi-shyster who could be kept out of sight enough not to "hoodoo" his party. A sidewalk inspector ought, of course, to be able to see a hole in the ground, and a building inspector should, all things being equal, be able to see a difference between a brick and a handsaw; but it was no use in practical politics to put too fine a point on that sort of thing. With the help of the army and an occasional hanging jury, we managed to "grub" along.

The public had so patiently tolerated these abominations of misgovernment and incompetency that it seemed to be a fair inference that the public was satisfied. Of course, candidates of both parties made the usual profuse ante-election promises of a clean business administration, based on merit appointment alone—"catering to the better element," with the familiar post-election results. Administrations came and went, but the spoils system went on, seemingly for ever, until a few days ago, when the question was squarely submitted to the voters whether they wished municipal civil-service reform and decent government or not. The answer was overwhelmingly, "Yes." Fortunately the question was not complicated with "patriotism"; neither party undertook to twist the British lion's tail, and the American flag was not waved. To one familiar with American politics, such an omission seemed a little strange, but, so far as I am aware, it is strictly true. It was probably an oversight, however. Truly God moves in a mysterious way.

Reformers in Chicago had preached for many years to unwilling ears the advantages of civil-service reform, and some had become disheartened; but it is a satisfaction to an honest believer in democracy to feel that, after all, it is safe to trust to the good sense of the average American voter, when the issue is squarely brought before him. Ideas percolate slowly through his brain, but they do percolate. A simple but unfamiliar idea, when properly presented and reinforced by experience, requires about five years for a permanent lodgment in the popular mind; an idea like the tariff, when complicated by side issues like self-conceit (in the form of spurious patriotism) or fear (like the pauper-labor or the spurious-document dodge), requires about twice that time. Still, Lincoln was probably right in his reputed saying that it is impossible to fool all the people all the time.

E. L. M.

Chicago, April 4, 1895.

THE COLUMBUS ELECTION.

To the Editor of The Nation:

Sir: In your editorial note of April 4, commenting on the spring elections in Ohio, you say: "Monday's elections indicated the reac-

tion against the A. P. A. movement which was sure to occur. Columbus has been the chief seat of the propaganda in Ohio, and the Republicans this week paid the penalty of encouraging the craze."

This is hardly correct. Along with many other cities, Columbus has felt the effects of the moral upheaval in New York, and has had this winter a Taxpayers' League and a Good Government Club—both active, and of course non-partisan. At the primary elections, neither party nominated a candidate for mayor that was acceptable to the reformers, and the natural result was an independent candidate, a tried and trusty city official, who was fully and definitely pledged to all the desirable things. He succeeded in getting enough votes to defeat the Republican candidate, and to elect, not himself, but—the Democrat. It was a hotly contested campaign, on account of the nearly absolute power which the mayor will possess, and the bitterness naturally developed by a triangular fight; but the A. P. A. movement played a very insignificant part, for this time at least. JOSIAH RENICK SMITH.

COLUMBUS, O., April 6, 1895.

IN THE GUIANA FOREST.

TO THE EDITOR OF THE NATION:

SIR: I was rather amused at reading the concluding part of your notice of my 'In the Guiana Forest' in the *Nation* of February 21. As I did not write a book of travels, it was not necessary to state "when the author's wanderings took place," or on what particular rivers and creeks he had "journeyed." The subtitle states that the book contains "Studies of Nature," and I have yet to learn that maps and dates are absolutely needed to elucidate such "Studies." Then, again, your reviewer states that "the book must be regarded as a poem rather than as a sober contribution to natural history." Possibly it may be a poem, but I hope it is something more. It is the result of twenty-five years' observation of nature in Guiana, not of a few weeks' or months' scampering over the ground. As one who has studied nature in England before coming to the tropics, I may affirm that the South American forest is a revelation. If I am too enthusiastic and a dreamer, put this down as the result of environment.

Yours truly, J. RODWAY.

GEORGETOWN, BRITISH GUIANA, March 19, 1895.

[The above letter gives place and date. Our complaint was that the book noticed lacked those very elements of definiteness which are usually found in every "sober contribution to natural history," and which especially characterize Darwin's 'Journal of a Voyage.'—ED. NATION.]

POOR PAPER.

TO THE EDITOR OF THE NATION:

SIR: Is it not time, and may it not presently be too late, to protest against the *wretched paper* which is now made for almost every use? It is not simply that our books and periodicals are printed on paper which tears at the least strain, and turns brown under a slight exposure to the sun, but you can hardly put up a bundle in ordinary wrapping-paper but it shall crack and tear under your hand. Already the librarians are warning us that the books of this generation will not survive to the middle of the next century because of the wretchedness of the paper, and only by careful handling can we get through our weeklies and monthlies without tearing them. When competition among paper-makers or among publishers issues in such results, is it not an intolerable nuisance?—Respectfully yours, H. D. C.

EASTPORT, ME.

A GRAMMAR-DICTIONARY.

TO THE EDITOR OF THE NATION:

SIR: Graglia's Italian Dictionary, universally used fifty years ago, contains all the essentials of Italian grammar, the book itself being a small quarto. My own copy was published in Paris in 1834, but there are later editions. It is possible to read all the classics helped by it alone, and it would be an admirable model if dictionaries of other languages are in contemplation.—Yours very truly,

CAROLINE H. DALL.

WASHINGTON, April 4, 1895.

Notes.

HENRY M. STANLEY'S 'My Early Travels and Adventures'; Froude's 'English Seamen of the Sixteenth Century'; 'The Revolution of 1848,' by Imbert de Saint Amand; 'Comparative Religion,' by Prof. Allan Menzies; 'How the Republic is Governed,' by Noah Brooks; and a 'Laboratory Guide for the Dissection of the Cat,' are in the press of Charles Scribner's Sons.

Among the spring announcements of D. Appleton & Co. are a 'Handbook of Birds of Eastern North America,' by Frank M. Chapman; 'Familiar Flowers of Field and Garden,' by F. Schuyler Mathews; 'Actual Africa,' by Frank Vincent; 'A Story of Primitive Man,' by Edward Clodd; 'The Beginnings of Writing,' by W. J. Hoffman; 'The Art of Newspaper-Making,' by Charles A. Dana; 'The Female Offender,' by Prof. Lombroso; 'General Sheridan,' by Gen. Henry E. Davies; and 'An Aide-de-Camp of Napoleon' (Memoirs of the Baron de Ségur).

From G. P. Putnam's Sons will issue 'The Ancient Egyptian Doctrine of the Immortality of the Soul,' by Prof. A. Wiedemann; 'Yale Yarns,' by John S. Wood; and 'Doctor Izard,' by Anna Katharine Green.

Houghton, Mifflin & Co. will bring out 'Explorations in the Mississippi Basin,' by Justin Winsor, and 'Critical Sketches of Federal and Confederate Commanders,' by John C. Ropes and others.

Miss Abby L. Alger's translation of Mme. Blanc's observations in the *Revue des Deux Mondes* on this country will be published by Roberts Bros., under the title, 'The Condition of Woman in the United States.'

Macmillan & Co. have well under way a new edition of Wordsworth in sixteen volumes of the "Eversley Series," edited by Prof. Knight of St. Andrews, and to embrace the poems and the prose works, Wordsworth's letters and his sister's, and her journals.

Ginn & Co. announce for August a 'First Book in Political Economy,' for the use of schools and high schools, by Robert Ellis Thompson.

'Merrie England: A Plain Exposition of Socialism,' by Robert Blatchford of London, will be issued directly by the Commonwealth Co., New York.

Sixteen years ago Mrs. Salis Schwabe published in French her 'Reminiscences of Richard Cobden.' The work is now to appear in English, with the imprint of T. Fisher Unwin.

The third centenary of the death of Tasso will be celebrated in Italy with especial honors on the 25th of the present month. Many publications are announced for this occasion, among which are some of exceptional importance. The 'Vita,' long ago completed by Sig. Angelo Solerti, will be published by Loescher of Turin, in three octavo volumes. A critical edition of the 'Gerusalemme,' prepared under the direction of Sig. Solerti, with a wholly new commentary and a newly established text, will be brought out in a double edition, one *de luxe* and one popular, by Barbèra at Florence. And, lastly, the third volume of the *opere minori* of the poet, in the edition which has been begun by Zanichelli of Bologna, will make its appearance. This will be edited by Prof. Carducci, and will contain Tasso's plays.

Mr. Percy Pinkerton has had in mind the general reader rather than the scholar in preparing the volume entitled 'Matteo Bandello: Twelve Stories, selected and done into English with a Memoir of the Author' (London: John C. Nimmo). The heavy paper, the handsome typography, the olive-green binding are all appeals to the æsthetic rather than the learned eye. The literary workmanship also is of the same order. The pleasant, diffuse, vague, and unprecise memoir is unhappily of a piece with much modern English writing—*belletristisch*, the Germans contemptuously call it. The translation does not attempt to render the Italian closely or exactly, yet is in the main easy and readable. Where so small a number of stories must be selected from so many (twelve from two hundred and fourteen), there will necessarily be opportunity for difference of opinion on this point. We ourselves, for example, should certainly have included the gracious tale of Anselmo Salimbeni and Angelica Montanini (*Novelle*, i., 49), in preference to several given by Mr. Pinkerton. There is, however, but one indispensable story in the collection—the immortal one of Romeo and Juliet (*Novelle*, ii., 9)—and this we find here. Perhaps then, since the complete version of Bandello's tales, made by Mr. John Payne for the Villon Society, is far too rare and too expensive to be generally accessible, Mr. Pinkerton's volume may serve a useful purpose in introducing English readers to the manner of a writer who interested Shakspere, and who, despite his frequent grossness, had unusual art in so telling his stories that the plots should not be mere intrigues, nor the characters mere psychological scrap-bags.

Both parts of "King Henry IV." with "King Richard II.," in the delectable Dent-Macmillan pocket edition, have reached us; and the latter firm sends us also a new uniform edition of Rudyard Kipling's 'Prose Tales,' in six volumes, including 'The Naulahka,' in which the late Wolcott Balestier collaborated. 'The Light That Failed' makes another volume, while the remaining four consist of several tales. The typography is fair and open, and a blue-cloth cover, freely gilt, commends itself in point of taste.

We need only mention the appearance of the 'Statesman's Yearbook' for 1895 (Macmillan), whose years, numbering thirty-two, sufficiently speak for it. The list of non-official publications concerning this country has been pretty well purged, but there are still some titles that could be spared to make way for Schouler's 'History of the United States,' the only continuous history of the Republic up to the civil war (and that limit will presently be

overcome). And Mr. James F. Rhodes deserves to have his first initial supplied in the line which designates his important work on the Republic in the second half of the present century.

The forty-second volume of the 'Dictionary of National Biography' (Macmillan) ends with Owen, leaving perhaps a few names under the letter O to be carried over to the next volume. It is remarkably rich in names connected with this country, and two of the most interesting articles in the whole volume are those by Leslie Stephen on Laurence Oliphant and Robert Owen, the philanthropist. The Welsh socialist is summed up by Mr. Stephen as "one of those intolerable bores who are the salt of the earth." Further: "His son says that he was so like Brougham in person that he might have been taken for him; but, with a vanity as great as Brougham's, he had what Brougham unfortunately wanted—the power of making even his vanity subsidiary to his principles." The sketch of Robert Dale Owen is brief, and from another hand; it unjustly charges upon his legislation securing independent rights of property to married women a share in producing "the reprehensible laxity of Indiana legislation on divorce." Oglethorpe, the founder of Georgia; John Oldham, a New England worthy; Andrew Oliver, the Tory Lieutenant-Governor of Massachusetts, with Thomas Oliver, who built "Elmwood," the future home of Lowell; and the Fenian John Boyle O'Reilly, are other American personages of distinction. The naturalist Richard Owen is treated rigidly, with small allowances for his narrownesses.

Under the sounding title 'The Building of a Nation' (New York: The Henry T. Thomas Co.), Mr. Henry Gannett presents a miscellaneous collection of maps, diagrams, figures, and comparisons, bearing upon our political, financial, and industrial history. Those who have occasion to use a compend of this kind will probably prefer to take their statistics plain, as they find them in such manuals as the '*Tribune* Almanac,' rather than in the menstruum here provided; especially as Mr. Gannett's figures are now nearly five years behind the times, being for the most part derived from the discredited census of 1890. We quote with surprise the author's judgment upon our pension payments, of which he says: "Regarded purely as an investment, without considering its sentimental aspect, this money has been wisely spent."

From Thomas Y. Crowell & Co. we have 'Hull-House Maps and Papers,' by residents of a social settlement of that name in Chicago. Taking Mr. Booth's great work upon the poor of London as a standard, we are unable to attach any scientific value to this crude mass of materials. In spite of the benevolent motives impelling the authors of these papers, we fear that they may be doing more harm by persuading the poor among whom they labor that they are the victims of social oppression than they can do good by their lectures and clubs. The settlement appears to have been active in procuring the passage of the law in restraint of the right to labor, recently declared unconstitutional by the Illinois courts, and to be thoroughly imbued with the sentiment that in questions of wages no bread is better than half a loaf. While it may be necessary to prevent by law the overworking of children, it is certainly unjust to deprive them of their means of support without supplying some resource in its place. To charge those who accept lower wages "in order to buy comforts for an invalid child, or to add to the earnings of an aged father," with "crime" against their fellow-workers, indicates rather inadequate preparation on the part of the social guide.

From Brentano's comes a useful and curious little publication, 'Nos Artistes: Portraits et Biographes' (Paris: Librairie de l'Annuaire Universel). A page is allotted in alphabetical sequence to each actor or singer in theatre, opera, or concert, a portrait vignette being followed by a brief history of his or her career. The higher stage comes first, and then the cafés-concerts, circuses, and divers other shows. Less than a dozen biographies are grouped without portraits, but some forty of the profession declined to furnish the necessary particulars concerning themselves and be included in the gallery. At the end are some convenient lists of officers of the Dramatic Mutual Relief Association and the Playwrights' Association, of the danseuses of the National Academy of Music, the associates of the Comédie-Française, the wearers of the decoration of the Legion of Honor, etc., etc. New Yorkers will here meet Calvé, Melba, Eames, Van Zandt, the Reszkés, Nilsson, Sibyl Sanderson, the Coquelins, Réjane, etc. The American singers and actresses are not a few. The women in general boldly give the year and often the exact date of their birth, but some are silent as to that and as to their origin. One begins abruptly by telling of her début at the café-concert. Mme. Crosnier (1820), Mme. Laurent (1825), Mme. Brohan (1833) are among the veterans of the stage, active or retired. The address of each personage is given, and commonly the name of the photographer of the portrait reproduced.

Speaking of the elder Coquelin, who has just been sued by the Comédie-Française, from which he has retired, he was allowed his share of the *fonds sociaux* which the Comédie challenged his title to, for breach of contract. But his right to act at pleasure elsewhere in his retirement was denied by the court, which relied on "l'article 85 du décret de Moscou," which forbids every "sociétaire retraité," under a penalty, to play in any Paris theatre without the permission of the minister of fine arts. This was not abrogated by the decree of 1864.

The *Citizen*, published monthly in Philadelphia by the American Society for the Extension of University Teaching, has now reached its second number. It is significantly in line with the large number and variety of journals lately sprung into existence for the sake of promoting "good government," as well as with the socialistic aspiration and movement of the day, while yet keeping its eye mainly on the diffusion of culture among the masses. As such it is entitled to every one's sympathy, and to support according to one's faith in the efficacy of the machinery or the attainability of the end in view.

A recent visit to the mountain republic of Andorra is described in the *Scottish Geographical Magazine* for March. The travellers were obliged to ride from Ax, the terminus of the French railway, mule-paths being still the only means of communication between the six parishes of which it is composed and the outside world. The people, with few exceptions, are poor, and, though cultivating carefully all the available arable land, live mainly on the produce of their flocks and herds. Wealth, however, is apparently within their grasp, for the republic is "rich in iron and lead." They refuse to have these natural resources developed for fear that it would lead to absorption by France. They prefer their independence with poverty to riches and subjection. Commander Keane, in an account of the lower Zambesi, emphasizes the importance to Great Britain of this waterway, in connection with the lakes, into the heart of Africa.

An encouraging account of the progress and prospects of the British Central Africa Protectorate is given by the commissioner, Mr. H. H. Johnston, in the March *Geographical Journal*. The disordered condition of the country in 1891 is briefly described, together with the manner in which the raiding tribes were subdued and the slave-trade suppressed. Among the results of peace are the building of roads for wheeled traffic, a regular postal service between the different settlements, and the construction of a telegraph line. Courts of justice have been established, and the once hostile Yaos are being turned into excellent policemen. The natives, freed from the fear of the slave-hunters, travel hundreds of miles in order to work in the plantations or to settle in the neighborhood of the stations. In one district their number has increased from one thousand to ten thousand since 1891. The cultivation of wheat, sugar-cane, and tobacco has been successfully introduced, and there are now over five million coffee-trees in the Shire Highlands, the greater part being derived from a plant sent from Edinburgh about sixteen years ago. The trade of the country has risen from $100,000 to more than half a million. Mr. H. Yule Oldham's lucid statement in the *Journal* of his theory of a pre-Columban discovery of America by the Portuguese in 1447, based on a map of Andrea Bianco, is not convincing, and the almost unanimous verdict of the experts is "Not proven." Capt. H. Bower gives an interesting account of his adventurous trip to Chinese Turkistan, in the course of which he was shown an underground city made by tunnelling the high banks of a river. In it were found "some sheets of birch bark covered with writing in a Sanskritic character, and held together by two boards." These, fortunately, he bought, as they are believed to be among "the most ancient Asiatic manuscripts in existence." What their subject is he neglects to mention.

Games are, we presume, still employed as a memoriter exercise in history, literature, and language, and that they are still manufactured is shown by "The Table Game" of Hélène J. Roth, designed "to familiarize pupils with the names of everything that is placed on the [French] dining-room table," and by F. S. Zoller's "Das Deutsche Litteratur-Spiel"—both published by W. R. Jenkins.

—The second number of the *Sun*, the new Japanese magazine, comes from Tokyo, with twelve pages in English and over two hundred in Japanese, with an abundance of woodcut and half-tone illustrations and a rich freight of timely and able articles. Prof. Tsubouchi furnishes a thoughtful paper, marked by great erudition, upon the influence of the war upon literature. He shows that the outbursts of literary activity and the great books which usually follow a great war are indirect and collateral, rather than direct and immediate, results of vast military activity. In discussing the great commercial war of Asia, Prof. Iida warns his countrymen against the dangers which beset them on the conclusion of peace. It has been easy enough, he argues, to beat China at arms; but it will not be at all easy to excel the Chinese in trade, for the Chinaman is naturally and by long practice a thorough business man, while the Japanese are not, being mere tyros. After the war fever is over, there is danger that China will com-

pletely conquer Japan commercially. Prof. Kumé, whose paper is a literary gem, discusses the relations between the caste system and ideal manhood. In Old Japan there were two general classes, *kun-shi*, or scholars, and *shojin*, men of low degree. These terms are, however, only relative. It is because the Japanese have already partially broken the old caste system, throwing open nearly all social, educational, and political facilities and privileges, without regard to class, that Japan has beaten China in the war. He therefore urges that the relics of caste be allowed to fall into oblivion, that ideal manhood be cultivated, and that every soul, high and low, do something to make himself worthy of the name of man. His paper is not only a plea for democracy, but a pretty clear proof of how society is moving in "Everlasting Great Japan."

—In the interesting paper on literary men of the Meiji era (1868-1895+), we have a list of the names of 54 novel-writers, 75 poets in the Japanese, and 104 in the Chinese style, 61 essayists, and 23 newspaper *feuilletonistes*, whose works have won the greatest popularity. In the list of native authors who compose in the new or European style of poetry, we have 21 names, among whom we recognize several graduates of Cornell and other American universities. One lady writer, Mrs. Miyagi, writes what we might call an impressionist story of Japanese life, using a new kind of vernacular that bothers the orthodox native of Nippon as much as Couperus and his innovating confrères in Holland vex their fellow-Dutchmen. The names of eight Japanese who write habitually in English (the English portion of the magazine being furnished by them, and, we must say, in excellent form) are also given. In the list of popular books written during 1894 we find that almost all of the two or three score concern themselves with the fact or fiction of the war now in progress. Connected with the short paper, in English, on the study of political economy in Japan, we have a list of associations, publications, prevailing economic views, and a table of writers of the last and the present century, with their books and opinions classified, which gives an excellent bird's-eye view of the problem of economic thought in Japan. Other Japanese articles treat of biography, history, geography, fiction, fine arts, religion, politics, and divers other matters. Should the ability displayed in these two numbers of the *Sun* be maintained, Japan bids fair to be one of the literary rivals in the world's republic of letters. Hakubunkwan, Tokyo, is the publisher.

—'George Washington, Day by Day' (New York: Cycle Publishing Co.) has been compiled by Miss Elizabeth Bryant Johnston with the good intention of making the man better known. The method is that used in preparing a "literary calendar." For each day of the year three or four extracts from Washington's letters or diaries, or some experience dated or happening on that day, are given; and between each group of extracts is quoted some opinion of the man's life and character, taken from essayists and orators. The whole makes a quarto volume of more than 200 pages, and a few prints add an attractive feature. The matter, however, is often of the most trivial character, and the combination so haphazard as to give no sequence or suggestion of connection. Opening the book at February 25, we find the following entries: 1779, an extract from Thacher's 'Military Journal' descriptive of Washington; 1790, Washington's removal to a house on Broadway; 1795, nomination of Habersham to be Postmaster-General. This is neither biography nor history; and the reader will obtain a very confused idea of the man and of his thoughts or actions. Want of care is very apparent throughout. John Davison, an Indian trader, is made the "Half-King of the Mingoes." There was a half-king, but he was of the Senecas, and was called Thanacrishon. We do not recognize the *Marquis* de la Luzerne, or one Murilles, mentioned more than once. General "Heorth" is a bad typographical error, and "Secretary James Madison," recalled in 1796 from France, is a slip of a graver character. In refusing Howe's letter addressed to "G. Washington, Esq.," the General is made to say: "This letter is for a planter in Virginia"—a remark unsupported by any authority. Compared with Baker's 'Itinerary,' Miss Johnston's work leaves everything to be desired.

—The second volume of the 'Life and Correspondence of Rufus King' (Putnams) bears out the good impression made by the first. It is rich in new material, and the selection of letters shows care and discrimination. The abundance of matter is seen in the fact that only five years, 1794 to 1799, of King's career are covered in the 600 pages of this volume. The subjects treated are of high interest. The troubles of Jay's treaty and the expulsion of Blount from the Senate for treasonable intentions are of local value. As minister to Great Britain, King was called upon to deal with many questions: prizes taken by French and English; the "extraordinary facility in condemning" such captures exercised by the courts of both countries; problems of international law, such as whether fourpenny nails or osnaburgs were contraband of war; the impressment of seamen; the release of Lafayette and progress of Napoleon; and finally the rise of a black republic in Hayti and the schemes of Miranda, with a possibility of South American republics, and important effects to be exerted on the slave interests of the South and the commercial interests of the North. At all points King displayed tact and knowledge; and his treatment of questions which might lead to war is a model to be studied by the Jingo of to-day. The reader is impressed by the good understanding and cordial relations existing between the American minister and Lord Grenville—relations due in great part, as King frankly admitted, to Jay's conduct of his mission. Nothing could be in stronger contrast with the unfortunate X. Y. Z. affair going on at this very time in France, and which King describes.

—We wish we might have only praise for this work, but the hope of making it even better than it is leads to the noting of some faults. The reading of names shows carelessness. Helmsley is correctly printed on p. 200, but is "Hensley" on p. 249 and "Hemsley" on p. 314. Duverne de Praisle (387) is given Baisle (407), and in the original despatch it was as "Dunen" that he is said to have betrayed the Royalists in France. "Fæderal" is a very unusual form, and is probably intended for fœderal—in common use. "Lefayette" is plainly an error. Instead of repeating letters already found in this series (as Hamilton's), we wish the editor had included more of King's, making the set more distinctly his "Writings." Six of King's letters in the Wolcott and two in the Jay correspondence find no place in this volume. Nor have the Hamilton papers been thoroughly searched, as they contain the letters described by the editor as not to be found. Certain papers have not been collated with the manuscript, leading to misreadings and important omissions. Greene in Lodge is printed "Gunn" in King, and a similar difference makes *secure* in the one "prune" in the other. No less than four of the essays of Camillus in King's manuscript are in the Hamilton collection—a fact needed to make clear the editor's references to those essays. Letters are frequently printed out of their chronological order, and without apparent cause; while notes in brackets inserted in the body of a letter are extremely awkward. In a remarkable letter from Sedgwick (p. 193) it is stated that Beckley, made furious by his rejection as Clerk of the House of Representatives, published the "Reynolds" charges against Hamilton. If this be true, Monroe is in part exonerated from a very serious charge.

—Mr. Lecky, in his 'History of England,' says that "the majority of Irish titles are historically connected with memories not of honor, but of shame." Any reader who desires corroboration of this assertion, any person who wishes to understand the feelings with which the majority of Irishmen look back upon the Union of 1800, cannot do better than purchase Mr. Swift MacNeill's 'Titled Corruption: The Sordid Origin of Some Irish Peerages,' published in this country by the Putnams. Mr. MacNeill, for many years a member of Parliament, traces fifty Irish peerages to their origin. He makes himself responsible for the statement that "they are largely taken up haphazard, and are not cases of exceptional corruption, but are rather types of the character of the ordinary Irish peerage." They are altogether sickening recitals. The present holders of the titles should, of course, be judged by their own lives and characters, not by the doings of their ancestors. But certainly, so far as pride of blood and lineage is concerned, the humblest cottier of honest parentage has, if not more reason to be proud, at least less reason to be ashamed, than they. Mr. MacNeill would have recommended his case more to the general public if he were not so fond of phrases such as "immortality of infamy," "bloodthirsty Lord ——," "crime of the deepest turpitude," "high priest of corruption," and the like, which we find scattered through his pages. An index, at least of titles and proper names, would have made this little book more complete in itself.

—A few months ago Frau de Lagarde printed a short memoir of her husband, the late Professor Paul de Lagarde of Göttingen, for private circulation among his friends and pupils. In response to many requests, she has now published it substantially unchanged ('Paul de Lagarde: Erinnerungen aus seinem Leben.' Göttingen, 1894). The character of the book corresponds to the original intention of the author; it is not a biography, but, as the former title expressed it, "Recollections of his life, brought together for his friends." But the intimate and confidential disclosure of Lagarde's nature which is made in these pages will have hardly less worth for those who knew him only through his writings, especially as more than one aspect of his many-sided character and strong individuality is here brought to light which would hardly be divined from his works. Much of the value of these Recollections lies in the extracts from Lagarde's private correspondence, which have been made with skill and tact. The circle for which the memoir was written explains the fact also that Frau de Lagarde warmly defends her husband from the blame often cast upon him, that he was contentious and unjustly severe in his judgment of others. Se-

vere he often was, but never intentionally unjust; convinced, as he was, that truth and right were on his side, he could not but contend earnestly for them, but not from love of strife. His faults grew out of the best in his nature. More than in most men, his character was *one* throughout. The truth is, that Lagarde's heart was set on making the world over by far reaching reforms, social, political, educational, religious; but, as of old, the world would not. The many disappointments of his own career rankled in him with the poison of injustice; but the worst was the disappointment of the prophet to whom men give no heed. That he judged all the world harshly is natural enough.

—As is known to our readers, Lagarde's library, which he left to the Göttingen Gesellschaft der Wissenschaften, to establish a publication fund, was bought by the University of the City of New York. It is very rich in works bearing on the Greek versions of the Old Testament, and in certain branches of Semitic study, and will prove very valuable to workers in those lines in this country. At the opening of the library in New York, April 29, 1893, Prof. G. F. Moore of Andover delivered an address on Lagarde's life and writings, which was printed in the *University Quarterly*, July, 1893. In her memoir, Frau de Lagarde has printed the greater part of this address, dealing with Lagarde's work as an Oriental scholar and theologian, as well as with his German writings. The brief sketch gives some impression of the immense range of his interests and labors, and of the quality of his learning. As an appendix to the volume, are printed two characteristic communications of Lagarde, containing a project for the reorganization of the Royal Society of Sciences in Göttingen.

GARDINER'S HISTORY OF THE COMMONWEALTH.—I.

History of the Commonwealth and Protectorate. 1649-1660. By Samuel R. Gardiner, M.A. Vol. I., 1649-1651. Longmans, Green & Co. 1894.

The first volume of Mr. Gardiner's 'History of the Commonwealth and the Protectorate' suggests reflections about two very different men—Mr. Gardiner and Oliver Cromwell.

What is the position which we ought to assign to Mr. Gardiner among the historians of England? What, that is to say, are the limits and the character of his genius? The time appears to have come for answering these questions. Among the living historical writers of England Mr. Gardiner stands now admittedly the first; for the Bishop of Oxford, since he was raised to the episcopate, has ceased to write history. It is an open secret, if secret it can be called, that Mr. Gardiner, from sheer fidelity to the great object of his life—the production of an adequate history of the rule of the Stuarts in England—has declined the Regius professorship of history at Oxford, and has thereby renounced the opportunity of succeeding to Arnold, to Vaughan, to Goldwin Smith, to Stubbs, to Freeman, and to Froude, and of thus filling a post which has been occupied by a longer line of illustrious men than probably any other professional chair in England. His fitness, let it be added, to carry on this tradition of eminence is universally admitted, and his refusal to forsake for a moment the work of his life has been deplored by all Oxford, and by no one, we venture to say, more sincerely than by the eminent teacher who has been appointed to fill the vacant chair. That Mr. Gardiner's devotion to his self-imposed task will have its reward, we may well hope and expect. There is every prospect that he will bequeath to England a complete and an absolutely fair account of the Puritan movement from the accession of James I. to the Restoration. There remains to be told the history of not quite ten years. They are years of immense importance, and Mr. Gardiner will find new opportunities for the exercise of his indefatigable research and of his incomparable candor. He will add much to the knowledge of even the most learned of his readers. His labors will go far to fix the ultimate verdict to be pronounced on Cromwell and his work. One thing, however, Mr. Gardiner will hardly achieve: he will not materially change his own position among historians His future labors, as they certainly will not detract from his fame, can hardly add much to his high reputation. We may now, therefore, form an estimate of his powers and their limits.

The limitations to Mr. Gardiner's historical genius are marked. He is not endowed with any dramatic power. The half-century of which he narrates the events is more full of striking situations than any fifty years in the annals of England, yet it may be questioned whether a single dramatic scene can be found in any one of Mr. Gardiner's volumes. The single exception which may occur to the reader is just one of those exceptions which prove the rule. The twenty lines or so which narrate the tradition of Cromwell's midnight visit to the body of Charles the First are a striking picture of a memorable scene; but in this instance our author merely repeats an anecdote handed down from Pope to Spence, and, to say the plain truth, the sensible reflections which follow this rendering of a weird scene spoil its effect. It would have been well if the story told originally by Lord Southampton had concluded (as with almost any other writer than Mr. Gardiner it would have done) the third volume of the 'History of the Great Civil War.' In the 'History of the Commonwealth and Protectorate' the absence of all taste for effective rendering of striking events amounts to a serious defect. The taking of Drogheda, the battle of Dunbar, the battle of Worcester, the escape of Charles the Second, are all told to the reader—we can hardly say that they are narrated. The facts are placed before us, but it takes some reflection to understand what they mean, or to realize what was the condition of England when distracted by a violent religious and political revolution. No doubt the tendency of many historians is to be too dramatic. They forget that, even in revolutionary eras, the ordinary life of ordinary men preserves for the most part the even tenor of its way. Still, it is quite possible to fail in reproducing the actual excitement of an age filled with passion. Whoever reads Mr. Gardiner's account of Cromwell's Irish campaigns will undoubtedly obtain a fairer statement of the facts than from any other English writer, but the facts themselves are hardly intelligible unless you allow for the atmosphere of rage and sentiment which gave them their color. No one will ever understand great crises in human affairs who does not allow for the force of human passions; and violence, prejudice, injustice, and all the long list of vices begotten of excitement and anger, seem to be all but incomprehensible to our historian.

Combined with this deficiency in the appreciation of violent feeling, there is patent, at any rate in Mr. Gardiner's later writings, a minor fault which mars the effect of his narrative, and even, it may be suspected, occasionally vitiates his judgment. He looks at the events which he i studying rather in piecemeal than as a whole. There is a real danger of his becoming rather a chronicler than an historian. His 'History of the Great Civil War,' as also the first volume of his 'History of the Commonwealth,' forms a perfect *Annual Register* of the years with which his volumes deal; but a chronicle of events is not, and never can be, the same thing as a history. The object of an historian is not only to tell his readers what happened in a given period, but also to show how, and if possible why, events took the course they did. He ought, at any rate, to put transactions before us in their due proportion, and to show us what were the salient features of a remarkable era. Mr. Gardiner here falls short of his duty, and fails to exercise a power of clear and orderly narrative which he undoubtedly possesses.

On this matter it is possible to speak with confidence. Mr. Gardiner's 'History of the Thirty Years' War' constitutes a triumph of literary skill. We venture with some assurance to assert that there is no historical manual in the English language which contains a more interesting, a more succinct, and a more lucid narrative of a very complicated series of transactions; whoever masters Mr. Gardiner's pages has before him a complete plan, though, no doubt, only in outline, of the struggle which finally fixed the political relations of Protestantism and Catholicism. The extraordinary thing is, that the very points in which Mr. Gardiner excels in his short treatise on the Thirty Years' War, are the points in which he comparatively fails in his large history of the great Puritan movement. Throughout the whole of the little manual, consisting altogether of not more than 222 pages, intelligent readers must be constantly impressed with our author's absolute command of his subject. He surveys the Thirty Years' War as a whole; he never loses sight of its general character; he marks with unerring skill the crises in the contest. The causes of the events and their ultimate issues are always before his mind. No critic, however captious, could ever question, as regards the Thirty Years' War, either Mr. Gardiner's mastery of his topic or his genius for clear and orderly narrative; but as we read the pages of Mr. Gardiner's later volumes we feel as if he almost declined of set purpose to take a general view of his topic. Each event is narrated in its chronological order, but the bearing of one event upon another, the relative importance of different transactions, the causes and the results of the Puritan Revolution, though no doubt not absent from our teacher's mind, are certainly not forced by him upon the attention of students. He writes, indeed, almost like a man who does not know the end of the course of events which he is laboriously tracing out. Year by year he explores the transactions which chronologically come before him, but he writes of 1649 as if he still hardly knew what was going to happen in 1651, and in November, 1651, at which date Mr. Gardiner's last volume closes, our guide does not seem to have before his mind the approaching fall of the Commonwealth or the rise of the Protectorate.

No doubt, this defect is one which, like every deficiency of Mr. Gardiner's, borders upon a virtue. It is certainly not desirable that the mind of an historical inquirer should be diverted from intense attention to the period or even the year with which he is actually concerned by thoughts about the changes which the succeeding year will produce; and

there is no doubt that Mr. Gardiner's attitude as an historian is much influenced by the fact that he is as truly an inquirer as a narrator, and is devoting his great powers rather to research than to narrative. Investigation is, after all, a different thing from narration. The only thing which is the subject for legitimate regret is that a possibly too exclusive devotion to the discovery of what is unknown threatens to prevent Mr. Gardiner from taking his proper place among the masters in the art of historical narrative.

As we have said, however, there is not a fault in Mr. Gardiner's position as an historian which is not closely allied to some high merit. His determination to guide his readers step by step through each year of the Puritan Revolution is, we doubt not, due in great part to the perfectly sound conviction that you never can judge men fairly, especially in times of revolution, unless you keep steadily before your mind the precise date and circumstances of their actions. Words or acts, say of Cromwell's, bear a totally different complexion according to the date when they were uttered or took place. It is hardly an exaggeration to say that the Cromwell of 1647 or 1648 must be treated in some respects as a different man from the Cromwell of 1650 or 1651. In any case, it is certain, though this certainty is by ordinary writers always overlooked, that in 1648 he could no more foretell the events or the sentiment of 1651 than any one of us can in 1895 predict what will be the state of parties or of public opinion, say in England, in 1898. The narrow limits of human knowledge are sufficient of themselves to convict of falsehood half the alleged schemes of far-sighted policy or of elaborate intrigue which are laid to the credit or to the discredit of the great leaders of men, such as Cæsar, Cromwell, or Napoleon. The determination to stick close to facts, and to look at them in their undoubted chronological sequence, is not the cause, but certainly is the support, of Mr. Gardiner's great and peculiar merit—his unrivalled sense of historical justice.

One effect of Mr. Gardiner's judicial fairness is curious. No writer had ever less desire to convert men to his opinions. Mr. Gardiner is far too conscientious an historian to be infected with the vice of either partisanship or didacticism, yet no author has ever, we suspect, made a greater number of conversions. A fair-minded reader rises from the study of Mr. Gardiner's books not so much with changed opinions, but, what is rather a different thing, with changed views. He learns, for instance—and learns in a way which it is impossible to forget—that the attitude of different parties throughout the Civil War, no less than throughout the period which led to it, was perfectly natural. The attitude of James and Charles, of Laud and of Strafford, was as much the natural outcome of their training and position as the attitude of Pym or Hampden or of Fairfax or Cromwell. It is perfectly plain that neither all the virtues nor all the vices were to be found exclusively among Cavaliers or among Puritans. What is even more noteworthy, because it is constantly forgotten, is that during the Puritan Revolution the choice of sides was a matter of great difficulty which might well perplex the wisest and the fairest of men. A revolution of some kind was inevitable. The defect of the Stuarts was that they understood neither the characters of men nor the course of events; they might have guided a revolution which they tried without any great skill to withstand, but what was the exact change required by the time is a matter which even now is open to discussion, and certainly could hardly be decided by any statesman of the seventeenth century. In a vague way we can see that freedom was the cure for the political, and toleration the one remedy for the religious, evils of the age. But the one thing certain, at any rate from the outbreak of the Civil War, was that every change was full of possible danger. The triumph of Charles meant despotism; the triumph of the Presbyterians meant the tyranny of an ecclesiastical party with which the majority of Englishmen had no sympathy. The success of a few ardent Republicans very possibly involved at once despotism and anarchy. The rule of Cromwell led inevitably, though much against his will, to the supremacy of the army.

All the inherent difficulties of the situation are forced by Mr. Gardiner upon the attention of students, and the more these difficulties become apparent, the more tolerant students must become towards the leaders by whom an unprecedented crisis had to be faced. We learn by this means to sympathize not only with the greatest men of the time, but also with the men who played a considerable, though secondary, part on the stage of history. To take as two examples of this Hugh Peters and Fairfax. We soon become convinced by Mr. Gardiner that the Puritan preacher was a very different sort of man from the sour fanatic with which, absurdly enough, he has been identified, and Fairfax appears in his true colors as, next to Cromwell, the greatest of Puritan soldiers. He is just one of those men whose virtues are passed over by zealots or advocates, but are recognized, in calm language the effect of which is the greater for its calmness, in the judicial pages of Mr. Gardiner's history. The truth is, that he is at his best when dealing with men who, though noteworthy, are not quite the leading spirits of the time. Whether he can draw a satisfactory portrait of such a leader as Cromwell is perhaps open to doubt. The time for summing up the character of the Protector has not yet arrived. Mr. Gardiner has already done much, however, to facilitate a fair estimate of the Puritan hero. In our next article we shall attempt to point out the conclusions which Mr. Gardiner's History suggests with regard to Cromwell.

JOHN ADDINGTON SYMONDS.

John Addington Symonds: A Biography. By Horatio F. Brown. With portraits and other illustrations. 2 vols. Charles Scribner's Sons. 1895.

It is not easy to predict under what aspect the subject of this biography will especially interest future generations. To us, at the close of this century so curious of the study of character and so engrossed in theories of education, the story of this outwardly uneventful life is extremely interesting as a subject for psychological study, and as the most instructive example of a sort of culture which has no exact parallel in past ages.

Considered from without, the life of John Addington Symonds has nothing to distinguish it from many another devoted to literary pursuits. He was well—or at any rate much—educated; he was always in easy circumstances; he wrote many successful books under great but not unparalleled disadvantages due to ill health; he did what good his hand found to do; and he is at rest. But as soon as we lift the curtain of this outer life, we look upon a world agitated by volcanic storms of the most terrific character. It is as though one should break through the cold crust of the globe and peer into the molten, seething core of it. Symonds was the son of an eminent physician of Bristol, who lived on a footing of equality with the great scientists and scholars of his time. From him he inherited an acute and ever active intellect, and from his early-lost mother a distinctly neurotic temperament; a combination of the most dangerous sort. The working of his mind was preternaturally active and incessant, so that, from his very childhood, it was constantly outrunning his nerve-force, as if he were using more of the "gray matter" of the brain than nature could normally supply. Even while he was a mere schoolboy, that overwrought brain more than once stopped short in the midst of its work, like an overtaxed locomotive compelled to stand still and "make steam" for a further pull. For even "Tired Nature's sweet restorer, balmy sleep," was neither sweet, nor restorative, nor balmy to this precocious boy. Nightly terrors, somnambulism, or insomnia too often filled the hours when Nature should have been doing her work of restoration.

All this made him singular and morbidly sensitive; and these conditions, again, raised a barrier between him and most of the boys with whom he lived, which, of course, only made matters worse. These evils were fostered by the wealth of his family, by the admiration of his sisters for an only brother, and by the fact that his father, although disposed to do what he could for the motherless boy, was precluded by his own crowded life from giving him that constant personal attention which his mental even more than his physical condition required. At the age of nineteen we find him at Oxford in a circle of brilliant men, among whom the late Prof. Jowett was the most prominent figure, forcing his restless brain to keep pace with vigorous minds to which the severest intellectual gymnastics had long ceased to be a dangerous effort, like a young wrestler who brings his adolescent muscles into competition with the iron thews of the mature athlete. At twenty he won the Newdigate prize for English poetry; and he was graduated soon after in course with very high, though not the highest, honors. As might have been expected, the young man paid dearly for the killing pace which he had been keeping up. He had just won a fellowship at Magdalen, after failing to secure one at Queen's College, when he totally broke down and was sent for the third time to recruit his health by foreign travel.

Soon after this crisis, Symonds was married to his truly incomparable wife, to whom every reader who can read between the lines of this too discreet biography will easily discover that he owed, directly and indirectly, all the real happiness that ever came to him. From the psychological point of view this event marks the close of what in a certain sense we might call the unconscious period in Symonds's life. Although painfully addicted from his earliest days to introspection, he seems not to have discovered until now what he himself calls the "sophistication of his existence." His sufferings at this time are painful to read of. Religious doubts, the natural fruit of his education, wrung his very soul. Doubts but little less harrowing hung round all the ideals of his young ambition. He was ill, constantly weary, oppressed by a sense of utter failure, and yet not content to "sprawl," as he terms it, under the burden of his calamities, but pursued by a desire to distinguish himself in literature, and, at the same time, more and more conscious of those failings with which

his critics have taxed him not more severely than he taxed himself. In these circumstances Walt Whitman, the very type of whatever was most opposite to his Oxford training, seems to have helped him; and if, at a later time, he showed an undue appreciation of that remarkable author, the fact must be ascribed to his gratitude for this service. To Whitman, and, no doubt, to the wise counsels of his young wife, he owed the first distinct revelation that "nature is more than art, life more than culture," and therefore that duty well done—"drudgery" he still calls it—is the great panacea for all mental troubles to the sons of Eve.

We cannot further pursue a psychological inquiry which would carry us far beyond our limits. We only add that in proportion as definite endeavor made Symonds more the slave of duty, and in proportion as his nature was purified from the common taint of selfishness by his family relations and by the interest which he took in the people of Davos, where his weak lungs had fixed him, he became happier and less rebellious against his limitations. Let us not forget what they were. In the poorest health, and condemned by the best English doctors to an early death, he found his chief comfort in literary work; and while his tastes led him to a field of labor where accuracy is of prime importance, he, recognizing that importance in the fullest degree, was painfully aware of his inaccuracy, which was probably inevitable, and of which he was disposed to exaggerate the extent. He never forgot that he had been "plucked" at "smalls" because he could not accurately conjugate two simple Greek verbs. While he felt so keenly on this subject, his life as an invalid exiled for years from libraries and from contact with living scholars cut him off from all means of correcting this fundamental fault. Many of his works were written at a distance from all books of reference, often upon some hotel table far from that circumambient atmosphere of the study which does so much for the writer, and especially for one so open to external impressions as Symonds was. Yet, in spite of these and many more difficulties which most persons would regard as a sufficient excuse for absolute idleness, Symonds worked on, to the day of his death, with a patience, a courage, an enthusiasm such as might shame the most advantageously situated scholar.

When we turn from Symonds's inner life to consider that overwrought Oxford culture which was his bane, it may be objected that we have no right to judge of it from the effects on a nature so peculiarly sensitive. We answer that it is precisely in a nature where that particular culture worked unrestrained that we can hope to see its legitimate consequences. Symonds said it all when he spoke of his sophisticated existence. The very essence of this sort of culture, happily not the only one pursued in England, nor even at Oxford, is the sophistication of existence through the overstimulation of the æsthetic sense. Hyperæsthesia is the medical name for a morbidly active physical sensibility. There is no better word to express the morbid activity of the moral æsthetic sense superinduced by such overtraining. The contemplation of the beautiful in art is one of the noblest occupations of the mind; but the hair-splitting, minute, ceaseless analysis of Beauty, the concentration of all the mental powers on the vivisection of the butterfly Taste, the perpetual elevation of æsthetics above every other object of thought, can only produce monstrosities. "I am nothing if not cultivated," said Symonds of himself. Of others it might be said that they are nothing *except* cultivated. Whether it be the mannikin produced at Oxford or his analogue as we see him reared in the "brainy" circles of Boston, this tamer Frankenstein monster made of dead fragments from every literary churchyard is no product of nature. One would like to prick the artificial thing in order to discover whether it is stuffed with sawdust or with bran. By such busy spiders of "culture" all beauty, natural and artistic, is covered with cobwebs many deep. But if the great things of genius do not speak to our souls in their own naked beauty, how shall we ever discern them through all their dusty cobwebberies?

It was here that Whitman helped Symonds by the very fact of his robust brutality; and it is curious to note that Emerson, when, after some hesitation, he sent the 'Leaves of Grass' to Carlyle, appears to have found in it the very qualities which made it serviceable to Symonds. He spoke of the book as "a nondescript monster, which yet had terrible eyes and buffalo strength." It was those eyes and that buffalo strength that Symonds wanted. His was the weary, pampered stomach so well described by Horace as craving strong, coarse food—

> "perna magis ac magis illis
> Flagitat immorsus reflci, quin omnia malit
> Quæcumque immundis fervent allata popinis."

It is not surprising that Symonds should have looked upon Whitman as one who had rendered him the greatest service, the like of which no physician less coarse or more reticent could have rendered to such a patient. And we need seek no different explanation of the infinite good that came to Symonds from prolonged attrition with the simple folk of the Graubunden. Without the (to him) salutary shock of Whitman's brutalities, the milder vulgarities of their rather sordid peasant life might perhaps have disgusted without healing him. After he had once learned to disbelieve in Brummagem idols and papier-maché arks of the covenant he was ready for contact with the simplicities of unsophisticated existence. To come from the suffocating atmosphere of dilettantism into free contact with real lives was like passing from the close air of a ballroom into the pure coldness of a winter night. Perhaps he overdid the cure. It is remarkable, at least, how, after some years of the Davos life, Symonds turns away from the best products of the Oxford soil, and becomes intolerant even of Pater's "precious sentences."

The author of this biography has done his work well. He has mostly allowed Symonds to describe his inner life in his own words, only here and there interposing to correct, by the aid of some contemporaneous document, the mistakes of the writer's retrospection after many years and in altered circumstances. Nothing could exceed Mr. Brown's delicacy and discretion in dealing with those sacred things which some romantic readers will miss from this book. Nothing could equal the unfeigned humility of his consistent self-effacement, which ends by appearing excessive. And yet the work is perhaps somewhat too long. There is too much of certain kinds of illustration. One episode, the ten or more pages devoted to Jenny Lind, though interesting, is mere surplusage. The same impression might have been produced by a book considerably shorter than the two elegant and sumptuous volumes which the Scribners have given us. But it will not seem too long to the large circle of Symonds's enthusiastic admirers. For, with some enemies and some rather severe critics, Symonds had and deserved to have many firm and devoted friends. We cannot better close these remarks than with the last and, for once, true words of his epitaph written by one of them, his life-long friend Prof. Jowett; nor are there many that we should prefer to have engraved on our own sepulchre; "Ave carissime! Nemo te magis in corde amicos fovebat, nec in simplices et indoctos benevolentior erat."

RECENT LAW-BOOKS.

THE second edition of Prof. Wambaugh's 'Study of Cases' (Boston: Little, Brown & Co.) is really a new book. The aim of the volume is to teach students "the methods by which lawyers detect *dicta* and determine the pertinence and weight of reported cases"—in other words, the use of the tools of the trade. The volume accordingly consists of a mass of elementary lore about cases, most of which is not to be found elsewhere, followed by a number of cases, without head-notes, for study. Besides this, there is a good deal of information on subjects which those who use law-books every day ought to have at their fingers' ends, or at any rate within easy reach, such as the proper method of abbreviating citations, and the chronology of the English reigns and terms of court. English and American law is case law, and if any proof of it were needed, it is that all the work of codification—*i. e.*, legislation with a view to reducing the volume of necessary litigation—during the past forty years, has resulted only in increasing the volume of cases. Why it should be so—why, at the very birth of the common law, we should find that atmosphere of veneration for precedent of which no other existing system shows much trace; why it should have perpetuated itself through all the later centuries of advancing enlightenment and reform; why to-day, in the teeth of the judicial legislation of six centuries, it should still be the fundamental assumption of the common law that the law itself has never changed, so that the best judges always resent the imputation of assuming to innovate—these are hard questions, to which no answer is to be found in Mr. Wambaugh's book, nor, so far as we know, in any other. But of the fact there is no doubt.

The common-law view of the relation of cases to the law has never been better stated than by Blackstone:

> "The judgment, though pronounced or awarded by the judges, is not their determination on sentence, but the determination and sentence of *the law*. It is the conclusion that naturally and regularly follows from the premises of law and fact, which stands thus: Against him who hath rode over my corn, I may recover damages by law; but A. hath rode over my corn; therefore I may recover damages against A. If the major proposition be denied, this is a demurrer in law; if the minor, it is then an issue of fact; but if both be confessed (or determined) to be right, the conclusion or judgment of the court cannot but follow, which judgment or conclusion depends not, therefore, on the arbitrary caprice of the judge, but on the settled and invariable principles of justice."

This is the beginning of wisdom. But although the law always remains the same, the major premises of the syllogism which make it up may be altered, and, strange to say, even reversed, so that a great English judge has called the theory so beautifully described by Blackstone a "legal fiction." The whole matter will be found fully discussed in Mr. Wambaugh's chapter on the "Growth of Legal Doctrine." Whatever view we may take of it, one thing is certain, that it is the *crux* of English and American law. So long as it re-

mains such, so long will the study of cases retain its ancient and capital importance.

The law tends every day, as Sheridan said of Gibbon, to become, if not more luminous, certainly more voluminous. Where lawyers used to have digests and treatises, they now have not only these, swollen to appalling dimensions, but a cyclopædia as well; and therefore it will surprise no one to find published as a 'Handbook of the Law of Contracts' (St. Paul: West Publishing Co.), in the "Hornbook Series," a volume citing ten thousand cases and containing over nine hundred 8vo pages. And let no one suppose it to be anything but what it holds itself out to be. A Digest of the law of contracts would probably contain a hundred thousand cases, and for convenient use would have to be published in ten volumes. In the Brobdingnagian domain of modern legal literature, Mr. Clark's treatise may fairly be called a handbook, and, so far as we have been able to examine it, a very good one. It is founded on Anson and Leake, and is one of a series of elementary treatises on all the subjects of the law, the principal features of which are to be (1) a succinct statement of leading principles in heavy type; (2) a more extended commentary, bringing out the principles; (3) notes and authorities; (4) problems and hypothetical cases to test the student's knowledge. In the present book we have, as a result, a sort of codification of the law of contracts, consisting of some three hundred sections, with a gloss amply fortified by citations. It differs from such a book as Stephen's well-known 'Digest of Evidence' from the fact that the gloss is not in the form of illustrative cases, but resembles the comment of an ordinary text-book.

For the same series Mr. Norman Fetter has written a book on Equity, and Mr. Henry Campbell Black on Constitutional Law. Mr. Fetter has managed to sum up the whole of equity in 204 rules and 335 pages, notwithstanding that some four thousand cases are cited. Mr. Black has managed to do the same thing for American constitutional law in 201 rules and 550 pages, and has cited only 2,800 cases. With Mr. Black's manner of framing rules we must confess we are not wholly satisfied. For example, rule 129, relating to the "taking" of property under eminent domain, is as follows:

"In order to constitute a 'taking' of property under the power of eminent domain it is not necessary that the property should be destroyed, or that the owner should be entirely deprived or disseised of the estate. It is sufficient to entitle him to claim compensation if the work or improvement for which this power is exercised deprives him of the ordinary, necessary, and beneficial use of the property, or if its value, for such uses and purposes, is directly and necessarily diminished by the work in question. *But he is not entitled to claim damages in respect of any merely incidental, indirect, or consequential injuries which his property may sustain by reason of the work or construction, where the same is justified by a lawful exercise of the powers of government, and there is no actual appropriation of any property or right to which he has a legal claim.*"

One would think from this and the gloss which follows that there was some simple and easily stated rule, uniform throughout the United States, on the subject. But the fact is, that the old rule was that property must be "taken" in the physical sense, and this produced so much injustice that in a great number of American constitutions it is now expressly provided that the land-owner may recover for damage without taking through the exercise of the power of eminent domain. In such States the law is the exact reverse of what it is here stated to be in the last clause of the rule. Mr. Black's formula may do very well as a statement of the result of the Elevated Railroad decisions in this State, which wholly changed the law here by judicial legislation, and assimilated it to that of those States which have amended their constitutions. The subject is one which needs a short historical statement in order to enable the student to understand what it means.

Prof. John Westlake's 'Chapters on the Principles of International Law' (Cambridge, Eng.: University Press; New York: Macmillan) is, as he says, not a treatise on international law, but "an attempt to stimulate and assist reflection on its principles." It contains essays on the relation of international law to law in general; on the equality and independence of states; on territorial sovereignty; on war, and on other subjects. We have not space to criticise them in detail, but may call the attention of readers to the very clear statement by the author of the claims of international law to be regarded as real law, and not, as Austin insisted, a branch of morality. Austin, in his anxiety to separate positive law established over subjects by a sovereign from everything else, seems to have overlooked the fact that morality, if we use language in its ordinary sense, deals with the relations of individuals with one another, while international law is a body of rules affecting the dealings of sovereign states with one another—rules which are (and this is the main point) commonly regarded as enforceable, and actually from time to time enforced, by *states*.

'Commentaries on the Law of Persons and Personal Property, being an Introduction to the Study of Contracts,' by the late Prof. Theodore W. Dwight, edited by Edward F. Dwight (Boston: Little, Brown & Co.), comprises the topics included in the author's lectures at the Columbia Law School, "immediately preceding the course on contracts." It is designed principally for the use of students, but it is so condensed that we suspect that in delivery the text must have been much amplified. Prof. Dwight had indeed a far greater faculty for oral than for written exposition, and those who remember his energetic manner, and capacity for creating interest in a dry subject, will miss something in looking over these pages. The book is marked by conciseness and accuracy, and the editor has added such late decisions and statutes as the lapse of time since its completion has made necessary.

The second part of Prof. James B. Thayer's 'Cases on Constitutional Law' (Cambridge: Charles W. Sever) completes that important work (pp. 2,434), which is the most comprehensive and at the same time scientifically arranged collection on the subject in existence. This volume contains five chapters on the important topics of retroactive laws, the regulation of commerce, the impairment of contracts, money, and military law. The work is intended to be divided into two volumes. Careful directions to the binder will enable the possessor of the parts as published to have them thus suitably bound, and to avail himself of the excellent index, which almost atones for the omission of head-notes, exacted of the author by the demands of the Law School. We say author advisedly, for the skilful linking together of the developed steps of each topic, and the copious annotation from all sources, give this book the character of an original work. Although primarily intended for law students, members of the bar will find the book a great repository of information. We only wish that a copy of it could form a part of every editorial library in America, and that a careful study of the chapters entitled "Taxation," "The Regulation of Commerce," and "War" might be obligatory upon the economic or military writers for every newspaper.

Roman Life in Latin Prose and Verse. Selected and edited by Profs. H. T. Peck and R. Arrowsmith. American Book Co. 1894.

To the minds of many teachers of the classics there is a new danger threatening their particular branch of learning. There was a time when boys were made to read selections from the best ancient works in a thorough manner, as remarkable pieces of literary perfection deserving of close study not only for the style and method of their composition, but also for their contents and the beauties of their expression. This old-fashioned study, covering a number of authors, has been to a great extent abandoned in the endeavor to teach boys to read at sight in both Latin and Greek. In order to accomplish this highly desirable end, it is necessary to read large amounts of these languages, and the reading, it is thought, must be done in authors whose style and contents are comparatively simple. As a matter of fact, by far the most of the time given to classics at present in our schools is devoted to Xenophon's 'Anabasis' and 'Hellenica' and to Cæsar's 'Commentaries,' and many boys on coming to college can read almost anything that is written in the style of these books. But what follows? There are practically no books surviving and worth our reading whose fields of thought and whose subject-matter are so limited as we find the thoughts and matter in the above-mentioned works. Further, it is not very surprising that so few young men are inspired by the contents of these books to keep up the study of the classics beyond their schoolboy days; that they are repelled from the narrow and jejune fields which alone are opened to them in such writings. The fact is that this new system, carried to its present excess, leaves out altogether the element of the imagination, which is so strong in young boys, and which ought to be fostered and not starved out. It needs nourishment on *thoughts*, and it is extremely doubtful (to put it mildly) whether there are in the 'Anabasis' or the 'Commentaries' many thoughts worth remembering as such. But we shall be told that the boy can't understand the great thoughts of the greater classical writers. *Nugaris!* Who wants him to? As if anybody, least of all the learned, felt sure about the exact shade of meaning! The great thing to be aimed at is the enlargement of the mind and the extending of the point of view, whether in the study of the classics or of anything else. The power of reading at sight is all very well—invaluable, if you like, and a thing that must be had—but with it one needs something else. What a pity that a boy should get the idea that the Greeks and Romans were always fighting, or talking in indirect discourse, or staying three days in deserted villages! This sort of thing was avoided by the old and broader way of teaching. One of the ways of avoiding it was by the use of books of selections from a variety of authors and on a variety of topics, by such a book, for instance, as Felton's 'Greek Reader.' And it may be avoided in Latin teaching now by the use of a book like 'Roman Life in Latin Prose and Verse.'

This book, to be sure, is not intended for mere beginners in Latin, but how easy it would be to make a similar book for such; how many of them there used to be in the days "when

nobody had any Views." But this one might well be used to great advantage after a couple of years of thorough study of the rudiments. It need not, of course, be the only text-book; but what an opener of the mind it would be to a boy could he use it, say twice a week, alternating with the harmless necessary Cæsar! It begins with half-a-dozen pages of popular songs, charms, and nursery rhymes; then come some epitaphs, including the famous one of Scipio (not printed in cold type, but engraved, tomb and all, so that you can read it, as it were, from the stone itself); then selections from Ennius, Plautus, old man Cato's ideas on the treatment of slaves, Lucretius, Catullus (but in the next edition we want the poor little sparrow hopping all by himself down the darkling road by which no traveller, sparrow or man, ever returns); then there is Cæsar, but not with his armor on, we may be sure, for Profs. Peck and Arrowsmith are men of peace; then three dozen saws from Syrus, a letter from Cicero and some of his good talk about literature and about old age; then Virgil, Mæcenas, then, of course, Horace, a dozen pages of famous passages and his adventure with that bore—a story which nobody can meet for the hundredth time without stopping to read it through; then Ovid, Livy, Petronius's dinner party, Quintilian, Martial, Juvenal, Uncle Pliny on hydrophobia and doctors, and his nephew's letter about the stout old fellow's death during the eruption—also the story of the haunted house and the letter to Trajan about the Christians; next some extremely timely words from Gaius, the great professor of law, on the business capacity of women; next *graffiti*, including the little ass at the mill and the labyrinthus; then Hadrian to his soul, extracts from Tacitus, Suetonius, and Gellius, and in full the last will of the little pig. Finally come three Christian hymns, including part of the greatest of all, the 'Dies iræ.'

The great merit of a work like this is that, instead of repelling, it is sure to make the study of Latin more attractive to all young students, while stimulating the more ambitious among them to a desire to read more widely. Hearty thanks are due to the editors for the excellence of their selection of passages. These are drawn from the best sources and printed from the best texts. The short notes on the passages and the brief biographies of the writers are useful and correct. There are about fifty illustrations in the book, taken from ancient and modern works. Of these, the one called a "Roman Bride" must represent, we think, a Greek lady, and the picture of the so-called temple of Vesta were better omitted, not being Vesta's at all, and having nothing to do with the scene in Horace's satire. Something should have been said in the notes about metres, and the more difficult verses should be marked with the ictus. But these points are easily corrected in another edition, to which it is to be hoped that the book soon may come.

Comte, Mill, and Spencer: An Outline of Philosophy. By John Watson, LL.D. Macmillan & Co. 1895. Pp. 302.

THIS is a sketch of philosophy by a well-known idealist of the school of Green and Caird, based upon a criticism of the most famous of the experientialists of our century. What is the standing to-day, among those who devote themselves to philosophy, of Comte, Mill, and Spencer? To judge the pertinence and strength of this book, we must recall to mind what their reputation is, not among men who read half-a-dozen works of philosophy and then stop, but among those who are qualified to judge of them. Spencer's books are supposed to contain an immense number of acute and valuable ideas, belonging to the marches between positive science and a more comprehensive theory; but as for his philosophy as stated by himself in sixteen propositions, it is valued by very few, if by any, although there are two or three of its statements which are pretty widely accepted. Spencer's 'First Principles,' though it contains one idea, at least, which has been generally taken up, is as a whole the work of a man wholly ignorant of modern philosophy, and therefore entirely incompetent to address modern students. Spencer, as a philosopher, is much more respected by those who write against him than he is by the bulk of students, although their general attitude of thought is nearer to his. Mill's 'Logic,' a work going on to two generations of age—generations the most active in the direction of logic mother earth has looked upon—was written by a man without any reading in philosophy outside the nominalist school. It was animated by the purpose of overthrowing the ideas of Whewell, which are the ideas that, before Whewell and since, have prevailed among those physicists who have endeavored to take a philosophical view of the history of physics, and who have had no extreme bias towards any particular school of philosophy. Moreover, it is now generally recognized that Mill's exposition suffered from his struggles to throw off the narrow bonds of the school in which he had lived. The result was to make him wavering and inconsistent to a degree that the reader would not at first deem possible. Jevons had begun to show this, in a series of papers now reckoned important by scholars, when he was cut off, to the world's loss. Comte, in the judgment of modern students, was a man whose spool of intellectual piano-forte wire was vastly greater. Of Mill there is nothing to ask except whether his doctrine is correct or not; but Comte certainly made mighty contributions to the world's stock of ideas, over and above what he got from St. Simon, whether they squarely drive the truth into the hard skull of Humanity or not.

Such, as well as we can make it out, is (not *our* opinion, but) the centre of gravity of the judgments of real students to-day. As compared with its place thirty years ago, it has moved much away from Mill, much toward Comte. But not in a direct line. No doubt, opinion has swerved toward realism (in the scholastic sense). For example, thirty years ago thinkers were generally very averse to innate ideas. But Spencer (July, 1865) used the phrase "hereditary ideas," and men began to think it was a question of evidence. Experiments were made; and the upshot is there is not a psychologist to-day who does not hold the doctrine of innate ideas, whether he *calls* them so or not, substantially as it was held by Descartes and Leibnitz. Now the doctrine of innate ideas is in general harmony with realism as opposed to nominalism. Pure mathematics, too, burst out into extraordinary activity; and pure mathematics is a natural friend of idealism. Then an exacter analysis of the logical question showed that realism was the doctrine of modern science. The advanced school of Formal Logic found in their algebra potent reasons for a conception of logic having a general similarity with that of Hegel's objective logic. The idea of evolution naturally inclined men the same way. Accordingly, when Mr. Watson proposes to found an idealistic philosophy on the study of the three great empiricists of whom our time talks, he is taking advantage of a powerful current of thought.

He begins with mathematical reasoning and Mill's views about it. During the last two generations the fundamental mathematical conceptions have been the object of most exact and profound study by the subtlest and exactest mathematicians who ever illuminated the world; and those studies have resulted in a substantial settlement of opinion among mathematicians themselves concerning most of the questions involved. After this history, it is interesting to find that Mill's main contentions are now regarded by mathematicians as attempts to formulate what is definitively acknowledged to be true. It is not surprising that Prof. Watson should be able to show very clearly that Mill is in error; and up to a certain point he goes on with great success. But it soon becomes apparent that he knows nothing of modern mathematics, and has not sufficiently (if at all) studied the analyses by modern mathematicians of their own thought. He is not aware how much those works do toward reconciling idealistic proclivities with the spirit of positive science. After the usual style of Kantians, he allows the question to be confused by not separating geometry as a branch of physics from geometry as a branch of pure mathematics. He calls no attention to the remarkable circumstance that, after mathematicians have deliberately severed their moorings to the real world—as in the Theory of Functions, for example, which is all about $\sqrt{-1}$—instead of their bark being tossed upon a wild sea of arbitrary hypotheses, as one might expect, they reach a certain destination, different investigators upon widely different lines being led to the same conceptions and to concordant results, quite as surely as different chemists experimenting upon the same substance. Such facts afford comfort to idealists; and it will generally be found that modern pure mathematicians are as idealistic about ideal geometry as they are decidedly empiricist about physical geometry.

Nor does Prof. Watson expose, as he should, the falsity of the common idea that mathematics advances by means of demonstrations. No doubt demonstrations are more important in mathematics than in most sciences; but, for all that, mathematics advances, just as the physical sciences do, by observation and generalization. Its observations are, it is true, only observations of the mind's own constructions, but they often have that *startling* quality which indicates that they *are* observations. The generalizations are so complex in construction as not at once to be recognized as generalizations. When mathematics is written in the style of Euclid, both the observations and the generalizations are hidden in the crush of demonstrations from student and writer alike. But modern mathematicians recognize the operations of attentive observation and generalization as their chief engines, and give them due prominence. This at once favors the moderately positivist conviction that science is the fruit of observation and generalization, and at the same time the idealistic belief that the world of ideas is a real world, that can be observed and reasoned about, and not a world of whimsies. It is really high time that those who write about the philosophy of mathematics should have a familiar acquaintance with modern mathematics, and should have attended to the reflections of modern mathematicians concerning their own science.

Prof. Watson's view of causation will seem to Anglo-Saxon minds a little wanting in

meaning. He denies that there is anything "occult" about causation, but in the same breath attributes it to an *identity* which he does not make clear. Thus, two bodies at a given distance have a given gravitational acceleration towards one another. If we ask why, and are told there is an occult unity in nature producing the uniformity, we can understand that, especially if the occultness is only relative. But when we are told that it is because of an identity not occult, we cannot say that that is perspicuous.

In three successive chapters on Biology, its relations to Philosophy, and the Philosophy of Mind, the question of whether everything is to be levelled down to matter or levelled up to mind is discussed with great clearness and no little force. The idealistic position is argued against the school of Spencer and Huxley in a manner deserving attention. The strong hold of idealism to-day lies in reflections upon the question of how consciousness came into the world. Students of to day form their opinions on a basis of observed fact. Their quarrel with the old "experientialists" is that their own doctrines were not so formed, but were the mere expression of their intellectual inclinations. If observed facts lead to belief in ghosts, in ghosts they will believe. If they lead to the belief in the active reality of ideas, in that they will believe. But in accepting idealism, the older generation of idealists must not flatter themselves that scientific men—and modern philosophers have upon their hands the stains of the laboratory—are going to embrace the notions, the sentiments, and the mode of being which, heretofore accidentally associated with idealism, have their home in the theological seminary.

Origines Françaises de l'Architecture Gothique en Italie. Par C. Enlart. Paris: Thorin & Fils. 1894.

UNDER the above title M. Enlart, of the École des Chartes of Paris and the French School of Athens and of Rome, has given the first full and accurate description of a highly interesting and important group of mediæval buildings in Italy that have hitherto been, for the most part, unknown to modern students of architecture. These buildings exist in places generally unfrequented by travellers. They are more or less apart from ordinary routes, and in some cases in situations so malarious as to render them unsafe for more than the briefest sojourn. The buildings are not the works of native designers; they are the churches of the Cistercian monks, who, during the twelfth century, established themselves in numerous bodies throughout Italy, as they did in other countries of Europe, carrying with them the architectural principles and habits that had been acquired in their original home

The architecture of the early twelfth century in Burgundy, where the Cistercian order arose, was Romanesque of two main types. The first type, of which the great church of Cluny was the most conspicuous example, was characterized by the use of the barrel vault over the nave; while the second adopted the oblong groin vault, as in the nave of Vézelay. Before the middle of the twelfth century this last type was modified into a semblance of Gothic by the introduction of the pointed arch in the vaulting and in the principal arcades, as in the well-known porch that was then added to the nave of Vézelay.

The Cistercian builders followed both of these types. Their earlier churches—such as Hauterive, Bonmont, and Fontenoy—are of the simpler pointed barrel-vault construction, while their later ones, of which only one important monument, the church of Pontigny, has survived in Burgundy, followed the type of Vézelay, improved by the addition of the groin rib that had by this time come into use under the influence of the nascent Gothic of the Île-de-France.

M. Enlart's descriptions and illustrations of the Cistercian churches in Italy, and his detailed comparisons of them with the Burgundian monuments, show clearly that they are derived from the Burgundian models. In some instances these models have been almost exactly copied, as in the case of Fossanova in southern Italy, the nave of which closely resembles that of Pontigny. M. Enlart shows further that these Cistercian buildings in Italy had such influence on the subsequent native architecture as to justify his thesis of the French (*i. e.*, Burgundian) origin of the so-called Italian Gothic. It is instructive, however, to notice that the influence of the former native architectural traditions, which render the pointed architecture of Italy so different from the true Gothic of the North, and even from the Burgundian pointed style, begin to manifest themselves in these Cistercian monuments on Italian soil. The author calls attention to this "fâcheuse influence" in the otherwise fine church of San Golgano near Siena, which was begun in the year 1218; and he tells us that San Golgano determined the style of the Cathedral of Siena—Fra Vernaccio, Fra Melano, and Fra Mario,* who were successively employed to direct the works, being monks of San Golgano—and thus through Siena became the prototype of the so-called Tuscan Gothic style. This view seems correct. The leading characteristics of the Tuscan pointed buildings largely bear it out. The forms of the vaulting, the adjustment of supports, and the general internal and external arrangements in such a church as Sta. Maria Novella, or the Cathedral of Florence, are substantially like those of the Burgundian Gothic. M. Enlart recognizes, also, a subordinate influence from the Île-de-France as manifest more particularly in northern Italy, and notably in the beautiful Church of St. Andrea of Vercelli. But this is confined to ornamental details. No building in Italy shows anything resembling the structural system of the pure Gothic of the North.

One pertinent question M. Enlart has not discussed, namely, the possible indebtedness of the Burgundian builders, in common with all other builders in the North, to Italy itself for the rudiments of those features in their system which, aside from the use of the pointed arch, gave it what Gothic character it has. The evidence is strong, and has recently been further strengthened,† that the true origin of the organic Romanesque which was perfected in the French Gothic is found in the Lombard Romanesque. In that early and remarkable development we find vaulting on a full system of ribs, with compound supports logically adjusted to them. The system was not, indeed, a product of purely Italian genius. It was the result of the infusion of a northern element; and it was not advanced, or even retained, by the Italians after this northern influence declined, being foreign to their more classical traditions and predilections. There seems little question that this Lombard art, at least in its beginnings, was anterior to any corresponding form of Romanesque north of the Alps, and that it largely furnished the model for the magnificent systems that were, under the particular favoring conditions of the North, quickly developed into the Gothic.

Before the Cistercian monks came into Italy the two latest and most important of the Lombard Romanesque monuments, the Church of S. Ambrogio of Milan and the Church of S. Michele of Pavia, had been completed.* It is a peculiarity of these buildings that they are constructed with an alternate system arising from the use of one large vault in the nave to two smaller ones in the aisles, necessitating an alternation of large and small piers. The same alternate system, which by derivation occurs in various subsequent varieties of Romanesque, and also in the Gothic, is found in some of the Cistercian pointed churches of Italy, as in San Martino, near Viterbo. This may be, as M. Enlart supposes, in imitation of the sexpartite pointed buildings of the regions contiguous to northern Burgundy—such buildings, for instance, as the Church of Pont-sur-Yonne and the Cathedral of Sens; but, on the other hand, it is not impossible that it may have been derived largely from the nearer Lombard monuments in which the vaulted alternate system seems to have originated. Thus, while recognizing, in the main, the Burgundian origin of what is called Italian Gothic, we must also recognize a possible prior influence from northern Italy as having been active in the formation of the architecture of Burgundy in the twelfth century.

The term Gothic is used by M. Enlart in its widest sense as including all the forms of pointed architecture of the Middle Ages. But it would tend to greater clearness if writers on the architecture of this time would agree to restrict the term to that style which alone was the complete and consistent architectural expression of the mediæval genius. In a strictly correct sense the term is out of place in connection with this subject, for neither the pointed architecture of Italy nor its Burgundian prototype is in this sense Gothic. The true Gothic, the distinctive style of the Middle Ages, was developed in the Île-de-France, and was never consistently carried out elsewhere.

The book is an important one, and, besides throwing new light on the origin of Italian pointed architecture, it fills a gap in the history of the fine arts. Its general make up is admirable, without that useless elegance which often renders such works unnecessarily costly, and inconvenient to handle. The illustrations by the author's own hand are remarkably clear, and sufficiently abundant; while the numerous full-page phototypes are superbly executed, and bring the principal buildings referred to before the eye with absolute faithfulness.

Three Men of Letters. By Moses Coit Tyler. G. P. Putnam's Sons. 1895. Pp. v, 300.

UNDER the above title, and in a dress of much typographic beauty, Prof. Tyler has grouped three sketches which are of the nature of by-products of his historical laboratory. The first, having to do with Bishop Berkeley's American visit, the writer tells us in his preface grew out of his 'History of American Literature during the Colonial Time'; and the two others, on President Dwight the elder and "The Literary Strivings of Mr. Joel Barlow," were prepared for his forthcoming 'Literary

* For a list of the *operati* of the Cathedral of Siena cf. Norton's 'Church-building in the Middle Ages,' p. 300.

† Cf. Cattaneo, 'L'Architectura in Italia dal Secolo VI. al Mille circa.' Venice, 1889.

* The dates of these two buildings have been much discussed, and variously assigned. Sig. Cattaneo, a cautious and able writer, regards the nave of S. Ambrogio as not later than the second half of the eleventh century. (*Ibid*, p. 210.)

History of the American Revolution,' but seemed to Prof. Tyler chronologically inappropriate for that work. Though more lengthy than most of the sketches in Prof. Tyler's well-known 'History,' these monographs have much of the brevity of their original purpose; and they are marked by the same picturesqueness of treatment, the same vivacity of expression, and the same felicity of statement that characterize the author's larger volumes. His ingenuity, as well as his breadth of reading, is illustrated, for example, by his substituting for any minute criticism of his own an estimate of Dwight's 'Conquest of Canaan' written by the sympathetic English poet Cowper, in 1788, when an epic in rhymed pentameter might still hope to find readers not wholly weary of that form of composition.

An exceedingly entertaining bit of writing is Prof. Tyler's description of the strenuous regimen adopted by Dwight as a student, when

> "the ancient superstition touching the peculiar virtue of early rising was still rampant at the college. The students were, indeed, not required to be at their morning devotions in the chapel earlier than half-past five o'clock in winter, or than half-past four in summer: but young Dwight, unable to sanction by his example the sluggish habits thus engendered, proudly betook himself from bed every morning in time to read and construe, before chapel, a hundred lines of Homer."

No less amusing is his account of the experiences of Joel Barlow as chaplain in the Revolutionary army—a chaplaincy not sought out of any love for the clerical profession.

But though Prof. Tyler usually tells his story with a twinkle of his eye and a ready welcome for the humorous—qualities much more conspicuous in the two later monographs of this volume than in that on Berkeley—he succeeds in leaving a distinct impression of the real worth of the subjects of his sketches and of some of the bases of their claims to permanent regard. The kindly idealist, Berkeley, waiting three years in vain on his Newport farm for governmental aid which never came from England to enable him to begin his desired American university, yet becoming, in spite of his disappointment, the life-long friend and benefactor of such institutions of learning as the colonies possessed; the many-sided Dwight, impressing his own intense intellectual and religious life on the college and the community where he labored; the versatile Barlow, holding fast during twenty-eight years of unusual vicissitude to his youthful dream of a poem worthily celebrating his native country—all stand out as distinct figures on Prof. Tyler's pages. The studies make no pretence of being complete biographies, they are not exhaustive literary criticisms, but they set forth, in a way likely to be helpful to the general reading public, the services of three very dissimilar men in the childhood of American letters.

It is to be regretted that Prof. Tyler, or his proof-reader, allowed the Connecticut city to appear as "Middleton" instead of Middletown (p. 62); and that in the Latin quotation (p. 88) "potestes" takes the place of *potestas*.

Rhodesia of To-day. A Description of the Present Condition and the Prospects of Matabeleland and Mashonaland. By E. F. Knight. Longmans, Green & Co. 1895. Map. Pp. viii, 151. 8vo.

UNDER the above caption a well-known traveller gives the impressions received in a journey made last year in south Central Africa as correspondent of the London *Times*. His book is primarily for the intending emigrant or investor, but it has a wider interest as showing very clearly how a vast tract of virgin territory is being methodically prepared for civilization. The promoters of the British South Africa Company, or, in other words, the Hon. Cecil J. Rhodes, have evidently done everything possible to make this experiment a success and to develop their possessions, carefully safeguarding at once the rights of the natives and the interests of shareholders and colonists. An elaborate and costly system of administration, for instance, has been established in all the centres of population, which will do much to prevent those lawless deeds of violence so frequent when pioneer whites come in contact with a weaker race. A mining law has been adopted, with the aid of an American expert, Mr. John Hays Hammond, in which "many improvements and modifications, dictated both by American and South African experience, have been introduced." Railway and telegraph lines are being rapidly built, fifty thousand mining claims have been registered, and a large number of farms have already been "pegged out." All the machinery of a country in an advanced state of civilization is set up and in running order in readiness for the coming tide of immigration.

Mr. Knight passes briefly in review the different topics on which information is most needed. The natives apparently are adapting themselves peaceably and contentedly to the new order, with the exception, possibly, of the military caste, out of which the company, however, hopes to make an excellent native police and soldiery. The climate of the high Veldt, where most of the cultivable and mineralized land is situated, is "undoubtedly healthy," and the fever which haunts the remainder of the country will disappear before occupation and civilization. Matabeleland is especially adapted for grazing, Mashonaland for agriculture; the fruits and vegetables of England growing on the hills, oranges and tropical productions in the valleys. There is gold in abundance; auriferous reefs are rich and extensive, but the alluvial gold has all been taken ages ago. A new clue to the mysterious ancient miners is given by the recent discovery of a copper coin of the reign of Antoninus Pius at the bottom of an ancient shaft near Umtali. They were doubtless prevented from getting more than the mere surface gold by the same difficulty which confronts the workman of to-day, the prohibitive cost of machinery. Fifty thousand dollars, for instance, "has to be paid for the carriage of a twenty-stamp battery to the Victoria district." The cost of transportation has been reduced by two-thirds since the time of Mr. Knight's visit, by the extension of the Beira railway to within seventy-five miles of the principal gold-fields.

In regard to emigration, he says: "This is no country for the 'waster,' the man of no trade and no means," but to farmers and skilled artisans Matabeleland "offers a good opening." Though Mr. Knight writes almost as if he held a brief for the shrewd and energetic managing director of the Chartered Company, it cannot be doubted that "Rhodesia" is a land of great promise—promise only, not fulfilment yet—and that in securing it for Great Britain Mr. Rhodes has displayed a far-sighted policy and a genius for organization which put him in the front rank of Englishmen of the day.

The Colonial Cavalier. By Maud Wilder Goodwin. Illustrated by Harry Edwards. New York: Lovell, Coryell & Co.

The Old Brick Churches of Maryland. By Helen West Ridgely. Illustrated by Sophie D. B. Stewart. New York: A. D. F. Randolph & Co.

Colonial Days and Dames. By Anne Hollingsworth Wharton. Illustrated by E. S. Holloway. Philadelphia: J. B. Lippincott Co.

AGREEABLE and valuable additions to Southern history are the first two books named above. The 'Colonial Cavalier' is a thoughtful, well-planned, orderly study of the domestic and social life of the cavalier emigrants of Virginia and Maryland. It gives to us, through the old-time gossip of letters and diaries, and the homely details of life and customs, a fireside intimacy with old Virginian and Maryland life which we have never had before. Though written in the simplest literary style, it is also in the best style, dignified and at the same time humorous and pleasing. The author notes in Jefferson's private account-book, under date of July 4, 1776, the day of the signing of the Declaration of Independence, the item, "For seven pairs of women's gloves, twenty shillings." "Even so," she says, "do great things and small jostle one another in this strange world of ours, and a woman's glove lies close to the document which changed the fate of nations." Mrs. Goodwin has scanned her authorities with discerning care, but she has drawn no one-sided conclusions. Especially has she refrained from gilding the American cavalier with the romance, the imaginary charms, with which many of his descendants elect to endow him. Life was grander in Virginia than in New England, and in some ways it was shabbier. The elegance and the shabbiness are both fully portrayed here.

'The Old Brick Churches of Maryland' is somewhat disappointing to those who are familiar with the county and town histories of Maryland, for but little historical matter, save that already made public in those histories, can be found in this new book. The brick churches and the chapels-of ease of Anglo-Catholic Kent, of Roman Catholic St. Mary's, and Puritan Anne Arundel are, however, all faithfully enumerated. The term chapel-of ease may need explanation for some readers. There were in Maryland at the time of the Establishment thirty-one parishes—each parish so large that a church attendant, forced by law to attend services, but possibly being at a long distance from the house of worship, might have to travel all day Saturday to reach the meeting-house, and all day Monday to get home. To relieve this state of things, chapels were built on outlying portions of each parish, in which services were held for communicants from remote plantations. In no colony was such freedom of religion and such protection of religion. The privilege, beloved of the Puritans, of calling names, was forbidden in Maryland. The celebrated "Act concerning Religion" forbade even the disparaging use of the words heretic, schismatic, idolater, Jesuit, Papist, priest, Presbyterian, Independent, Lutheran, Baptist, Brownist, Antinomian, Burrowist, Roundhead, under pain of ten pounds fine. So the Quakers also came to the safe haven and built their severely simple meeting-houses. The side-lights thrown throughout the book on the social developments of this meeting and friendly neighboring of the various sects are perhaps more interesting than the descriptions of the edifices. The score of illustrations are

not very happy as counterfeit presentments of brick buildings, and are not, on the whole, as satisfactory as the more commonplace illustrations, so universal nowadays, obtained through the much-abused camera and half-tone process.

'Colonial Days and Dames' proves a pleasant successor to Miss Wharton's previous book, 'Through Colonial Doorways.' It is a cheerful and animated relation of incidents of colonial days in America, chiefly in Pennsylvania, written without much coherence in narration or regard for literary shape, yet on topics of sufficient genetic affinity to be properly gathered into chapters. But little new material is disclosed to the reader who is at all familiar with the established sources and authorities for colonial history, but the old materials are selected with good taste, and elucidated with a chatty vivacity which renders both the selections and commentary explanations attractive. The illustrations are also tasteful, and the book is pretty to look at, in print and binding.

The Post in Grant and Farm. By J. Wilson Hyde. London: Adam & Charles Black; New York: Macmillan. 1894.

THE author of this little book has long been an officer of the post, and has made good use of his opportunity to inquire into its early history. He goes back to the period when the postal service was confined to the forwarding of royal despatches, and shows how it came to undertake its enlarged functions as a public carrier. Early in the reign of James I. a patent was issued to Lord Stanhope as master of the King's posts "as well within the kingdom as in parts beyond the seas, within the King's dominions." Under Charles I., in accordance with the policy of raising money by the sale of offices, another patent was issued, creating a master of the posts in foreign parts "out of the King's dominions." It seems that by this time, although there was no authority for carrying the letters of private persons by the inland posts, it had become the practice of merchants to use the foreign posts in forwarding their packets. The fees for this service made the office of postmaster a lucrative one, and, as is still the case under like circumstances, he who held it had to fight to keep it. Gradually, however, the postmaster for foreign parts out of the King's dominions came to monopolize the foreign business, and in the process of time the internal posts fell under the same management.

The details of these changes, with the groans and complaints of those who had purchased their positions only to be presently deprived of them, are told at some length by Mr. Hyde, but they have little interest except as showing how private enterprise succeeded in creating an extensive business under the guise of a Government monopoly. The revenue received by the Crown was insignificant in amount, but the profits of the business were very large. Indeed, it was the gains derived from the carriage of foreign packets that suggested the idea of carrying the letters of private persons by the inland posts, and in accordance with custom the exclusive privilege of conducting this business was granted to the postmaster. It dimly appears that one Thomas Wilkerings had most to do with the development of a comprehensive postal system, and although he enlarged the business chiefly for his own gain, the public eventually profited. To the business of carrying the mail that of furnishing post-horses soon was added, and as the postmasters had certain rights to impress horses for their service, they seem to have found their places lucrative.

Some entertaining incidents of the primitive days when the royal mail was carried across the Channel by fishermen, and occasionally plundered by Dutch and Flemish pirates, have been extracted from the old records by Mr. Hyde; and he has preserved some official records of the rate of the posts, their charges, and the difficulties arising from the absence of roads. When the business once got fairly under way, it must have increased very rapidly, for we are told that in 1674 Lord Arlington paid £43,000 for the privilege of farming it. Mr. Hyde has certainly gathered together a good deal of recondite information; but he exhibits little skill in arranging his material, and his book is of value chiefly as a collection of annals

---

The Chemistry of Paper-making, together with the Principles of General Chemistry. By R. B. Griffin and A. D. Little. New York: Howard Lockwood & Co. 1894. Pp. iv, 517.

THIS book is the work of able chemists who have had large experience in the chemical examination of paper-making materials and processes. The first 100 pages are devoted to a brief summary of the elementary facts and principles of chemistry. Of this part, the 21 pages given to theory offer an outline of fundamental principles which is for the most part exact, everywhere clear, and will be of much advantage to the technical reader. We note, however, the following statements which should be corrected: "Weight . . . in chemistry means about the same as the term 'mass' in physics" (p. 4). Differences in temperature are stated to consist in differences in "momentum of the moving molecules" instead of their kinetic energy (p. 6). "The power of the steam-engine is derived from the blows delivered against the piston by the 'infinite' number of molecules of 'water'" (p. 7). The law of Avogadro is called the law of Ampère (p. 8). Energy and force are used as equivalent terms (p. 4).

The special part of the book opens with an excellent discussion of cellulose and the various fibres which have been used or suggested for paper-making, illustrated by a plate of admirable micrographs of fibres from 'Papier-Prüfung,' by Dr. W. Herzberg. The fibres are classified as: Seed-hairs (cotton); bast fibres (linen, jute, etc.); those derived from whole stems or leaves (straw, esparto, etc.); those derived from wood. Chapter iii. deals with processes for isolating cellulose, the importance of wood fibre claiming all but ten pages of the 124 of the chapter; and the greater part of this space is occupied with a thorough treatment of the details and modifications of the sulphite process. Chapters on bleaching and on sizing and loading follow, and the important subject of water receives a chapter to itself. Chapters viii. and ix., covering about 100 pages, describe the analytical methods necessary to the paper chemist, and the chemical, mechanical, and microscopical testing of papers. In the last chapter a short account is given of electrolytic processes which have been proposed for the preparation of bleaching-liquors; in regard to which the authors make the following statement: "At the present time, however, the state of the art is such as to hold out little probability that the electrolytic production of bleaching agents will become a department of the paper-maker's work in any such general sense as the recovery of soda-ash or the manufacture of bisulphite solutions has already done." An appendix contains some useful tables, and the rules for spelling and pronouncing chemical terms adopted by the A. A. A. S., to which, however, no attention is paid in the spelling employed in the text.

The book is, on the whole, a good example of what a work of this kind should be. The account of methods and processes is careful and accurate, and the text nowhere obscure, although occasional infelicities of expression occur, as in the sentence quoted above. One does not, however, expect a technical work to be a model of English prose, and is thankful if, as in the present instance, he can follow the author without appreciable effort. Valuable matter from the authors' own experience is found in almost every chapter, especially in those on analysis and paper-testing; and the whole work is characterized by thorough knowledge, good judgment, and proportion.

The Saga of King Olaf Tryggvason, who reigned over Norway A. D. 995 to A. D. 1000. Translated by J. Sephton, M.A. London: Nutt; New York: Macmillan. 1895.

THE Great Olaf Tryggvason Saga, as Vigfusson appropriately called it, has doubtless remained so long untranslated—this is the first English version—because of the early rendition of the 'Heimskringla,' which also contains a life of the king. From some points of view this has been a loss. The 'Heimskringla' saga is in many ways its inferior, in spite of the pre-eminent place of that whole work in Old Norse literature. It not only has in numerous instances an abridged form of episodes, undoubtedly good history, connected with the King, but it gives others only in part, and some it omits altogether. The Great Olaf Tryggvason Saga is much more loquacious and discursive, and, as a whole, perhaps infinitely less critical. It has admitted, for instance, all sorts of legendary material, such as was likely to spring up about the King in his great work of the conversion of Norway to Christianity, that is not found in the soberer narrative of the 'Heimskringla.' The Olaf of the 'Heimskringla,' in short, is an historical person; in the present saga he has assumed an heroic and superhuman aspect, and is gifted with supernatural insight and miraculous powers. If we accept Vigfusson's view, the more amplified saga is, nevertheless, the earlier. He even sees in it the original full text of Snorri, of which the 'Heimskringla' is but an abridgment; it has been interlarded, however, with many minor sagas and fragments of sagas bearing upon the life of the King, from various sources, known and unknown—all additions of the thirteenth century. Who was the author of the form in which we have it is uncertain. In all probability it was, like most of the longer sagas, a composite growth. Its last reviser may possibly have been Berg Sokkason, who was made abbot at Thvera, in the north of Iceland, in 1325.

The present translation is, in many ways, an excellent one, although, unfortunately enough, the picturesqueness of diction abundantly characteristic of the original saga has all but exhaled in the process of rendition. There is somewhere a mean between the pseudo archaism of the Morris Magnusson translations and this. These authors have evolved a sort of pre-Early English for the language of their sagas; Mr. Sephton has gone to the other extreme and made of his a modern book. An archaic feature has been suffered to remain in the citation of the 'Antiquitates Americanæ,'

published in 1837, as authority for the location of Vinland, which in the index is stated to have been Massachusetts and Rhode Island. Storm's 'Studier over Vinlandsreiserne' (1888) and Reeves's 'Wineland the Good' (1890) have disposed of the matter differently.

The saga, which is beautifully printed and attractively bound, is the initial volume of a new series of translations from the Old Norse. The next to follow is the Færeyinga Saga, to be translated by F. York Powell, Vigfusson's old collaborator in this field and the successor of Froude as Regius Professor of History at Oxford.

Sir William Petty: A Study in English Economic Literature. By Wilson Lloyd Bevan, M.A., Ph.D. 1894. (Publications of the American Economic Association, vol. ix., No. 4.)

FORMALLY, Dr. Bevan's study is divided into an introduction and six chapters. Essentially, it consists of three parts, dealing, first, with Petty's life (1623–1687), and bibliographically with his writings; second, with his views on specific economic topics, as labor, rent, taxation; third, with "Petty in relation to contemporary England, and his place in economic literature." Lack of care, apparently proceeding from lack of time, is the most prominent characteristic of the whole study; it forces itself upon the reader's attention before he has finished the introduction, and evidences of it pursue him literally to the last page. In the first part, for example, a careful narrative of Petty's checkered and successful career might have been made to contribute much towards the elucidation of the writings subsequently to be discussed. Instead of working out such a narrative—no holiday task, to be sure—Dr. Bevan reprints in chapter one some "materials for Petty's biography," viz., his curious autobiographic will and Aubrey's sketch of him, both reproduced in part only, and appends, in chapter two, a score of "illustrations and notes on Petty's life from contemporary sources." These are scraps collected here, there, and everywhere—some of them no doubt scraps of value, but scraps none the less. Partial materials for study they may possibly be; part of a study they are not.

The danger of attempting to draw conclusions from such fragments is well illustrated by Dr. Bevan's own treatment of one of them. After mentioning Petty's invention of double writing, he says:

"This invention, like a good many of Petty's later mechanical devices, proved a failure. Curiously we find in a letter, written by Sir Christopher Wren some years after, a reference to a similar machine. Wren, without mentioning any name, complained that a model of his invention, in a still imperfect condition, had been seen by chance by a visitor, and reproduced. . . . The history of Petty's own invention leads us to suspect that he may have been the person whom Wren accuses of this dishonorable act. From what we know of Petty's insensibility to strict honesty where he saw any chance of furthering his own interests, we cannot say that he was incapable of such an action."

This is surely pushing inference rather far. Like other English land-grabbers in Ireland, Petty probably acquired part of his estates there, after the Cromwellian settlement, by methods not strictly honorable if judged according to our present standards. His answer to the charges of corruption brought against him in Parliament is not entirely satisfactory. But what we know about it—and we *know* very little—scarcely justifies Dr. Bevan's persistent insinuations that Petty was generally dishonest, and by no means justifies the unsupported charge that he was this particularly mean thief. As for the history of the invention, it is known that Petty's device for double writing was completed prior to December 22, 1647. Sir Christopher Wren was then a youth of fifteen years and one month, and there is reason for believing that up to that time Petty had never seen him.

This specific instance of an argument upon insufficient grounds would not deserve notice if it stood alone. But it does not. Another example of Dr. Bevan's hasty way of presenting the results of his study might be taken from the last chapter: "In his will he [Petty] again betrays Hobbes' influence, where his words mean that the authority of the state in religion is supreme." The only words in Petty's will, partly printed in chapter one, upon which such a construction can be put, are these:

"As for religion, I die in the profession of that faith, and in the practice of such worship as I find established by the law of my country [here, in the middle of a sentence, Dr. Bevan's quotation unexpectedly ends], not being able to believe what I myself please, nor to worship God better than by doing as I would be done unto, and observing the laws of my country, and expressing my love and honor to almighty God by such signs and tokens as are understood to be such by the people with whom I live, God knowing my heart even without any at all."

Hobbes's influence is here more evident, one must own, if the hurried reader stops with the hurried Doctor, half-way through the passage.

In order, in his second part, to discuss Petty's economic views, Dr. Bevan must first decide where those views are to be found. Accordingly, he reopens the controversy as to the authorship of those famous 'Natural and Political Observations upon the Bills of Mortality' whose publication in 1661, under the name of Capt. John Graunt, marks the beginning of vital statistics, and indeed of all intelligent statistical study. Differing from McCulloch, Roscher, De Morgan, John, and Cunningham, whose "view, however plausibly stated, hardly seems to give adequate weight to contemporary testimony," Dr. Bevan assigns the 'Observations' to Petty. We cannot enter at length into this controversy, which is almost as complicated and fully as perverse as the Bacon-Shakspere quarrel. But, in passing, we may briefly note one or two reasons for thinking that, had Dr. Bevan examined the case a little more carefully, he would have hesitated before assigning greater weight to the contemporary testimony for Petty than to that he might have found for Graunt. The only contemporary testimony that Dr. Bevan mentions in favor of Petty is that of Evelyn (Diary, 22 March, 1675) and of Aubrey. Aubrey, however, gives two conflicting accounts, of which our study finds room to consider the second only. In the sketch of Petty's life which he furnished Anthony à Wood, *circa* 1680, Aubrey says that Graunt wrote the 'Observations.' But in a supplemental note, added, perhaps, after Petty's death in 1687, he says of Petty: "The 'Observations upon the Bills of Mortality' are really his." Opposed to this somewhat doubtful evidence, there stands, in addition to Petty's own frequent mention of the book as Graunt's, the contemporary testimony of Bishop Sprat, historian of the Royal Society; of Oldenburg, its secretary; of its committee appointed February 12, 1662, to examine Graunt's book; of the Royal Society itself in electing Graunt, a tradesman, to membership because of his book; and of the Council of the Royal Society, which, on the 20th of June, 1665, during the Plague, "ordered, that the 'Observations upon the Bills of Mortality,' by Mr. John Graunt, be printed by John Martyn and James Allestry, printers to the Royal Society." Concerning all this contemporary testimony telling against his position, Dr. Bevan says not a word. Nor is there, is his subsequent account of the contents of the 'Observations' and of the further treatment of similar subjects in the 'Essays on Political Arithmetick,' which are indisputably by Petty, any indication that Dr. Bevan appreciates the superiority of method and the greater general sobriety of Graunt's statistical work as compared with Petty's.

Petty's economic notions may be presented in either of two ways. On the one hand, since each of his pamphlets was directed to a concrete problem or problems, each may be described for itself, and with relation to the circumstances out of which it originated. On the other hand, the ideas embodied in his several pamphlets may be grouped topically. The latter method, which Dr. Bevan has chosen to follow in the second part of his study, is perhaps the better; it is certainly the more difficult of the two. Especially in the case of an author like Petty, whose economic writings cover a period of twenty-five years, during which his notions underwent considerable modification, the collocation of sentences selected from various pamphlets, regardless of their chronology, cannot fail to be misleading. Now Petty's bibliographical chronology is not simple. Some of his writings, for example the 'Treatise of Taxes and Contributions,' 1662, and the 'Five Essays in Political Arithmetick,' 1687, were published within a few months of their composition. Others lay years in manuscript before they were printed. Thus the 'Verbum Sapienti,' written in 1665, was printed in 1691 as an appendix to the 'Political Anatomy of Ireland,' which was written in 1672. In like manner the 'Political Arithmetick,' written in 1676, six years before the first of Petty's numerous "Essays," was not published until 1690, three years after the last of them. Of these facts Dr. Bevan takes so little account in expounding Petty's ideas, that his study affords but an imperfect survey of their development. This is indeed a fault, but to avoid it were so difficult that its commission may almost be overlooked. Less excusable are the evidences of continued carelessness which mar the execution of the second part of the study also. For example, in his account of the 'Observations' Dr. Bevan says (p. 49): "A table of mortality by decades, constructed by guesswork, is fitly followed by the astounding statement that London doubles its population in eight years." The passage of the 'Observations' to which reference is here made (sec. 12 of chapter xi.) runs thus:

"The next enquiry will be, In how long time the City of *London* shall, by the ordinary proportion of Breeding and dying, double its breeding People? I answer, In about seven years, and (*Plagues* considered) eight. Wherefore, since there be 24000 pair of Breeders, that is ⅛ of the whole, it follows, that in eight times eight years [!] the whole people of the City shall double, without the access of Forreiners."

It is unnecessary to examine the third part, on "Petty's place in economic literature." The ingenious founder of political arithmetic was also an economist of no mean ability. Taken all in all, he is perhaps the most important English economic writer before Hume, and relatively the most neglected. To Dr. Bevan he justly seemed "to merit more attention than he has hitherto received." After reading this study, we are of like opinion.

Petty still merits more, or at any rate other, attention than he has hitherto received.

Lucy Larcom: Life, Letters, and Diary. By Daniel Dulang Addison. Boston: Houghton, Mifflin & Co. 1894.

One has only to look at the picture of Miss Larcom facing the title-page of this volume to know that hers was a noble, liberal, and kindly soul. Many have long been aware of this by other means, and these will take the greatest pleasure in the biography which her pastor has written with unaffected admiration for his parishioner and friend. Yet we cannot but hope that many others will read the simple story, and some of these will certainly be led to read Miss Larcom's various books, it may be to discover that there was more music in her than she ever got out, and that her genial personality was something better than its happiest expression either in prose or in verse. Mr. Addison has done his work well and made a most agreeable and interesting book. He has subordinated himself to his subject in a manner that commends to us his taste and modesty. The most obvious lack is that of any critical appreciation of Miss Larcom's work. A few pages from her townsman, Professor Woodberry, would here have been a notable addition. And, indeed, it is in a letter to Professor Woodberry that she makes a criticism on herself which is admirable for its sincere discrimination, though its construction is more stern than just if we apply it to her better work. She writes:

"Most of our modern verse—and I include my own—is too superficially lyrical; the measure often muffles the meaning; the thought flies off through the sound. In yours, the music and the meaning unfold together; always hinting the deeper chords half awakened beneath."

But Prof. Woodberry would probably be the first to tell us that in her recognition in him of possibilities greater than Clough's performance, and her assurance that "Milton might have been proud to write" some of his passages, there was too much of her habitual kindness and something of her pride in a new Beverly poet.

If, with the lack of critical appreciation, there is in Mr. Addison's book something of excess, it is in its endeavor to turn the late adhesion of Miss Larcom to the Episcopal Church to some good account for that particular schism. Here and there we seem to be reading a tract or an extract from a sermon. But then, too, it should be said that Mr. Addison's Episcopalianism is that of Phillips Brooks, as was that of Miss Larcom, the broadest of the broad—the Episcopal Church one door of many into the Church Universal. It is certain that Miss Larcom never would have joined the Episcopal Church, as she did in 1890, when she was sixty-six years old, if she had not seen that church invested with the splendor of Phillips Brooks's personality and shining with the light of his countenance. Reared in Puritan Congregationalism, she reacted from its narrowness, and found herself in sympathy with such minds as F. W. Robertson and F. D. Maurice—even more with the latter than with the former, for the trend of her mind was exceptionally mystical from first to last. Tauler and the other mystics were the purveyors of her spiritual food. She did her thinking mainly with her heart. Yet she so loved those roots of her own life that fed upon the Puritan soil that not even her delight in Phillips Brooks's preaching and the warmth of his friendship were able to make her an Episcopalian until after many years of her experience of these things. She had a childish satisfaction in her new spiritual home once she had entered it.

A chapter of twenty pages covers the period of which Miss Larcom wrote so pleasantly in 'A New England Girlhood.' The chapter is a good summary of that delightful book, but it is no sufficient substitute for it. The sensible reader will at once possess himself of that, if it is not already known to him. As a factory girl at Lowell she saw and was a part of that most interesting phase of factory life which produced the *Lowell Offering* and kindred publications. There was nothing precocious in her literary talent, and her poetry for a long time lagged behind her prose, especially that of her journal and letters, which, apparently, was much better than that of her more conscious literary efforts. They are full of animal spirits and rollicking fun, as she describes her journey West in 1846, her life on Looking-Glass Prairie, her early teaching, which was followed by several years of combined study and teaching in an academy of ambitious prospectuses and moderate advantages. There are intimations of a long-drawn tragedy beginning in these years—an engagement which went on up to the threshold of the war. Miss Larcom frankly celebrated the catastrophe in one of her best-known poems, "A Loyal Woman's 'No.'" Her lover held pro-slavery opinions, and she was always anti-slavery and abolitionist in her own, with so little "prejudice against color" that sometimes she seems to have had a prejudice in its favor.

Coming east again in 1853, she soon after became one of the teachers in the Wheaton Seminary at Boston, Mass., and there she remained until 1865, when ill health obliged her to give up the position. Her skill in teaching must have been considerable, and her influence on her pupils excellent, but to do literary work was the interest and passion of her life. Recognition on this line came to her very slowly. Her "Hannah Binding Shoes" was printed in the *Knickerbocker Magazine* without payment or acknowledgment and without her knowledge, whereupon she sent it to the *Crayon*, where it was again printed and brought on her the reproach of the *Knickerbocker* editor as "a literary thiefess." She spoke at the time most disrespectfully of the poem, which now stands, and by good right, in the fore-front of her complete collection. The first poem that brought her into notice was a "Kansas Emigrant Song," which successfully competed for a prize offered by the Emigrant Aid Society. In 1859 she tried in vain to find a publisher for a volume of her verse, though she had Whittier for a backer with Ticknor & Fields. It must have been much more difficult to find a publisher for poetry then than now, when the new volumes are thicker than the leaves of Vallombrosa. But then, perhaps, she wanted a publisher who would take the risk, for she always had to struggle for a living. Considering the amount and quality of her literary work, there is something to instruct and warn the young aspirant who is looking to pure literature as a means of livelihood.

Her fortunes were pathetic. She could never go to Europe; she could never have a home of her own; she was obliged to take an annuity from her friends. She was, however, rich in these, and among them Whittier and his sister took the lead. She met Whittier first when she was a factory girl in Lowell. Their mutual relations grew into something very beautiful. For a long time she showed him her verses before printing them, and when she declared her independence he was a little hurt. His influence upon their thought and form is not to be escaped. They collaborated in the making of certain compilations, so that we do not know whom to blame for the inaccuracies, which were many. At his death she was astonished at his wealth, and glad to find that he had willed her the copyright of the books they had made together.

Her alliterative name was generally supposed to be a pseudonym, and on one occasion a gentleman asked her if there wasn't some one who wrote poetry calling herself "Lucy Larcom," adding assuringly, "I never read any of the stuff." Though

"Born in the East on a seaward rock,"

the sea had for her no such fascination as the mountains, and that she often visited these in the company of Whittier was one of the rarest satisfactions of her life. Her poem "A Strip of Blue" is an exact expression of her preference for a glimpse of the sea to its limitless expanse. There was a homely sweetness in her verse as in her life that was her surest charm The extracts from her journal and letters are a frank disclosure of her inner life, while her opinions upon contemporary books offer many an interesting challenge to our own. On page 79 there are three errors of transcription in Donne's perfect couplet,

"No Spring, nor Summer's beauty hath such grace,
As I have seen in one autumnal face."

Two of them are important; especially so is the substitution of "an" for "one" in the second line. The lines were written for George Herbert's mother. They do for Lucy Larcom quite as well.

BOOKS OF THE WEEK.

Appleton, Henri. Des Effets des Annexations de Territoires sur les Dettes de l'Etat démembré ou annexé. Paris: L. Larose.
Bacon, Rev. T. S. It Is Written. James Pott & Co. 75 cents.

HENRY HOLT & CO., N. Y.

Cohn's Science of Finance

Authorized English Edition of Professor GUSTAV COHN'S

System der Finanzwissenschaft.

Translated by Dr. T. B. VEBLEN. Revised and approved by the Author.

The **Science of Finance** is altogether the most important contribution to the theory of Public Finance hitherto published from the most modern point of view—the point of view of social evolution and social solidarity. It brings out, as has never been done before, the essentially economic ground of all fiscal institutions It presents, in Professor Cohn's characteristically lucid style, the view that the State is civilized man's first need, and that the question of public revenue and public expenditure is consequently a question as to the most effective distribution of the social product. It sets forth in detail the modern theory according to which equity in taxation is not embodied in any definitive and statical norm, but that the norm of equitable taxation is a matter of progressive historical development, in which the demands of public expediency always constitute the dominant factor.

8vo, 800 pp., cloth. Price, $3.50 net.

The University of Chicago Press,
CHICAGO, ILL.

Rhode Island

History of Rhode Island and Providence Plantations 1636-1790.

By the Hon. SAMUEL G. ARNOLD. 4th edition. 2 vols. $7.50 *net.*

JOHN FISKE says: "One of the best State histories ever written is S. G Arnold's History of the State of Rhode Island and Providence Plantations."

Forwarded on receipt of price by the publishers.

PRESTON & ROUNDS. Providence, R. I.

TO RENT—AT NORTH EAST HARbour, Maine, a very desirable cottage, opposite the Harbourside Club; fully furnished. Rent moderate. Apply to 1413 Locust St, Philadelphia.

MAINE COAST.

LANDS at and around CAPE ROSIER and CASTINE, ME., on this boldest and most beautiful section of Penobscot Bay, 50 miles nearer Boston and the West than Mt. Desert—southwesterly exposures, fine harbor fronts, bold rocks, beaches, and fine trees, broad views of mountains and islands, extended drives along the shore and among the hills, new wharves, and good daily connection by boat and rail. These lands are offered at low prices to persons intending to build and occupy. A very few hundred dollars will buy a fine, high shore lot of several acres. Several tracts of from 20 to 50 acres are offered at low prices. Send for descriptive pamphlet and further details to

J MURRAY HOWE & BRADLEE,
28 State Street, Boston.

Penobscot Bay.

TO RENT FOR THE SUMMER—Several very attractive cottages directly on and near the shore at Islesboro and the Fox Islands. These cottages are very fully and tastefully furnished, contain from 8 to 12 rooms, command beautiful bay, island, and mountain views, and are very convenient to markets and steam communication. Rents from $175 to $350 for the season.

J. MURRAY HOWE & BRADLEE,
28 State Street, Boston.

Mt. Desert.

FOR SALE—At moderate prices, several very desirable tracts of land in some of the most beautiful situations upon the shore of the Island These lands vary from 3 to 50 acres in area. Prices from $50 an acre upward.

J. MURRAY HOWE & BRADLEE,
28 State Street, Boston

Manchester by the Sea.

FOR SALE—A beautiful tract of 30 acres of shore land in this most beautiful and popular of the Massachusetts Shore towns. This property comprises a tract of fine wooded highlands and open fields, is almost the only undeveloped tract on this shore offered for sale or obtainable, and will be sold at a low price to an early cash purchaser, to settle an estate.

J. MURRAY HOWE & BRADLEE,
28 State Street, Boston.

OXFORD MAPS.

By Prof. H. E. OSBORN, LL D.
Correct to the most recent discoveries. Adapted for S. Schools, Bible-Classes, Colleges.
Egypt and Sinai, Palestine, Western Asia, St. Paul's Travels
For commendations and descriptions, send to
OXFORD MAP PUBLISHERS, Oxford, Ohio.

YALE MIXTURE.

The choicest tobacco made, and pre-eminently a gentleman's smoke.

Marburg Bros., The American Tobacco Co, Successor, Baltimore, Md.

HOUGHTON, MIFFLIN & CO.'S
NEW BOOKS.

The Life of the Spirit in the Modern English Poets.

By VIDA D. SCUDDER, formerly Associate Professor of English Literature in Wellesley College. Crown 8vo, gilt top, $1.75.

Miss Scudder has made a thoughtful, philosophical, and eloquent study of the characteristics of the poetry of the nineteenth century, to discover the development of thought on the highest themes, and analyzes keenly the poetry of Wordsworth, Shelley, Tennyson, Arnold, Clough, and Browning.

Russian Rambles.

By ISABEL F. HAPGOOD. Crown 8vo, $1.50.

Thirteen chapters on Russian life, people, and customs. These are of special value as being the fruit of personal observation by an unusually intelligent and fair-minded visitor.

A Soulless Singer.

By MARY CATHERINE LEE, author of "A Quaker Girl of Nantucket" and "In the Cheering-Up Business." 16mo, $1.25.

A singer with a wonderful voice, but little feeling, has varied experiences, and in loving finds her soul. The story is told in a bright, readable manner, and is likely to be one of the most popular of the season's novels.

After-Dinner and Other Speeches.

By JOHN D. LONG. 8vo, $1.25.

This book contains about forty of the thoughtful and felicitous speeches which have given Ex-Governor Long of Massachusetts an enviable reputation as an orator.

Sold by all Booksellers. Sent, postpaid, by

HOUGHTON, MIFFLIN & CO., Boston.
11 East 17th Street, New York.

The Life of Wm. H. Seward.

"A biographical record of a great man, by a faithful, just, and truth-seeking hand, but coming last, as it does, is a piece of careful historical work, which corrects mistakes, explains ambiguities, removes doubts in the records which we already have of the great actors in the drama of this half century."—Judge Charles C. Nott, United States Court of Claims.

Three vols., 2100 pages, 117 illustrations. By FREDERICK W. SEWARD. Price per vol., cloth, $3.75; sheep, $4.50; half mor., $5.00.

A Special Discount made from above prices to any Public Library, College, School, or to any person connected with Board of Public Instruction.

Write for terms. Specimen pages mailed free.
N. C. MILLER, 14 Thomas St., New York.

GUILLERMO DOBLACHE'S "*Picarillo*" (natural, unsweetened, unfortified table sherry), bottled in Port St. Mary's, Spain, and shipped in cases of one dozen bottles each. For sale by PARK & TILFORD, New York, and all wine merchants. Send for price list.

MT. DESERT

[P. O., Seal Harbor], house, furnished, $250; occupied previous seasons by Dartmouth and Hopkins professors; has bath-room, with hot and cold water (no pumping needed).

W. M. GRISWOLD, Cambridge, Mass.

FURNISHED HOUSE for the Summer, 13 rooms; also Cottage, 8 rooms, near Buzzard's Bay, in West Falmouth, Mass. To be let at $300 and $200 respectively. Address J. H. DILLINGHAM, 140 N. Sixteenth St., Philadelphia.

The Nation.

NEW YORK, THURSDAY, APRIL 18, 1895.

The Week.

THE President's letter to the Chicago sound-money conference has a weight greater than that which naturally belongs to his official position—the weight, namely, of a temperate and truthful portrayal of the real nature of the silver propaganda. In this respect Mr. Cleveland now sees more clearly and speaks out more emphatically than ever before. Like nearly every other public man in this country, he has heretofore felt constrained to acknowledge himself "a friend of silver," in favor of its "judicious" use in the currency; but the scales have fallen from his eyes, and he now sharply declares that "the line of battle is drawn between the forces of safe currency and those of silver monometallism." In thus clarifying his view of the situation, the President has but progressed along with general opinion; and for the change the silver agitators have themselves to thank. By their reckless language they have made it impossible for intelligent men longer to misunderstand them. When they say that the "basis" of our currency must be enlarged, people now see that they mean depreciated money. When they talk about raising prices, people understand that they mean scaling down their own debts. They continue to argue gravely about maintaining "the parity" and securing an international agreement, but this is getting to be more and more evidently a mere blind, and their intention to debase and repudiate is becoming clearer every day. To have this seen and said by the President is a great stroke for national honesty.

Mr. Cleveland is undoubtedly correct in maintaining that this silver question needs only to be argued out before the people in order to be settled right. The silver-men think themselves very original and ingenious, but they are merely the inflationists and repudiationists whom the world has been familiar with since the beginning, masquerading in what is simply the latest of a long series of disguises. All that is needed is the arrival of the dramatic crisis when, as the stage directions say, "all unmask," and the jig is up for the financial villain as surely as for the theatrical villain. The rapidity with which the silverites are throwing away their masks is therefore most encouraging. They will soon be avowedly where the greenbackers were in 1874, and meet a like fate. Only now, as then, it is necessary, as the President urges, that honest-currency men should unite when rogue-currency men combine. We must have men in 1895 and 1896, like Garfield in 1874 and 1875, who have thought this question through and are ready to go on the stump and meet all comers. We must have business men organize, must have silver lies run down and speared fast to the ground. We must ignore party lines in this business and vote as we want our wages and debts paid. The action of the President and his cabinet ought surely to restrain the Democratic party from surrendering to the silver inflationists. Let Republican leaders be equally outspoken, and the agitators will be forced to flock by themselves. When they do that, no fire from heaven will be necessary to consume them.

We have often pointed out the mischief that is worked among weak minds by statistics. Many a man, for instance, never dreamed he had not enough currency for the needs of his business until some one told him how much money there was in the country "per capita." As soon as he learns there is only $23 "per capita," he sits down on a log and weeps and wails and wonders what we are coming to. So also when he takes up the custom-house returns and finds the imports exceed the exports, he concludes that his neighbors are all running in debt for silks and champagne, although he knows that among his own acquaintances things are going on as usual, and notes are met with the customary regularity. There is a similar alarm about "plutocrats" and "watered stock." When some people foot up the number of "plutocrats" there are, and the quantity of watered stock there is, they want to leave a dying world. Judge Gaynor, for instance, although drawing a comfortable salary in Brooklyn, and surrounded by a peaceable and reasonably contented community, writes out to St. Louis that "untold millions of sham, dishonest, and oppressive paper stock and bonds" are "preparing to sap agricultural, mechanical, manufacturing, mercantile and professional, and all other honest industries." Now, if the judge were obliged to state under oath how many millions the "untold millions" were, and in what manner "oppressive paper stock" "saps agricultural, mechanical, etc., honest industry," it would make him happy as a king and lively as a cricket. He would see that he was the victim of a bugaboo.

The country long ago discovered in McKinley one of those great geniuses whose province it is to make difficult and complex problems clear as daylight, and his peculiar powers shone to great advantage last week in Hartford. He brought out a simple little receipt to cure financial ills, which is one of those flashes of insight that make ordinary men beat their heads and tear their hair in rage at their own stupidity in not having perceived the great truth themselves. People have been worrying over the gold reserve, the country was brought to the verge of panic and bankruptcy on account of it, and a costly contract had to be made with foreign bankers—all to meet a difficulty which McKinley surmounts in one sentence. Says he: "The outflow of gold will never trouble us when the inflow of gold is only large enough." What a ridiculous plight that leaves the President and the syndicate in! Why didn't they think of that? If they did not, why didn't they send for McKinley? These are painful questions to be compelled to ask, but still more painful is it to think that such a man as this should be forced to journey about the country drumming up delegates to nominate him for the Presidency. Any other country possessing such a political genius would seize him and make him President against his will, if necessary. We could have him as President with his hearty consent, and yet we lie back and smile at his hunt for delegates. The outflow of gold he can contemplate with serenity, but the outflow of delegates is what starts him on his parlor-car travels.

The large use of instruments of credit in wholesale trade, obviating by so much the need of actual currency, has long been well known. What has not been so well established is the growing extension of the same system to retail trade. Prof. David Kinley publishes in the March *Journal of Political Economy* some inquiries directed to this point, which yield most instructive results. Through the comptroller of the currency, questions were sent to national banks asking for the amounts deposited on the nearest settling day by retail grocers, butchers, clothiers, furniture-dealers, and fuel-dealers, with kinds of money and checks and other instruments of credit specified. Replies were received from 2,465 banks, all over the country, and from the returns a rough but sufficiently accurate estimate can be made out showing the part played by currency and credits respectively in retail trade. Prof. Kinley makes out a table covering all the States and Territories, and shows that payments by check range from 54 per cent. of the total settlements in retail trade in the North Central States to 65 per cent. in the South Central. The bearing of the investigation on present currency discussions is thus stated by Prof. Kinley:

"While it is generally admitted that the larger part of wholesale business is done on credit, some have claimed that only a small portion of retail trade is so conducted, and that the supply of money should, therefore, be increased for the daily needs of the people. The present investigation shows, however, that credit plays an important rôle in retail payments; its results are, therefore, on the whole,

in the line of former conclusions as to the importance of credit instruments in payments and exchanges generally, and against the necessity of any additional provisions for simply increasing the volume of money without taking into consideration the other and at least equally important element of our circulation."

The price of beef is now higher than it was in the year 1873. This fact ought to gladden the hearts of the silverites, who think that low prices are the bane of the human race. Yet we have not heard of any public meeting being called to celebrate this advance in the price of steaks and roasts. There is to be an advance in the price of coal if the anthracite companies can bring it about, and there is already an advance in petroleum. In none of these cases is there any sign of public rejoicing such as ought, according to the silver theory, to attend the advance in prices. It may be replied that the theory requires the advance to be general before it becomes beneficial. In other words, people are not benefited by paying 5 cents a pound more for beef and 25 cents a ton more for coal unless at the same time they have to pay a dollar more for shoes and two dollars more for a coat, and other things in proportion. The idea is that when prices become high all around, wages will be raised proportionately. But unless they are raised more than proportionately, the laboring man is no better off. So the vital question for all persons who work for hire and all who have fixed incomes—that is, for ninety-five out of every hundred persons in the community—is, who will guarantee that their wages will rise simultaneously with the advance in general prices and a little more than in due proportion to such advance? A committee of guarantee ought to be appointed at once. Senator Jones of Nevada, Don Cameron, and the author of 'Coin's Financial School' ought to be members of it, with President Andrews of Brown University for consulting actuary. There is no time to be lost.

Very few ministers—of the Methodist persuasion, at all events—will be willing to believe that Senator Morgan, the chairman of the Senate committee on foreign affairs, had not been drinking when he composed his explanation of the English difficulty with Venezuela, to wit, that Great Britain is quarrelling with Venezuela for the purpose of getting hold of the Venezuela gold-fields in order to maintain her monometallic gold system. To this Alabama Sage, the gold standard in England is in constant danger of collapse for want of gold, and the Government, in order to keep up the supply, grabs all the gold it can in all parts of the world and carries it to the mint. He thinks we should do something to stop her little game. There are, of course, many men as ignorant and silly as this in other countries, but we do not believe one could be found on the civilized globe to make the exhibition of himself that Morgan makes. The shame of him, too, is aggravated by the fact that we sent him abroad to represent us in an august international tribunal, side by side with eminent jurists and scholars and gentlemen, last year. Worse still, he is actually chairman of the committee on foreign affairs of the Senate. His biographical sketch says he got "an academic education" somewhere in Tennessee, and we should ascribe his follies to the limitations of this curriculum if it were not that Lodge, who graduated at Harvard, follows close behind him in support of similar tomfooleries. We should say, too, that he was a useful illustration of what the Democratic party can do in these days in the way of producing statesmen, if it were not that Frye, the Maine Republican, talks on foreign politics in a way fully as well calculated to excite the suspicions of clergymen. One thing is certain, and that is, as we grow in size, and power, and pretensions, we must provide different instruments for the management of our foreign relations. It is preposterous to try to do business and maintain friendly relations with great foreign states through these politicians, who are either shamming for their own fun, like Lodge, or are, like Morgan, giving the world in our name, and in a black broadcloth coat, a gloomy savage's views of the working of civilization.

Very disturbing news was received from Hawaii by the last steamer. On the evening of April 1, Mrs. Dominis, the ex-Queen, who is a prisoner, although allowed to take exercise in the open air, "was observed exchanging salutations with a body of political prisoners returning to jail from their daily labor on the roads. She was first seen to wave her handkerchief to them from the east veranda of her former palace." This salutation was responded to silently by the road workers. The event has taught the Government that "little reliance is to be placed upon the ex-Queen's oath of allegiance or act of abdication." But this is not the most alarming news brought by this steamer. In proportion as Great Britain neglects her opportunity to grasp the islands, the danger of Japan's seizing them increases. "Serious and growing apprehension is expressed here," says the news budget, "as to what the Japanese Government may feel *compelled* to do with Hawaii after the termination of the war with China." Jingoism, we are told, has taken possession of certain Japanese politicians. This means that they have their Morgans and Lodges and Fryes, just as we do—a sad state of things for Japan, no doubt, but one that must be reckoned with in Hawaii just the same. The budget concludes by saying: "Altogether, more danger is feared from the Japanese than from any other source." This is very strange indeed, for how could more danger be feared from any country than from England? We shall never believe it unless it is officially communicated to our Government by Minister Thurston's successor when he shall be appointed.

Minister Thurston's probable departure from Washington as *persona non grata*, it seems, was known to the royalists in Honolulu before it was known to the public in general. "It is clear," says the news budget, "that the 'tip' came from the informant in the State Department who warned the Queen and her advisers that President Cleveland would instruct Minister Willis to demand that President Dole and his associates should turn over the government to her." Another "tip," from the same source probably, was that "Senator Pettigrew submitted to Secretary Gresham his virulent speech against the Hawaiian Government in the recent cable debate, and that both Secretary Gresham and President Cleveland approved it." This is little less than treason on Pettigrew's part, and it is a wonder that he should have dared to do it. It remains to be seen how such a damning fact was kept secret here while publicly talked about in Honolulu. Very likely it reached the ears of those road-workers and led to the exchange of salutations with Mrs. Dominis which had such a disquieting effect. If so, Senator Pettigrew ought to take greater precautions the next time he has a midnight consultation with Gresham. There is a hint that Minister Willis's place may become too hot for him, and that there are just as good reasons for calling him *persona non grata* as there were for applying that epithet to Mr. Thurston, but up to the sailing of the last steamer he had not received his passports.

We do not often agree with the Hon. Hugh J. Grant, but we read on Tuesday his manifesto, issued on the occasion of his taking command of Tammany, with peculiar interest. It is not quite as pleasant reading as that old one of 1888, when he promised to fill our offices "with the highest order of citizenship the county affords." But he recognizes the signs of the times when he invites William C. Whitney, E. Ellery Anderson, and divers other distinguished citizens to join the organization. There never was a time when it needed such men more. W. C. Whitney and E. Ellery Anderson and Mr. George G. Haven in particular ought to be there. One of Mr. Whitney's best-known public papers was a eulogy on Croker as an honest, hard-working man, who was trying to serve his country according to his lights. Moreover, Mr. Whitney was, with Mr. Haven, the park commissioner, one of the very earliest to discover Mr. Grant's commanding talents. In those now apparently far-off days, when Mr. Grant had just taken office as our new mayor, and the rich were rallying round him, and he was filling the whole city with promise, Mr. Whitney called attention to his immense abilities, and the probabilities that

his career would be one of unusual brilliancy—an estimate in which Mr. Haven heartily concurred. "That young man," said one, "is a person of extraordinary powers." "Right you are," said another. "He will go far," said another. "You bet," said a third. The whole community fell in with this view.

He makes one remark in his manifesto which we think of itself shows that the man has a great future:

> "It is the time for Democrats to get together and help make an organization under the roof and rules of old Tammany Hall which shall work for the clean and honest administration of municipal affairs, which shall labor to overthrow the hypocrisy which has beclouded the eyes and minds of the people of this city, and which shall place the government of the city of New York once more in the hands of New Yorkers. It is the duty of every New York Democrat to do this, the duty of every one who loves his party, of every one who has any local pride, of every one who has a contempt for sham."

Now, we know there are plenty of carpers who will cry out that any one could have said this, that we all knew this, and so forth. No man like Mr. Grant can utter a word without having the authorship claimed by some trumpery fellow who is trying to live on other people's brains. What we say is, if this was so easy to say, why did not some one say it? Who hindered him? The facts of the situation were as patent to everybody as to Mr. Grant—the condition of the city and the work before Tammany. Why then did not somebody besides Mr. Grant perceive it, penetrate the heart of the crisis, see the need of the hour, and proclaim the saving truth? Simply because nobody else was H. J. Grant. There is only one Hugh J. Grant, not two—only one man with the perceptive power necessary to set Tammany to its proper work.

A notable victory for the principle of non-partisanship in judicial elections was won in Wisconsin week before last. For a number of years in that State there has been a growing popular conviction that a judge who had served one term with credit should be given another term without regard to his politics. In pursuance of this policy the Republicans have more than once joined in the reëlection of a Democrat when they might have put one of their own party in his place. Under ordinary circumstances the precedent of continuing on the bench a faithful incumbent whose term was about to expire would hardly have been questioned in the Republican party this spring, although he was a Democrat in his political affiliations. But party feeling has run high in Wisconsin since the Democrats got control of the State in 1890 for four years, and also of both the United States senatorships; and when the tidal wave of last fall swept the Republicans back by more than 50,000 majority, the professional politicians, who had never liked the non-partisan principle, resolved to overthrow it. They accordingly nominated a Republican lawyer, and counted upon the 54,000 majority of last November to carry him on the bench in April. But a number of the best Republican newspapers in the State, under the lead of the Milwaukee *Sentinel*, refused to endorse this grab game, and called upon the people to sustain the policy of retaining good judges in office without reference to their politics. The appeal was successful, and although Wisconsin apparently remains as strongly Republican on national politics as last fall, it has reëlected a Democrat to the Supreme bench. The incident is full of encouragement to all believers in the non-partisan principle everywhere.

A bill to establish the office of commissioner of public records in Connecticut is now before the Legislature of that State. The need of such an officer can be fully appreciated only by those who have had personal acquaintance with the records of the counties, cities, and towns of the various States, or have followed the work of the commissioner in Massachusetts. In that State, where the condition of the records was fully up to the average, many had been lost, and many more were in danger from fire, theft, or mutilation. Most of these are now safe, and improvement in the general condition is apparent. The use of permanent ink on public records, which is now required by law in Massachusetts and is proposed in New York, is among the important reforms introduced by the commissioner. The office was established as an experiment, but its operation met with instant popular approval, and it is now both permanent and held in high esteem. We feel sure that the people of Connecticut will manifest the same appreciation if the Legislature follows the example set by the neighbor State. One indirect result will be a revival of local historical and antiquarian interest; and, as in Massachusetts, the preservation of the earliest records by copying and printing will surely be resorted to.

We are extremely sorry that State Senator W. P. Goebel should have had to kill Secretary John Sanford of the Farmers' and Traders' Bank at Covington, Ky., on Thursday. The reason why Goebel killed Sanford was that Sanford tried to kill him, having "lain in wait" for him on the steps of the First National Bank. One or other of them had to die, because they belonged to "Kentucky's best-known families" and were "leaders in politics, business, and society." Politics, business, and society cannot have two leaders in Covington, Ky. One has to perish sooner or later. Goebel was bright, and excited the envy of Hallam and Meyers. Goebel and Sanford ran rival banks. Hence "bitter political feeling." Then at last "the bitter attack" on Sanford appeared in the local paper, referring in its headline to him in "depraved language." One of the bankers was doomed. Sanford leaves a son, who knows what he owes to the memory of his deceased parent and likewise to Goebel. "General regret" over the affair is expressed by the Kentucky colony in Washington. No joy; no exultation. The banking business in Kentucky is evidently what insurance men call "extra-hazardous." It is not every man who could spot a rival cashier lying in wait for him, in time to get the drop on him. We strongly advise elderly Kentucky financiers to fix their residences in New York, and do their business through local fighting men.

The Harvard overseers have decided that it is within the power of the athletic committee to settle the question of the continuance of football, and the athletic committee are going to allow its continuance within college grounds. "There is to be no publicity." Only undergraduates and alumni are to be allowed to witness the sacred mysteries of the play, and "there will be no passes for newspaper reporters." Telegraph or telephone wires will not be allowed on the field, news about the eleven is to be "circulated privately" alone, and "newspaper reasoning from wrong premises, and especially unwarranted puffing and other personal mention of players," are to be rigidly prevented. These proposals betray a lamentable ignorance of both the generous football youth of our colleges and the newspapers. Publicity and puffing and glory are what have made "the game" the great thing it is, and if the players are to contest in secret, for an amount of gate-money that will look more like a missionary collection than the President's salary, with no howling mobs to cheer them on to bloody deeds, the charm of football will disappear for self-respecting students. But the worst blunder refers to the newspapers. Are the overseers aware of the job they have on hand in undertaking to prevent the newspapers from "reasoning from wrong premises"? And do they expect to keep out reporters simply by withholding passes? Most of the football reporters are college men, who would have no difficulty in getting in under the new regulations, and the lurid nature of their accounts would only be heightened by the attempt to curtail their rights. Then as regards keeping players' portraits out of the daily press, have the overseers considered the resources of a well-equipped illustrated daily? Last year's pictures of the intellectual Hinkey will do perfectly well for this year's Brewer, or, if the worst comes, a little dressing up of the Marquis of Castellane's picture will make him pass for a raw-head and bloody-bones football hero. Idlest of all is it to expect that Yale spirit will consent to play football after the Miss Nancy style proposed by the Harvard overseers. It begins to look, in fact, as if those gentlemen had chosen to kill the game by making it ridiculous.

THE SILVER PROPAGANDA.

Signs multiply in all parts of the country that the advocates of free silver coinage have organized a most comprehensive scheme for pushing their views upon the attention of the public and making proselytes. That no State is considered too strongly committed to the cause of sound money to be a hopeless field is illustrated by the fact that Mr. Charles Heber Clark, secretary of the Manufacturers' Club of Philadelphia, went to Harrisburg last week to make a plea before the members of the Pennsylvania Legislature, as the representative of those high-tariff Republicans in the stronghold of protectionism who are ready to follow the lead of Don Cameron, and give that champion of free coinage another term in the United States Senate. The tone of this plea is sufficiently shown by the closing passage:

"This is a question which you can help to answer, and I trust that you will be impelled to send to this nation some message that the great commonwealth that has always been in the very front as the champion of American protection as against British free trade, will still hold that place in the contest between British gold monometallism and that bimetallism which was introduced to our political system by the great men who set up the pillars of the republic."

The recent recommendation by "the American Bimetallic party" of the immediate organization of all who believe in its views is already being followed. A fortnight ago, some four hundred persons, hitherto Democrats, Republicans, and Populists, met at Athens, Ala., and organized the Central Alabama Silver Club. The State commissioner of agriculture, who is a Democrat, offered a resolution to carry on the fight for silver within party lines, but it was overwhelmingly defeated, and in its stead a declaration was unanimously made pledging those present "to support and in 1896 to vote only for the party platform and candidates, national, State, and county, in favor of the free and unlimited coinage of legal-tender silver and gold on equal terms, at 16 to 1, regardless of all past, present, or future political affiliation on other matters." Committees were appointed to organize similar clubs throughout the State.

Another feature of the propaganda is the attempt now making to commit the Democrats of Illinois to the support of free coinage by the unprecedented step of holding a State convention in June of one year to decide what position the party shall take in a campaign for an election that will not be held until November of the following year. The chairman of the State central committee has publicly declared that he is convinced that 90 per cent. of the Democrats of the State outside of Chicago are favorable to "free and unlimited coinage of silver, at the ratio of sixteen to one, without waiting for the action of any foreign government," that he himself is in favor of this policy, and that the party machinery will be used to secure its endorsement at the snap convention.

The free-coinage men have also opened a campaign for the circulation of silver literature on a great scale. They are already flooding the West with copies of 'Coin's Financial School,' and this is only the beginning of their efforts. Gov. Richards of Montana has called a conference, to which the Governors of all the silver-producing States are asked to send delegates, to meet at Salt Lake City next month to inaugurate an "educational campaign on the silver question, the intention being to place bimetallic literature in the hands of voters throughout the Union."

The friends of sound money have every reason to rejoice over such evidence that the silver-men are going to make an open and straightforward fight all over the country. A sharp division between those who want an honest dollar and those who do not is on all accounts to be desired. A year's discussion of the principles that enter into this question is the best possible preparation of the public mind for the Presidential campaign of 1896.

Of course there must be, and will be, as vigorous a campaign for sound money as has been started against it. The work of educating the people must be prosecuted as thoroughly as that of hoodwinking them. Sound-money clubs must be organized, pamphlets laying down the right financial doctrine must be circulated, speakers who can expose the fallacies of the silver-men must be put in the field, particularly in the West and South.

No student of our political history can doubt the result of such an appeal to the people. One's memory need not extend further back than twenty years to find proof that the advocates of sound money will always win when they make a determined fight. The Indianapolis *Journal*, which is the most influential Republican organ in Indiana, is vigorously opposing what it styles "the free-coinage scheme of the bonanza mine-owners," because it "believes profoundly that the free coinage of silver by the United States alone would put this country on a silver basis, drive the stock of gold abroad or make it merchandise, and create a panic such as this country has not witnessed since 1837." The editor of the *Journal* has recently received two or three postal cards from readers who tell him that his paper is not in accord with the majority of the Republican party in opposing free coinage. He makes a very effective reply to such protests by this appeal to history:

"The *Journal* has been through one contest in Indiana for sound money. From first to last it fought the greenback and fiat-money lunacy when it was sweeping the State, and when nearly every Indiana Republican in Congress voted to repeal the resumption act. Then angry appeals and abuse came in every mail from men who are now ashamed that they were ever so far beside themselves as to oppose the resumption of specie payments, which more than doubled the money of the country."

The sound-money men of the country only need to make the same kind of a fight against the free-coinage craze from now until the next Presidential election in order to win an equally complete victory.

AN AMERICAN PROTECTORATE.

It is clear that the Lodge theory of a United States protectorate over this hemisphere has not been adopted by the Government at Washington. His view was, it will be remembered, that Great Britain might properly enough demand an indemnity from Nicaragua for injuries inflicted, but that she could not be allowed to collect it. International law admitted the right to claim, but the shade of James Monroe interposed a ghostly hand to prevent enforcement of the claim. But it appears that Gresham, probably emboldened by Lodge's temporary absence from Washington, has disavowed this idea, and told the English Foreign Office to go ahead and get their $75,000 out of Nicaragua the best way they can. Hence the alarming references of the London *Times* to "the justice and good sense of the Americans." Wary and experienced patriots always distrust such international compliments, knowing that they imply the success of foreign schemers over our too credulous diplomatists.

We do not suppose that even Lodge was serious in his view of an American protectorate. Certainly no man with the responsibilities of directing foreign affairs upon him could look upon any such doctrine without amazement. It implies that the countries of South America may be as insolent or lawless or reckless in their dealings with any European Power as they please, and that our Government will always interfere to prevent them from being punished in any way whatever. What the effect of such a monstrous principle, if once established, would be upon the class of men in office in South America, can easily be imagined. They would be protected against the consequences of their own acts. They would not need to pay their debts, or to observe international courtesies or obligations, and could count upon the United States to prevent their being forced to make either apology or reparation. The position in which it would put this country would be intolerable. We should be in the situation of a foolish old uncle allowing a scapegrace nephew the luxury of doing exactly what he pleased, without any danger of ever being called to book for debts or debauchery.

The duties of nations exercising a protectorate over certain portions of the earth's surface are not clearly defined and are still the subject of discussion. Prof. Westlake devotes a good part of his last volume to the matter, which has assumed no little importance in connection with the partition of Africa among the European Powers. Many things about protectorates and "spheres of influence" remain unsettled, but no jurist or statesman or man in his senses supposes that there can be a protectorate without responsibilities. Yet the Lodge idea is that we can be protectors without any obligations whatever. If Great Britain claims an indemnity from Nicaragua, or Germany from Venezuela, we must cry

"Hands off! America is for Americans." But if Downing Street then says, "Very well, keep your protégés in order, and pay their debts yourself if you won't allow us to collect our dues," we are to assume a surprised and pained air, and talk deprecatingly of the sovereignty and independence of the South American nations, with which we could not for a moment think of interfering.

Such international effrontery no public man would be equal to off the stump, nor would he be, we should hope, to the impudence of denying the right of other countries to apply the same rule to South America that we follow ourselves. When we have a claim, we set about enforcing it. American citizens have had claims against Venezuela pending since 1871, on account of some steamboats of theirs held in the Orinoco by revolutionists. These claims were taken up by the State Department, but negotiations dragged, and finally, in 1890, Congress passed a joint resolution authorizing the President to collect the money by force, if necessary. Happily, force was not necessary, as a mixed commission has since passed on the claims and made an award of $141,000, which Venezuela will now meekly pay over. But the spectacle of the United States forbidding England to do what they themselves were ready enthusiastically to do five years ago, would be too much for anybody but those sad and sincere men, without a ray of humor, who are known as Jingoes.

The effect of this wild notion may be observed in operation in South America in two ways. In proud and jealous countries, like Chili and Argentina, it produces a distinctly hostile feeling. They do not want to be protected or patronized. In the weaker republics, like Venezuela and Nicaragua, it arouses a vague belief that the United States are bound to stand by them in all their quarrels with European Powers, right or wrong. Venezuela, it is reported, is going to declare war against Great Britain as a result of the Guiana dispute, and to look to this country to see that she is not allowed to be spanked. This is certainly deplorable, both for the South Americans and for ourselves. As for Europeans, in so far as they take the talk of our Jingo Senators seriously, they are both puzzled and exasperated by it. What they see clearly, however, and say with sufficient positiveness, is that the fast-and-loose protectorate over this hemisphere asserted in some quarters is thoroughly impossible if the world is to live in peace. Their attitude was well expressed by the London *Economist* of March 23, when it said:

> "It is needless to say that there is no Power in Europe so great that it does not regret and even dread a dispute with the United States, but still it is possible to carry deference too far, and sooner or later these recurring incidents will lead to regrettable complications. Europe, as a whole, may even be compelled to ask the Government at Washington whether it does or does not claim any especial rights within North and South America and Hawaii, and if so, what these rights are. Does the Union claim to be the protector, in the modern sense, of Spanish and Portuguese America; or does it regard all the Powers within those limits as its dependent allies? In either case, does it acknowledge itself to be in any sense answerable for their conduct?"

WESTERN REBUKES OF EASTERN FILIBUSTERS.

It must have been generally remarked that the wildest talk in favor of the annexation policy comes from Eastern Senators. Frye, Lodge, and Platt, all of whom during the last few weeks have been shrieking that the United States ought without delay to begin grabbing territory in different parts of the world, are representatives of New England Republicanism—that Republicanism which in the first national convention of the party supported with enthusiasm the declaration in the platform that "the highwayman's plea, that 'might makes right,' was in every respect unworthy of American diplomacy, and would bring shame and dishonor upon any government or people that gave it their sanction."

Time enough has now elapsed for public sentiment throughout the country regarding the proposed revival of the old "highwayman" policy to find expression. It is an interesting fact that, while many New England journals have kept silent or even endorsed the outbreaks of the Maine, Massachusetts, and Connecticut Senators, earnest protests against their annexation schemes have been made by representative party journals in the West.

The Milwaukee *Sentinel*, which is the chief Republican newspaper in Wisconsin, opens an article on "The Annexationists" by calling attention to what Mr. Bryce says, in the new chapter on "The Home of the Nation" in the last edition of his 'American Commonwealth,' on the immense advantages that Nature has given this country by reason of its geographical position:

> "Severing its home by a wide ocean from the Old World of Europe on the east, and by a still wider one from the half-old, half-new world of Asia and Australasia on the west, she has made the nation sovereign of its own fortunes. It need fear no attacks nor even any pressure from the military and naval Powers of the eastern hemisphere, and it has little temptation to dissipate its strength in contests with them. It has no doubt a strong neighbor on the north, but a friendly one, linked by many ties of interest as well as kindred, and not likely ever to become threatening. It had on the south neighbors who might have been dangerous, but fortune favored it by making one of them hopelessly weak, and obliging the other, strong as she was, to quit possession at a critical moment. Thus it is left to itself as no great state has ever yet been in the world; thus its citizens enjoy an opportunity never before granted to a nation, of making their country what they will to have it."

With a merited sneer at such demagogues as Lodge, the *Sentinel* admits that "perhaps the more resolute spirits among the gentlemen who wish this country to annex Hawaii, Cuba, and other islands will see in Mr. Bryce's words nothing but a crafty attempt to further the interests of Great Britain by pretending that it is advantageous to the United States to keep itself isolated; and Mr. Bryce, in their eyes, may be only a subtle and insinuating British agent, who has been hired to use his influence against the annexation of territory by this country." But the Wisconsin editor is of opinion that nobody whose judgment is worth anything will doubt that Mr. Bryce is still, as he always has been, an exceptionally intelligent, well-informed, and disinterested friend of the United States; and he considers the passage above quoted "especially worth reading at this time, when Americans who ought to know better are effervescing with a desire to annex a few half-civilized communities."

The Omaha *Bee*, in an article entitled "Unwise Counsellors," points out that the utterances of Frye, Lodge, and Platt show "a spirit distinctly hostile to the established principles and policy of the nation, which, if permitted to grow until it takes possession of the people, cannot fail to involve us in grave and serious complications and conflicts." The *Bee* calls attention to the advantages that we now enjoy by virtue of our situation, and shows that, if we depart from our traditional policy and begin gathering in all the territory we can lay our hands on, as advised by the New England highwaymen, "we should not long enjoy the freedom from aggression on the part of other nations that our isolated position has given us." "Let this country enter upon such a course as these Senators suggest," it adds, "and it would not be long before we should have to reckon with the rest of the world, perhaps united against us."

These patriotic Western editors expose the demagogism of the Fryes, Lodges, and Platts most effectively when they point out that we have quite enough on our hands in governing the territory we now have. "It is hard to understand," says the *Sentinel*, "this desire to increase the troubles we have by adding others which we know not of"; and it proceeds to give this much-needed advice to the New England demagogues:

> "An American who wishes to be patriotic would be better employed in trying to get men of sense and integrity nominated for aldermen in his ward, in trying to give his city clean streets and fine public buildings, in spreading information about money, in tackling any of the problems which the country must settle. This kind of employment is not so spectacular as preaching the need of territorial acquisition, and not so exciting for the preacher, but it deserves to attract men who have energy and hard heads. We have an opportunity, as Mr. Bryce says, of making this country what we wish to have it. Some of us are in danger of neglecting this opportunity through a desire to borrow trouble from abroad."

The Western editors do not believe that at present any considerable body of the American people sympathizes with the views of those who think that this country ought to reach out for new territory on every hand. The *Bee* points out that such a policy involves the building of an enormous navy, the maintenance of a great standing army, and the reconstruction of the machinery of the home Gov-

ernment; and these are things which it feels "confident the great majority of the American people do not desire." At the same time, as a strong effort is making to impress these views upon the people, the Omaha editor holds that "the sooner their dangerous nature is pointed out, the better."

Politics is notoriously full of surprises, but it has seldom shown a greater than when that section which has always prided itself upon its superior morality, as illustrated in its traditional hostility to filibustering, suddenly breaks forth, through its chosen representatives in the Senate, as the advocate of the "highwayman" policy, and then is properly taken to task for its unpatriotic attitude by a younger section, which reminds New England that the true grandeur of nations is not to be found in spectacular conquests of territory, but in the more prosaic work of solving the great problems that already tax the energies of this country.

A NEGLECTED INCIDENT IN THE LIFE OF DR. FRANKLIN.

PHILADELPHIA, April 9, 1895.

BENJAMIN FRANKLIN paid a visit to Germany in the year 1766, which appears to have been almost entirely neglected by his biographers, and yet it is of interest from many points of view. In a letter to his wife dated London, June 13, 1766 (printed in Sparks's 'Works of Franklin,' vol. vii., p. 320), he wrote: "To morrow I set out with my friend Dr. Pringle (now Sir John) on a journey to Pyrmont, where he goes to drink the waters. . . . We must be back at farthest in eight weeks. . . . I propose to leave him in Pyrmont and visit some of the principal cities nearest to it, and call for him again when the time for our return draws nigh." That he actually went to the baths with Pringle we have satisfactory evidence in the Pyrmont *Brunnenarchiv*, published in Berlin in 1782, which contains a list of the guests at Pyrmont from 1752, and which, under the year 1766, contains the entry: "Leibmedicus Ritter Pringle aus London und Dr. Franklin aus Pennsylvanien, kommt aus London."

Very few references to this trip occur in his correspondence or elsewhere. It was in the midst of a very exciting period of Franklin's life, which may account for the fact that he makes such small mention of the journey himself; but the few times he mentions it, he certainly shows that he enjoyed it very much, and there is various evidence from German sources pointing to the fact that his visit was regarded as a very important and interesting event in the annals of Goettingen.

The exact date of Franklin's visit to Goettingen is fortunately preserved for us in the reports of the Goettingen Academy of Sciences. In the one hundred and tenth issue of the *Goettinger Anzeigen*, bearing date of September 13, 1766, the statement is made that the session of the Royal Society of Sciences held on the 19th of the preceding July was more impressive than usual. "The two famous English scholars, the Royal physician, Mr. Pringle, and Mr. Benjamin Franklin, from Pennsylvania, who happened to be at that time in Goettingen on a trip through Germany, took their seats as members of the Society." The same periodical, in its issue of September 27, 1766, says that Pringle and Franklin visited Mr. Hartmann in Hanover in order to see his apparatus for strong electrical experiments. Sir John Pringle, in a letter dated London, September 6, 1766, to Professor Michaelis of Goettingen, thanks him for the courtesies which he and Dr. Franklin had received from him on occasion of their visit to that city. In a letter dated June 2, 1769, to the same gentleman, Pringle apologizes to him for some extraordinary statements which Franklin had made during their conversation in Goettingen in 1766, in regard to the enormous size of the Patagonians, explaining that he had been misled by the reports of sailors.

During this visit at Goettingen, Professor Achenwall held a conversation with Franklin on the condition of the American colonies He wrote out careful notes of this interview, and published them subsequently in the *Hannoversches Magazin* in the seventeenth, eighteenth, nineteenth, thirty-first, and thirty-second issues—the first bearing date of February 27, 1767, and the last April 20, 1767—under the title of "Some Remarks upon North America and the Colonies of Great Britain in that Continent, from a Personal Interview with Dr. Franklin." He remarks in his closing note that he found Dr. Franklin very willing indeed to answer all his questions, and not only that, but to go much further and give him all the information he could in regard to matters in the New World. He also calls attention to the fact, in this foot-note, that when the British colonies felt themselves aggrieved by the Stamp Act, they showed almost exactly the same temper and mode of thought as the Corcyreans displayed towards their mother country, Corinth, on a somewhat similar occasion. (See Thucydides i., 34, etc.)

The report of this interview with Dr. Franklin was republished subsequently in various forms: In Koehler's (J. T.) 'Sammlung neuer Reisebeschreibungen aus fremden Sprachen,' Goettingen and Gotha, 1767-69; also, a separate edition entitled 'Herrn Hofrath Achenwalls in Goettingen Anmerkungen über Nord Amerika und über dasige grosbritannische Colonien aus mündlichen Nachrichten des Herrn Dr. Franklin,' Frankfort and Leipzig, 1769; also, at Helmstedt in 1777. The latter edition was accompanied by an appendix consisting of a translation of John Wesley's address to his brethren and countrymen in the American colonies. There seems to have been also a Dutch translation of this interview published at Utrecht in 1778.

The book attracted considerable attention, to judge from these frequent reprints; though, so far as I am able to learn, no mention of it is made by any of Franklin's biographers or bibliographers, with one exception, and he evidently knew nothing beyond its bare title. Mr. Paul Leicester Ford, in his Franklin Bibliography (a most valuable work, by the way), mentions it, but confuses it with a supposed translation of 'The Examination in Parliament,' published by Almon in London in 1766. He says in the Bibliography (page 133), under the title of 'Examination in Parliament,' that this work was reprinted several times in German, and gives the three titles which are cited above. It is evident that Mr. Ford had never seen any one of these pamphlets, or he could not have fallen into such a serious mistake. Not only do the pamphlets above mentioned treat of an entirely different subject, but they had no relation whatever to the 'Examination in Parliament,' nor, so far as I have been able to ascertain, is any mention made in any one of them of the fact that Dr. Franklin had been examined before Parliament. The Frankfort and Leipzig edition of 1769 is in the Philadelphia Library; the Koehler edition is reported by Sabin to be in the Harvard College Library, and the Helmstedt edition, he states, is in the Massachusetts Historical Society's Library. Copies of the Koehler edition and of the Helmstedt edition are to be found in the British Museum, and the Leipzig edition of 1769 is also in the British Museum catalogue, but the attendants were unable to find it when I called for it.

The copy in the Philadelphia Library contains 94 pages, 12mo, and discusses various topics relating to the British Colonies. The style of composition bears out the statement of the author, that it is essentially a series of answers to questions which he propounded in regard to the Indians, to the products of the country, its agriculture, manufactures and commerce, education, government, monetary and tax systems, law of succession, system of land-holding, slavery, redemptioners, religion, towns and cities, etc. The account of the paper money issued in Pennsylvania would of itself be ample evidence that this pamphlet rested upon statements of Franklin, as the account is very similar to that which he gives in other places.

Koehler, in his edition, evidently regards it as very necessary to correct some of Dr. Franklin's statements about the colonies, on the basis of Meyer Roberts's account of his travels in America, and he adds a number of foot-notes which are interesting, as he plainly makes the attempt to discredit Franklin's testimony. He accuses Franklin of great carelessness in his statements to Prof. Achenwall, and unfairness towards other colonies than Pennsylvania. He states, for example, that Franklin had said that a college had been established in Boston, when every one knew that it was at Cambridge, six miles from Boston! Franklin spoke, moreover, of the educational institutions of Pennsylvania as though they were the only ones in the colonies, whereas many other colonies had just as good, and probably better—notably, Massachusetts, Connecticut, New York, and New Jersey. Franklin speaks of the colonists paying tribute to the Iroquois Indians in the shape of gifts; Koehler remarks that this is true probably only of the Pennsylvanians—"mostly Quakers, whom their religion makes cowards."

In speaking of the difficulties in Pennsylvania between the Government and the colonists, which Franklin had described in some detail, Koehler says: "The Pennsylvanians are a 'sort of little rebels' who are violating in a criminal way the rights and dignities of their indisputable superiors, as well as the laws of nations; these people have become insolent through their too quickly acquired wealth, and deserve the severest punishment, because they give other subjects a bad example." He is not even satisfied with Franklin's description of how bear-roast is prepared in Pennsylvania. For, although he cannot deny that Franklin's description is true, still he says they do this much better in Poland, where they boil the claws in Burgundy, and thus make a most savory morsel.

In this interview with Achenwall, Franklin claims the credit for the establishment of the college in Philadelphia in 1749 (now the University of Pennsylvania). He declared, among other things, that the stories of the wealth of Mexico and its civilization were all a myth. "The Indians," he declared, "were barbarians; how could they build such cities as the Spaniards described?"

More than a year after his return to England, Dr. Franklin received a letter from Johann Friedrich Hartmann, dated the Calends of October, 1767, in which the writer says that he shall always remember the time when he was privileged to talk with Franklin on the occasion of his visit to Hanover. He also states that the Prince of Schwarzburg-Rudolstadt had sent a special messenger to Goettingen to salute Franklin; but the messenger got to Goettingen the very day Franklin left and too late to see him (printed in Sparks, vol. vii., p. 326). This Hartmann was a very prominent physician in Hanover, head of the royal hospital, and well known to scholars of that day for his interest in electrical investigations.

A further reference to this visit of Franklin's to Goettingen is found in Johann Stephen Pütter's 'Selbstbiographie' (2 vols., Goettingen, 1798, pp. 490 and 491). Pütter there mentions the pleasure which he derived from a visit of the famous Franklin and his equally famous English companion, Dr. Pringle, then President of the Royal Academy of Sciences at London. He says that Franklin was at that time working on the plan of the establishment of an American university at Philadelphia, and that was one of the reasons which led to his visit to Goettingen. Although he was not able to speak German, he seemed to be glad to get a copy of Pütter's 'History of the University,' and he talked with him and others about its contents. "I had the pleasure," Pütter remarks, "of having these gentlemen at my house one afternoon and evening, in company with other scholars in Goettingen. My friend Achenwall utilized this opportunity to get exact information from my guest as to the condition of the American Colonies, and their relation to the mother country; he subsequently published a part of this information in the *Hannoversches Magazin*. What Franklin said at that time could almost be regarded as the exact prophecy of the events which afterwards took place in that quarter of the world."

In Von Schlözer's Life, by his son, published at Leipzig in 1828, the author mentions that his father, on occasion of a visit to Hanover in April, 1766, dined at Münchhausen's along with the celebrated American, Dr. Franklin. He adds that nothing remarkable occurred on this occasion, except that Dr. Franklin kept his spectacles on during the entire meal—evidently looking upon this much as he would have done on Franklin's keeping on his hat.

In the Autobiography of Prof. Michaelis, published at Leipzig in 1793, he mentions having met Franklin in the summer of 1766, and he also gives us an account of what he calls an important conversation that he held with Franklin on one occasion at table.

"As he was dining at my house, we talked much about America; about the Indians; the rapid growth of the English Colonies; their population; their doubling in twenty-five years, etc, and I remarked that when I was in London in 1741 I had taken occasion to study pretty carefully the condition of these colonies from English books and reports, and I had come to the conclusion, which I expressed at that time to various people, that the colonies would ere long become independent. They laughed at me at that time; but I said I was of the same opinion still. Franklin thereupon answered, with his earnest, significant and shrewd expression, that I was entirely mistaken; the Americans had a great love for their mother country. I replied, that might be so, but the mighty sweep of interest would soon work very strong and outweigh or destroy the love for the mother country. He could not deny that this might be true, but he said their revolt would still be impossible, for every important place in the colonies, including Boston, New York, and Philadelphia, lay exposed to the English fleets. Boston could easily be destroyed by a bombardment; to this, of course, I could not reply. I did not think, at the time, that I was talking with a man who a few years later was destined to play such a prominent part in the fulfilment of my prophecies. When the disturbances actually broke out, I watched with great interest for the beginning of the bombardment of Boston, but things took an entirely different course."

The editor of the Autobiography of Michaelis remarks in a foot-note that he had had the opportunity, as a student at Goettingen, of seeing Franklin and Pringle, who had dropped into the Goettingen Library, and that they had pleased him much better than the famous Lessing, who was also stopping at that time in Goettingen. "These Englishmen, who are ordinarily reputed to be very distant in their manners, were exceedingly pleasant and condescending; Lessing, on the contrary, was distant and contemptuous."

EDMUND J. JAMES.

BROC'S LIFE UNDER THE FIRST EMPIRE.

PARIS, March 28, 1895.

M. DE BROC is the author of two volumes on 'France under the Old Régime,' which gave a clear account of the administration of the French provinces before the Revolution, and of the old provincial life. The interest I felt in reading this work, which was full of data and of documents scattered in a number of volumes, often difficult to find, induced me to read also a new volume by M. de Broc which has just appeared, 'La Vie en France sous le Premier Empire.' Why did he not write simply, 'La France sous le Premier Empire' as he did 'La France sous l'Ancien Régime'? "Life in France" means everything and nothing. In going over the volume I saw that M. de Broc intended to give to his new work a sort of dramatic life, with the help of the innumerable documents which we now possess on the period of the Empire. He meant to be more anecdotic, and it is perhaps a pity, for we know all his anecdotes, and I, for my part, expected a more general and systematic survey of the institutions of France as they were left us by Napoleon. For, if Napoleon's immense empire was but an empty dream, if he left the frontiers of France just as he found them, after having conquered nearly the whole of Europe, he was more successful as a lawgiver. "He created," as M. de Broc says, "institutions which have outlived himself and which are still flourishing. He made many laws which have not escaped criticism, but which nobody has yet undone. Neither monarchies nor republics have effaced their mark. . . . If the institutions of the First Consul and of the Emperor have such profound roots, it must be because they corresponded to the needs of the new France and were adapted to its manners. If they had been only the instrument of a reign, they would not have survived it."

In order to judge Napoleon well we must always see in him the First Consul, the inspirer of the Code Civil (so long called Code Napoléon) and author of the Concordat. One of the framers of the Code Civil, who died very old, told a friend of mine, who repeated it to me, that in the discussions which took place in the Council of State, at the time of the framing of the Code Civil, Napoleon, who presided as First Consul, took an active part in the deliberations, and always astonished the old *parlementaires* and jurists who were members of the Council by what they called between themselves his Jacobin opinions. Montalembert used to call the Code Civil the code of despotism. Napoleon would not tolerate testamentary freedom—he would have all children treated alike; and the part of which a father can freely dispose—what is called the *quotité disponible*—was reduced under his inspiration to a *part d'enfant*: that is to say, if there are two children, the father can dispose of a third of his fortune; if there are three, of a fourth; if there are four, of a fifth, and so on.

"You French," said Napoleon one day to Mme. de Rémusat, "care for nothing seriously except equality. And you would all renounce it willingly if you could each of you flatter yourself with the idea of being the first. . . . It is necessary to give to each man the hope of rising . . . and to keep your vanities at work. The severity of a republican government would have bored you to death. What made the Revolution? Vanity. And what will end it? Vanity. Liberty is a mere pretext."

The Code Civil is the code of that perfect equality which Napoleon thought to be the dominant passion of the French people. Its administrative expression must be found in our centralization, the most complete and in one sense perfect centralization to be found in the present or in the past. This centralization is the common work of the Revolution and of Napoleon; it began with the destruction of the old provinces and the creation of the departments. The province had its own life, the department is an arbitrary geographical unity; the First Consul had as many proconsuls as there were departments. I once asked a friend of mine who had been prefect in several great departments, if he did not dislike being sent from one place to another, and if he did not find these changes too laborious. "Not in the least," said he; "the prefect is everywhere the prefect; he finds everywhere the famous decree of Messidor, which is still in force, and which regulates precedence among all the functionaries, civil or military—the prefect, the bishops, the presidents of the law courts, the generals, etc.; he finds everywhere the same bureaux of the prefecture, where all business is classified and annotated; he has to go through the same rounds of visits for the *conseil de révision*—that is, the examination of the conscript soldiers; he has to preside at the same annual meetings of the councils-general; he has the same legal advisers." Wherever he goes, he is the representative of the State, whether the State be republican, imperialist, or monarchical. He is part of a great engine which is worked in Paris. He is not a man, he is a prefect; he has no thoughts but inspired thoughts, no will but an impersonal will. He comes to-day, he disappears to-morrow. He is all the more formidable because he is nobody.

This great machine of centralization was so minutely described by Taine that M. de Broc could not improve upon his description. At various times attempts have been made to secure decentralization, not only administrative, but intellectual also, if I may so express myself. Under the Second Empire, a certain number of gentlemen in Lorraine made an effort in this direction; they are still remembered under the name of the "school of Nancy." At present there are a few men who favor the creation of provincial universities, to play in France a part similar to that played in Germany by so many independent universities, which are distinct focuses of intellect. I find in some Souvenirs (now in process of publication) of Madame Octave Feuillet, the widow of a novelist who was a member of the French Academy, and who had some celebrity in the days of the Second Empire, an extract from

a letter which Feuillet addressed to Napoleon III. in January, 1867:

"One word more, Sire. Let the Emperor allow me to confide to him an idea which oppresses me, and which reflection fortifies every day. I think that the terrible instability of government in France is caused not alone by the political agitations of the country; I believe that the extreme centralization of the Parisian dictatorship has much to do with it. It is difficult for the Emperor to judge exactly the degree of mortal inertia into which the province has fallen. As the result of centralization, the whole of France has become the servile faubourg of Paris. The supremacy of Paris has no counterpoise, and, in every crisis, in each sudden movement, the head threatens to give the impulse to the body. . . . An almost incredible fact, Sire, is the want of men in the province. In a department like mine, which has 600,000 inhabitants [he wrote from the Manche], not one Deputy can be found. The provincial life is so reduced, so null, that it can neither form intellects nor harden characters. The France of '89 was much more fruitful.

"Must we believe, Sire, that centralization, excellent as a remedy and a means, is bad as a régime; that, in this sense, the Revolution went too far? Is not the chief work of centralization, French unity, accomplished for ever? And, at any rate, is not the chance of civil wars preferable to the chance of a Commune of Paris? Would it not be time to give to the province—that is to say, to France—under new forms in harmony with the times, life, spring, independence, a distinct activity, the local animation which the former provincial institutions of the old régime spread over the whole surface of the empire?"

The Emperor contented himself with thanking Feuillet for the expression of his "elevated and patriotic views." These spasmodic efforts towards decentralization will probably always be vain; there are material facts which favor centralization, and which act every day with more power and more energy. The railways, the telegraphs, the telephones are powerful agents of centralization; they make, in one sense, each country smaller; the business of every town, every village can easily be carried on in the capital. Paris acts like the brain which orders all the movements of the body. It is a curious fact, however, that, since administrative centralization has been made so easy and so complete, since there is, so to speak, no provincial autonomy left, the history not only of the provinces but of the old cities and the ancient monuments of France is studied with a minuteness and a care which is quite extraordinary. Any book, any pamphlet, any document relating to the old provincial life is sure to find a buyer. I am a constant reader of sale catalogues, and I am very much struck by the care which is now taken by booksellers to collect these pamphlets and documents. The provincial archives are now kept as well as our great libraries, and I remember the time when they were shamefully neglected.

There is one domain in which Napoleon met with a moral force stronger than his own. He was at heart of the opinion of the kings and princes of the sixteenth century. He made the Concordat, and signed a treaty of alliance with the Church; but he had no respect for religious liberty. A mere deist at heart, he considered an established religion as a mere "instrumentum regni." He met with some opposition in his *entourage* when he signed the Concordat.

Constant tells us in his Memoirs that on the day when the new law on public worship was signed, Joseph Bonaparte entered his room with the Consul Cambacérès.

"'Well,' said the First Consul to Cambacérès, 'we are going to mass. What do people think of it in Paris?' 'Many people,' said Cambacérès, 'intend to go to the first representation, and to hiss the play if they don't find it amusing.' 'If anybody dares to hiss, I will have him thrown out by my consular guard.' 'But if the grenadiers hiss like the others?' 'No fear of it. My old moustaches will go to Notre Dame as they did to the mosque in Cairo. They will look at me, and when they see their general behave gravely and decently, they will say, It is the order of the day.' 'I am afraid,' said Joseph Bonaparte, 'that the generals will not be so yielding. I have just left Augereau inveighing against what he calls your *capucinades*.' 'Bah! Augereau is a noisy fellow, and if he has some little imbecile of a cousin, he will put him in a seminary and ask me to make him an almoner.'"

Bonaparte well knew that the immense majority of the nation would see with satisfaction the reopening of the churches; but he intended to govern the clergy despotically. All the bishops' mandates were to be submitted to the approbation of his prefect, whether they were Catholics, Protestants, or Jews. The episcopate was reduced to a perfect slavery; the despotism of the Emperor and his agents was equalled only by the servility of some of the bishops. The curate became a minister of the imperial rule; he was forced to preach for the conscription, to read the bulletins of the Grand Army. (These ceased to be read after 1805.) I have before my eyes a copy of the catechism which was used in the churches of the French Empire, with the approbation of Cardinal Caprara, the Papal legate. It was used from 1806 to 1814. The seventh lesson made this commentary on the fourth commandment:

"What are the duties of Christians towards the princes who govern them, and what are particularly our duties towards Napoleon I, our Emperor? Christians owe to the princes who govern them, and particularly to Napoleon I., our Emperor, their love, their respect, their obedience, their fidelity, military service. . . . To honor and serve our Emperor is to honor and to serve God.—What is to be thought of those who would not fulfil their duties toward the Emperor? According to the Apostle Saint Paul, they would resist the order established by God himself and would deserve eternal damnation."

Though he had been consecrated by the Pope, Napoleon was not long in treating him as a vassal. He took possession of his States, and imprisoned him in France. He took a very practical and realistic view of religion. One of his courtiers, Cardinal Maury, once said to Pasquier: "Well, the Emperor has satisfied the two great needs of his capital: with a good police and a good clergy he is sure to keep it quiet. An archbishop is a prefect of police."

The subject treated by M. de Broc was almost exhausted by Taine. M. de Broc has not the sledge-hammer style of Taine; he is more superficial. I expected to find in his book what is not found in Taine, a lively description of the imperial society. The contact of the old aristocracy, after the emigration, with the new military aristocracy of Napoleon's creation was a fine subject for the political philosopher; but M. de Broc has not analyzed in a wide and philosophical spirit the immense social transformation which took place at the beginning of this century. He has contented himself with putting side by side a number of anecdotes and extracts from memoirs. The impression left by his volume is wanting in clearness and in sharpness.

Correspondence.

THE INCOME TAX.—TWO METHODS OF LEGISLATION.

To the Editor of The Nation:

Sir: Comparisons may be odious, but they are not always without instruction.

(1.) The existing method. Any one of 356 members of Congress introduces a bill for an income tax; it is referred to a standing committee of seventeen members made up by the Speaker of the House, the selection being based possibly upon some financial reputation of the individuals, but mainly upon party and political considerations, chief among which is the degree of their influence in procuring his election to his office. No member of the committee has even the pretence of representing the Treasury, or the nation, or the public interest, or has any responsibility for or needs to have any knowledge of the administrative effect of any laws which may be passed. Every member represents 1-356th part of the whole country, and is amenable in the first place to the pressure of his own constituents, but in a much greater degree to the necessity of conciliating the other 339-356ths of the House, themselves under hydraulic pressure from the private and party interest in the lobby. The bill as reported, therefore, is not constructed with an eye to the revenue of the Treasury or its effect upon the business of the country, or the possibility of its being put in operation, but solely as to whether it can be passed. The idea of its being subjected to anything like the test of effective debate is too absurd to be worth a moment's attention. The bill has passed both houses, after such tinkering as can be imagined, and is signed by the President, who cannot veto it without incurring the reproach of upsetting the financial system established by the deliberate judgment of Congress. The whole country is in an uproar in trying to understand the provisions of the act, the modes of making returns, the possibility and even the constitutionality of collection. Certain persons combine to bring the question before the Supreme Court, and, pending the decision, the whole subject stands in abeyance beyond the period fixed by law for the collection. Suddenly the Court decides by splitting the act in two in the middle, declaring that one-half the sources aimed at cannot constitutionally be touched, leaving the other half to be applied with an amount of uncertainty, jealousy, and exasperation far outweighing in their disastrous effect upon the public mind any possible benefit to the revenue. Such, up to this date, is the net outcome of the profound wisdom of our present methods of legislation.

(2.) A possible method. Congress may be supposed to have passed a resolution that an income tax is expedient, and called upon the Government to submit a bill for that purpose. The Secretary of the Treasury, in conference with the President and the other members of the Cabinet, has undertaken the task. They know well that their proposals will be subjected to the fiercest criticism, and that to have any chance of success their bill must be workable in its details, and bear unmistakable evidence of having been prepared solely with a view to the protection of the Treasury with the least possible disturbance of or injustice to private interests. Questions of constitutionality would be provided for in advance by submitting points for the decision of the Supreme Court. The bill, thus carefully pre-

pared, is laid before Congress by the Secretary of the Treasury in person, with an oral exposition of its details. Debate then begins. Members of the Government party will almost be compelled to support it. Those of the other side will have to take great care that their opposition is based upon grounds of public interest, and not upon local and party interests, which would be too dangerous in the face of Cabinet representatives of the whole country. Everything that could be said for and against the bill would be said. If it was finally passed, the country would know its history, that it had been adopted with full deliberation, and would accept it with resignation, if not with pleasure.

If the mass of criticism and amendments was so great as to make the passage of the bill impossible, and of such a kind that the Government would not accept them, the Secretary would withdraw the bill altogether, as it would be better to wait for another session or another Congress than to adopt hasty or reckless legislation.

Besides the direct effect of this course, members would appear before the country individually and in the light of public debate, instead of being lost in the secrecy of the committee rooms, and the people would begin to regain confidence in Congress instead of steadily losing it.

Which of the two methods is most in accord, not merely with common sense, but with the prospect of the future welfare of popular government, of course every thoughtful person will decide for himself. G. B.

Boston, April 13, 1895.

THE ILLINOIS FACTORY LAW.

To the Editor of The Nation:

Sir: Permit me to suggest that in your article of April 4 on the Illinois factory law you quite misunderstand the purposes and significance of that law. Its purpose was in no way a catering to the labor vote of this State; its significance involved in no sense a success of the labor politicians. It meant simply a first valuable step in the heavy task of giving legislative sanction to the accepted results of modern sanitary and philanthropic science. The propagation of disease in garment-making sweat-shops, the stunting of the race by disease-producing child labor, the unnecessary hazards in dangerous machinery, the race-degeneration through excessive and unhealthy modes of work by females—these are some of the evils which English legislation has already found worth attacking, and which the as yet youthful development of Western manufacturing makes it now possible to remedy with special ease and effectiveness. Such evils and remedies it is which you appear unable to discriminate from the demands for class legislation in favor of manual laborers. There are some of us who, like you, are neither anarchists nor socialists; who, like you, believe neither in a general pampering of certain classes of workers nor in particular in an indiscriminate eight-hour law. But it is a serious disappointment to us to find you taking satisfaction in a decision which involves a standstill in the progress of modern philanthropy. Could you accompany our factory inspector for a week in a tour of the Illinois establishments, you would see enough to wrench your heart-strings, and to turn your sympathies if not your convictions.

After all, is not this matter of bringing constitutional engines to bear something of a farce? Is it not more a matter of personal feelings and preconceived notions than of the legitimate effect of ambiguous constitutional clauses? To illustrate. The Supreme Court in its opinion admits that "the right to contract may be subject to limitations imposed . . . by the demands of public policy or the necessity of protecting the public from fraud or injury," but claims that where this police power is exercised "to secure the public comfort, welfare, or safety, it must appear to be adapted to that end," and that in this legislation about women laborers "there is nothing in the nature of the employment . . . which is in itself unhealthy or unlawful or injurious to the public morals or welfare," that "the mere fact of sex will not justify the Legislature in putting forth the police power of the State for the purpose of limiting her exercise of those rights, unless the court is able to see that there is some fair, just, and reasonable connection between such limitation and public health, safety, or welfare proposed to be secured by it"; that "the court must be able to see that the law has at least in fact some relation to the public health, that the public health is the end actually aimed at, and that it is appropriate and adapted to that end. This we have not been able to see in this law."

Now, here is no real constitutional question. It is simply that the members of the Court "have not been able to see" a conclusion of fact, a purpose which seems apparent on the face of the law, an appropriateness of means that has been approved by physicians and philanthropists the world over, sanctioned by repeated and deliberate English legislation, and twice recommended by the International Association of Factory Inspectors on sanitary grounds. When the question is merely whether the Court is "able to see" a specific sanitary purpose and the adaptability of means to this end, is it not clear that its inability to see what so many qualified persons have seen is, after all, a matter of temperament and preconceived belief, and that it is no victory for great constitutional ideas, but simply for a certain conservatism of thought? Is it not time to cease flattering ourselves as the defenders of imaginary constitutional bulwarks, and to consider whether it is not, after all, mere matter of personal opinion on a social question? This would make us more humble in our attitude and more ready to give a fair consideration to the real issues of such a question. J. H. W.

Chicago, April 8, 1895.

[Our correspondent's points seem to us fully covered by the court's opinion. As this document contains twenty-six pages of concise argument, we have space but to remark that it seems to us not to "misunderstand the purposes and significance" of the law; and that the "purpose" of a Legislature, unless so expressed as to limit the law itself, has nothing to do with the interpretation, still less the constitutionality, of the laws it may enact. Nor have we any contention with the regulation of sweat-shops or dangerous or improper employments. This law was a general one, covering the right of industrial employment of women and their contracts for such employment, and was not limited to sweat-shops; had it been so limited, it might have stood. And the obnoxious section 5 was not avowedly a sanitary, but a sex, restriction. In England the Parliament is supreme; in our country the individual is guaranteed certain rights. But the laws of Illinois provide that "no person shall be precluded or debarred from any occupation, profession, or employment (except military) on account of sex." And under the Constitution of the United States a woman has been held to be a citizen. As such, she has a constitutional right to make her own contracts. If it were constitutional for the Legislature of Illinois to forbid her working more than eight hours, it would be constitutional to forbid her working at all.—Ed. Nation.]

THE NEGRO VOTE IN SOUTH CAROLINA.

To the Editor of The Nation:

Sir: I observe, in your issue of the 4th inst., that you call attention to the political movement in South Carolina preparatory to the Constitutional Convention, and say that "the 'pacification scheme' has the familiar ante-bellum air of peace at the expense of the colored American."

In justice to the conservatives of this State and to a large proportion of the Tillman faction, allow me to state that when they demand "white supremacy," they demand also "good government and *honest* and *fair* elections" (*vide* address issued by the Conference of February 25). The desire to disfranchise the negro is not due to the fact that he is a negro, but because a very large majority of that race in South Carolina are not qualified to cast an intelligent ballot, and are not fitted, in point of morality or education, to administer the government. I am within the bounds of moderation when I say that probably 90 per cent. of the negro voters of the State vote as they are told to do by the "precinct chairmen," are ignorant of the issues involved, and often ignorant even of the names of the candidates. Under such conditions are we to be criticised for wishing to disfranchise the ignorant part of that population?

I have no desire to go into an extended discussion of the difficulties that confront and perplex us, but I wish to emphasize the fact that there is a strong and growing public sentiment demanding an intelligent and pure ballot, and, with such a large illiterate population in our midst, we must provide such qualification of the suffrage as will insure the preservation of good government, and at the same time provide for honest and pure elections. This is possible only under a government controlled by the Anglo Saxon. We have not forgotten the terrible ordeal through which we passed during the period from 1868 to 1876, when South Carolina was under the domination of negroes and carpet-baggers, nor will we submit to a repetition of such misrule and corruption. The fear of a return to such a condition led us to resort to election methods which were wrong and unjustifiable, and from which honorable men now recoil, and which they are determined must be abandoned.

Men all over the State are loud in their demands for fair elections and justice to all, and are equally outspoken in insisting on the maintenance of the public schools, which do as much to educate the negro as the whites, but which are supported almost entirely by the whites, on whom the burden of taxation falls by rea-

son of the tax on property for the support of the schools.

The demand for fair elections, which forms such a leading subject of discussion in the present agitation, was anticipated by the introduction last winter by the writer in the Legislature of an election bill embodying the Australian ballot system, and which was advocated by the leading papers of the State, but which, in view of the fact that the Constitutional Convention would deal with the suffrage, was continued to the next session. Under the operation of this bill, all citizens who were qualified would have equal showing and protection in casting their ballots.

In conclusion, let me say that the communication from Hartsville to Col. Dargan, to which you refer, is but the silly ebullition of some crank or fanatic—a communication which is censured by the people of the community and by the press, and which deserves no notice. Col. Dargan is himself fully aware that this is the case, and that though his views are very different from those of most of his white fellow-citizens, he is always accorded a respectful hearing, and can, with perfect impunity, express his opinions as he chooses at any time and at any place in this State.

RICHARD I. MANNING.

WEDGEFIELD, SUMTER CO., S. C., April 8, 1895.

[We have nothing but sympathy for the people of South Carolina in the dilemma which slavery has imposed upon them; at the same time we welcome any evidence that the white conscience revolts against the practices by which the revolution of 1877 has been secured to this day. That this conscience is to be found in the Tillman faction we cannot believe without forfeiting our sense of humor; and the fact that the "Conservatives" have joined hands with that faction in agreeing to disfranchise no white man except for crime, proves that the "color line" serves to still all dissension among the whites, as the appeal to the war spirit and memories served for more than a generation to suppress all reformatory movements in the Republican party. Our correspondent does not disguise the nature of the problem which the Conference undertook to solve, namely, to reconcile "demands for fair elections and justice to all" with inequality of disfranchisement: the whites must always be counted in, the blacks always be counted out in sufficient numbers to insure "white supremacy." It would puzzle a Philadelphia lawyer to frame a device for this juggling from which honorable men would not recoil.

We cannot agree with our correspondent in looking upon the anonymous Hartsville menace of Col. Dargan as that of a crank or fanatic—at least if by that designation the fellow is to be sharply set off from the community in which he lives. Some "Regulators" of Camden, S. C., recently ordered a Northern merchant, Mr. Richard Hallowell of Boston, out of town because he freely visited or conversed with the colored people there, while sojourning for his health. For this "unpleasantness" the leading citizens expressed their regret to Mr. Hallowell in a published letter, not, however, without insinuating that he had no right to associate with any but his own color; but we have not heard that they called a town meeting to denounce the cowardly Regulators, or offered a reward for their discovery by the police. It used to be said that in Connecticut they always kept one member of every pious family unconverted to do their wicked work for them; and, with all respect to our correspondent, we believe that his "cranks" and "fanatics" are a necessary part of any scheme likely to be adopted for maintaining the rule of the minority in South Carolina.—ED. NATION.]

HILL'S WICKED PARTNERS.

TO THE EDITOR OF THE NATION:

SIR: Undoubtedly, as stated in your last number, Senator Hill is "responsible more than any other man for the failure of the court to overthrow the income tax, root and branch"; but are not Senators Hoar and Lodge of this State entitled to share the responsibility and the condemnation for the assistance they rendered to Mr. Hill? J.

BOSTON, April 13, 1895.

TAXATION OF STUDENTS IN GERMANY.

TO THE EDITOR OF THE NATION:

SIR: Your issue of February 28 (p. 167) speaks of the extortionate income and communal taxes which foreign students must pay at Leipzig and other North German universities. As far as Leipzig is concerned there is evidently some mistake. At the office for both state and city taxes, they assure me that a foreign student whose income is from foreign sources is not taxed; and the practice seems to bear their statement out. I have inquired of several foreign students resident here from one to four terms, and from none have taxes of any kind been required. But foreign residents who are not students must pay taxes, I have heard, even on an income from property not in Germany.—Respectfully,

G. M. STRATTON.

LEIPZIG, April 4, 1895.

GRAMMAR-DICTIONARIES.

TO THE EDITOR OF THE NATION:

SIR: In reply to Mr. Gardner M. Jones's inquiry in the *Nation* for April 4 about grammar dictionaries, I may be pardoned for calling attention to the following among the "commoner dictionaries" that contain pretty good synopses of grammar: Millhouse's 'New Pronouncing and Explanatory English-Italian and Italian-English Dictionary' (Trübner); Velazquez's 'Pronouncing Dictionary of the Spanish and English Languages' (Trübner)—otherwise not to be recommended. Bustamente (Christern) being the best; and Helms's 'Neues vollständiges Schwedisch-Deutsch und Deutsch-Schwedisches Wörterbuch, nebst einem kurzen Abrisse der Formenlehre beider Sprachen' (Leipzig: Otto Holtze, 1887). This last is, of course, not so well known in this country, but in Germany I believe it is the standard, and would serve as a good model for makers of French and German dictionaries for English students. It contains just what Mr. Jones suggests, although not in quite so condensed a form. The *Formenlehre* occupies 20 pages.—Yours truly,

WM. M. STEVENSON, Librarian,
Carnegie Free Library, Allegheny, Pa.

ALLEGHENY, PA., April 9, 1895.

Notes.

IF a sufficient number of subscribers at $1.50 can be secured, the Virginia Historical Society is prepared to publish entire in one volume the Minutes of the Virginia Company of London (1619-1624), heretofore published only in abstracts. The Corresponding Secretary of the Society is Mr. Philip A. Bruce, No. 707 East Franklin Street, Richmond.

Additional announcements by Macmillan & Co. are a uniform edition of the late Sir John Seeley's works, 'Ecce Homo,' 'Natural Religion,' 'The Expansion of England,' and 'Lectures and Essays'; a new edition of Prof. Goldwin Smith's 'Oxford and her Colleges,' photographically illustrated; a new edition of Zangwill's 'Children of the Ghetto'; 'Fishes, Living and Fossil,' an introductory study, by Bashford Dean; 'Agriculture, Practical and Scientific,' by Prof. James Muir of Yorkshire College, Leeds; 'Municipal Home Rule,' by Prof. Frank J. Goodnow of Columbia College; 'Essays in Taxation,' by Prof. E. R. A. Seligman of Columbia; 'Social Theology,' by President Hyde of Bowdoin; and a story, 'An Experiment in Altruism.'

We defer till the completion of the work a more extended notice of the new and revised edition of Mr. Henry E. Watts's translation of Don Quixote, of which the first volume has just appeared (London: Adam & Charles Black; New York: Macmillan). The entire work will contain five volumes, of which four will be devoted to the translation and notes, and the fifth will be a new and enlarged Biography of Cervantes, with a Bibliography of his works. The rate of issue is to be a volume a month.

The second edition of H. D. Minot's 'Land-birds and Game-birds of New England,' edited by William Brewster, is a handsome volume from the Riverside Press of Cambridge. This work originally appeared in 1876, and we have nothing to add to our extended notice of it in that year, except praise for the manner in which Mr. Brewster has handled his youthful author. Mr. Minot is the youngest ornithologist whose writings have acquired repute. He was born in 1859, and at his death by a railroad accident in 1890 was the youngest railroad president in the United States. Mr. Brewster has shown great tact and discretion in dealing with the author's peculiarities. It was no easy task to give this book the necessary critical annotation, with due regard to those idiosyncrasies which constitute its chief claim to perpetuity. Minot's work has certainly taken a new lease of life at Mr. Brewster's hands, and, twenty years hence, may be found to have achieved a permanent place in the literature of the subject.

'The Book of the Rose,' by Rev. A. Foster-Melliar (Macmillan), is not a poem or a romance, as one might perhaps imagine from the title, but is a treatise on the cultivation of roses, written confessedly "for enthusiasts, for those who make a regular hobby of their roses, and think of them as fondly and almost as fully in January as in June." Some two hundred pages are given to the methods of cultivation, including the minutest instructions for preparing the "blooms" for competitive exhibition,

and one hundred pages to "Manners and Customs," or the author's judgment on the excellences and deficiencies of many kinds of roses. The concluding chapters are on "Selections" (of the best roses in each class), and a "Calendar of Operations" for each month in the year. The book is illustrated with many good figures from photographs, and, though here and there the language is rather technical, it is interesting even to the general reader, while to one who desires to raise fine roses for his own enjoyment, or for exhibition, it must prove an invaluable guide. The author has taken many first prizes, and he tells honestly how he won them—and how he lost others.

Gen. H. V. Boynton, the historiographer of the Chickamauga Commission, has published an historical guide to that National Military Park (Cincinnati: The Robert Clarke Co.). The handsome volume contains the topographical description of the park and a guide to the more important points. It has also a full historical description of the battles of Chickamauga, Chattanooga, and Missionary Ridge, in which, with good judgment, an impartial statement is compiled from the records of both armies, giving the things about which there is general agreement. The maps are excellently drawn, though necessarily on a small scale. The other illustrations are half-tone reproductions of photographs of landscape views of the field. A history of the legislation by which the park was established is appended to the descriptive matter, with the proceedings and addresses at the meetings which gave special impulse to the park scheme.

Prof. C. W. Shields has collected various papers and addresses of his on the subject of church unity into a sizable volume, 'The United Church of the United States' (Scribners). This title will be taken as prophetic, or challenging, or simply futile, according to the reader's standpoint. Prof. Shields himself admits that the prospect of immediate church union is not bright, and that several generations must pass before all these things shall be fulfilled.

Saint Columba was an Irish saint (of the clan O'Donnell) and abbot of famed Iona, where he died in 597. His Life, written by Adamnan, one of his successors, although little more than the usual catalogue of miracles, throws much light incidentally on early Celtic monasticism and on the beginnings of Christianity in Ireland and northwestern Scotland. The reprint, edited by J. T. Fowler ('Adamnani Vita S. Columbæ'; Oxford: Clarendon Press; New York: Macmillan), is based on a larger work by Dr. Reeves. The introduction gives a good sketch of the early Celtic church, some notice of the Druids, Bards, and Brohans of ancient Ireland, and an interesting account of Iona. The notes are full of antiquarian lore, while the text of Adamnanus is better Latin than we should expect from that age (*circa* A. D. 695). But the author was a man of learning, with some knowledge even of Greek and Hebrew. The book has an admirable index, and a glossary which, though brief, will be found to supplement, especially for Irish-Latin words, the latest (the Niort) edition of Du Cange.

A history of German civilization from a new point of view is Friedrich Seiler's 'Die Entwicklung der deutschen Kultur im Spiegel des deutschen Lehnworts' (Halle: Waisenhaus), of which the first part covers the period from the earliest appearance of the German tribes to the introduction of Christianity. The author applies to historical research the old commercial proverb, "The word follows the ware," and thus endeavors, by a chronological and critical study of the foreign words in the German language, to trace the influence of foreign nations upon the growth and character of German culture. Investigations of this kind must be conducted with great care and may easily lead to very erroneous conclusions. The name of an object in many cases does not indicate its true origin. Thus we call the fowl which is a native of the western hemisphere a turkey, while the French seek its origin in India (*dinde*), and the Germans in Calcutta (*kalkutischer Hahn*); in like manner our maize or Indian corn is to the German Welsh corn (*Welschkorn*), or Turkish wheat (*Türkischer Weizen*). It must be remembered, however, that *welsch* in German means merely foreign; and this was also the signification of *türkisch* in the sixteenth century. The citizen in Goethe's "Faust" who likes to talk of war and rumors of war,

> "Wenn hinten, weit, in der Türkei,
> Die Völker auf einander schlagen,"

uses the word "Turkey" in this sense as synonymous with remote regions. Thus far Herr Seiler has conducted his researches with circumspection, and does not appear to have drawn from the exotic elements of the German tongue any conspicuously rash or untenable inferences.

Lambert le Bègue, who ranks as the founder of the order of the Béguines, has been the subject of considerable discussion. His invectives directed against the vices of the clergy of Liége, towards the end of the twelfth century, led to a prosecution for heresy in which he was roughly handled, till he succeeded in escaping and appealing to the Anti-Pope Calixtus III., who at that time was recognized in the territories of the Empire. Little was known about him until, curiously enough, some of his writings were discovered in a contemporary MS. in the Hunterian Museum of Glasgow. These have been utilized by the distinguished professor of history at Ghent, Paul Fredericq, in a paper contributed to the Royal Academy of Belgium, through which we at last obtain a tolerably clear conception of a somewhat notable personage, hitherto half mythical.

The latest monograph in the Münchener *Beiträge zur Romanischen und Englischen Philologie* is by an American, Clarence Griffin Child, and is entitled "John Lyly and Euphuism." Mr. Child gives an exhaustive and minute survey of the question, with much schematic and bibliographical information. In his conclusions he stands nearest to Landmann, yet differs from that authority in some important particulars which tend to prove Lyly's Euphuism much more the result than the cause of a popular taste. Mr. Child has "endeavored to bring out the absolute falsity of the notion that Euphuism was a sort of wilful superficiality and affectation, and to show how orderly and consistent, in spite of its faults, the Euphuistic rhetoric was. . . . Its excesses merely display how anxious and eager the effort was to attain ends thoroughly worthy—clearness, precision, force, rhythmic melody, formal consistency" (p. 116). There is at least boldness in this apology, and food for reflection for contemptuous critics of Lyly.

La Révolte, the little anarchist newspaper of Paris which, for one reason or another, raised so much talk about itself, and which ceased to appear a year ago, is to be revived next month under the name of *Les Temps Nouveaux*. Jean Grave, as before, will be its director, assisted by what may be called the regular communist staff, MM. Élisée Reclus, Pierre Kropotkin, Ch. Albert, and the rest. It will consist, like its predecessor, of eight pages, four of which will be devoted to literature. The *Révolte* was seven years old when it died, and had a circulation of about nine thousand. It was itself the successor of the *Révolté*, which was founded in 1870 by Élisée Reclus, and had a life of nine years. Jean Grave, who succeeded Reclus, was a shoemaker by trade, who learned printing in order to carry on the paper. For years he set the type in his own chamber. The entire resources of *La Révolte* at its beginning were but twenty francs.

In the *Korean Repository* for February, 1895, the two best papers are on native guilds and the Tong Hak. A system of mutual helpfulness among the common people is secured by these industrial societies, which stand in lieu of the institutional charities of Christendom. The Tong Hak, or Eastern Culture movement—the match which set ablaze the fires of war between China and Japan—really arose, in 1859, out of the reaction of the founders' mind against Christianity. Made up avowedly of a mixture of Confucianism, Buddhism, and Taoism (and thus far akin to the Shin Gaku, or Heart Culture movement in Japan, A. D. 1820–1855), it borrows some features and the name of God from Roman Catholic Christianity. Choi, the founder, was in 1865 beheaded as a "foreigner-Korean" and a Christian, and his scriptures and religion put under ban. Under intolerable oppression, religion became politics, and nothing but Japanese bullets and bayonets under Korean direction has been able to suppress the Tong Hak rebels. "The Korean Bride," by Mrs. M. B. Jones, opens a window into social life. In "The Bird Bridge" we have the Korean version of the Star Lovers who cross the Milky May once a year on the backs of myriad magpies. In the editorial department is a valuable paper on the Korean Almanac, with the text of the King's oath of January 7, 1895, in which "all thought of dependence on China" is sworn off.

The *Geographical Journal* for April opens with the first part of an account of the Luchu Islands by Prof. B. H. Chamberlain. He describes each island separately, the natural history and industries of the whole group, and briefly outlines their history down to their enforced annexation by Japan in 1872. The most prominent race-characteristic of the people, who are closely allied by race with the Japanese, is not a physical, but a moral one. "It is their gentleness of spirit and manner, their yielding and submissive disposition, their hospitality and kindness, their aversion to violence and crime." Mr. Walter B. Harris tells the story of one of his adventurous journeys in Morocco, this time in the wilds of the southern Atlas, through a region never before visited by a white man. Much of it is a forbidding, rainless country, in which extraordinary labor has been expended upon irrigation works. In one place water was carried from a river to an oasis eleven miles distant, by "no less than eleven rows of subterranean aqueducts." These consisted of pits some thirty feet deep by ten in diameter, and sixty feet apart, which were joined by a tunnel. "A rough estimate gives the result that . . . some nine thousand of these pits must have been sunk and the intervening spaces tunnelled." Mr. Dixon's account of his explorations in British Guiana is accompanied by two maps showing the position of the gold districts, as well as the disputed territory between Guiana and Venezuela. There is also an interesting notice of the last instalment of the *Challenger* Report, now

complete in fifty royal quarto volumes. As the highest praise which can be given to the typographical part of this magnificent work, Dr. Mill says that it "may take its place beside the best memoirs of the United States Geological Survey, and fear nothing from the comparison." The first two volumes give a narrative of the cruise; the two following are devoted to physics and chemistry, another to the deep-sea deposits, two to botany, forty to zoölogy, and two to a summary of the whole work of the expedition. There is a general index, and one of about 16,000 names of species.

The *Psychological Review* (Macmillan) has issued its first Psychological Index, "a bibliography of the literature of psychology and cognate subjects for 1894," compiled by Howard C. Warren of Princeton and Livingston Farrand of Columbia. It fills seventy-two pages, and is followed by an index of authors.

Among the new periodical ventures of the year are the *University Graduates' Magazine* (132 Nassau Street, New York), of which the character is hardly developed beyond a monthly bid for the attention of each college which is described (as, Princeton in the March number); and the *Brochure Series of Architectural Illustration* (Boston: Bates & Guild), which is, as to its plates, "to be entirely devoted to the photographic illustration of foreign architecture." Italy monopolizes Nos. 1 and 2 (January, February). Each of these thin issues sells at five cents each, and the yearly subscription is fifty cents. The size is octavo.

It seems odd to find a sympathetic article on Brook Farm in the *Catholic World* (for April), but Father Hecker's connection with the experiment would supply any missing link. "Brook Farm To day" is Mr. McGinley's theme, and he has to tell pictorially and otherwise of the Martin Luther Home for Orphans and its cemetery, "Gethsemane"; but also he traces up some of the old haunts that Time and Nature have gently spared as they have the Margaret Fuller cottage.

With the April number the *Virginia Magazine of History and Biography* closes its second volume, in which the table of contents shows a large measure of attention to have been bestowed on seventeenth-century history and records, as in the valuable abstracts of Virginia land patents, the causes of discontent in Virginia in connection with Bacon's rebellion, the instructions to Governors Yardley and Berkeley, the letters of William Fitzhugh, wills, etc., etc. The most important genealogical contribution is that concerning the Flournoy family of Virginia, Middle Tennessee, and West Kentucky. In the present number, one notes with curiosity two instances adduced by Mr. E. W. James of a court's granting petitions for the education of free negro apprentices in the mechanic arts in 1719 and 1727. In the latter, it was "ordered that David James a free negro be bound to Mr. James Isdel who is to teach him to read ye bible distinctly also ye Trade of a gun Smith." This has a Cromwellian sound. The friends of this magazine (and it deservedly has many) can but wish it an improved proof-reading; the recurring errata are excessive in a quarterly publication.

Mr. Foster's Monthly Bulletin of the Providence Public Library for April pays homage to the momentary Napoleon cult in a reference-list of works and reviews which will give serious occupation to any student. The same number is noticeable for its catalogue of the contents of a musical alcove in the library, containing 222 volumes, equivalent to a collection of the chief works of the best authors, say in English literature, and embracing "characteristic and representative works of the great masters in music for the last two centuries."

We can heartily commend the 'Public Library Handbook' issued by the Public Library of Denver, composed of twenty-six chapters dealing with such practical topics as starting and advertising a library, selecting and buying books, cataloguing, duties of assistants, classification, binding, taking account of stock, etc. These instructions are from several hands and are signed, and while they exemplify the practice of the Denver institution, they have a general applicability. The book is prettily printed, has diagrammatic illustrations, and of course an index.

The distribution of artesian wells on our coastal plain, from New Jersey to Virginia, is illustrated by N. H. Darton in a recent number of the Transactions of the Institute of Mining Engineers, and in so definite a manner that the number of such wells must largely increase in the future. The region is underlain by a series of great sheets of unconsolidated deposits, mainly sands and clays, lying unconformably on an east-sloping floor of harder rocks. A map shows the location of the various deep wells, and numerous sections exhibit their relation to the water-bearing strata that they pierce. It is curious to note that several wells in Maryland east of the Chesapeake Bay, as at Claiborne, Easton, and Cambridge, derive their water-supply from rainfall west of the bay, which passes beneath the salt water of the bay before rising in the wells. Similarly, numerous wells that supply the summer settlements on the sand-bars of the Jersey coast, receive their supply from inland rainfall that passes down through gravel beds deep beneath the salt-water lagoons behind the sand-bars, before it is again brought to the surface.

An important official report has lately been issued, entitled 'Agriculture by Irrigation in the Western Part of the United States at the Eleventh Census,' prepared by F. H. Newell, special agent. It is well illustrated with maps of the whole area, of States separately, and of special districts, as well as by numerous views and diagrams, making the most satisfactory general account of the development of this important art in our arid regions that has yet appeared in this country. It is gratifying to add that its tone is throughout much more scientific than that of a number of other official reports on this subject which might be cited. The general map of irrigated districts shows the largest areas in northern and southern Colorado, northern Utah, scattered over Montana, and grouped along the base of the Sierra Nevada in the valley of California. In both Colorado and California, about a million acres of land are thus rendered cultivable; yet this is only a little over 1 per cent. of the area of each of these great States. Arizona and New Mexico irrigate less than a hundred thousand acres, or about 1-10 of 1 per cent. of their whole surface.

—Mr. Henry Bradley's second fascicule of volume iv. of the 'New English Dictionary' (Macmillan) made its quarterly appearance promptly on April 1. It reaches from *Fanged* to *Fee*, and contains an unusual proportion of words having an ancient pedigree, with a scarcely visible minimum of modern scientific terms. The latter circumstance marks the non-success as yet of the phonetic revolution, for if the scientific *ph*'s were bodily transferred to the letter F, then a goodly array of scientific formations from the Greek would take their place here beside *Farad*, *faradaic*, *faradaism*, *faradization*, -etc. On the other hand, we meet with *fare*, the now obsolete term for 'strait' (in "Fare of Messina"), which might suggest 'thoroughfare,' whereas the derivation is from the Greek *pharos*, meaning first a lighthouse in the strait, then the promontory thus guarded, and finally the water passage. The alternative spelling *phare* illuminates the whole matter, but the phonetic reformers would interdict it, and would thus add another source of confusion to the eight shades of meaning of fare, 'a going' (including 'passage money,' 'passenger,' and 'food'), to say nothing of the obsolete substantives *fare*, 'a litter of pigs,' and *fare*, 'a game at dice.' Their choler must rise when they read Mr. Bradley's note under *fantastic:* "The form *phantastic* is no longer generally current, but has been casually used by a few writers of the nineteenth century to suggest associations connected with the Greek etymology." And again, under *fantasy:*

"The shortened form *fancy*, which apparently originated in the fifteenth century, had in the time of Shakspere [so Mr. Bradley spells the name, we remark in passing] become more or less differentiated in sense. After the revival of Greek learning, the longer form was often spelt *phantasy*, and its meaning was influenced by the Greek etymon. In modern use, *fantasy* and *phantasy*, in spite of their identity in sound and in ultimate etymology, tend to be apprehended as separate words, the predominant sense of the former being 'caprice, whim, fanciful invention,' while that of the latter is 'imagination, visionary notion.'"

Strange perversity of the human mind, which seeks variety in language instead of simplicity and uniformity, and, having secured it, uses a discriminating orthography for quick apprehension by the eye! In like manner we write, "the Powers of Europe," "the State of New York," using a capital initial for the sake of the reader and not the listener.

—In close connection with the foregoing is the statement that "in standard English the form *farther* is usually preferred where the word is intended to be the comparative of *far*, while *further* is used where the notion of *far* is altogether absent; there is a large intermediate class of instances in which the choice between the two forms is arbitrary." The requirements of poetic euphony will tend to keep this and all similar choices open. Here is an interesting remark under *father:*

"The modern English *-ther* . . . for O. E. *-der*, *-dor* in *father* and *mother* is often wrongly said to be due to the analogy of *brother* or to Scandinavian influence; it is really the result of a phonetic law common to the great majority of English dialects; other examples in standard English are *gather*, *wither*, *together*, *weather*. At present nearly all dialects pronounce *father* and *mother* . . . as in standard English; in various parts of the north of England and the north Lowlands (d), alveolar or dental, is sometimes heard."

The contest between usage and dictionary comes to light under *feasible*, third meaning, 'likely, probable' (of a proposition, theory, story, etc.). "Hardly a justifiable sense, etymologically," comments the editor, "and (probably for that reason) recognized by no dictionary, though supported by considerable literary authority"—Hobbes, Lyell, Livingstone, and others. Amateurs of the fashionable game of golf who are at a loss whether to sound the *l* or not, may learn here that the etymological restoration of *l* to *faute* (fault), after it had been taken over from the French, had become standard in the seventeenth century; "but in Pope and Swift it [*fault*] rimes

[so Mr. Bradley spells this word] with *thought*, *wrought*, and Johnson (1755) says that in conversation the *l* is generally suppressed"—as it is in many dialects to-day. We had expected some notice of the vulgar pronunciation of *February*, with a suppression of the first *r*, but there is none. Finally, the phrases involving *white feather*, in the sense of 'cowardice,' are explained as "in allusion to the fact that a white feather in a game-bird's tail is a mark of inferior breeding." We cannot controvert this, but we are reminded of the white "flag" in a rabbit's and a buck's tail, and wonder if the cowardice is not associated with *retreat* ("turning tail").

—Mr. A. J. Butler, the well-known translator of Dante, whose rendering of Scartazzini's 'Dante-Handbuch' into English was noticed by us some months ago, has just published, under the title 'Dante: His Times and His Work' (London: A. D. Innes & Co.), a volume compounded of papers originally written for the little-known periodicals, the *Monthly Packet* and the *Magazine of the Home Reading Union*. The book is intended not for advanced students of Dante, but for persons just beginning to read him and in need of preliminary information of an elementary kind. This end the book seems to us to serve well. It is less detailed and technical than Scartazzini's work, more accurate and reliable than Symonds's. Particularly clear and good are the account of the rise of the Guelf and Ghibelline parties in Italy and that of political affairs in Florence up to Dante's exile. We could wish, however, that the author had treated a little less superficially the general intellectual condition of the thirteenth century, as well as the character of the Provençal and Old French literatures and their influence upon the beginnings of Italian poetry and upon Dante himself. It cannot be too often repeated that Dante cannot really be understood without some appreciation of these sources of many of his most fundamental conceptions.

—We have noted some inaccuracies of statement. It is not true, speaking of the general condition of literature in the Middle Ages, to say (p. 8) that "not till the twelfth century was far advanced did any signs of a reawakening appear." The 'Chanson de Roland,' the greatest of Old French poems, was written as we have it in the end of the eleventh century; and the first of the Troubadours, William VII. of Poitou, was born not far from the same time. Guido Cavalcanti, Dante's most intimate friend in Florence, died August 28 or 29, 1300, and not "in the course of the winter" of that year (p. 75). Where does Dante tell us, as the author asserts (p. 85), that he wrote the 'Vita Nuova' before he was twenty-five? It will hardly do to say that the whole conception of Canto III. of the "Inferno" (punishment of the indifferent and unpartisan) "seems to be due to Dante's own invention" (p. 93). Had not Dante clearly in mind the immortal condemnation of the Laodiceans (Rev. iii. 14-16)? Among the "student's" editions of the 'Divine Comedy,' Scartazzini's one-volume edition (Milan, 1893) should certainly be mentioned (p. 194), as by far the best we yet have. Blanc's 'Vocabolario Dantesco' was originally written in French, not in German (p. 194). The most serious slip, however, is the statement (p. 49) that "Dante's son Pietro says no word to show that Beatrice was anything but a symbol, and in this some of the other early commentators follow him." The first person to assert the historic unreality of Beatrice was Filelfo, in the fifteenth century. As for Pietro di Dante, while it is true that the manuscript of his Comment printed by Lord Vernon contains no mention of the flesh-and-blood Beatrice, there exists another group of manuscripts (of which the English Ashburnham Codex 841 is the best-known representative) containing apparently a later and fuller form of the Comment, in which it is distinctly said of her that she was "nata de domo quorundam civium florentinorum, qui dicuntur Portinari, de qua Dantes auctor procus fuit et amator in vita dicte domine et in eius laudem multas fecit cantilenas." Bartoli, eager in defence of his interpretation of Beatrice as the *ewig-Weibliche*, sought to prove this passage an interpolation; but Signor Luigi Rocca, in the *Giornale storico della Letteratura Italiana* (vii., p. 366 *seq.*) has shown this to be impossible. Hence we have the assurance that Dante's own son believed his father to have loved and honored with his pen the historic Beatrice Portinari, daughter of Folco Portinari and wife of Simone de' Bardi.

—Bishop Creighton's Hulsean Lectures on 'Persecution and Tolerance' (Longmans) are, as might be expected, charming in thought and expression, and instinct with the love and charity befitting a Christian prelate. His leading object is to prove that Christianity itself is not justly chargeable with the deplorable crimes that have been committed in its name, and that modern writers are mistaken in attributing them to the doctrine of "exclusive salvation" which rendered it the duty of all possessing power to enforce uniformity of belief in order to save souls from Satan. He holds that persecution has always sprung from the desire to preserve social organization and ecclesiastical domination, and that its abandonment has arisen not from a spread of intelligence, but from the recognition of the fact that social order can be maintained amid diversity of belief. This is a vindication of religion at the expense of its representatives, whom it deprives of excuse by attributing to them worldly motives, however disguised by the self-deceit which is so easy; and, in spite of Bishop Creighton's persuasive eloquence and ample knowledge, we cannot but regard his argument as unconvincing. Unquestionably, as he says, justification for intolerance is not to be found in the teachings of the Gospel, but these teachings form only a small part of the structure that has been erected upon them; and the motives which led to the Albigensian crusades and the career of the Inquisition were more complex than Bishop Creighton endeavors to prove. Selfish lust of domination unquestionably there was, but also there were the sense of duty to prevent Satan from extending his empire, and a profound conviction that God had intrusted his church, as his chosen instrument, with power to root out heresy. We should be loath to attribute to Pius IX. a merely selfish desire to preserve his rule over the human mind when, in his Apostolic Letter, *Multiplices inter* of 1851, and his Allocution *Maxima quidem* of 1862, he emphatically condemned the maxim that every man is at liberty to worship God according to his conscience, and when he repeated this in the Syllabus of 1864 as the accepted doctrine of the Church, which all its prelates are required to enforce.

—The *American Journal of Art and Archæology* (October-December, 1894), besides the usual extensive and well-arranged budget of archæological news, contains important papers by Mr. Henry S. Washington and Prof. Marquand. Mr. Washington reviews the question of the date of the Santorini pottery. These relics, which were discovered in the island of Thera, buried under the lava and scoriæ of a prehistoric volcanic eruption, have been reckoned as perhaps the oldest specimens of Aegean pottery, though their style is more advanced than that of objects found in Dr. Schliemann's "second city" in the Troad. For quasi-geological reasons, M. Fouqué had assigned to them the approximate date of 2000 B. C.; and this date has been assumed as a sort of "pou sto" in the quicksands of the period. It is quoted by various manuals as a settled point, and it is apparently so treated even in M. Perrot's latest volumes on early Greek art. Mr. Washington shows very conclusively that M. Fouqué's conjecture is unwarranted and that geology has positively no answer to give to the question when the Santorini pottery was buried. Prof. Marquand examines with great care, in a series of elaborate tables, the value of such architectural standards as the so-called "Semper's norm." Semper expresses the "norm" of Doric architecture by the ratio of the width between column-axes to the height of the order, and, in accordance with this standard, distinguishes six successive periods in the Doric style. Prof. Marquand shows this norm to be unpractical and insufficient. It makes no account of many other proportions which the architect must have had in mind. Mr. Marquand himself applies to the five temples of Selinus a series of tests derived from comparison of the ground-plan, the elevation, the columns, and the entablature. His conclusion from the application of all these norms is, that any inference as to date must often be uncertain. "The study of the ground-plan produces one result, the elevation another, the columns and entablature a third." The evidence derived from a study of proportions alone is, therefore, though valuable, not always decisive. It is a laborious method of reaching results which may sometimes be more quickly attained by other means.

—We seem to hear a new note, new at least for South America, in a little book by Federico Elguera ('Marionetes'; Lima: Gil, 1894), which, as its name implies, finds the world very much of a huge puppet-show. But it has no touch of that vicious spirit of cynicism caught out of French influences by so many Spanish-Americans and offered in the place of humor. It is a good healthy book, and a clean one, not indulging in grotesque caricature, nor yet depending upon any unusual sparkle of wit or fancy, but full of wholesome fun because the author has a faculty for seeing men precisely as they are, and knows how to paint them truly. The ubiquitous scamp *Perecito*, half gentleman, half mendicant, pleading for work to buy bread for his variously afflicted family, disgracing every effort of kindness in his behalf, and finally extorting a dollar upon a tearful plea and spending it for a seat at the theatre, is a familiar character to us all, and yet we cannot deny the petition while we have the dollar in our pocket. There is fine humor, too, with a strong and characteristic local color, in the indigent petty politician who can put no other interpretation upon a summons from the President, coming just after a ministerial crisis, than that of a recognition of his self-conceived talents. The intellectual littleness of the man as shown in the bluster and pompous irritability of preparation for the momentous visit, as well as in his stupid misinterpretation of the interview with the President, followed naturally by discomfi-

ture, the whole brought out in strong relief against the discriminating good sense of his doubting yet hopeful wife, is admirably portrayed. The book is in many respects notable. Eschewing the orthodox Castilian literary models, adopting rather the speech of the café and the streets, without buffoonery or pessimism, it applies the cold, keen lance of practical common sense to a people who would be the better for a little of such blood-letting, and then, with a touch of human sympathy that colors every sally, seems to say, "But, after all, brother, you're a pretty good fellow, and I have faith in you for the future."

—The proper pronunciation of *sp* and *st* in German has long been a puzzle to many teachers of that language, who are unable to decide whether they shall adhere to the Hanoverian practice of pronouncing words like *sprechen* and *stehen* as they are spelled, or adopt the more general usage and pronounce them as though they were written *schprechen* and *schtehen*. In a lecture recently delivered before the Berlin Deutscher Sprachverein, Dr. Grabow of Bromberg showed that the soft or coalescent sound represented by *sch* in German and *sh* in English was unknown to Old High German, and first appears in the transition to Middle High German wherever *s* is followed by hard *c* or *k*. Thus we find in O. H. G. the words skif, skaf, skaz, miskan, skriban, which in M. H. G. are written and pronounced schif, schaz, schaf, mischen, schriben. This change did not extend at first to *sl*, *sm*, *sn*, *sw*, etc., which remained the same in O. H. G. and M. H. G., as, for example, in slagen, smizen, smeren, sniden, swimmen, swingen. Very soon, however, these digraphs began to be pronounced as though they were written schl, etc., but it was not until the formation of New High German that the orthography conformed to the orthoepy, and the words were spelled schlagen, schmeissen, schmieren, schneiden, schwimmen, schwingen. At a still later period *sp* and *st* obeyed the same law of development and underwent a similar orthoepic transformation, but without producing a corresponding change in the orthography of the words beginning with these letters, so that today more than six-sevenths of the German people pronounce sprechen, spielen, stehen, stechen, etc., as though they were written schprechen, etc. The same tendency is also perceptible in the early evolution of the English language. As *s* before *c* or *k* in O. H. G. became *sch* in M. H. G., so *sc* in Anglo-Saxon became *sh* in English: sceótan, shoot; scufan, shove; scyttan, shut; scip, ship; scrud, shroud; sceó, shoe; sceáp, sheep. The movement, however, seems to have stopped here and did not extend to *sl*, *sm*, *sn*, *sp*, *st*, *sw*, and *su*, the few words in which *su* is pronounced as though it were written *shu* (sure, sugar, sumach, censure, sensual) being of French origin. The attempt made by Sheridan and others to give this sound to *su* in suicide (shooicide), supreme (shoopreme), etc., failed to receive the sanction of the best orthoepists or of general usage. Indeed, the extension of the *sch* sound to these digraphs in German may be regarded as a mark of literary degeneracy, since it was contemporary with the decline of courtly epic poetry and the minne song which followed the fall of the Hohenstaufen. The change took place after poesy, which had been attuned to the harps of knightly minstrels, had passed into the hands of "rude mechanicals."

ASSYRIAN DICTIONARIES.

Assyrisches Handwörterbuch. Von Dr. Friedrich Delitzsch, ord. Professor an der Universität zu Breslau. Leipzig: J. C. Hinrichs. Erster Teil. 1894. Zweiter Teil. 1895.

A Concise Dictionary of the Assyrian Language. By W. Muss Arnolt. Berlin: Reuther & Reichard; New York: B. Westermann & Co. Parts I and II. 1895.

SCHOLARS have been long waiting for Professor Delitzsch's Assyrian Dictionary. Since Norris, that excellent and modest English scholar, published his three volumes (1868-'72), there has been nothing to represent the growing Assyrian vocabulary, except special glossaries, etymological treatises, and the individual word-collections of separate students. Even Norris's Dictionary treated only the nouns. Delitzsch did, indeed, append to the third edition of his 'Assyrische Lesestücke' (1885) a 'Kleines Assyrisches Wörterbuch,' so called, but this was made up from memory, as he himself has told us, was by its nature an incomplete and provisional affair, and contained no references. It had not even a specific relation to the Chrestomathy with which it was bound up. Delitzsch has had, however, great advantages for the production of a relatively complete and useful Lexicon of the Assyrian language, in preliminary training and in long familiarity with the materials, and he has no doubt felt, as others have, that he owed such a work to his fellow-workers and to the new generations of students, as well as to his own position. This debt he began to discharge in 1887 by the publication of his 'Assyrisches Wörterbuch,' of which three parts have appeared. But it grew evident that this work was undertaken on too elaborate a scale. The time was not ripe for a monumental thesaurus. Assyrian studies were in a state of flux. What was needed was a book of moderate compass and cost, as comprehensive as the present state of our knowledge admits, with citations enough to justify the definitions given, with thoroughly sifted etymological statements, and with a careful discrimination between what is known and what is conjectured. An unpretentious and promising 'Assyrian Glossary' was projected at Johns Hopkins University, some seven or eight years ago, but the plan fell through at that time. The 'Concise Dictionary' of Dr. Muss-Arnolt of the University of Chicago may be regarded as its continuation. There is certainly, at the present moment, a clear field for a practical Assyrian Dictionary, and two books are appearing to occupy it.

Delitzsch is the first claimant, with his 'Handwörterbuch.' The first two parts lie before us. The remainder was promised before the end of the year 1894. It is to be hoped that the year 1895 will see it. In externals the book is good. The size is convenient, the type clear, the impression of the page clean and attractive. The matter is abundant, but compact. Citations are sufficient in number and from a wide range of literature. The articles are not unduly long, and reference to them will be easy. The labor involved in such digestion and arrangement of the materials is very great and deserves cordial recognition. Some proper names are included, but not compounds, which is a sensible course. The thick type of the initial words catches the eye readily. Why it is of different sizes, and why Hebrew letters are prefixed in the case of some stems and not of others, are questions that will puzzle beginners and even some advanced students. The introduction which the concluding part is to bring will probably clear these matters up.

Passing to the contents, we desire at once to say that they testify to large familiarity with the text, to knowledge grammatical as well as lexical, to earnestness, to great industry, to very considerable insight and power of combination. The work is, of course, not final, but this is due in large part to the situation. Assyriological science is moving so swiftly that an attempt to fix any aspect of it can have only temporary success. This must be constantly remembered in order to just criticism. And here space admits of reference to very few details.

The words are disposed under their respective stems. This seems on the whole wise. The derivatives are needed to present fairly the use of any given stem, and the student learns more readily the common noun-formations. It may be objected that not all the stems are known, and indeed the same objection has been often, and even recently, made to a similar disposition in a Hebrew dictionary, where the margin of uncertainty is much narrower. But this objection is of little consequence in view of the decided advantages on the other side. The certainty that particulars will be modified with advancing knowledge is not a sufficient reason for refusing to exhibit most practically and usefully what is believed to be known at present.

There is almost no information as to the etymology of the stem-words themselves. Fulness here was out of the question; it would have conflicted with the indispensable conditions of size and price. But we could have wished for enough to show the verbal relations between the languages of the Shemitic family. Few things are more attractive to the Shemitic student or more illumining, in his early stages, than a judicious presentation of equivalents in the cognate languages, with their divergent shades of meaning. Even brief hints do good out of all proportion to the space occupied by them. By this silence we lose also much evidence as to the contributions of Assyriology to the interpretation of Hebrew and other Shemitic words. In Assyrian lexicography we have, further, the whole range of connection between the Shemitic and the pre-Shemitic on Babylonian soil. We cannot help regarding it as one of the defects in Delitzsch's equipment for the work of a lexicographer that he yielded some time ago to the theory that a pre-Shemitic language does not exist in the cuneiform writing. This theory raises far graver difficulties than the ones it tries to meet, and is regarded by the soberest judges as untenable. This being so, it is a pity that in a dictionary which students are to handle there should be no suggestion of the intricate and fascinating relation between the Assyrian and the Akkado-Sumerian vocabulary. It is, however, to the credit of his good judgment that Delitzsch has refrained from any argumentation in favor of the non-Akkadian theory, and even any further obvious commitment to it. Moreover, the lack of etymological statements is atoned for in part by the full exhibition of linguistic facts in important cases, with occasional suggestions of comparison as to particular points of usage. Such words as *alâku*, 'go,' *bêlu*, 'take possession of,' *banû*, 'build,' *gamâru*, 'complete,' *dalâlu*, 'be humble,' afford illustrations.

An examination of the word-meanings, in connection with Delitzsch's earlier work, reveals a certain changeableness of view which we fear will not tend to increase the general confidence of sceptical scholars in the scientific basis of Assyriology. Take for example *ummu*,

'mother,' which in 'Hebrew and Assyrian' (1883) and the 'Prolegomena' (1886) was distinctly derived from a stem meaning 'wide,' 'spacious'; now the relation between such a stem and the meanings of 'womb' and 'mother' is stated hesitantly and obscurely. So now we have no definition of the stems whence come *assatu*, 'woman,' 'wife,' and *têniseˆtu(m)*, 'mankind,' nor even any allusion to the evidence that they are distinct in origin. *Annabu*, 'hare,' which formerly was explained as 'Springinsfeld,' is now questioningly interpreted from its fertility. Under *alu*, 'city,' which was formerly (even in the large lexicon) connected with the Hebrew *'ôhel*, 'tent,' as well as with Assyr. *mailu*, *mailtu*, 'couch,' now stands quite alone. In some instances the present attitude is probably wiser than the former, but not in all, and the abandonment, without an array of new evidence, of positions taken with much positiveness not long ago may lead some to doubt the security of positions taken now. However, this is a defect of the past rather than of the present. We shall be glad to believe that these changes mark increasing sobriety of judgment, and a sharper distinction between what is fairly proved and what still remains mere opinion.

It would be interesting to take up other points, such as the principles of transcription and the treatment of particular words, but our limits forbid. We are glad to welcome this dictionary. It has some faults, but great merits. It will serve an immediate and useful purpose and furnish a basis for something better when the time comes. One final remark is called out by a statement in the prospectus, to the effect that the larger 'Assyrisches Wörterbuch' is relieved of so much material by the publication of the hand-dictionary that it can now be finished in three additional parts instead of seven. How a thesaurus of which three parts have been already published without completing the first letter can be finished at all in three more parts, and how the publication of a compendious hand dictionary can so relieve the thesaurus as to permit its completion in less than half the expected space, it is not easy to see. This amazing statement does not encourage lively anticipations as to the value of the thesaurus, which should either be finished slowly, on an ample scale, or abandoned altogether.

Dr. Muss-Arnolt's work promises to fill about 500 pages—rather less in number than Delitzsch's—but the size is reduced not so much by diminishing the amount of matter as by the use of smaller type, the utmost compression of statement, and an ingenious system of abbreviations. Detailed comment must be reserved, but certain features are obvious. The Assyrian words are transcribed in Latin letters, as in Delitzsch's book, but without the stem-headings in Hebrew characters. They are arranged alphabetically, a method inferior to the arrangement by stems, which Delitzsch employs. Some other differences are, however, to the advantage of Muss-Arnolt. It is a clever stroke to give definitions and cited passages in both English and German, although it uses up space. Two most distinctive and valuable characteristics, however, in both of which Delitzsch's work is defective, are the etymological statements and hints, including comparisons with the cognate languages, and the frequent and judicious references to philological discussions bearing on derivation and interpretation. These are exceedingly important features, and more than make up for the fewer and briefer citations of Assyrian texts. It is evident that, except for the necessity of buying two books instead of one, Assyrian students will be much the gainers by the publication of both these works.

BOHEMIA AND THE BOHEMIANS.

History of Bohemia. By Robert H. Vickers. Chicago: Charles H. Sergel Co. 1894.

Pictures from Bohemia, Drawn with Pen and Pencil. By James Baker, F.R.G.S. Fleming H. Revell Co.

The two books above named are the work of Czechophils who feel that they have discovered a new country and a new people, and have a certain duty to perform in imparting their knowledge to the general public. Bohemia is, in truth, a comparatively unknown region to the average American or English student, but we are not yet prepared to recognize it as *terra incognita*, nor can we agree to the proposition that, "to the apprehension of most persons, a Bohemian means a vagabond, a gypsy, a tramp, an anarchist, a conspirator," or to the statement that "the least breath of popular discontent is attributed to Bohemians." Notions of this kind are frequently held by the ignorant, but they can hardly be asserted to be characteristic of the more enlightened portion of the community, of those who travel and read books of history.

Mr. Vickers informs us in the preface to his history that the work is "presented as friendship's sympathetic offering to the Bohemian people," and as their "vindication," which is certainly a very laudable presentation, but we are not sure that we understand on what grounds the "most orderly, industrious, peaceable, and thrifty people" which make up the Bohemian nation require a vindication. Their position in the technical and fine arts, in science, medicine, and literature, has long been recognized, and there are probably not many who associate the stirring compositions of their masters in music with the stridulations of roving bands of gypsies. It may be unfortunate that the word "Bohemian" has been retained as a part of the stock in trade of at least three languages, but it serves a purpose, and its meaning is too well understood to permit it to stand in condemnation of a people who to-day number some five millions or more. Mr. Vickers is throughout a champion of his chosen nation, and he has not been able to accommodate himself to that impartial vision which should be the first possession of an historian. It is therefore not surprising to find in the modern history such statements as (p. 737), "Thus Hungary three times within two years entirely destroyed the efforts of Bohemia," and (p. 739) "America was blinded by the glare of Louis Kossuth, and totally lost sight of the Slavs whom Kossuth had endeavored to subjugate." This unfriendly feeling to the Hungarians is extended to the events of 1867, when not even the brilliant but thoroughly honest statesmanship of Deák saves them from the charge of having "deliberated only for themselves" (p. 745).

In the compilation of his stirring narrative Mr. Vickers has availed himself largely of material derived from native sources, and he deserves the thanks of English-reading students for having compressed so much substance into a single book. On many pages, however, it is only too apparent that the author's own knowledge is largely superficial, and a marked unfamiliarity with his surroundings crops out here and there, noticeable more particularly where absolute dependence is placed upon the form and substance of the writings of historians whom he uses as his guides. Such an instance we find in an extract (not accredited, however) from a well-known French work, which appears as follows on page 737: "Of the provinces seven were named, German, Bohemian, Polish, Italian, Jon[u]go-Slav, Magyar and *Valaque.*" Again, on p. 742, the *Lettre de Majesté* of October 20, 1860, which appears in an English translation, is signed with the letters M. P. (*manu propria*) following the Emperor's name. The author is reckless in the spelling of proper names, and we have an almost indiscriminate commingling of English, German, and Bohemian (and even French) forms, and a barbarous use and elimination of accents. Thus, to mention only a few of the offences, we have Bethle and Bethlehem Gabor, Palacky and Palaçky, Safarik and Szafarik, Windisch-Grätz, and Deak; but possibly some of these sins of omission and commission fall to the very negligent printers rather than to the author himself. So, too, may it be with the date of the battle of Sadowa, July 4 [3], 1861 [6], on p. 744. As is only too often the case with historians, Mr. Vickers is undisguisedly ignorant of the geography of the country whose history he narrates, and his first chapter, "Geographical Conditions," may fairly be considered a literary curiosity. It makes an attempt in both topography and physical geography (or geology), and it fails equally in both. We are informed on p. 11, the opening page, that the "primitive mountains proper occupy chiefly the south and southeast, and include the Böhmerwald, the northern, and the Sumava, the southern portion of the great chain which constitutes in general the southern boundary of the country." These are composed chiefly of "granite, schiste, and mica-schiste." A little further on we are enlightened as to the existence of a "second chain of primitive mountains," protecting the northwest, in the midst of which a "small elevated plateau named Labska Louka (Elbewiese)" gives "rise to the Labe River, or Elbe." Presumably the mountains under consideration are the northeastern Riesengebirge, or Giant Mountains, both of which names are seemingly unfamiliar to the author. We are made acquainted with a "third chain of primitive mountains, called in geography Adlergebirge (Orlicke Hory)," and with still another "third system of mountain elevations," furnishing coal, iron, and *chalk*, and "known under the general title of Stony"; presumably these last correspond to the well-known Erzgebirge, or Ore Mountains. On p. 17 the area of the country is stated in a note, with fair accuracy, to be 20,000 English square miles, but in the text is given as 5,000! Apparently the linear expression has here been used in place of the areal.

The author's unfamiliarity with scientific expression and facts is found in such statements as (p. 12), "In this [Silurian] formation fossils of crustaceans, cephalopods, and marine zeoliths are found in abundance," and (p. 13) "The flora of Bohemia is very diversified, and includes many Alpine plants usually discovered only in a warmer latitude." The "map of Bohemia" (of Bohemia and Moravia, in fact) which accompanies the work is Bohemian in substance, but French in final execution; hence we have Praha for Prague or Prag, Karlovary for Carlsbad or Karlsbad, etc., with surroundings of *Prusse*, *Autriche*, *Bavière*, and *Hongrie*. It is exceedingly commonplace in execution, and forms the basis of the geographical text.

Mr. Baker's 'Pictures from Bohemia' are very nearly what the title indicates, to which it might be added that in most cases the

word-pictures are indifferent and the pencil-pictures often not much better. Here and there Walter Crane gives us a true, facile touch of his pen, but, as is so often the case with the work of English illustrators, his designs are stiff and coldly rendered. The book is part guide-book and part personal narrative, and may be acceptable to the few who have travelled the byways of Bohemia as refreshing the memory, but we doubt if it will stimulate travel in the direction of that very interesting country. The descriptions of scenery are very defective, and centre mainly about the giant sandstone crags of the north and the piney forests below; of the charming mountain recesses of the Böhmerwald and the Riesengebirge we have practically nothing, nor, indeed, does it appear from the narrative that the writer had much acquaintance with those tracts. The people are not treated much bet ter than the landscape, although Mr. Baker warms very noticeably when extolling their many virtues and graces. The following description of the peasantry of Haida may be taken as a sample of the author's style:

"On the left hand are the women, a blaze of color, for every woman wears a head-dress of brilliant hues; every shade and every combination of color is there—red, blue, brown, yellow, black, sky-blue, crimson, green, gray, violet, ultramarine, orange. . . . On the men's side all is dark, gray, and sombre, for they wear here modern costume *sans* bright hues" (p. 23).

A modification of this description, applying to the inhabitants of Pilsen, is found on p. 100: "Around a pile of eggs and butter and fowls were grouped women in mauve, red, light pink, blue, chocolate, dark brown, olive, yellow, a black-gray alternating on one dress with yellow and red, very light blue, pink, purple, and primrose yellow." It could hardly be expected otherwise, after such a kaleidoscopic description, than that the author should state (p. 83) that the Bohemian "dress refutes the statement that picturesque and representative costume is not now to be met with in Europe"!

Mr. Baker, like Mr. Vickers, lacks the quality of acquaintance with his country, and shows a marked unfamiliarity with certain well-known names in history. Thus, adapting his history manifestly from the German Palaçky, we find on p. 77 the statement that the "earliest-known inhabitants of Bohemia were the Bojen, . . . then came the Markomannen," etc. This may in part be a slip, for further on we do find Boii, but Markomannen recurs. A careless adaptation of the German is also found on p. 173, where the Council-house of Eger is identified with the "Burgermeister's House" of Schiller. A most singular termination of the book, and the only touch of science in it, is the enumeration of ten species of plants from the Rip Mountain, which "will prove to the English botanist that he may find in Bohemia plants he might seek for in vain in our own country, and thus add an additional pleasure to his travels."

The Silva of North America. By Charles S. Sargent. Vol. VII. Boston: Houghton, Mifflin & Co. 1895.

THE present volume begins the second half of this invaluable work. As had been expected, it opens with the red bay, and includes our native species of elm, mulberry, walnut, and hickory, besides other more or less related trees. Of the laurel family we have five native trees, the red bay and the swamp bay of the Southern States (species of *Persea*), the Floridian *Ocotea Catesbyana*, the sassafras, and the Californian laurel (*Umbellularia Californica*). Of these spicy trees the sassafras grows to the largest size, being sometimes eighty to ninety feet high, and with a trunk nearly six feet in diameter, though it is probable that these dimensions are rarely attained. The pleasantly aromatic roots were formerly considered an excellent remedy for rheumatism and other diseases, and were gathered and exported in great quantities by the early American colonists. Faith in the remedial power of the plant has now pretty much disappeared; but the roots are still used as flavoring for beer and confectionery, and the young foliage is gathered and dried in the Southern States as a chief ingredient in the mucilaginous soup known as *gumbo*. Linnæus named this tree *Laurus Sassafras*. Nees ab Esenbeck separated it from *Laurus*, and called it *Sassafras officinale*, under which name it has usually been known since 1830. The modern American craze for "reformed nomenclature" has substituted the amphisbæna-like binomial of "*Sassafras Sassafras*." The Californian laurel is a stately evergreen, scarcely smaller than the sassafras. Its dark and polished foliage is persistent for several years, and it is a favorite ornament of parks in California. The berries are rather rounder than an olive, and dark purple when ripe. The wood is strong and durable, of a rich brownish color, and is much used for ornamental wainscoting and for cabinet-work.

The order *Euphorbiaceæ*, besides its many herbaceous species, is represented in southern Florida by four small trees, one of which is the manchineel (*Hippomane Mancinella*), with its pretty but noxious apples. The whole tree is so poisonous that the stories told of it remind one of the legends connected with the upas-tree of Java. Our elms are happily permitted to rest in peace under their well-known names. Chief among them, of course, is the white elm (*Ulmus Americana*), the glory of New England's meadows and roadsides. Our four other elms are less noticeable, though all are occasionally fine trees. The winged bark of the wahoo (*Ulmus alata*) and of the cork-elm (*U. racemosa*) is much like that of the sweetgum (*Liquidambar*), and is sometimes imitated in the cedar-elm of Texas (*U. crassifolia*). The fifth elm is the well-known slippery elm (*U. fulva*), which has such fragrant and mucilaginous inner bark that the author does not recommend it for planting in public places, as it must sooner or later become the prey of boys. Related to the elms are the planera or water-elm (*Planera aquatica*) of the Southern States, and the two species of hackberry (*Celtis occidentalis* and *C. Mississippiensis*). The hackberries have much the look of elms; but the leaves are narrower, and the fruit is a small round inedible berry.

In the order *Moraceæ* we have two native mulberries—the common red mulberry (*Morus rubra*), and a Mexican species which finds its northern limit in Texas. Then there are two kinds of fig-tree in Florida (*Ficus aurea* and *F. populnea*), and in the Southwest the handsome Osage orange, the *bois d'arc* of the French colonists and voyageurs. This tree, with its handsome foliage and its great orange-like but woody and terebinthine fruits, is exceedingly ornamental, and as it is perfectly hardy even in southern New England, it well deserves wider cultivation than it has yet received. The wood is hard, yellowish, slow to decay, and possesses very great elasticity, whence it has been the favorite material for bows among the Western Indians. For many years it has been known to botanists under the name of *Maclura aurantiaca*, a name given by Nuttall in 1818; but it now seems that Rafinesque was a year earlier in calling it *Ioxylon pomiferum*, which it is claimed was a misprint for *Toxylon pomiferum*, the name here adopted. *Toxylon* is said to be the Greek equivalent of the old name *bois d'arc*, but by strict etymological rules the word ought to have had one more syllable, and have been written *Toxoxylon*. Perhaps it is well in this case to let etymology yield to euphony.

Of plane-trees or planes (*Platanus*), commonly known as buttonball and buttonwood, we have three species, the widespread *P. occidentalis*, ranging from New England to Texas, one of our very largest trees, sometimes reaching the height of 170 feet, and with a trunk ten feet in diameter, and two Western kinds—*P. racemosa* of California, scarcely smaller than the Atlantic species, and *P. Wrightii* of New Mexico and Arizona. The name sycamore is so thoroughly appropriated to these trees in the United States that it cannot be displaced; but it should be remembered that in England the name is given to a broad-leaved maple (*Acer Pseudoplatanus*), while the συκόμορος of the ancients was a species of fig-tree (*Ficus Sycomorus*), a common shade-tree in Egypt. The latter was also sometimes called συκάμινος, though this name belonged more especially to the mulberry.

Corkwood (*Leitneria Floridana*) is a small swamp-grown tree of Florida and Missouri, having somewhat the appearance of a willow, but with pointed drupes nearly an inch long for fruit. It seems to stand alone by itself as the sole representative of a natural order, and by common consent is placed between the planes and the walnuts. The wood is the lightest we have, being only about one-fifth the weight of water, and is used for floats by the fishermen of Missouri.

The last order of trees taken up in this volume is the walnut family (*Juglandaceæ*), of which we have two genera, walnut and hickory. Besides some obscurer distinctions, the principal difference between the two is that the husk or involucre of the walnuts is indehiscent, and so breaks up irregularly or not at all, while in the hickories the husk readily cleaves into its four valves. In Dr. Isaac Taylor's book, 'The Origin of the Aryans,' is given a summary of Geiger's argument that the use by the Greeks of the word φηγός, the linguistic equivalent of the Teutonic *beech*, for an edible oak, the beech not growing in Greece south of Dodona, is some evidence that those who thus applied to one tree the name of another must have migrated from the land of beeches in the northwest rather than from Asia, and so the yellow-haired princes of the Homeric poems were really of Teutonic origin. Similarly the early settlers of New England knew the walnut of Europe very well, and, not finding it on our Atlantic coasts, gave its name to the Virginian "pawcohiccora," now altered in our common speech to "hickory." Our true walnuts are the butternut (*Juglans cinerea*), the black-walnut (*J. nigra*), the Texan and Arizonian *J. rupestris*, and the *J. Californica* of the coast region of the State for which it is named. The black-walnut is one of our most valuable timber-trees, its wood having long been most highly valued for decorative work of all kinds. So great has been the demand for it that the supply is now nearly exhausted, and fine trees of native growth are scarcely to be found anywhere. All our walnuts bear edible fruit, but all have the shell so very hard and thick that the nuts are not eaten to any very great extent. The European *J. regia* is beginning to be cultivated in America, and there is no rea-

son why we may not eventually raise its nuts in marketable quantity. The hickories, established as the genus *Carya* by Nuttall in 1818, consist of eight species, the *pecan* of the Mississippi valley, the shell-bark or shag-bark hickory of the wide region from Canada and Maine to Texas, both yielding edible nuts of excellent quality, the "big shell-bark" of the Middle States, with edible but very thick-walled nuts, and five other species, commonly called pignut, bitternut, mockernut, nutmeg-hickory, etc., whose nuts vary from barely edible to decidedly bitter. The wood of most of the hickories is exceedingly tough, fine-grained and durable, and is invaluable for the handles of agricultural implements of all kinds, and for those parts of wagons where lightness and strength are desired. The name given to the genus by Nuttall, and universally recognized for about seventy years, is displaced in this book by a conjectural emendation of a misprinted name found in one of Rafinesque's writings—writings which have done systematic botany much harm, and the recognition of which brings only confusion and chaos to nomenclature.

Next in order to the walnuts and hickories should come the bayberry, which sometimes becomes a low tree, followed by the birches, alders, hazelnuts, and hornbeams. Whether the oaks will be reached in the next volume cannot be clearly foretold; but it may be safely assumed that when they do appear, they will be marshalled under their classical title of *Quercus*, and not under any resurrected Rafinesquian misnomer.

B. F. Stevens's Facsimiles of Manuscripts in European Archives relating to America 1773-1783. Vol. XXII. Nos. 1861 to 1945. London: B. F. Stevens. August, 1894.

In volume xxii. we have the last of Lord Stormont at Paris, and therefore the important features of his closing despatches will not be uninteresting. Much as he burned to make France suffer for her secret policy constantly developing under his very nose and eyes—and both senses were busy—he at first held that she should be forced to a categorical answer in regard to the suspected treaty; but Vergennes soon forestalled him by ordering Noailles to declare it in London, though before this event Stormont had begun to urge his Government to a "sudden blow." He certainly had at times very accurate information as to what was going on, as well he might, considering the presence in Paris of Dr. Bancroft and Paul Wentworth; but he does not seem to have placed final confidence in what came to him, though ready enough to carry general gossip at all times to Vergennes. He confesses to paying well for his news, but how much can probably never be known. In No. 1862, Weymouth authorizes him to give "Mr. James" one hundred guineas. "Mr. Edwards," too, was perhaps comforted by similar remembrances, delicately transferred by the legerdemain of practical diplomacy. As far back as February 18, 1778, Stormont was holding that there were two treaties, "both signed on Friday the 6th Instant," whereas rumor spoke only of one. From some painfully accurate memoranda (No. 1881) in the hand of Wentworth, reproduced from the Auckland MSS., it seems certain that these facts were had from some one who was privy either to the actual signing of the treaties or to the drawing or copying of them. Wentworth's informant was "Mr. Edwards," and who might Edwards have been if not Dr. Edward Bancroft, when he says the "preparing of which [the treaty] kept me very busy for several days"? Edwards also sends an "abstract of the Treaty of Commerce, and such an account of the other Treaty as will be sufficient"; and then he prays and confides, as such persons always do, "that not a sylable respecting them may be permitted to transpire untill accounts of them are obtained from other Quarters, else I shall be ruined." In offering this suggestion as to the probable identity of these men, who are still considered by some writers of authority to have been two distinct persons, it is just to admit that we are not expressing a conviction, but only a reasonable suspicion, based upon the evidence shown in this important document, though we may properly add that this suspicion is shared by so competent a student as Mr. Paul Leicester Ford.

"Mr. James" turns up again (in No. 1866) with a request for a "trifling sum" of twenty-five guineas, and offers, for four hundred guineas and a place on the Island of Jersey at £100 a year, to quote passages of the treaty from one who has seen it! Stormont would gladly have paid this demand for a sight of the treaty, but writes that since "we know so much" the offer is high. That "Mr. James," "Mr. Edwards," and Wentworth were not unacquainted may fairly be inferred from the above, but Stormont was not so ready with his credulity as with his guineas, and was cautious about guineas. While Stormont is thus alive to the condition of affairs, Maurepas takes the pains to assure him that "there is no Treaty between France and the Colonies!" It is true that when Maurepas said this the treaty had not yet passed the seals (concerning which event see Nos. 1929, 1931), which is the only explanation favorable to such an assertion, extraordinary even for Maurepas, and one to which Vergennes would never have descended. Stormont utterly discredits Maurepas, and urges again his favorite "sudden blow" (No. 1873). To Weymouth, doubtful of the existence of the treaty, Stormont (No. 1883) answers that he will pawn his "Honour and Reputation for the actual existence of a Treaty of alliance signed and executed in the usual Manner," and persists in a suggestion, dear to him at that time, that La Motte-Piquet's squadron should be intercepted; but in his next (No. 1890), dated March 11, it is too late, for the squadron has sailed. He speaks of Deane's recall, and, with an Englishman's genius for inaccuracy in things American, says that "Mr. George Adams is to be sent hither in his Room."

At last the long suspense as to the definiteness of the relations between France and the revolted colonies is over. On March 10, 1778 (No. 1888), Noailles is instructed to inform Lord Weymouth of the Treaty of Friendship and Commerce; on March 13 Lord Stormont is ordered by his court to quit Paris without taking leave (No. 1894); on March 17 (No. 1903) Vergennes orders Noailles to withdraw at once, also without taking leave, and to leave some one behind sufficiently intelligent to observe what is taking place in London. Four closing despatches to Weymouth (Nos. 1899-1902) and a request to Vergennes for passports for himself and suite (No. 1898), and Stormont's mission is done. He arrived in London on March 27.

In the protracted struggle wherein Stormont and Vergennes were for a time chief contestants, the unwearied zeal and energy of the former had to yield before the astuteness of the other, who personally was of high honor, but who played to win. That he had no illusions certainly gave Vergennes a great advantage. Especially does he seem throughout his many papers in this collection quite devoid of enthusiasm as to American ideals and aspirations. Not self-seeking, he was a devoted servant to France; all the more valuable because, as Jefferson wrote to Madison, age had "chilled his heart."

Of more than usual interest and value are many of the eighty-one documents of this volume. For the occasional notes of information on the title-pages one is always grateful; in fact, it is desirable that they should be more frequent. In Nos. 1878 and 1879, a healthy curiosity is raised as to the identity of an important passenger expected to embark at Brest. A word of explanation would have been of service, though, to be sure, from No. 1781 it appears that Silas Deane's brother was to sail at once with fresh despatches from the Commissioners. Such corroborative evidence is not always, however, so satisfactory as is positive assertion, in this maze of heterogeneous papers.

Several documents cover a controversy which arose between the officers of the Farmers-General and Capt. Tucker, and which was finally settled by Vergennes, who cut a great deal of red tape, as able men will readily do, to the utter confusion of official machinery. The captain had refused to declare the tobacco which he brought into the port of Bordeaux on his frigate *Boston*. As commander of a vessel of war he held that he was exempt from examination. A procès-verbal and other formidable papers did not blind Vergennes to the fact that French war-vessels were not examined in foreign ports, and Tucker was sustained.

The dissatisfaction of French officers who found themselves less honored than they expected to be in the American army is not a new subject, but it is forcibly illustrated in Nos. 1936, 1937, and 1939, the last of which is by Baron de Kalb in support of two unhappy gentlemen who relieve their wounded feelings in the other papers. It was not all disillusion here, however, to Frenchmen. That America still had its enchantments is seen in a letter (No. 1918) from Cumberland, Virginia, in which a French captain calmly asserts that "coal is from six to eight leagues deep!" With reluctance we pass by some letters of Beaumarchais, vivacious even in his despair, to mention only his excellently tabulated "Incontestable proofs of the enormous expense of the war between America and England" (No. 1892). How sluggish was the English pulse at this juncture appears in figures given by him which show that bank stock in London, in October, 1775, was at 143½, in October, 1776, at 134¼, and in March, 1778, at 116; and that 3 per cents consolidated in October, 1775, were at 89⅝, in October, 1776, at 82⅛, and in March, 1778, at 69. With such facts in his possession, Vergennes may well have felt that it was an auspicious time for France to declare in London the Treaty of Friendship and Commerce.

The Life and Times of James the First, the Conqueror, King of Aragon. By F. Darwin Swift, B.A. 1 vol., 8vo. Oxford: Clarendon Press; New York: Macmillan. 1894.

Among the crowd of compilations styling themselves histories it is refreshing to the critic to encounter a genuine product of honest original research such as this. Mr. Swift is evidently a student of the modern historical school, and his work is an encouraging indication that England is at last to follow Ger-

many and France in adopting modern methods —in taking nothing for granted on the authority of a predecessor, and in exhausting all sources of positive information, edited and inedited—in having no preconceived theories to support, and in presenting all the facts from which the reader can draw his own conclusions. Mr. Swift has delved into the Spanish archives, from Barcelona to Simancas. He has collected all attainable facts illustrating the subject and the epoch of his book, and he presents them in orderly sequence without intruding upon the reader his own opinions, theories, or conjectures, and without indulging in the rhetorical declamation and commonplace moralizing with which half-instructed writers are apt to cover their deficiencies.

This reticence is all the more creditable because the subject of the volume is one peculiarly provocative of romantic amplification. In the whole era of the Spanish Reconquest no figure stands out so prominently and so alluringly as that of Jayme el Conquistador. Born in 1208, his father, Pedro II., handed him over in 1211, virtually as a hostage, to De Montfort, the leader of the crusaders against the Albigenses. Two years later, in 1213, Pedro fell at Muret, warring with De Montfort, and it was not without difficulty that in 1214 the child was extracted from the hands of his father's enemy. A long and troublous minority followed, during which, more than once, it seemed as though the royal power would disappear. The hardening experience was not lost on the young king, who in 1229 turned the energies of his rebellious subjects to the conquest of the Balearic Isles, followed in 1235 by that of Valencia, and in 1266 by that of Murcia. Yet to the end of his long reign his strength was wasted in almost perpetual struggles with his great nobles, who scarce recognized him as more than a nominal feudal superior, and the result of his experience is condensed in the six counsels of perfection which he gave to his son-in-law, Alfonso the Wise of Castile: "(1) Always to keep his word when once given; (2) always to consider well before signing a grant; (3) to keep the people in his love; (4) in any case to conciliate the Church and cities, with whose aid he could crush the nobles if necessary; (5) not to infringe the grants made to the settlers in Murcia, and to people it with a hundred men of importance, giving them large allotments, and letting out the rest of the lands to artisans; (6) not to punish any one in secret" (p. 120).

If Jayme failed in his efforts to extend his dominions over the south of France, it was because he undertook the impossible. The house of Barcelona and the house of Toulouse had long struggled for supremacy there, where the possessions of both were enormous. If Pedro II., in 1213, took up the sword to defend Raymond of Toulouse against the Church and its crusaders, it was because he hoped to win for himself the heritage assailed by the men of the North. His death on the disastrous field of Muret, followed by the long minority of Jayme, rendered idle any attempt to follow out the ancestral policy. The Albigensian crusades, ending in the Treaty of Paris in 1229, left Languedoc virtually in the hands of the house of Capet, against which neither the policy nor the arms of Jayme could hope to prevail. The utmost that he could do was to preserve the possessions of his ancestors, and these were eventually lost through the destructive partition which separated the kingdom of Mallorca from that of Aragon and Catalonia. Yet though Jayme was unable to accomplish his designs either on France or on the kingdom of Navarre, he has passed into history as the national hero—the ideal of an adventurous knight and a wise king. So great was the reverence felt for his memory that in the sixteenth century his canonization was earnestly demanded of the Holy See, in spite of the notorious licentiousness of his life.

Mr. Swift has condensed into less than a hundred and fifty pages the account of Jayme's reign of sixty three years, crowded though it was with events. This he follows with a series of most instructive chapters on the governmental and social organization of the kingdom —or rather aggregate of states which formed the kingdom—on legislation, revenues, and commerce, on the Church, the Jews, and the Saracens, and on literature, science, and art. These chapters are well worth perusal by all students of the mediæval period, for they give us a reasonably complete view of the structure of a state which, both in its resemblances to other feudal monarchies and in its peculiar idiosyncrasies, affords an instructive object of study. While within his own field Mr. Swift is manifestly a safe and accurate guide, there is elsewhere an occasional lapse which serves as a warning how minute must be the vigilance in seeking illustrations from foreign sources. Thus in comparing the monarchy of Aragon with those of Castile and France, he says (p. 149), on the authority of the *Siete Partidas*, that "In Castile the Prince was regarded as God's vicar on earth," and he quotes Henri Martin to the effect that "In France the King's pleasure was law; all jurisdiction emanated from him, and all could be cited to his court." Now the *Partidas* represented only the conception of Alfonso the Wise of what the law ought to be; they were not confirmed until after nearly a hundred years by the Córtes of 1348, and how little their doctrines of the royal supremacy were subsequently admitted is seen in the *Seguro de Tordesillas* under Juan II. in 1439, and in the Deposition of Ávila under Enrique IV. in 1465. The foundations of absolute monarchy in Spain were not laid until the reign of Ferdinand and Isabella was well advanced. So in France, under Louis IX., the royal power and jurisdiction were still exceedingly limited. The Ordonnance of 1260 ventured to remove the judicial duel only in the royal domains and did not affect the baronial courts; nor did the feudatories lose the right of *haute et basse justice*—a right at no time enjoyed by the *ricoshombres* of Aragon—until long after Philippe le Bel had succeeded, with the aid of his civil lawyers, in greatly extending the royal jurisdiction.

Trifling errors in *obiter dicta* such as these, however, do not affect the value of Mr. Swift's labors. The present volume, we believe, is his first effort in historical composition, and it holds forth the promise of abundant harvests hereafter if, as we hope, he shall continue to direct his energies to fields which English scholars have thus far been content to abandon to their Continental brethren.

The Peoples and Politics of the Far East. By Henry Norman. Charles Scribner's Sons.

THE author of the 'Real Japan' has in this work set forth the results of his travels and observations in that part of his Far East in which Great Britain, France, Russia, Spain, and Portugal are most interested. He ignores utterly one of the fairest and most valuable portions ruled by the Netherlands. Yet as this lies outside of the track of the many storms which he predicts, the loss to the reader is very slight.

Despite its great attractiveness, this encyclopædic volume reminds us of the work of the late Edward A. Freeman, for it has very much the same limitations. Apart from the elements of personal adventure and narrative of travel, it is almost wholly political. It is true that the author, in his title, links the term "peoples" with "politics"; and undoubtedly his discussions of race-characteristics, and the emphasis he lays upon what he calls even the "sacred" element of race, are marked and ample. Yet to our mind it shows a radically false conception of life and of the philosophy of degradation or progression that a book treating of "peoples" should studiously ignore those things which move men most profoundly—religion, ethics, and social principles. To one who wants to know about trade, geographical strategy, the bearing of statistics, the ambitions of nations, the exigencies of politics, this book is of prime value. It is wonderfully like an announcement of weather observations and probabilities. It seems to combine the detailed forecast of a single day, based on actual observation and scientific data, with the general programme of the weather as elaborated by a generalizer from prolonged records.

Mr. Norman's book is on a much larger scale than Mr. Curzon's recent work, 'Problems of the Far East,' and there is delightful and refreshing contrast between the two. Mr. Curzon represents the traditions of Tory England, and his suggestions and prophecies hover on the verge of Jingoism. Furthermore, his brilliant work is already, in all probability, antiquated, because the Corea which he described and partly imagined exists no more, while it is evident that there is to be a China, hereafter, very different from that pictured in the old books. Mr. Norman takes what we imagine to be the Liberal or more rational view of British foreign politics, for he actually believes that it is possible for England and Russia to be friends. From first to last he has exposed the inherent weakness of China, even to demonstrating that there is no such thing as China in the sense of a political entity. He exults with delight in the fact that the Japanese war has done what nothing else has been able to do—made known the truth about this colossal sham. His admiration for Japan borders almost on the sentimental. He thinks Portugal and Spain have practically dropped out of Eastern politics. Portugal will disappear, leaving scarcely so much as a stain of tradition; while as for Spain—well, Japan can wipe her off the map of eastern Asia any morning. In addition to Japan's elongation of her chain of empire so as to include Formosa, she is pretty sure some day to have the Philippine Islands. Mr. Norman thinks that he knows well what the terms of the peace settlement between Japan and China will be. He regards it as certain that Russia will have her railway terminus at that Corean port and bay which the Russians will call nothing else than "Lazareff." At present Russia is quiet though all ready, expecting to be on hand when the China Japanese war is ended and peace-terms declared; yet Russia can afford to wait even longer until her railway approaches completion. As for France, she will always be England's enemy in the East. China is a morass of abomination that needs to be, in the interests of humanity and civilization, partitioned, drained, filled up, and its malaria destroyed by planting abundantly the eucalyptus trees of British soldiers, forts, and

custom-houses. Mr. Norman justifies Japan in her course in Corea, for he shows that Japan, besides bringing the peninsular state into the circle of civilized nations, is the creator of her trade and incipient industries. In his criticisms of Japan he shows knowledge and sympathy, while exposing her dangers as a foreign friend sees them. He holds that beyond doubt Japan's greatest difficulties will be when the war is over. It is easy for a hornet to sting the body of an enemy bigger than itself, but to extract its sting again without danger to its own life—that is the problem for the hornet and for Japan.

The five chapters devoted to Siam give what we believe to be the best discussion of the actual situation to-day. The criticism of the action of France is searching and the indictment is tremendous, but we cannot see that Mr. Norman has in the least exaggerated the facts. It is very doubtful whether the French people will ever succeed in colonization, for thus far French colonies in Asia have meant to the French people more taxation and little else. In his chapters on Malaya our author throws such light as is now possible upon the mysterious Malay race, and feels sure that the peninsula named after it is ultimately to belong to England. In conclusion, he sums up his work in "An Eastern Horoscope," calling attention to the fact that "powerful and jealous nations are plotting for our inheritance." He sees the most hopeful portent in the declaration of a Liberal Prime Minister that "the party of a small England, of a shrunk England, of a degraded England, of a neutral England, of a submissive England, has died."

It is but sheer justice to call attention to the excellent book-making and editing, and to the four maps and the three score illustrations, the latter excellently selected and reproduced from original photographs. The literary arrangement and proportion and the well-made index commend this book, which is of the first order of literary merit; and this we say, even though our copy has missing some illustrations and a duplicate of several others.

Studies in Modern Music. Second Series. By W. H. Hadow. Macmillan. Pp. 312.

When the first series of Mr. Hadow's musical studies appeared, about three years ago, the author was universally commended for his fairness and catholic taste. These qualities may also be affirmed of his new volume, which treats of Chopin, Dvorák, and Brahms, the first having been devoted to Berlioz, Schumann, and Wagner. As that volume was introduced by an essay on Musical Criticism, so this one begins with a long disquisition on the Outlines of Musical Form. This essay is readable, although it is not remarkably luminous or suggestive, and contains some questionable doctrines. But it would be well if the large number of literary men who seem to imagine, with Ruskin, that music is a purely sensuous art, read and pondered the following passage:

"It will thus be seen that the manner in which we are impressed by music is enormously complex. First, there is the sensuous appeal, the different characteristics of *timbre* and tone, of rich harmony and full orchestration, of all those devices which are usually described in metaphors of taste and color; second, and inclusive of the first, is the emotional appeal, the exhilaration of rapid movement, the gravity of stately chords and broad diatonic melody, the restlessness of broken rhythm and frequent modulation, the shades of surprise which follow upon a sudden change or an unexpected crisis; third, and inclusive of the other two, is the intellectual appeal, the exhibition of balance and symmetry in the management of these several effects, the definiteness of plan and design, the vitality and proportion of organic growth."

Of the three biographic papers which make up the bulk of Mr. Hadow's book, the most welcome and valuable is that on Dr. Dvorák. The author took the trouble to visit the Bohemian's birthplace so as to be able to describe the surroundings of his early life at first hand; and he studied in the libraries the scores of such of his works—especially the operas—as cannot be heard on the stage to-day. Mr. Hadow makes the most of the meagre incidents of Dr. Dvorák's life, from the time when he earned $7.50 a month by playing with a small band in inns, to his engagement as director of the National Conservatory in New York at a salary of $15,000 a year. Here are a few of his judgments: "Dvorák is the one solitary instance of a composer who adopts the chromatic scale as a unit, who regards all notes as equally related." "His operas are for the most part essentially undramatic, and if they hold the stage, will survive as displays of pure melody." He pays tribute to the Bohemian's rare mastery of form and his skill in orchestration, unequalled by any of his contemporaries. The opinion of the chamber music expressed on p. 224 would probably be modified had the writer heard Dvorák's last works, composed in America. The distinct influence of "Parsifal" in the "New World" Symphony also shows that Mr. Hadow is utterly wrong in saying (192) that "his Wagner-worship was but a sudden episode, . . . of which little or no effect remains in the record of the later works." We can state on the very best authority that Dvorák worships Wagner as ardently as he ever did, notwithstanding all efforts of his friends Hanslick and Brahms to influence him in an opposite direction.

With the estimate of Brahms expressed by Mr. Hadow we must differ absolutely. He nowhere expressly says so, but he intimates pretty plainly that he considers Brahms, next to Bach and Beethoven, the greatest of all composers! It is not surprising to find a man who holds such an opinion writing of Chopin that "even his melody is never sublime, never at the highest level"; that "a want of virility" appears in his music; and that "he can claim no place among the few greatest masters of the world." In answer to which extraordinary statements we beg to refer Mr. Hadow to what he himself says (p. 81): "There is a special danger in estimating him [Chopin] from a British standpoint. Our bluff, sturdy manhood has little in common with the keenness and mobility which mark one side of the artistic temperament, and we have never been very successful at comprehending alien characters or alien nationalities." Brahms has the bluff, sturdy nature of an Englishman, while Chopin has the keen, mobile, artistic temperament; which may perhaps account for the extraordinary Brahms fad in London, and the lack of poetic appreciation in most English writings on Chopin.

We have admitted Mr. Hadow's catholicity of taste, and must not forget to mention that he says many complimentary things about Chopin and his style. But an author who can write that he hardly thinks of Chopin "as marking a stage in the general course and progress of artistic history," shows that he has no conception of musical evolution. Excepting Bach, Beethoven, Schubert, and Wagner, no composer has exerted so much influence on other composers as Chopin has done, in the treatment of harmony, melody, rhythm, and style. Consequently he must be classed as one of the five greatest composers. Liszt, Rubinstein, and all other writers for the piano adopted his idiom; even Wagner was influenced by him, and Brahms alone stood aloof. When Mr. Hadow says that "Brahms was born to restore the classical traditions in music," he shows again that he has not grasped the spirit of musical history, which nowhere records a restoring of past conditions, but an evolutionary advance to new conditions. Mr. Hadow's weakness lies in this, that he accepts the sonata as the perfection of musical form, instead of seeing that Beethoven and the other "classical" writers were great in spite of that artificial garb of their ideas, not because of it. As Dr. Hubert Parry has remarked in his admirable book, 'The Art of Music' (332): "The aspect of pianoforte music in general seems to indicate that composers are agreed that the day for writing sonatas is past, and that forms of instrumental music must be more closely identified with the thoughts which are expressed in them." If all the critics in the world stood up for the sonata form, it could not be saved; for the fact that all the great composers since Beethoven have turned their backs on it, shows beyond all controversy that it is obsolete. This matter has a practical as well as a theoretical interest; for a clear understanding of the situation will prevent young composers from trying to cast their thoughts into forms which are not natural to our age and will not be accepted as artistically modern.

The Right Honorable W. E. Gladstone: A Study from Life. By Henry W. Lucy. Boston: Roberts Brothers. 1895.

The Early Public Life of William Ewart Gladstone. By Alfred F. Robbins. Dodd, Mead & Co. 1894.

The proverb, "It's ill waiting for dead men's shoes," has many applications in the case of Mr. Gladstone. Some of his youthful antagonists, like Lord Randolph Churchill, have quitted the earthly stage altogether, and others have found that while they were waiting for the old man's departure the tide in their own affairs had hopelessly ebbed. We venture to say that not a few writers now dead have left behind them obituary notices, if not regular biographies, of Mr. Gladstone, and that not a few more who have on hand such material will not live to publish it. The authors of the books before us have been perhaps apprehensive of this fate, and have determined that their works should be published during their own lives, even if they had to be brought out in the lifetime of their subject. Possibly Mr. Gladstone is willing to apologize, like Charles II., for being such an unconscionable while in dying; but we have not observed any manifestation of such a disposition upon his part, nor any particular reason why such a disposition should be manifested. His natural strength is so little abated that it may carry him on for an indefinite period, and there are many instances of vigorous health at greater ages than that which he has attained. Nothing is more deceitful than the application of the doctrine of averages to particular cases, and we can all point to individuals of advanced age whose prospect of life is distinctly better than that of others many years younger; and in the Gladstone family longevity is customary.

We believe, with Mr. Webster, that monuments and eulogy are for the dead. Doubtless it happens sometimes that men die without

knowing how much they are admired and how well they are loved; but the very existence of the maxim, *Nil nisi bonum*, proves the untrustworthy nature of human testimonials. In general it is true that biographies should be written of those who have played great parts or performed acts of public importance; and such men are not likely to be ignorant of their own achievements, or of the appreciation which they deserve. But are we to be deprived of information concerning our contemporaries, it may be asked, merely because they are so fortunate as to be alive? It is a sufficient reply to this question to ask if there is the slightest danger that any contemporary will be permitted to enjoy privacy after he has attained distinction. The editors of the periodical press will attend to that. What we are troubled with is a dearth of great men, rather than a dearth of information about those who pass for great. Hence we regard it as more judicious, as it is certainly more decorous, to postpone writing men's lives until they are completed. Many things can then be said that could not so well be said before; some things omitted with advantage that it might before have seemed important to proclaim.

It must be conceded that there are peculiar excuses in Mr. Gladstone's case—extenuating circumstances, in addition to the unforeseen prolongation of his days. As Sydney Smith said of Mrs. Siddons that she was too great to be made love to, as a whole, by any single human being, so, it may be urged, Mr. Gladstone must be surveyed and characterized in separate epochs, in distinct aspects, and in various personalities. We were formerly told by physiologists that the matter of which the human body is composed is entirely changed in the course of seven years, and in the course of sixty years of public life it may well be that a number of different statesmen, by a kind of reversed metempsychosis, have put on a metaphysical unity under the common name of Gladstone. Such a plea may be entered in behalf of Mr. Robbins, who contents himself with tracing Mr. Gladstone's career down to 1841; although, in spite of his title, a quarter of his space is given up to his hero's early private life and family history. Certainly the plea has much apparent justification, since during this period Gladstone's statesmanship was manifested only by his persistent defence of slavery in the British colonies (his father eventually received over £75,000 as compensation for the emancipation of his slaves), by his opposition to the removal of the disabilities of the Jews and the Catholics, and by his strenuous advocacy of the doctrine that it is the sacred duty of Government to instil correct religious views into the minds of its subjects. We cannot say that Mr. Robbins has made an interesting book, but he has evidently taken great pains to make it accurate, and thoroughgoing hero-worshippers will doubtless enjoy what to others seem trifling and tedious details.

Mr. Lucy is well known as the author of some clever books about the English Parliament, and he shows the knack of a practised writer in this "Study from Life." He gives us the House of Commons view of Mr. Gladstone—a view at once penetrating and superficial. Like an experienced jockey holding forth upon the abilities and exploits of a famous racehorse, Mr. Lucy can describe, in picturesquely brilliant style, the manners and moods, the fortes and foibles of the great statesman. To say the truth, the dignity of the subject raises the work above the level of gossip, and in its way nothing could be better done. Perhaps it is more appropriate that these personal reminiscences should be made sure of while they are fresh, and we should have been very sorry if Mr. Lucy had never made use of his powers and opportunities; but should he outlive Mr. Gladstone he will be tempted to write again—and he will yield to the temptation. Nevertheless, we must praise his well-proportioned sketch of Mr. Gladstone's public career, and those who are in haste to acquaint themselves with it will find Mr. Lucy a capital guide. But when the inevitable hour shall have come, "monuments and eulogy" will appear which will supersede these premature efforts.

Atlas of Classical Antiquities. By Th. Schreiber. Edited for English use by W. C. F. Anderson. With a preface by Percy Gardner. Macmillan. 1895.

"It seems scarcely possible," wrote an old schoolfellow from Rome the other day, "that this Forum can be the thing which we used to read about at ——, wishing with all our hearts that the Romans had never built it." And natural enough the wish was, for we knew *forum* only as a noun to be parsed; of the place itself, its looks, its uses, and its associations, we heard next to nothing. But we are the tottering relics of a time when the written word, bare of any outward illustration, was all that schoolboys could get. Since our day the whole system has been changed, and now it is held, and rightly, that a knowledge of the ancients, as real living men, is, in itself, and aside from the light thus thrown upon the literature, one of the most important items in classical study. There is no better way to arouse a boy's interest in this study than by teaching him something of the every-day life of the Greeks and Romans—about their houses, temples, markets, and theatres, and what they saw and did in them, about their customs, dress, religion, sports, art, and their business on sea and land. There have always been books (ponderous tomes and close-printed most of them) on classical antiquities; but it is only recently, since the employment of various "processes" by which illustrations can be reproduced with exactness and yet without great cost, that it has been possible to show a boy pictures of the very things about which you wish him to learn. Once arouse his curiosity by the eye, and you are on the straight road to work upon his brain. To take the simplest possible instance: how we marvelled at the extraordinary choice of "golden flesh-scrapers" for prizes in the athletic sports of the 'Anabasis.' What under the sun was a "flesh-scraper"? The clearest answer is to show a picture of an actual existing *strigil*, printing on the opposite page the briefest possible description of the thing and its use, stating also the place where the *strigil* in question was found, and where it is to be seen today; then show a vase-painting of an athlete using one, add a similar description, and the thing is done for ever.

This simple method of teaching is the method of Prof. Anderson in his edition of Schreiber. The hundred plates, containing ten times as many pictures on all sorts of topics, are reprinted as they stood in the German work (second edition). In the original the descriptions of the pictures appeared in a separate volume—an inconvenience which is avoided by the English reviser. We say "reviser" purposely; for the descriptions are almost entirely rewritten, with great improvement in clearness and arrangement, while in many cases the interpretation of Prof. Anderson differs from that of the German. His work is done in a thoroughly scholarly fashion. He gives references to the books from which his pictures are selected, and when the original is to be found in a museum, the catalogue number is usually added. He sets forth both sides of disputed questions, and it is remarkable how well he does this in a few words. He is careful to mention restorations whenever they have been made. On the famous "Praying Boy" of Berlin, however, though he notes the often ignored fact that the arms are restored, he seems to be unacquainted with Voullième's dissertation which goes far to show that an error was made in the position of the hands. In the pictures of theatrical costume the omission to comment on the σωμάτιον is unfortunate; so, too, is the neglect of the Romans in the plate on marriage, where a picture of the *dextrarum junctio* would have been easy to find. But this is a criticism on Schreiber himself. It is hard to see why the Aderno vase-painting should be called a "Lady Visiting" rather than a "Lady Going Out," and perhaps after all we have here a bridal scene. It is far from certain that it is a necklace which the young man is brandishing in the well-known Naples relief of a scene from comedy; he may, indeed, be a *lorarius*. The idea, too, that this is an indoor scene, is, to say the least, unique; and it may be that what Prof. Anderson calls the *aulaea* is really the *siparium*. The Pompeian fresco of Medea with her children and the pedagogue cannot possibly be an exact representation of Eur. *Med.*, 1002 ff.; for it is not until much later in this play that Medea should be seen with the sword drawn. It must be either a fancy painting or a scene from some lost tragedy, perhaps a Roman one.

We have mentioned a few points wherein we disagree with Prof. Anderson, and now offer him our hearty congratulations on a work well done. The book will be as welcome and as useful as his edition of Engelmann's Atlas to Homer.

BOOKS OF THE WEEK.

Appleton, Robert. The Rise of Mrs. Simpson. G. W. Dillingham. 50 cents.
Bangs, J. K. Mr. Bonaparte of Corsica. Harpers. $1.25.

HENRY HOLT & CO.'S

New German, French, and Spanish Books

☞ *This list includes only a few selected Modern Language Books. Descriptive Educational Catalogue free on application to the publishers at 29 W. 23d St., New York. All prices in this list are those to teachers.*

THOMAS'S GERMAN GRAMMAR.
For schools and colleges. By CALVIN THOMAS, Professor in the University of Michigan. [*Part I. now published, complete book ready in August.*]

Part I. is a drill book for beginners, with abundant exercises which are colloquial, connected, modern, and of distinct human interest. Part II. is a grammar for students of literature.

WHITNEY'S INTRODUCTORY GERMAN READER.
16mo. Text 220 pp., notes 36 pp., vocabulary 136 pp. List of irregular verbs. $1.

H. H. Boyesen, Prof. in Columbia College:—"It is an admirable collection of German prose and verse, and well adapted for its purpose, and supplied with excellent, scholarly, and interesting notes. I may have occasion to introduce it in our lower college classes, and I shall not fail to recommend it to the preparatory schools which send students to Columbia."

BRONSON'S GERMAN PROSE AND POETRY.
For Early Reading. Stories by Grimm, Andersen, and Hauff, including his *Karawane*, and Poems by various authors. With Notes and Vocabulary. Pp. xvi+600, 16mo, $1.25.

BRONSON'S STORIES BY GRIMM, ANDERSEN AND HAUFF,
and Poems by various authors. Taken from *German Prose and Poetry*, and not including *Die Karawane*. With Notes and Vocabulary. Pp. xvi+424, 16mo, 90c.

BRONSON'S HAUFF'S KARAWANE.
With Poems by various authors. Taken from *German Prose and Poetry*. With Notes and Vocabulary. Pp. x+345, 12mo, 75c.

HARRIS' GERMAN READER.
By Prof. CHAS. HARRIS of Adelbert. (*Ready about August 1st.*)

DEUTSCHE GEDICHTE.
(Von Klenze). The best German lyrics and ballads from about fifty poets. With eight full-page portraits. xiii+321 pp. 16mo. 90c.

THREE GERMAN TALES.
Goethe's Die Neue Melusine, Zschokke's Der Tote Gast, Kleist's Die Verlobung in St Domingo. (Nichols). ix+206+20 pp. 16mo. 60c.

SCHEFFEL'S TROMPETER VON SAKKINGEN.
(Frost.) xxii+284 pp. Ill'd. [*Ready in May.*]

BAUMBACH'S FRAU HOLDE.
(Fossler.) Poem of German village life. With portrait. vi+105 pp. 16mo. Boards, 25c.

CHAMISSO'S PETER SCHLEMIHL.
(Vogel.) With two rare portraits and Cruikshank's illustrations. xv+126 pp. 16mo. Boards, 25c.

SCHILLER: MARIA STUART.
New Edition. (JOYNES.) With portraits of Schiller, Queen Mary and Elizabeth. (*Whitney's Texts.*) xii +266 pp., 16mo. 60c.

LESSING'S EMILIA GALOTTI.
(SUPER.) 12mo. Boards. xviii+83 pp. 30c.

SCHILLER'S WALLENSTEIN.
(CARRUTH.) The three plays, *Wallenstein's Lager, Die Piccolomini*, and *Wallenstein's Tod*, in one volume, with illustrations and colored map. 16mo, lxxxi+434 pp. $1.00.

SCHILLER'S JUNGFRAU *Von Orleans.*
New and Enlarged Edition. (Nichols.) xxx+175 pp. 16mo. Boards 40c. Cloth. 60c.

HEYSE'S MÄDCHEN VON TREPPI
and MARION. (BRUSIE.) With portrait, xiii+89 pp. Boards. 25c.

HILLERN'S HOHER ALS DIE KIRCHE.
(WHITTLESEY.) With vocabulary. Ill'd. 96 pp. Boards. 25c.

CLASSIC FRENCH LETTERS.
Voltaire and Mmes. De Sévigné, De Maintenon, and Du Deffand. (WALTER.) xv+214 pp. 16mo. 75c.

The letters chosen in many cases illustrate the spirit of the age and throw a side light on history. The notes are mainly historical. The introduction includes a sketch of French letter-writing.

JOYNES' MINIMUM FRENCH
Grammar and Reader. 275 pp. 16mo. 75c.

Louis von Eltz, Instructor in Yale College:—"I suggested to all who had no grammar to get Joynes', which I have found an exceedingly serviceable and handy little guide for quick reference."

Edwin A. Grosvenor, Professor in Amherst College, Mass.: "The book pleases me exceedingly. It is not loaded with the indigestible grammatical rubbish that overcrowds almost all our American-French grammars, and yet contains all that is necessary."

BALZAC'S EUGENIE GRANDET.
(BERGERON.) xx+280 pp. 80c.

TAINE'S ORIGINES DE LA FRANCE CONTEMPORAINE.
Selected extracts. (EDGREN.) With portrait. 157 pp. 16mo. Boards. 50c.

BRONSON'S EXERCISES IN EVERYDAY FRENCH.
Elementary Composition. 92 pp. 16mo. 60c.

CONTES DE DAUDET.
(CAMERON.) With portrait. 321 pp. 16mo. 80c.

HALEVY'S L'ABBE CONSTANTIN.
(SUPER.) With portrait and vocabulary. 208 pp. 16mo. Boards. 40c.

HUGO'S HERNANI.
(HARPER.) With Portrait. 176 pp. 12mo. 70c.

HUGO'S SELECTIONS.
(WARREN.) Gringoire in the Court of Miracles, A Man Lost Overboard, Waterloo, Pursuit of Jean Valjean and Cosette, The Man and the Cannon, and 14 Poems. With Portrait. 244 pp. 16mo. 70c.

MERIMEE'S COLOMBA
Complete. (CAMERON.) With Portrait. 240 pp. Cloth, 60c.; boards, 36c.

RAMSEY'S MODERN SPANISH.
653 pp. 12mo. Teachers' price, $1.80.

"Although as a rule we do not notice grammars, we mention 'A Text-Book of Modern Spanish,' by M. M. Ramsey, B.S., because of the very great advance it shows over all existing Spanish grammars in English This applies to almost every detail of the work."—*Nation.*

Copeland and Day,

69 Cornhill, Boston.

THREE SUCCESSFUL NOVELS.

8th Thousand.

MRS. DELAND'S

GREAT MARRIAGE NOVEL,

Philip and His Wife.

16mo. $1.25.

"In her last book, 'Philip and His Wife,' Mrs. Deland presents a delicate and difficult problem with admirable skill and feeling."—*London Star.*

"In fact, the book is enthralling in parts, and clever always."—*London Sun.*

9th Thousand.

MRS. BURNHAM'S

Sweet Clover.

A Romance of the White City. 16mo. $1.25.

"If the reader should not care for the two delicate love stories that drift through the volume, no one who went to Chicago should miss the exquisite descriptions of the Court of Honor, the mighty illuminations, or the perishing glory of the burning Peristyle."—Mrs. C H. DALL, in *Springfield Republican.*

3d Edition.

MRS. PRINCE'S

The Story of Christine Rochefort.

16mo, $1.25.

"Mrs. Prince, granddaughter of Rufus Choate, has written a novel particularly strong in its well-knit style."—*Chicago Times-Herald.*

"This is an unusual story to be the first attempt of a young writer. . . . Throughout it exhibits a sweetness and elevation of tone which is in charming contrast to the generality of modern novels. Its theme is unusual, and the grace and delicacy with which it is worked out are more unusual still"—*The Literary World.*

FREDERICK WARNE & CO.,

3 Cooper Union, New York.

The Nation.

NEW YORK, THURSDAY, APRIL 25, 1895.

The Week.

WHILE Senators Harris and Blackburn are proclaiming their subserviency to silver monometallism, a movement is on foot in the South for a sound-money convention to be held at Memphis on the 23d of May. The first steps for this meeting were taken by the commercial organizations of Memphis—the Cotton Exchange, Merchants' and Lumber Exchanges, the Manufacturers' Association, and the Young Men's Business League—which held a joint meeting and adopted a call for "a convention to be composed of delegates to be chosen by the people of the Southern States who believe in the necessity of a sound and stable currency and better banking facilities, in order to fully restore and in the future to maintain prosperity among the people." The meeting was addressed by the Hon. Josiah Patterson of the Memphis district, whose services in the cause of sound currency have been recognized and welcomed throughout the country and rewarded by a reëlection to Congress. Many letters have been received from Southern cities and towns promising hearty coöperation; so there is no doubt of the success of the convention. The movement cannot be too warmly commended. The idea has been widely promulgated that the interests of the West and South as regards the currency are different from those of the East. This notion has received vulgar pictorial illustration in a widely circulated pamphlet, representing the West as a Sioux Indian, with war-paint and feathers, and a Southern planter with their arms around each other's necks in league against the East and drinking champagne together. Such attempts to breed sectional strife will no doubt receive an effectual quietus at the hands of the Memphis convention. There is no more reason why the South and the West, or even the Ogalalla Sioux, should have an inferior currency than there is for their having flint-lock muskets, worthless gunpowder, or bad medicine-men. Senators Harris and Blackburn are decidedly "bad medicine."

At last we have got what we have long and in vain asked the Jingoes to give us, a definition of "Americanism." It is furnished by the speech of Ambassador Eustis made in London on Friday, and the correspondence of Secretary Gresham with Minister Terrell, both published in Saturday morning's papers. That Eustis's speech was "ringing with Americanism" is kindly guaranteed to us by the *Tribune*, and Terrell's remarks to the Turkish minister of foreign affairs are of the same metal. From the two men we learn that "intense Americanism" is made up of ignorance, impudence, and lies in about equal parts. Mr. Eustis declared that "we can truthfully say that no weaker nation ever suffered from aggression on the part of the United States." Is not our minister to France old enough to remember the Mexican war? That is the war which Gen. Grant called repeatedly a "war of conquest," and said of it that "even if the annexation [of Texas] itself could be justified, the manner in which the subsequent war was forced upon Mexico cannot." We say nothing about the bullying attack upon Chili, the bombardment of Greytown, the joint resolution of Congress to collect a claim from Venezuela by force. But Terrell was a much more ringing American than Eustis. He stood boldly up in the palace at Constantinople and demanded access to the Sultan in order to tell him that he must "save the country from the devil," or it would be "bad for Turkey." He also took occasion to enlighten the Turk about the English Constitution, and reminded him that "the Queen, and not the Constitution, is sovereign" in England. This heroic Texan, whose education at the University of Missouri was "supplemented," as it evidently needed to be, "by a special course at Heidelberg," is clearly the spiritual descendant of General Choke, who insisted that the Queen *did* reside in the Tower of London, as "nat'rally the place for holding a luxurious and thoughtless court."

Gen. Edward McGrady of Charleston, a leading lawyer and old Confederate soldier, has openly joined the ranks of those South Carolinians who "confess to a sense of humiliation in endeavoring to find a means of evading for the white man a test of intelligence which we propose to require of the black." Accordingly, he declines to be considered a candidate for the Constitutional Convention under the pledge of the late Conference to disfranchise no white man except for crime, while contriving such "purification" of the suffrage as shall prevent negro domination. What, he asks, does this mean? "Simply a qualification of the ballot for colored people, which qualification shall not apply to white men." He declares this to be opposed to the Constitution of the United States, and sure to invite federal interference. Gen. McGrady's attitude is the more remarkable because he was the author of the present so-called "eight-box" election law, which, he says, has warded off negro supremacy for twelve years, but may now have to be abandoned because of the "fraudulent practices" that have grown up under it. The Charleston *News and Courier* more bluntly affirms that "the frauds which have been committed under the color of its provisions have been sufficient almost to sink the State." Gen. McGrady's letter does not leave a very clear impression of the measure he would substitute for this law (based partly, by the way, on the Australian system). He would not embody any plan in the Constitution. On the other hand, he holds that "the supremacy of the white race cannot be maintained by any legislative trickery. The sole basis of its supremacy is its superior intelligence. The only way of maintaining that superiority is by raising high the standard of citizenship, and applying that standard to all, whether white or black."

Gen. McGrady's apprehension of federal interference in the South Carolina juggle has been promptly realized. Judge Goff of the United States Circuit Court has issued two injunctions, one directed against a county supervisor of registration, the other against Gov. Evans and the State commissioner of elections, and both together blocking the preparations for the Constitutional Convention. The second petition attacked the validity of the vote by which the Constitutional Convention was ordered, and charged the Tillmanites with a conspiracy to defraud the negro of his right of suffrage. The hearing in the first instance is set down for May 2 at Columbia, and will be awaited with the greatest interest. Gov. Evans is already hurling defiance at the court in the name of State sovereignty, and assuming an attitude of contempt. The Columbia *State* (Conservative Democratic) anticipates the overthrow of the registration laws of 1882, whose character, it says, is "only less odious to the principles of liberty and justice than the administration of them has been"; while "the combination of the two has been of surpassing iniquity," disfranchising thousands of whites as fully as any negroes. Oddly enough, it sees the ark of safety, after the decision, in the Peace Conference and its pledge of "white unity" through white disfranchisement solely for crime; whereas, precisely here is the source of Gen. McGrady's assurance of federal interference.

The point in the income-tax case which the public is desirous of having cleared up, is whether or not the income-tax law has created the conditions against which the proportional clause of the Constitution was intended to guard. When that clause was put in, it was not done for fun, or as a contribution to literature. It was done to guard against a danger which some of the framers saw, or thought they saw. That danger was, as is easily seen from all contemporary comments, that one part of the country might saddle another part of the country with an excessive share of taxation. This is explicitly recognized in

Hylton agst. the United States decision. What we want to know from the court now is whether this has come to pass, whether a tax has been imposed which operates, and was meant to operate, unequally. As long as the court has not spoken out its mind on this point, it has not done its duty, or, at all events, it has not satisfied popular expectations. People do not care so much to know what kinds of direct taxation were familiar to George Washington and Benjamin Franklin as whether the particular kind of oppression against which the constitutional provision was meant to guard them is being attempted. All that we have got as yet from the court is a declaration that income derived from land is legally land, and that if you cannot tax land, you cannot tax the rent of land. What we want to know now is whether when you tax a man's income you tax the man—that is, if you take a portion of his earnings you do not levy a capitation tax. It is admitted that under the Constitution a capitation tax is a direct tax, and must be apportioned. Now, what we want to know is, where a capitation tax comes from. Does the taxpayer coin it, or does he give his note, or does the collector issue his own note for it and "base" it on the man? Where does the man, in short, get the money he pays the tax with? It will not do to say he derives it from income, for the framers of the Constitution, we are told, knew nothing about income except income from land. What is the mysterious source, then, from which a capitation tax would come? We want to hear the deliverance of modern judges on this most important question. A new financial world has come into existence since Alexander Hamilton's day, and we want to have the Constitution applied to it, not by the judges of 1795, but by the judges of 1895.

On the first day of March an act was approved creating two additional judges of the United States Court in the Indian Territory. These judges had to be appointed by the President, with the concurrence of the Senate. It was the opinion of Judge Story that if the Senate is in session when offices are created which have not yet been filled, and nominations are not then made to it by the President, he cannot appoint to such offices during the recess, because the vacancy does not happen during the recess. Ordinarily, if a vacancy exists while the Senate is in session, and is not filled, either because no nomination is made or because the Senate fails to act upon it, or in the last hours of the session rejects the nominee, the President has the same right to make a temporary appointment during the recess as he has when the vacancy actually occurs after the adjournment of Congress. This, at least, is the view of Attorney-General Wirt and his successors, but the question has never been determined, we believe, by the courts. In 1863, during the debate in the Senate on the army appropriation bill, Mr. Trumbull introduced an amendment which forbade the Treasury to pay any salary in such a case until the appointee should be confirmed. The debate shows that the Senate considered the President not authorized to make an appointment during the recess of the Senate if the vacancy existed while the Senate was in session. As they had no power actually to prevent the appointment, they passed an act forbidding payment of the officer's salary, which, as was then said, would "probably put an end to the habit of making such appointments." This view was combated by only one member, who referred the Senate to Mr. Wirt's opinion, and added, "However we may read the Constitution, for forty years the precedents have been against that theory."

This act has just been construed by the comptroller of the treasury in the cases of these judges. His decision is a singular one in that it upholds the constitutional right of the President to make the appointments during the recess of the Senate, but at the same time sustains the act of 1863, which withholds the salary of the appointees. In short, he decides that Messrs. Springer and Kilgore hold their offices by a valid title, and that an appropriation is provided for the payment of their salary, but that they cannot be allowed a cent until their nomination is confirmed. As the salary of an office is a mere incident to the title, it is to be hoped that this case will be brought before the courts, that it may be determined whether the act of 1863 is not another evidence of that propensity, against which the *Federalist* warns us, of the legislative department "to intrude upon the rights and to absorb the powers of the other departments."

One of the unfortunate results of the excessive attention bestowed in our legislatures upon personal considerations is that really important laws come to be enacted without proper advertisement. Every one is watching for some new political combination, some mischievous trick, or some disguised job, and fundamental changes in the law are made without attracting attention. Such is the passage of an act by the New York Legislature which materially alters the law of inheritance. Under the law as it stood, a widow was entitled to dower in her husband's real estate, whether he died testate or intestate. As the law now stands, in case of intestacy, the widow is treated as a lineal descendant. Where there are lineal descendants all of equal degree of consanguinity, the widow receives her equal share; where they are of different degrees, the widow receives the share of the descendant of the nearest degree. If there are no lineal descendants, the widow inherits the whole real estate, to the exclusion of parents and collateral relatives. While there is much to be said in favor of this change in the law, it is evident that very serious complications might arise in the case of improvident matches. The stake to be played for by the class of women who make "common-law" marriages is much increased, and as the right of dower is still preserved, subject to election, dangerous uncertainties as to title may arise. In such a community as New York city it is at present frequently very embarrassing to the conveyancer when property descends through intestate succession. Unless the decedent was a well-known citizen leaving a family, there may be trouble from claims for dower which cannot possibly be guarded against. Frequently the circumstances are such as to make the risk a very slight one, the value of any possible life estate being inconsiderable. But now it is no longer the possibility of a charge for a term of years upon one-third of the property that is to be considered; it is the possibility of an entire failure of title, the hopeless loss of the whole property. Whether the changes in the law were on the whole desirable or not, it is obvious that the public ought to have an opportunity of being heard before such changes are adopted.

The policy of introducing and discussing bills, not for the sake of passing them, but in order to make a good party platform for the next election, is one of which the English ministry are now accused by their opponents. In the last ten weeks of Parliament they have got the Welsh disestablishment bill and the Irish land bill past the second reading, and the local veto bill past the first; but neither of them has been discussed in committee, where all the real shaping of legislation is done. With the time necessarily to be taken up by voting supply, it is alleged that not more than one of these bills can possibly pass the House, yet the Government insists upon driving them three abreast, not because it expects to pass them, but in order to show the electors the kind of legislation it favors. Whether such work is shrewd politics must always be considered a moot question. It is a question which the Republicans will have to confront in the next Congress. Ex-Speaker Reed, for his part, has already declared against passing a Republican tariff bill in the House, simply for making a "record"; as nothing of the kind can be made law, he would leave the whole matter severely alone. This looks like disinterested devotion to business methods and the practicable, but Mr. Reed's enemies are not slow to say that he is really not sound on the tariff, and opposes agitating it now because he does not want to agitate it at all. Here, for example, is Mr. James Dobson of the Philadelphia Manufacturers' Club asserting:

"I do not think it will be wise for the next Congress to say that we cannot pass any laws because the present executive is so much at variance with the policy of the Republican party that it would be a waste of time and

labor lost, for the executive would veto any measure not meeting his views on political economy. Any party who would take a position of this kind, in my judgment, would meet the condemnation of the people, and very justly so."

But Dobson ought to remember that what Reed is afraid of is, that any party which now went to work to disturb business by tariff agitation, merely for the sake of agitation and making a record, would be condemned by the people, and justly so. As Reed, not Dobson, is to organize the House, we presume it is safe to say there will be no tariff bill in the next Congress.

The rather Jingoish remarks of Sir Edward Grey, on March 28, about the French in Africa, and the rejoinder of the French minister of foreign affairs, a week later, were not without those ludicrous features which sometimes enliven diplomatic encounters. Sir Edward had heard that two French expeditions had entered the British protectorate on the Niger, and also had knowledge of rumors that a secret French expedition was headed for the Nile valley. He could only say that it must be well known to the Government of France that such acts would be unfriendly, and would be so viewed by England. Loud cries of "Hear, hear," followed, with praise of the Government's firm and patriotic attitude. Excitement reigned in the Stock Exchange and on the Paris Bourse, and all the talk was of war. All this was in entire oversight of Sir Edward's qualification, that he did not for a moment credit the rumors about the Nile expedition, and that it was not wise to attach any importance to the Niger business until the reply of the French Government was had. In other words, it was defiance, patriotic firmness, war—all with an *if*. But M. Hanotaux, on April 5, showed what a peacemaker your *if* is. He was blessedly ignorant of any French expeditions to the British Niger. He had heard, he admitted, that the Niger Company, a purely private corporation, was endeavoring to monopolize trade, in violation of articles 26, 27, and 30 of the Treaty of Berlin. But he had no doubt England would remedy that, and make ample amends for the illegal confiscation of a French vessel on the Niger. In fact, with a tact and grace which put him at a great advantage compared with Sir Edward Grey, the French minister of foreign affairs removed the whole matter from the realm of angry parliamentary discussion, and reserved it for that of calm and good-natured diplomatic negotiation. Thus ended another newspaper war, brief, but, while it lasted, fearless and glorious.

That the influence in the East of the several Powers having possessions in the North Pacific must soon undergo a readjustment, is clearly foreshadowed by the conditions of peace exacted by Japan from China. Ostensibly Japan declared war in order to obtain the complete independence and needed internal improvement of Corea. But, having won the fight, she not only demands this and the payment of a sum of money as indemnity more than equalling the utmost of her expenditure upon the war; she insists also upon the transfer to her jurisdiction of a considerable portion of Chinese territory. With the independence of Corea and the payment of the indemnity the rest of the world has only a moderate concern, but the affair takes on a different aspect when it is proposed to add to Japan's territory a portion of the province of Mantchuria and the Island of Formosa. The acquisition of the former especially affects Russia's projects of Asiatic expansion, and it is already predicted that her Government will not permit the contemplated transfer. Under the treaty just concluded, Formosa will indisputably become a part of the Japanese Empire, which with this acquisition will have what has been appropriately termed "the Malta of the North Pacific." Five years ago Manjiro Inagaki, a Japanese student at Cambridge University, England, in a monograph on "Japan and the Pacific," pointed out that, "if the occupier [Japan] of the Loo Choo Islands also occupied Formosa on a military basis, she again would have nearly absolute control of the North Pacific." This may be an exaggerated statement, but the international importance of the contemplated acquisition has thus far hardly been appreciated. The island is almost directly in the pathway of the steamship lines from Hong Kong to Australia, Panama, Nicaragua, San Francisco, Vancouver, and Japan. Steamers from Hong Kong to Shanghai run between the island and the mainland. As a military basis for attacking China, its advantages are inestimable, and Japanese authorities, before the present war, prophesied that the power acquiring it could make it a rival in commercial, as well as strategical, importance to Hong Kong itself.

The grumbling of the Russian press over the terms of the treaty between Japan and China probably signifies that the Government will use all means short of war to prevent Japan from getting a lodgment on the mainland of Asia. Such lodgment would mean for Russia a civilized and strong neighbor on her eastern frontier. As matters stand now, she has only China to deal with, whose consistency is scarcely that of a jelly-fish. When the Siberian railway is completed, so that Russia can bring her resources to bear on the Chinese frontier, she can absorb territory as easily as she absorbed that of the Turcomans in her march to Afghanistan. Not so if Japan is her rival. Russia is a much stronger power than Japan, but to fight at a distance of 4,000 miles from her capital requires an expenditure of strength out of all proportion to the expected results. The French newspapers, eager to find an ally for other purposes, side with Russia in this paper war against Japan. The German press is divided, some denouncing European interference as outrageous, while others, in the Russian interest, hold that Corea is a part of the European balance of power. England is silent so far, but there is little doubt that her influence will be cast on the side of Japan, both because it is her interest to have Russia curbed on the Pacific, and because fair-minded men object to having Japan cheated out of her victory.

While the German Government is cudgelling its brains to devise some form of international silver conference that will fool the Agrarians and yet do no great harm, the trade and banking of the Empire are not idle. Already a "Union for the Defence of the Gold Standard" has been formed, embracing representatives of all the leading chambers of commerce and of the more important banks and banking centres, together with members of the Reichstag, eminent professional men, and university professors. An active and intelligent propaganda has been begun and will be sustained by this organization, for the purpose of spreading sound ideas of finance among the people. An effective pamphlet by Dr. Karl Helfferich, "Gegen den Währungs-Umsturz," is one of the first shots in this German campaign for sound money, and a telling one it is. For outsiders its most striking pages are those which show how German bimetallism passed its flood in 1880 and the two or three subsequent years, and how both the political strength and the business strength of the gold standard have since been steadily waxing. In 1884 the Reichsbank took in only about $3,000,000 in gold, but by 1888 its gold receipts were $60,000,000, and now it has a total gold holding of more than $200,000,000. Ability to sustain gold payments, therefore, which in 1880–'84 might fairly have been questioned, is now placed beyond cavil, while the gold standard has year by year so made itself a more and more vital part of the entire commercial life of Germany that its abandonment now is simply unthinkable.

The low price of grain has had the same effect in France as in Germany on the landowning class. M. Léon Say has written three articles in the *Journal des Débats* to show that the troubles of the landowners have no relation to the currency question at all, but are due to a temporary oversupply of cereals. M. Say tells his readers also that France cannot change her system without losing her gold. In England the bimetallists have made just sufficient gains to warm their opponents up to battle. There is not the slightest reason to suppose that the conference, if it is held, will do anything more than "talkee-talkee." In fact, the impossibility of coming to an agreement is, in the last resort, the sure protection of the business world against disastrous tinkering with the standard of value.

THE BIMETALLIC KERNEL.

MR. HARVEY, the secretary of the Bimetallic League, and author of 'Coin's Financial School,' has written an "open letter" in answer to President Cleveland's letter to the business men's committee. In this he has set out the whole bimetallic theory of the nature of debts and of the nature of contracts, and it is the queerest confession ever made by any man called a "secretary" in a commercial country. There is a great deal of mere fustian in the letter, but we shall quote the very words in which he sets out his view of the relation of money to debts:

"Money, and these debts payable in money, have been steadily increasing in exchangeable value with the property of the people. A debt for $1,000 that 1,000 bushels of wheat would have paid ten years ago, now requires the farmer to give up 2,000 bushels of wheat, in exchange for these dollars, with which to pay the same debt. The debts now in existence are principally old debts, or renewed or refunded debts, or new debts contracted to pay old debts, or debts which the people have been forced to contract by reason of the continued decline in prices. The owners of products must now give up twice as much property to pay their taxes as in 1873. Seventeen thousand bushels of wheat would have paid the President's salary of $25,000 in 1873, and it now requires 100,000 bushels of wheat to pay your annual salary of $50,000. Taxes have been increased, as expressed in dollars, and have doubled and quadrupled, as measured in the property which the people surrender with which to pay them since 1873. We have constantly pointed the people to the ever-increasing exchangeable value of the creditor's dollar, and to the reason why it was increasing, but the influence of these creditors has dominated your administration, and you insist on such a currency as they have established as a sound currency. It means the confiscation of the property of the people by the sale of property under mortgages, judgments, and executions. It means that fixed income will wipe out the interests of stockholders in our railways and corporations."

Now, one of the great uses of money is to enable men to lend without agreeing to share the debtor's fortunes—without, that is to say, becoming a partner in his business. When a farmer asks me to lend him $10,000 on the security of his farm, payable at a certain date, if he proposes that the amount he is to return to me shall depend on his success—that is, on his crops being good and the prices of his produce keeping up—I unhesitatingly refuse. I say, No. I do not want to become a farmer or to share in the profits and losses of a farm, or stake my savings in any manner on his industry, or capacity, or foresight. I have no idea how he may manage his affairs. I am willing to lend him the money if I can do so without much risk of its diminution from *any* cause, but I will not go shares with him in his ventures. I will not take pay in corn or wheat. I prefer money, because money fixes the value of my loan from the day I make it. That is what money is for. It is a measure of value, and when he promises me $10,000 I shall expect to get back what I gave him without having to listen to his stories about hard times and low prices, sickness in his family, and the water on his knee, or the high price of whiskey.

In like manner when a dry-goods dealer comes to a bank to get a bill discounted, he does not say, "Now mind, the payment of this bill in full will depend on my own account of the times. If I say that trade has been slack, or the competition has been very keen, or the fashion of goods has changed, you must make me a heavy discount. I am not going to pay you back $5,000 when the goods I buy with it have not gone off or have depreciated 10 per cent. No, no; I'm not the man to practise that sort of extortion on." Of course if any dealer talked in that way, he would not get his bill discounted. The banker would say promptly, "We are not going into business with you. If that is the way you understand trade, you must go elsewhere with your paper."

It is not an exaggeration to say that all, or nearly all, the debts of the world which are the result of loans, have been contracted on the understanding that the creditor shall not share the debtor's risks. They could not have been contracted on any other basis. Nobody but a fool would lend money to Harvey, for instance, on the understanding that if Harvey's enterprises did not prosper according to Harvey's own account, the debt should be scaled. This scaling of debts on the debtor's own statement of his affairs is, in fact, what is generally known as "fraudulent bankruptcy." It is only under that name that people are familiar with it. When a debtor comes in and says, "I am not doing well, and this is all you're going to get," the world says he is a rascal. But this is what Harvey proposes all the farmers of the United States shall say. He demands that every lender of money shall take all the risks of the debtor's business, and, worst of all, of his character.

Moreover, this plan of finance would involve a radical change in the manner of doing business of the whole civilized world. It would take us back to barter everywhere. What would be the use, for instance, of putting $10,000 in a bond, when a fall in prices might make it worth only half that amount, as is now proposed, when Harvey could step in, ask for the bond, and say that on a calm review of the whole situation the debtor was satisfied that $10,000 ought to be only $5,000, and that the $10,000 must be scratched out and $5,000 written in accordingly? Bonds would not be drawn in the present way any longer. Debtors would be made liable for so many bushels of grain, or so many head of cattle or barrels of pork; but even this form would not do. Grain might rise, and so might cattle or pork. So there would have to be a provision also in the bond that the debtor was to be allowed in that case to give the creditor smaller quantities than he stipulated for, as common justice. In fact, the settlement of debts when bonds fell due would be very like Donnybrook Fair. Only half the transaction would consist in valuation; the rest would be fighting, and the biggest creditors would get the heaviest returns. It was to prevent this confusion that money was invented—to afford a measure of value which should not be affected by ups and downs in the value of other commodities, or only in a small degree, or which, at all events, would measure men's promises in ways from which they could not depart.

As to Harvey's estimate of the fall in produce, Mr. Upton, the former assistant secretary of the treasury, a very careful statistician, says that Harvey has been departing from the truth about the price of wheat, as about so many other things. He says and shows that wheat has in ten years fallen only 26 per cent., so that a farmer who could pay a debt ten years ago with 1,000 bushels of wheat, would now have to pay only 1,360 bushels, not 2,000. So that if he cut down his debt 50 per cent., as proposed by Harvey, he would, on the Harvey plan, cheat his creditor out of 24 per cent. of his debt. But this is not all. All farmers are not dependent on wheat alone. They pay, or help to pay, their debts with other crops. Take corn, for instance. The total product of the United States is one-half more valuable than the wheat crop. It was quoted in January, 1885, on the Chicago Board of Trade at 35 cents a bushel, a few days ago at 45 cents a bushel, an increase of 28 per cent. Consequently, the debtor would be able to make up with his corn the loss on his wheat.

Mr. Upton has also examined the report on prices and wages made by a sub-committee of the finance committee of the Senate in 1893, with the following result:

"The committee carefully computed the average prices per annum of the nine principal agricultural products, barley, corn, cotton, hemp, oats, meats, rye, tobacco, and wheat, since 1860, and, after giving to each product its weight in proportion to its yield, combined and tabulated the average values in gold of these nine products for every year from 1860 to 1891, that of 1860 being represented by 100. Below will be found this tabulation for every fifth year, to which I have added the gold value of the bullion in a silver dollar, that the depreciation in the value of silver may be strikingly shown:

Year.	Relative average value of the nine products in gold.	Gold value of bullion in the silver dollar.
1860	100.0	104.6
1865	97.3	103.7
1870	107.7	102.3
1875	116.8	98.4
1880	102.9	85.2
1885	87.9	79.9
1891	98.4	74.1

"It will be seen that during the thirty-one years under consideration the exchange power of gold for the principal agricultural products, taken together, has remained substantially uniform, while the same power of silver has meanwhile decreased 30 per cent. If one can understand this statement, he will infer very properly that gold has not appreciated in its purchasing power to any considerable extent since the discontinuance of the use of silver, and that any assumption to the contrary is a fallacy derived from the imagination, or a misstatement of facts."

Similar calculations in Europe have produced results still more striking. M. Pierson is a Dutch economist of great distinction. Moreover, he is or has been a bimetallist; his difficulty is with "the ratio," which he does not see his way to fixing. He has been writing on

the alleged scarcity of gold, and consequent fall of prices, and he takes three tables of prices computed by Continental statisticians, Messrs. Sauerbeck, Soetbeer, and Kral, and presents the rise or fall as follows:

	Sauerbeck 44 articles.	Soetbeer and Heintz 141 articles.	Kral 265 articles.
1847-1850	100	100	100
1851-1860	116	116	114
1861-1870	124	123	110
1871-1875	128	133	122
1876-1880	110	123	112
1881-1883	103	122	109
1884	94	114	101
1885-1891	87	105	101

The three calculations show a rise in prices from 1851 to 1860, another from 1871 to 1875, then a fall, according to Sauerbeck, of 18 per cent., according to the other two of 10 per cent. All three give a heavy fall in 1884. From 1885 to 1891, compared to the period from 1881 to 1883, there was, according to Sauerbeck, a fall of 16 per cent.; according to Soetbeer, of 17 per cent. The general result is, that prices did not alter sensibly between 1861 and 1883, except in the years of speculation, 1872-'3. It was only in 1884 they began to fall, and the fall from that year to 1894 was about 16 per cent.

Now, when one considers the enormous amount of new land brought within reach of the market during that period, the improvements in transportation, and the progress of invention, and the possible effects of these things on production, the wonder is that prices have not varied more than they have, no matter how steady the price of gold and silver might be. It can be easily seen, too, that if there had every four or five years to be an investigation, such as is now going on, into the causes of the variation in prices, before men could settle the value of their debts, or if the standard of value had to be changed every time that debtors were dissatisfied with the state of their trade, there would soon be an end of lending. Nay, there would soon be an end to exchange of every description. Whatever be the rights or wrongs of currency, men will never lend money on a standard of value which the debtor can change at pleasure. They will hoard or spend or buy land, but they will not lend. Harvey may, therefore, cheat, but he will never cheat the same man twice.

LOYALTY TO PARTY PRINCIPLES.

It is the habit of the Democrats in the Massachusetts Legislature to dine together in the course of the session, and to ask some prominent party leaders to share their hospitality. We are informed by the Boston papers that at their dinner last week the Hon. Geo. Fred. Williams was one of the guests of honor; that he replied to the toast "Loyalty to Party Principles," and that in opening he said: "What higher and nobler sentiment could a man be asked to respond to? Parties may change, but if a party's principles are true, they will withstand all defeats."

This last statement is fair enough; or, rather, the converse of it is the important fact, that if a party's principles are not true, they are sure to break down in spite of all victories. But his first assertion, assuming him to be correctly reported, is one of the emphatic sayings which he, a very enthusiastic man, loves to deal in, and certainly believes in honestly at the time; and which more deliberate and cooler men are very apt to get off, not exactly believing in them, but knowing they will excite great applause from unreflective followers.

To ask, however, in cold blood, what nobler sentiment a man could respond to than loyalty to party principles, is assuming for those peculiar articles an exceedingly exalted position, to which they must show pretty strong credentials to entitle them. They must show that they are entirely consonant with the truest patriotism, the broadest humanity, the stanchest personal honesty, to say nothing of abstract morality and humility before God. Exactly this has more than once been claimed for Republican principles, notably in an exposition of them by Senator Hoar in the *North American Review* some years ago. But if a man's party principles can claim this station—that loyalty to them is the noblest public sentiment he can feel—they become confounded or absorbed in the general principles of public duty which are claimed by all parties and distinguish none. Such principles resemble the "maxims" which Patrick Henry declared were so essential to a constitution, but which are really nothing but a reassertion of the fundamental ideas of Anglo-Saxon liberty, which everybody in America accepts; and in this view Mr. Jefferson's statement in his first inaugural is true—"We are all Republicans; we are all Federalists." The Democrats claim—Mr. Williams claimed it in the course of the speech we are referring to—to be the party of the people; but so do the Republicans; so still more emphatically do the Populists; so, as far as they are a party, do the Mugwumps. It is when we come to the specific interpretation of these general notions of government, on which all in America are agreed, that parties separate, and here party principles must declare themselves, or they are nothing better than glittering generalities.

If, then, we ask Mr. Williams or any other Democrat, new or old, what are the abiding principles of the Democratic party traceable to Thomas Jefferson and George Clinton, and never lost sight of by all its great leaders, no specific answer has ever been received. We can hardly say free trade is one, when we remember Jefferson's distrust of all commercial pursuits, when we remember that free trade was the cry of the Federalists in 1807, when we know how Randall blocked every approach to a freer system. There certainly is no agreement on the incidence of taxation, in view of the divisions of the Democratic majority in this last Congress. The money question forms and has formed a bone of contention between the two ends of the Democracy; silver-men and gold-men and bimetallists, whoever they are, each confidently claiming that he is the real Simon Pure. As things look now, it threatens to split the party across in 1896. The Democratic policy towards foreign nations has swung half round the compass, the Jingoism of Soulé and Buchanan and Mason in 1855 being exactly that of Lodge and Frye in 1895, so that Senator Morgan stands like an ichthyosaurus of the ancient seas. The relations of the Representatives to the Executive in 1805, 1835, 1865, and 1895 have borne entirely different characters in the view of the Democratic party and its leaders. The speeches of the untainted Democrats in the last Congress on executive usurpation and meddling with the currency sounded like the echoes of Webster and Clay against Jackson and Taney. Even the well-worn assertions that it is the party of the masses against the aristocracy read queerly in the light of the stiff educational qualification established by the Democrats of Mississippi.

The trouble is, that neither of the two great parties is agreed on any definite theory of government or any definite plans for the future. As far as they seem to have anything of the kind, these are made utterly nugatory by local issues, local traditions, local needs. Democracy is one thing in Massachusetts and another thing in Georgia; Republicanism is one thing in Pennsylvania and another in Iowa. The solid vote of New England in the Fifty-third Congress on the great currency questions, absolutely defying what Republicans or Democrats from other States might say, proves this beyond question. There are those in the Democratic party who will attempt at the next Presidential convention to force the delegates into an uncompromising declaration of views on the great money issue. They will not be satisfied with such a currency plank as the last platform contained, which leaders of diametrically opposite views each declared meant what they said, but which all agreed was thoroughly Democratic in principle. It would not be at all strange if a similar fight were made on the classified service in behalf of the spoils system—possibly on other issues still, where the party, as soon as one leaves high-sounding general maxims and comes to a definite policy, is divided. What may emerge from the strife it would be rash to prophesy. But one thing is certain, that if loyalty to party principle is indeed one of the noblest of watchwords, party principle must have some definite meaning which can be explained to the voters who vote for the first time in 1896; and if it shall have, no one can explain it more clearly than Mr. Williams.

PARTISAN VIRTUE.

MR. W. R. GRACE, in withdrawing from the chairmanship of the State Democracy, will, we fear, let the bottom drop out of that institution. He was its main support in both money and brains. We do not mean to say it did not do good work at the last election, but no such organization can ever in city politics do good work that will be permanent. Mr. Grace delivers as he retires a parting fling at "the fad of the day, the government of cities by non-partisan bodies of citizens getting together from time to time for such purposes." "But in my opinion," says he, "the efforts in this direction will fail; and partisan politics, elevated by true patriotism, self-sacrifice, and relentless, persistent activity against evil influences, must be accepted as the only road to permanent success."

We do not mean to compare Mr. Grace to or to class him with Hugh J. Grant, but this deliverance has about as much value for practical purposes as Grant's proposal that selfish men and men with selfish motives should be rigidly excluded from Tammany Hall. The wave of reform has at least had the effect of acquainting the practical politicians with the terminology of altruistic ethics. They now describe their aims and processes in the language of Seneca or Spinoza. They apparently live in the pure upper air of duty and principle, and pass their leisure hours in contriving plans for the elevation of mankind. But one thing they will not give up, and that is partisanship in city affairs. Purity and good government they are ready for, but it is only to be had, as Mr. Grace says, through "true patriotism, self-sacrifice, and relentless, persistent activity against evil influences in organization." One cannot help asking, however, where a man was born and where has he lived who supposes that "true patriotism, self-sacrifice, and relentless, persistent activity against evil influences" are easier to be had in city politics than non-partisanship. If we could get these virtues in partisan organizations, we should not need organizations at all. It would show that the citizens were so good that they would go to the polls and elect good men without as much as a hint from anybody. We should no more have to organize to elect good mayors than to get men not to beat their wives. It is because the experience of this city and of all cities shows that partisan organizations are invariably selfish, corrupt, irrational, jobbing, that the "non-partisan fad" has taken possession of the public mind.

Mr. Grace talks about partisanship in city affairs very much as Platt talks about bi-partisanship in police affairs. No one would suppose from his language that we had tried partisanship at all. The fact is we have never tried anything else. Every city in America has tried for fifty years to get good government through partisanship, and has failed. Not only has it failed, but it has got the opposite of good government. It has got the worst government the world ever saw. We got a government in this city which was a disgrace to our civilization. To make our case all the worse, the only cities in the world which are successfully governed are governed on the non-partisan or business plan. So that it is the non-partisans who are the practical men, the partisans who are the windy theorists, "talking," as the slang phrase is, "through their hats."

The only answer they have to make to us is that we have not tried virtuous partisanship, which is true; but it is not true that we have not sought for it. We have waited for it for fifty years, and have never seen the smallest sign of it. The partisans are always selfish, self-seeking, and often mendacious and corrupt. Mr. Grace knows very well that admonitions to them to be good and pure are generally taken as jokes. In a city there is nothing, any more than in a bank, to divide about honestly. Every resident wants the same things, as every stockholder wants dividends. The division is always over the question who shall get most plunder—that is, most places—without reference to fitness. There is no other line of division among city politicians. There never has been, and the practice which citizens have long pursued of voting on their quarrels—that is, voting to decide which set of drones shall have the salaried offices—grossly discredits the intelligence of the community.

We do not say that non-partisan government is within our reach to-day. The outlook for it just now we admit to be discouraging. But that we are making some progress towards it is shown by the fact that two organizations have blown a call for virtue and unselfishness on their respective horns. Five or six years ago they would never have thought of such a thing. They would not have pandered to the "hightoners" so far as to say that a city politician should have no selfish ends in view. They would have said that their business was to win the elections and get the offices for their respective "men," and that righteousness in city government was an iridescent dream. Now they say all city politicians must be good men, living altruistic lives, and presumably forcing offices on other men whom they think better fitted for them than themselves. Their idea is, we presume, that the Stecklerites should pursue the O'Brienites with offers of commissionerships, and the State Democrats should insist on the Plattites taking half the Public Works and two-thirds of the corporation counsel's office, solely for the good of the city. This is a great movement, full of promise for America. It may not bear fruit this year, but the seed is sown, and the harvest will come in due season. Fear not, little flock, we say to the reformers.

THE SANCTITY OF THE GRAND ARMY.

THE little skirmish Col. Waring has had with the "Grand Army of the Republic" is very useful, as furnishing a good illustration of one of the difficulties we have to contend with in establishing non-partisan administration of city affairs. The chief of these difficulties is now, and has always been, the disposition to establish qualifications for office which have no relation to the duties to be performed. A city officer has had, as a rule, to be a Tammany man, or a Republican, or a State Democrat, or an old soldier, or a "worker" of some kind, in order to get a place for which these things were no sort of preparation. We might furnish numerous examples of this sort of absurdity from the municipal history of the last twenty-five years. In Col. Waring's case, however, a new test has been set up. In order to be allowed to clean streets a man must think well of the Grand Army. He must not touch a broom if he thinks there are plenty of "bummers" in the Army. This is about as sensible as insisting that no man shall clean the city who does not think ill of Martin Luther, or who believes that silver was secretly demonetized. Now, reformers may talk till they are tired about improvements in city government, but permanent and radical improvement we shall never have until the practice of judging a man's fitness for city offices by his opinions on other subjects than city work shall be generally recognized as supremely ridiculous. There is nothing sacrosanct about the Grand Army. Even if it were all composed of good and pure men, every American would have the right to express his opinion, favorable or unfavorable, about it freely. To say that a man shall not clean streets unless he admires the Grand Army, is about as sane as the old custom in England of compelling people to qualify for office by taking the sacrament.

The trouble is aggravated in the present case by the fact that tens, nay hundreds, of thousands of good Americans agree with Col. Waring about the Grand Army. We have, in fact, never known an old soldier of undoubted record for valor and constancy and of spotless private character, who did not look down on the Grand Army. We have heard from such men within the last two days loud rejoicings over Col. Waring's courage in facing the bummers in the gate. The reason of this is plain. No one denies that there are in it a large body of as good men as ever stood in battle line. But the Grand Army has been known to the public ever since 1878 mainly as a trade union existing for the purpose of getting money out of the public.

Now what is the chief object of a trade union? It is the putting of men of every grade on an equality in the matter of wages and hours, the protection of the drones and incompetents against the ordinary consequences

of their laziness or incapacity. One object of the Grand Army is in like manner to see that the skulkers, deserters, bounty-jumpers shall be on the same footing as the good soldiers who never shirked. One of the bravest generals of the Union army has told us, nay, has published the fact, that when he was carried off the field at Antietam badly wounded, he found in the fields in the rear, out of fire, as many men, on a moderate computation, as he had left behind in the fighting line. These men were skulkers from their duty, and they were making coffee, dancing, fiddling, and even holding prayer-meetings. We believe it is the general testimony that similar scenes might have been witnessed in the rear at every great battle during the war. These skulkers are now in the Grand Army just as well as the good soldiers. We even venture to assert that they are much more numerous than the good soldiers. The organization, too, has set up a code of morality which makes neither cowardice, nor desertion, nor lying a disqualification for pensions. It may be taken as a general rule, that the poorer soldier a man was, the more vociferous and active he is as a Grand Army man.

Take as an illustration of this the case of "Corp" Tanner. It is safe to say that from the close of the war till Gen. Harrison came into office, no Grand Army man was half as uproarious as this Corp. He was so uproarious that he at last came to appear in the public eye as, *par excellence*, the representative of the veterans of the Union Army. Under this impression of him President Harrison actually appointed him commissioner of pensions. The minute he got the office he dashed at the surplus, and began to distribute pensions with such recklessness and disregard of law that the President, Grand Army man as he was himself, had to remove him promptly. The Grand Army, however, supported him through thick and thin, and Tanner denounced his critics as "whelps." The affair led, nevertheless, to an inquiry into the Corp's record which was very useful. It showed that he was only one year in the army, and of this only a very brief period with his regiment. During the rest of his active service he "straggled" with other regiments, and was never under fire till he lost his legs. The way he lost his legs was this: He was in an orchard, lying under a tree eating an apple and reading a book, with some others, when the Confederates, spying them from a distance, dropped a shell among them, which disabled the Corp. Since his retirement from office he has subsided into silence and obscurity. If all the pensioners and veterans were examined, probably hundreds and thousands of such cases would be discovered. The great sin of the Grand Army is that it covers them up with a mantle taken from the shoulders of good men and true, and resents on their behalf the stern criticism which is their just due. In this, too, is the organization's greatest offence against morality. The worst enemy of mankind is he who makes it appear on a great scale that it is no more meritorious to die for man than to make a mutton stew with a stolen sheep.

This is not all, however, that a disgusted public has against the Grand Army. The pensions amounted in 1878 to $27,000,000, and probably reached nearly every deserving and disabled man. In two years, under the clamor of the Grand Army, they reached $56,000,000, and under the same instigation they are today $160,000,000 a year! For fifteen years these men, who professed to have fought for pure love of the Union, have devoted all the energies of a great organization to the extracting of money from the public treasury, without the smallest regard to truth, honor, or decency. The result has been to throw our finances into a disorder of which no man can yet foresee the outcome, to sprinkle knaves and loafers through our villages, to make fraud, and perjury, and malingering seem harmless and even soldierly, and to turn the infinite pathos of the civil war, the widow's and the orphan's sorrow and the patriot's agony, into materials for a claim-agent's speculation. That one man in office—Col. Waring—has had the courage to say what millions out of office have felt for years, and longed to say with a thousand tongues, shows that we are at least on the edge of a better era. All this time, too, not one word has come from the G. A. R., in spite of its political power, in behalf of any good cause, in furtherance of any reform or any attempt to improve the Government. In fact, not content with their pensions, the legislation which the veterans have secured, giving them preference in the public service, works daily injury to the city. Veterans are dreaded by appointing powers as a distinct detriment to the public, but we have yet to hear of a G. A. R. veteran who proposed to "let up" on his unfortunate country. Some sign of interest in public affairs apart from their own drafts on the treasury would now be very grateful.

SPAIN AND CUBA.

THE commonest idea in this country about Spanish administration of Cuba is that it is one of monstrous oppression and tyranny. Let it be said at once that there is much to justify this idea. There is no doubt that the Government of Spain has consistently looked upon all its colonial possessions as so many oranges to be squeezed for the benefit of the mother country. Taxes are levied and customs duties laid and navigation laws passed almost purely in the ingenious endeavor to get as much as possible out of the colonists in the way of both revenue and exclusive trade. All this is, no doubt, repugnant to Anglo-Saxon theories of good government. Especially to Americans must it seem a horrible thing to lay tariff taxes in a way to burden both consumer and producer for the benefit of some third party. But this is scarcely a fair way of judging Spain. In estimating the beneficence or wickedness of her rule in Cuba we must inquire as to the characteristics of her rule at home. If we find there, as we do, a system of frightful taxation, public jobbery, political favoritism, and perpetual shivering on the verge of national bankruptcy, then we cannot justly attribute bad government in Cuba to a malevolent intention to worry and oppress the colonists.

Quite the contrary, it is a fact that the administration of Cuba has distinctly improved in the last thirty years. There was a revolution in Spain in 1868, as well as a rebellion in Cuba; and the political reforms which were secured at home by the former event have been extended, in their proper measure, to the colony. The old press laws have been suspended or abolished; access to the courts is free; representation and suffrage have been steadily extended; measures of thoroughgoing political reform, in accordance with the desires of the Cuban Deputies in the Cortes, were on the point of adoption on the eve of the present rebellion. It is, in fact, the testimony of a hostile observer in the island that there has been, for the past score of years, on the part of the Government of Spain and the Governor-General of Cuba, "a deliberate effort to reconcile the people to Spanish rule, and to efface the terrible memories of a civil war conspicuous for atrocity and savagery."

Such being the unquestioned facts—Spanish government being practically all of a piece at home and in the colonies—how has the idea become so prevalent that Cuba is writhing under the oppressor's heel? A reason, good as far as it goes, is to be found, as we have said, in the tariff and navigation laws, which are certainly bad in conception and oppressive in execution. But the greatest outcries, curiously enough, come from people who are not at all affected by these laws—the Cuban "patriots" in exile in this country. The real owners of the sugar and tobacco plantations complain a good deal, it is true, but they address their complaints to the home government, through their chosen representatives, and get the evils remedied in a measure. But the men who are chiefly responsible for the notion that Spain is a cruel monster, preying upon her own children in Cuba, have neither home nor possessions in the island. Some of them are most estimable gentlemen, like the Cuban poet Francisco Sellén, who publishes his patriotic verse in this city. One of his poems, "To Cuba in the Days of her Humiliation," winds up with the pious wish that "the steel may again flash in the air and make thy oppressor tremble." Others, like him, lost property and citizenship as a result of the unsuccessful revolution of 1868, and

naturally carry about with them a sense of having suffered a great wrong. But we believe it is true that the larger part of the Cuban patriots in this country are reckless and restless agitators who want to impose their rule on the island in the room of that of Spain.

This it is which explains the fact that the present revolution seems to be fed almost wholly from the outside. Some "general" has to make a landing with a body of adventurers before real war breaks out in any part of the country. No trustworthy signs of widespread popular approval of the revolution have been reported. There is nothing strange about this, as one result of the long revolutionary struggle from 1868 onward was the confiscation and sale of the property of the revolutionists. It passed into the hands of Spaniards and of foreigners. Mr. Froude estimated that there are ten times as many Spaniards in Cuba as there are English and Scotch in all the West Indies. This explains why it is that the present revolution can show so little native support. Of course there are many discontented inhabitants ready to join the guerillas, but the great mass of property owners and business men see their truest interest in the continuance of Spanish control.

How easy it is for Spain—how easy it would be for the United States if Lodge and Frye had their piratical way—to make Cuba a model of self-government and political purity, may be seen by a glance at the nature of the population. According to the census of 1887, it numbered 1,631,687 souls. In 1877 the figures were 1,521,684, thus showing a gain of but 7 per cent. in the decade. Of the total, 492,294 were negroes, and 43,811 Chinese. Illiteracy mounts up to alarming proportions: 76 per cent. of the population can neither read nor write. Nor is this wholly due to the colored element: the illiteracy among the whites alone is 64.89 per cent. The number of schools in the island is one for every 2,105 inhabitants. From all this it can be inferred how ripe Cuba is for independence and republican institutions, especially how ready to become a State in our Union. What delightful colleagues for Lodge and Morgan in the Senate would Cuba furnish! How patriotic they would be, how intense in their Americanism! With hearts beating true to sugar and tobacco and all other "good things" in sight, they would seem to be foreordained to seats in the Senate; and Senator Proctor's objections to receiving them must be set down to advancing age, the pharisaic spirit, and blindness to manifest destiny.

THE CHICAGO DRAINAGE-CANAL.

OBERLIN, O., April 16, 1895.

FEW people seem to be aware of the magnitude or of the far-reaching consequences of the enterprise upon which Chicago has embarked for the disposition of its sewer-filth. During the past three years the city has already spent more than ten million dollars in the construction of a canal which is to turn a portion of the water of the Great Lakes along an old glacial outlet into the Mississippi valley, and carry the sewage with it so diluted that it will not be a menace to the health of the Illinois valley through which it is to flow. Ten million more dollars will have to be spent before the canal is in active operation; but the work is prosecuted with such energy that its completion is looked for within the next two years.

This is not to be a canal with locks to regulate the flow of water, but an open channel one hundred and sixty feet wide at the bottom, and eighteen feet deep, with plans for deepening it still more in the future. When first opened it is to discharge 10,000 cubic feet of water per second, which is about five per cent. of the amount now flowing through Niagara River. The quantity of water to be discharged is fixed by the Legislature of the State with a view to protecting the valley of the Illinois from contamination. When the population of the city shall exceed 3,0 0,000, the quantity of the discharge is to be increased in proportion to the excess. The amount of the original discharge is so great that the engineers estimate that it will raise the low-water mark of the Mississippi one foot at St. Louis.

The accomplishing of such an enormous enterprise is rendered possible by the peculiar physical geography of the Great Lakes. Lakes Michigan and Huron are practically on the same water-level, about 580 feet above the sea, while Lake Erie is only eight feet lower. Lake Superior is in an independent basin twenty feet higher. The basin of the lower three of these lakes is so delicately poised that only four feet of rock and two of gravel at Chicago prevent them from spilling over into the Mississippi valley at high water. The rock-bottom of the Niagara, where it leaves Lake Erie, is only thirty feet lower than the rock shelf which forms the barrier west of Chicago. An elevation of fifty feet at Buffalo, or a depression of the same amount at Chicago, would reverse the drainage and make the four upper lakes tributary to the Mississippi. What nature could do so easily, the engineers of Chicago are to do in part by the expenditure of the vast sums put at their service by the city.

This plan for the disposal of Chicago's sewage has been devised by the city and the State without formal consultation with the other parties whose interests may be affected by it. It seems to be assumed that, since the canal is wholly within the territory of Illinois, it is not necessary to consider the other interests involved. But the cities along the lower lakes are just beginning to be aroused to a consideration of the possible effect of this scheme upon the level of the lakes, and upon the depth of the water in their harbors and in the channels which have been deepened at great expense to facilitate commerce to their ports. The Cleveland Chamber of Commerce has just petitioned the Secretary of War to investigate the matter at once, and ascertain what effect the canal will really have, so that proper measures may be instituted for the protection of all the interests at stake. In response to this action of the Cleveland Chamber of Commerce, other cities on the lakes have joined in the request, so that public attention will be occupied with the question to a large extent for some years to come. A few words, therefore, with reference to the elements involved will not be amiss.

The total drainage area of the four upper lakes is 250,000 square miles, with a rainfall of about thirty-one inches. If we reckon that from 35 to 40 per cent. of this is now discharged through Niagara River (which is a liberal estimate), it would make the amount to be about 200,000 cubic feet per second. This accords very closely with the estimate made by Major Ruffner, the United States engineer in charge of the survey of the lower part of Lake Erie. In 1893 he was set to gauge the flow at Black Rock, near the head of Niagara River. As a result of this investigation he concluded that the average discharge of the river was a little over 200,000 cubic feet per second. It is not, however, an easy matter to determine how much the diversion of 10,000 cubic feet, or 5 per cent., will reduce the level of the discharging stream, and so of the lake. As the channel at Black Rock is only about 2,000 feet wide and twenty feet deep, Major Ruffner estimated that the diversion of 5 per cent. of the water flowing into Lake Erie will probably reduce its level nine inches. The Chicago engineers, basing their calculations on earlier and less perfect data, have been reckoning on a lowering of the level of from three to five inches only. But in view of the shallowness of all the harbors on Lake Erie, and of the fact that the United States has but just completed its work of deepening the navigable channel two feet at a cost of $2,000,000, even the lesser estimate is by no means an insignificant item. Especially does this appear in view of the future increase of the amount of the discharge upon the growth of the city to its possible extent.

Furthermore, it should be kept in mind that while the tax levy upon Chicago is made upon the substantial ground of promoting the sanitary interests of the city, the ulterior object of insuring a ship-canal through which the largest ocean steamers shall reach the port of the city is prominently kept in view. The completion of the drainage-canal will mark the practical accomplishment of that long-cherished dream. The engineers in charge freely talk of diverting fifteen or twenty per cent. of the water of the great lakes into the Illinois, so as to give such continuous volume to both that stream and the Mississippi as to make both navigable at all times to the largest steamers. Locks, of course, are contemplated to carry ships past the rapids which will be created at various places.

If this canal shall be adopted by the United States as a part of its system of internal navigation, it seems evident that the general Government will be called upon to protect the other interests involved from injury. This will include the maintenance of the normal depth of water in the harbors of the lower lakes and in the navigable channel to which commerce has already adjusted itself. International questions may also arise. If it is not adopted as a national waterway, it will be an interesting question whether the cost of repairing damages can be assessed upon the city of Chicago, which is to receive the direct benefit from this diversion of a public waterway.

The most feasible way spoken of to keep the level of the lower lakes up to its normal stage is to store water in Lake Superior during the early part of the season and let it down in the dryer parts of the year, thus equalizing the flow. But this involves unknown interference with vested rights on both the Canadian and the American shores of the lake, which would have to be adjusted by an international commission. The level of Lakes Erie and Ontario could be maintained by slightly constricting the outlets so as to diminish the cross-section of the discharging streams.

It must be confessed that the boldness of the Chicago engineers, and the promptness with which the city is proceeding to carry out their plans, are scarcely less than sublime. In olden times this project of Chicago might easily have become the occasion of a war between the East and the West, or between Canada and the United States. But, happily, the age of arbitration has already come, and there will be ample time to prepare for the remedy of incidental evils before the canal shall become a fixed fact; for so vast are the stores of water in the great lakes that four or five years would elapse before the full effect of such a diversion as is contemplated would be felt upon the lake-level. Still, even the vast reservoirs of the great lakes are not exhaustless; and now is the time to forecast the results of such a far-reaching interference with the natural waterways as the Chicago canal will be when, a few years hence, it is in full operation. It certainly is remarkable that the solution of a most difficult problem in disposing of a city's sewage should render financially practicable one of the boldest schemes for the improvement of internal navigation which have ever been entertained by engineers anywhere in the world.

G. Frederick Wright.

SOSHI-ISM IN JAPAN.

Tokyo, March 30, 1895.

The attempted assassination of the Chinese ambassador, the aged Li Hung Chang, by a Japanese *soshi*, has produced a widespread feeling of shame and disgrace in Japan. The general sense of satisfaction in all classes at the conduct of the war has, to a great extent, passed away. Even schoolboys and students have a subdued air, and the noise of tin trumpets from the numberless children in the streets of Tokyo has given way to a silence all the more pronounced because of its suddenness. It is to the credit of the Japanese of every sort and condition that they feel the breach of courtesy and hospitality, not to mention the moral shortcomings of this act, so keenly. To a great extent it disarms one's power of criticism where regret is so spontaneous and immediate as it is in the present instance.

The facts of the case are probably as well known in America as they are in Tokyo. Li Hung Chang was proceeding in his palanquin, borne by Chinese, from the conference hall to his quarters, through a narrow street, when a young *soshi*, Koyama Rokunosuke, of about twenty-five years of age, rushed at him and shot him in the face. The bullet seems to have entered below the left eye, and is lodged somewhere in the upper jaw, but on this point there may be some doubt, as the Chinese attendants of Li object to the removal of the bullet by the Japanese surgeons. There is also some doubt as to whether the wound is serious or not. The latest telegrams are, however, reassuring, stating that the ambassador is rapidly recovering and will soon be able to resume negotiations.

It is not very difficult to get at the motive of Koyama's action if one has any knowledge of *soshi* character and conduct. These pests of Japan have been defined as "irresponsible political toughs," whose conduct in life is determined chiefly by two motives—an inordinate vanity and an absurd principle of loyalty to those they serve. This last virtue is supposed to be the survival of the ancient samurai spirit, but is as out of place in the present life of Japan as was mediæval chivalry in the time of Cervantes. There is this difference, however, between chivalry and soshi-ism, that the former was harmless, while the latter is extremely dangerous. Like the old soldiers of fortune, the *soshi* are willing to hire themselves to any one who is ready to support them. They have, as a rule, a certain amount of superficial education, and are above manual labor of any kind. They profess a vast amount of patriotism and cultivate the virtues of swashbucklers. Their courage, I suppose, is undoubted, and is supported by their vanity, which is all the more powerful as it takes the guise of patriotism. There is not one of them but will risk his life in any enterprise where he will be brought into public notice. Killing a prominent minister of state or foreign ambassador like Li Hung Chang is a positive luxury to the imaginations of these fellows. They utterly refuse to do honest work of any kind, and spend their days in idling, gambling, and devising endless schemes for their own advantage or for those who employ them. They are generally armed with canes which conceal sword-blades—dangerous instruments, in the use of which they are very expert.

The youth Koyama, no doubt, thought he was achieving everlasting fame in doing so exceptional a deed as killing the great minister of China. A dramatic act, in which one loses his life, or imperils it, is the very *summum bonum* of a *soshi's* existence; and, curiously enough, in certain cases, though not in the present one, a *soshi* gets both fame and honor in Japan when he would be execrated in other countries. Nishina Buntaro, the murderer of Mori, minister of education, is fairly a hero among certain classes of Japanese, and at his grave worshippers still adore his memory by offering incense. Such was the glory, probably, to which Koyama Rokunosuke looked forward, though, unfortunately for him in the present instance, he overshot the mark.

It is a curious commentary on the present state of civilization in Japan that a class of reckless heelers who at any time may develop into assassins should be allowed to exist. Even when they are taken *in flagrante delicto*, the Government, so far from using the utmost authority of the law to put a stop to them, is conspicuously lenient in its treatment of them. Crimes and misdemeanors which in Europe or America would be punished with long imprisonment are either passed over or visited with light penalties. The reason for this is, either that the Government lacks courage to encounter the hostility of the *soshi* and their employers, or that every Japanese, including the Government officials, has an element of the *soshi* spirit in him and feels a bit of sympathy, or at least of tolerance, towards the class. It is a fact that many Government officials, even of the highest rank, have at a certain stage of their careers employed *soshi*, either to defend themselves or to attack their opponents. At every parliamentary election when the voting is close in a particular district, or party feeling runs high, there are swarms of *soshi* employed on both sides, and not a few of them are killed or wounded in these encounters. Hoshi Toru, a man of ability and character, one of the leaders of the Radical party, who is spoken of as the probable successor of Count Inouye in Corea, had a large number of *soshi* engaged on his side in the last election, and the Government stood nerveless except so far as to prevent intimidation of voters at the polls.

Some time ago a foreigner, whose nationality we need not mention, encountered the hostility of a body of these hirelings. His offence was that he had dismissed a servant who in revenge joined a well-known band of *soshi* who took up his cause. The foreigner was pestered with threatening letters and visits until he could endure it no longer. He laid the case before the minister of his country, who at once proceeded to call on the Japanese minister of foreign affairs. The former represented in vigorous language that he expected the citizens of his country to receive the protection of the Japanese Government, and gave warning that he should hold the Government responsible in case the completest protection was not given. The result was that the foreigner was strictly guarded by the police, the guilty *soshi* were ferreted out, ordered to leave Tokyo, and were put under police surveillance. The foreigner was no longer annoyed by either threats or visitations. The most significant point, however, of the whole affair is that when the foreign representative urged upon the Japanese minister the necessity of crushing soshi-ism, the latter confessed that the Government was powerless to do it. The Government might give warning or give orders for some or all of them to leave Tokyo, or in various other ways to restrain them, but to abolish the system was impossible.

It is one of the weakest spots in Japanese civilization that these fellows are permitted to pursue their course without serious interference. There have been warnings time and again that they would bring Japan into serious trouble, but the warnings have been unheeded. Already three Japanese ministers have been killed, if not all by *soshi*, yet by men who derived their reckless courage entirely from the *soshi* class. Count Okuma escaped death from one of them, but was maimed for life. Here and there a voice, particularly Mr. Fukuzawa's, is heard in ringing tones calling upon the Government to stop the whole system of soshi-ism, but for the most part the public is silent about the wretched business. Japan professes to stand as the representative of Western civilization in the East. This is part of her ambition in the present war; and as compared with Corea, China, or India she no doubt deserves the place she covets. But can she preach the gospel of civilization to these people for any length of time when her Government confesses itself unable to crush an institution (for it is nothing less) which permits large numbers of men to go about with concealed weapons, intimidating whoever encounters their ill will or that of their employers? Every one in Japan knows, and the Govment knows, that sword-canes can be purchased in almost every part of Tokyo for 50 cents. In going by the houses of parliament I have seen dozens of these fellows lying about on the grass outside of the compound armed with these deadly weapons, yet they were unmolested by the police.

The Government must also be blamed in another respect. It guaranteed the safety of Li Hung Chang and his suite in the most explicit terms. It wished not only to make peace under favorable conditions—it wished to show the Chinese what international usage should be. Count Ito's remarks to the previous Chinese embassy were as severe and deserved a lecture to the Chinese Government as it has probably ever received. He stated that it was notorious that the Government of China had broken the most solemn promises and used unworthy subterfuges in its dealings with foreign nations. Now, no government in the world probably has larger police powers than that of Japan. A half-dozen gendarmes stationed on each side of the palanquin of Li Hung Chang would have put all danger of as-

sassination out of the question. Yet this simple precautionary measure was not taken.

Correspondence.

THE CHICAGO LETTER.

To the Editor of The Nation:

Sir: Mr. Cleveland's Chicago letter has, from the financial point of view, a characteristic ring of honesty and sound sense, but there is also a political side which is worth attention. Being asked to address a public meeting, he replies:

"My personal inclination is strongly in favor of accepting your flattering invitation, but my judgment and my estimate of the proprieties of my official place oblige me to forego the enjoyment of participating in the occasion you contemplate."

So he proceeds to write a letter covering almost exactly the same ground as his speech would have done. The distinction is not very obvious, but there is a great difference, as his action implies. A speech from Mr. Cleveland in person at a public meeting in Chicago would have vastly more effect upon the country than any letter he could write, and the question arises, If it would promote the cause of sound money, why should he not make it?

The reason seems to lie in the tacit understanding which has grown up, that all the talking is to be reserved for Senators and members of Congress, while the President must confine himself to written communications, mostly addressed to Congress, while the members of his Cabinet are never to open their mouths at all. The effects are apparent from Mr. Cleveland's letter: "It is time for the American people to reason together as members of a great nation." Sixty millions of people to reason together upon questions of finance! "I will not believe that if our people are afforded an intelligent opportunity for sober second thought they will sanction schemes that, however cloaked, mean disaster and confusion," etc. It is precisely because we look to the "sober second thought" of the people to defeat the intrigues and manipulations which control the anarchy of Congress that our currency is in its present confused condition, and that we have two hundred millions (more or less) of silver in the Treasury which could not be sold for half its cost. If the strength of the American people is to be effectively put forth, it must be under the personal leadership and guidance of men whom they can trust.

When the battle of Arcola was won, it was not because the troops reasoned together, or because they had a sober second thought of the consequences of defeat, but because Napoleon grasped a standard and sprang upon the bridge with the cry, "Suivez-moi!" Mr. Cleveland's estimate of the proprieties of his official place means simply that he does not think fit to antagonize Congress. But that is precisely what is needed, that the President should lead an assault upon the anarchy and vacillation—to speak mildly—of that body, and should appeal directly to his constituents of the nation for support. No doubt that calls for a Napoleon in civil affairs; but if Peace is to have her victories as well as War, she will have to find the man.

Boston, April 20, 1895.

MADISON ON DIRECT TAXATION.

To the Editor of The Nation:

Sir: The decision of the Supreme Court on the income-tax provisions of the tariff law of 1894 has again directed attention to the question of direct taxation by the Federal Government. An officer high in the Government has gone so far as to say that it may be necessary to repeal the provision in the Federal Constitution prescribing the methods for levying direct taxes. There were some in 1790 who questioned the justice and expediency of that provision, and I find in the "Ford collection of manuscripts" the following letter of Madison on this point. It has never been published, and at this time has an interest other than historical.—Respectfully yours,

Worthington C. Ford.

Washington, March 15, 1895.

MADISON TO COL. G. THOMPSON.

Jan^{y} 29th. 1789.

Sir

A convenient opportunity offering I take the liberty of adding to the former explanation of my sentiments relating to the federal constitution the grounds on w^{h} I dislike a change of that part of it which authorizes direct taxes. I am led to give you this further trouble, by intimations that the necessity of such a trust in the Union is by many not truly understood; & is a subject on which the reasons in favour of my opinion may with propriety be suggested. Should I judge amiss, your candour will excuse the communication. Should I judge aright, your discretion will make a proper use of it.

I approve this part of the Constitution because I think it an essential provision for securing the benefits of the Union, the principal of which are 1st the prevention of contests among the States themselves: 2^{dly} security against danger from foreign Nations.

On the first point it is evident that there is no way to prevent contests among the States but by establishing Justice among them: and equally evident that this cannot be done but by some system that will make each bear its just share of the public burdens. If some States contribute their quotas and others do not, justice is violated; the violation of justice is the ground of disputes among States as well as among individuals; and as among the latter they produce an appeal to the law, so among the former they produce an appeal to the sword. The question to be considered then is which of the two systems, that of requisitions or that of direct taxes, will best answer the essential purpose of making every State bear it's equitable share of the common burdens. Shall we put our trust in the system of requisitions, by which each State will furnish or not furnish its share as it may like? Reason tells us this can never succeed. Some States will be more just than others, some less just: some will be more patriotic; others less patriotic: some will be more, some less immediately concerned in the evil to be guarded against or in the good to be obtained. The States therefore not feeling equal motives will not furnish equal aids: Those who furnish most will complain of those who furnish least. From complaints on one side will spring ill-will on both sides; from ill will, quarrels; from quarrels, wars; and from wars a long catalogue of evils including the dreadful evils of disunion and a general confusion. Such is the lesson which reason teaches us. But we have a surer guide in our own experience; which like that of every other confederacy that has tried Requisitions, assures us that they will not be duly complied with; that they will not therefore answer the public exigencies, and that they moreover lay the foundation for injustice, for discord and for contention. I need not quote particular instances in proof of what is here advanced. The whole history of requisitions not only during the war but since the peace stamps them with the character which I have given them, and proclaims the necessity of resorting for safety to the other system; the system of direct taxes which the Constitution has substituted.

To say that requisitions ought first to be tried, and if they fail, that direct taxes are then to enforce them, is little better than to yield the point by the manner of urging it. For it admits that requisitions are not likely to be complied with voluntarily; at the same time that the efficacy of them is so much insisted on: It admits again that direct taxes are practicable, although the argument against them is that the General Government cannot in the nature of things levy them. But surely if they are practicable after the refusal of the State Government to comply with the requisitions shall have raised prejudices against the General Government, the practicability will be much greater if no such prejudices be thrown in the way. One remark, however, ought not to be omitted. It is, that every State which chuses to collect it's own quota may always prevent a federal collection by keeping a little before hand in its finances and making its payment at once into the federal Treasury. Another remark deserves to be here made. From the reasoning of many on this subject it would seem as if the question concerning requisitions and direct taxes was whether direct taxes shall be levied or not. This is by no means the case. If extraordinary aids for the public safety shall be not necessary, direct taxes will not be necessary. If extraordinary emergencies call for such aids, the only question will be whether direct taxes shall be raised by the General Government itself or whether the General Government shall require the State Governments to raise them; or in other words whether they shall be raised in all the States, or be raised in some States, whilst others unjustly withdraw their shoulders from the common burden.

On the 2^{d} point to wit security against danger from abroad, it is no less evident that Requisitions will fatally deceive us. For the same reason that they will not obtain from the States their respective shares of contribution and thence become a source of intestine quarrels, they must invite foreign attacks by showing the inability of the Union to repel them: and when attacks are made, must leave the Union to defend itself, if it be defended at all, as was done during the late war, by a waste of blood, a destruction of property, and outrages on private rights, unknown to any country which has credit or money to employ the regular means of defense. Whilst the late war was carried on by means of impress'd property, &c., the annual expense was estimated at about twenty millions of Dollars; at the same time that thousands of brave Citizens were perishing from the scarcity or quality of the supplies provided in that irregular way: to say nothing of the encouragement given by such a situation to the prolongation of the war. Whereas after the General Government was enabled by the pecuniary aids of France to procure supplies in a regular way, the annual expense was reduced to about eight millions of dollars, the army was well fed, the military operations went on with vigour & the blessings of peace were visibly & happily accelerated. Should another war unfortunately be our lot (and the less our ability to repel it, the more likely it is to happen) what would be the condition of the Union, if obliged to depend on Requisitions? There are but two methods by which Nations can carry on a regular plan of self defence; one by waiving the necessary supplies by taxes within the year equal to the public expences: the other, by borrowing money on the credit of taxes pledged for the future repayment of it. The first method is considered by most, if not all nations, as impossible, with the aid of every resource they possess: In the United States, possessed of no resource but duties on trade and their trade probably at the mercy of an enemy superior on the seas, the very idea of such a method is chimerical. The only remaining method is that of borrowing. But who could be expected to lend to a Government which depended on the punctuality of a dozen or more Governments for the means of discharging even the annual interest of the loan? No man who will candidly make the case his own, will say that he would chuse to become a creditor of a Government under such circumstances. Even if the scheme of trying requisitions first, and eventually resorting to direct taxes after a refusal of requisitions, were free from other objections which condemn it, the delay & unpunctuality inseparable from it, would be fatal to it as a Fund for borrowing: or if loans could be obtained at all, it could only be from usurers who would make the public pay threefold for the risk & disappointment apprehended. What would have been the condition of America at any period since

the peace, that is under the system of Requisitions, if Great Britain had renewed the war, or an attack had come from any other quarter, & money had become essential for the public safety? How was it to have been obtained? Would Requisitions have obtained it from the states? There is not a man acquainted with our affairs who will pretend it. Would they have obtained it in loans from individuals to be repaid out of Requisitions? There is probably not a man within the United States aiming at profit only who would have trusted his money on such a security; or who would not at least have exacted an interest of 20, 30, or 40 per cent., as an indemnification for the fallen state of public credit. We see then that the article of the Constitution in question is absolutely essential, whether we consider it as a means of preserving justice & tranquillity among the states, or of preventing or repelling foreign wars.

But besides these general considerations which affect every part of the Union, there are others which claim the most serious attention of the southern parts of it, & of Virginia particularly. If direct taxes be prohibited, and no reliance can be placed on Requisitions, the inevitable consequence will be, that whenever public exigencies arise, the duties will be accumulated on imports, until they shall have yielded every farthing that can be squeezed out of them. Now who is it that pays duties on imports? Those only who consume them. What parts of the continent manufacture least and consume imported manufactures most? The southern parts. It is clearly the interest of the southern parts therefore, and of Virginia particularly, that trade should not be overburdened; but that direct taxes when necessary should come in aid of that fund; since being laid on all the states by an equal rule provided in the Constitution, they tend to equalize the general burden on every part of the continent. It is truly wonderful that from the same quarter it should be urged, as dangerous to yield a full power over trade, lest the northern interest should overburden it with duties, & as proper to make an alteration, that might drive the government into the necessity of overburdening it.

In another view the southern states have peculiar reasons for retaining the article of direct taxation. If war ever breaks out against America where will it fall? On the weakest parts. Which are the weakest parts? The southern parts; particularly Virginia, whose long navigable rivers open a great part of her country to surprise & devastation whenever an enemy powerful at sea chuses to invade her. Strike out direct taxation from the list of federal authorities & what will be our situation? The revenue from commerce must in great measure fail along with the security of commerce. The invaded & plundered part of the Union will be unable to raise money for its defence. And no resource will be left; but under the name of Requisitions to solicit benefactions from the Legislatures of other states, who being not witnesses of our distresses cannot properly feel for us; & being remote from the scene of danger cannot feel for themselves. Is this a situation in which any man who loves his Country ought to wish it to be placed? Are these the benefits for which Virginia can wish to stipulate as a return for her concessions in favor of a Union & a General Government? That a northern state should not be averse to expunge the power of direct taxation may be conceived; because a local interest is not always postponed to the general interest. But that a Southern State should hearken to the measure, & be ready to sacrifice its local interest as well as the general interest, admits of no rational explanation to which I am competent.

With great respect & esteem I am, Sir, your obedient & humble servant, J° Madison, Jr.

DIRECT AND INDIRECT.

To the Editor of The Nation:

Sir: It is strange that, after a century's discussion of the subject of direct and indirect taxation, such confusion should prevail as to the exact meaning of these terms; and more especially as they explain themselves. A direct tax is, of course, a tax laid directly on its subject, whether that subject be a person or a thing; and an indirect tax is one not so laid. In a game of billiards, to send a ball into a pocket the player aims directly at it. But in a carom game, in order to hit ball No. 2 he aims at ball No. 1, striking No. 1 directly and No. 2 indirectly.

So, it is incorrect to call taxes on imports and excises *indirect* taxes, for the tax is laid on them directly and specifically. But when the taxpayer has taken the thing taxed into his possession, the tax is properly, *as to him*, an indirect tax. He then stands in the position of ball No. 2 in the carom game.

Necessarily taxation must be either on persons or on things. A capitation or poll tax is admittedly a direct tax on persons. To prevent such a tax being unequally laid, the Constitution prescribes that it shall be apportioned according to the number of persons that are to pay it. Now, suppose Congress to lay a capitation tax, but exempting a certain class of persons from its operation, could it be pretended that, although acting directly on persons, it would not be still a direct tax? The present "income tax" is palpably a tax on persons, but exempting from its operation those persons whose annual income is under a certain amount; and, being such, it is invalid under Article I. of the Constitution.

If authority be needed in support of these views, your readers will find it in the following passage from the last edition of the 'Encyclopædia Britannica' under "Taxation," the writer of which is Prof. Nicholson, professor of political economy in the University of Edinburgh:

"The most important direct taxes practically are those levied on income or capital directly; and the most important indirect the customs and excise."

Evidently, in characterizing the customs and excise taxes as indirect, he has reference only to their incidence on the taxpayer. For, as we have seen, the taxes on customs and excise, viewed simply as subjects of the tax, are properly direct taxes. Francis J. Lippitt.

Annapolis, Md., April 15, 1895.

THE SOLDIER CASTE.

To the Editor of The Nation:

Sir: As showing the extent to which the war spirit, which, as you say, is threatening to turn the whole land upside down, has already gone, permit me to add an illustration to that given by you in your article on "The Soldier Caste," in No. 1553 of the *Nation*.

In the Federal Court in Council Bluffs, before Judge Wilson, the trial of a young man charged with making a false affidavit in support of his mother's claim for a pension is now in progress. This young man, named Edgington, had made an affidavit to the effect that his father was F. M. Edgington of Company F, Thirty-fifth Iowa; that he was buried at Mars, Mo.(?), January 26, 1886; and that he, the defendant, attended the funeral. This affidavit was sent to Washington along with his mother's application for a pension. An investigation by the Pension Office disclosed the facts that F. M. Edgington of Company F, Thirty-fifth Iowa, is now on the pension-roll; is a resident of Muscatine County in this State; is a stranger to the defendant and his mother, and in no way related to them.

I quote from the Omaha *Bee* the following account of the opening of the case for the defence:

"Smith McPherson made the opening statement for the defence.

"He admitted that he would be unable, probably, to show in what regiment the defendant's father served, and asserted that the young man had done as is done by men every day in the year—signed an affidavit in support of a pension claim when he really had no personal knowledge as to the main facts connected with it. . . . He wound up with a remark calculated to bring him in touch with the old soldiers who were on the jury, by saying,

"'We have no right to say that because a pension claim is invalid it is fraudulent. We expect to make such a strong showing before we get through with this case, that every one of you will say that if you were sitting in that chair in Washington instead of Hoke Smith, this woman would get her pension.'"

If Mr. McPherson is correctly reported, we have here one of the prominent politicians of Iowa, a leading member of the bar, and an officer of the Federal Court, practically asserting that perjury is not perjury when committed in aid of a pension claim.

Let us trust that Judge Wilson will follow Judge Nelson in maintaining the ancient firmness and wisdom of our Federal Court.

J. A. Phillips.

Dunlap, Iowa, April 15, 1895.

THE SPOILSMAN'S EFFRONTERY.

To the Editor of The Nation:

Sir: The idea that a person should serve his fellow-citizens in a particular capacity for the reason that he possesses particular qualifications for the place seems to be an idea utterly foreign to the average citizen. I should like to submit for the perusal of your readers the following extract from a "ward" paper of Chicago of recent issue. The "editor" and reporter is not a cynic nor a humorist—he probably thinks the state of affairs he depicts is all right and perfectly proper; but a civil-service reformer on reading the piece will realize that there is much work for American patriots to do. A true American could wish that some of the energy now spent occasionally on Hawaii, Samoa, and Cuba might be deflected into such home affairs as the following relates to:

"Among the applications for place, the following are given us: For superintendent of the Sixty-eighth Street water-works, Robert Aspin and Harry Martin, the former being a recent convert to Republicanism; William Walton will have his old job as superintendent of streets in this end of the ward. Mr. Walton always gave good satisfaction, and we shall be glad to see him back. Julius Danielson, who nominated Shepherd in the convention, claims as his reward street superintendent of the north end of the ward, but James Todd, the former boss, is making a great fight for the place. For sidewalk inspector there are three applicants, viz.: Lew Hargreaves, Jack Boger, and Charles Edwardts. Hargreaves is handicapped by the fact that he has been holding down a job under Collector Hanberg, and some declare he has had enough and should give some one else a chance. For Jim McLaughlin's job [in charge of water-pipes] there are any number of applicants. Michael Schmidt, it is thought, can have the place if he will take it. John McCormick, W. H. Sullivan, George Wright, and Percy Burke, a relative of Harmon S. Burke, and Charles Templeton are the other applicants if rumor is to be relied on. There are also two Polish applicants, with unpronounceable names, who are not considered in it. For bridge-tenders, there are over three hundred applicants, and Ald. Shepherd, who is chairman of that committee, is hounded to death. Walter McCall is a candidate for harbor master.

"The following gentlemen have 'caught on' to jobs in the county treasurer's office: John B. Price of Irondale; Barney Rozynek, W. E. Lewis, the barber; and Squire Burke, a son of the president of the Twenty-third Ward Republican Club."

Of course it would be very doctrinaire, unpractical, and theoretical (and everything else that is bad, besides being un-American), but some of us visionary people would like to

see these numerous applicants "lined up," and the most capable of them selected for the places on exactly the same principle that an employer would select applicants for a place in his works—that is, fitness; and the applicant, once selected, should hold the place during good behavior. Why do our missionaries go to Africa to preach the Gospel to the heathen? E. L. M.

CHICAGO, April 16, 1895.

BONDED EMPLOYEES.

TO THE EDITOR OF THE NATION:

SIR: The recommendation of the legislative committee on the Brooklyn strike that rail road employees be licensed, so that a motorman or gripman who has neglected his duties in one position will be prevented from securing similar employment elsewhere, is worthy of thoughtful consideration. Some method of adding to the responsibility of men of this class should unquestionably be devised, and it has long seemed to the writer that public safety would be increased if the companies should require the deposit of a bond of say twenty-five dollars from each new employee. No man who is unable to furnish such security is worthy of being intrusted with the management of a car moving at high speed through city streets, and such a bond would be of especial value in preventing that wanton destruction of property by irresponsible strikers which has been so injurious to the laboring man as well as to his employers.

The efficiency of a small force properly applied should be recognized in Political Economy as well as in Mechanics. J. H. P.

PHILADELPHIA, April 16, 1895.

TWO LETTERS OF RUFUS KING'S.

TO THE EDITOR OF THE NATION:

SIR: In your number of April 10, 1895, there is a review of the second volume of 'The Life and Correspondence of Rufus King,' in which, while the volume is spoken of most favorably "as rich in new material and in the selection of letters showing care and discrimination," the reviewer points out some faults "in the hope of making it [the work] even better."

It is not my purpose to pass upon these, which, though they are blemishes, are in the main of no great moment. But there is one which requires a correction, inasmuch as there is an inaccuracy in the fact stated, and apparent carelessness on the part of the gentleman who kindly had the Hamilton papers in the State Department at Washington examined for me, giving me a list of those written by Rufus King. The charge is: "Nor have the Hamilton papers been thoroughly searched, as they contain the letters described by the editor as not to be found."

These letters referred to were two written on April 17 and 20, the year not given, but in 1796, by King to Hamilton in answer to three short letters by the latter, published on p. 61 of this second volume. On p. 62 the editor regrets that these letters cannot be found, "as they must have given some interesting facts, as well as the views of Mr. King relative to the important questions under review. . . . A search for them in the United States State Department among the Hamilton papers by Mr. Andrew H. Allen, Chief of Bureau of Rolls and Library, at the editor's request, has been unsuccessful."

In this statement there are two serious errors: the first is, that they *are* among the Hamilton Papers in the Department of State; and the second, that in the list furnished to me of the letters of King, *these two letters* are noted as No. 16, pages 141 and 143 of the Hamilton Papers. Mr. Allen asked me to mark on the list such as I desired to have copied. For some reason, for which I cannot account, possibly because the year in which they were written was not in them, I did not mark the letters for copying and they were not copied; and as they did not appear among my copies, I must have inferred, most carelessly, that they did not exist. Mr. Allen, against whose accuracy I have most unjustly recorded an incorrect statement, was therefore not in fault, but really placed at my disposal the desired information. I regret that I cannot make this correction where the charge is made, on page 62 of this second volume, but I shall insert it in an appendix to the third, where a copy of the letters shall be placed.

I must ask from you the privilege of making this statement, and also to publish the two letters from Mr. King, as copied below, and thus follow the refutation of the above charge as speedily as possible, giving your readers the benefit of such information as they contain.

CHARLES R. KING,
Editor of 'Life and Correspondence of Rufus King.'

ANDALUSIA, PA., April 17, 1895.

Hamilton Papers, No. 16, p. 141.

RUFUS KING TO ALEXANDER HAMILTON.

Monday Morning 17 Ap.

In general I agree in the course you recommend. Separate Bills will be reported to the House this morning providing for the Sp. Ind. & Alg. Treaties. They will pass the H. and be sent to the Senate by the middle of the week. I perceive no impropriety in adding to the first of these Bills received by the Senate, and in succession to each of them if requisite, a provision for the Br. Treaty. Such amendment, if rec'd in the House before they take a question, it is believed would have influence.

[The Merchants and traders' is signed with unexampled unanimity. Baltimore have prepared a similar petition wh. will be very generally signed. Gen^{l} Smith, who is now there, writes that the Treaty has gained many friends, that they are next to unanimous in favor of its execution, that Annapolis is likewise unanimous, and that he thinks nine-tenths of the State are for carrying it into effect. He adds that a memorial has been drawn up and signed by most of the respectable People in Baltimore, approving the President's conduct in refusing the Papers], that he thinks a counter memorial could be obtained, but that he has discouraged it seeing the necessity of unanimity at the present crisis. He returns to-morrow or next day & will be zealous for the execution of the Treaty. His friends may be induced to act upon his mind, which balances, so as to decide it. Adieu. R KING.

(Addressed) Free. R. King—Alexander Hamilton, Esq., New York.

(Endorsed) R. King, Esq,—Rufus King, April 17, 1796.

Hamilton Papers, No. 16, p. 143.

Wednesday 20. Ap.

The Petitions of the Merchants and others will be presented to-day, and it is said they have been signed by almost every Merchant and Trader in the City. Pettit, Barclay and some few others are exceptions. A counter Petition has been very industriously carried through the City and its suburbs; and though very few Merchants, Traders, or principal Mechanicks have signed it, it will show a long catalogue of Names. The persons engaged in this service have been very successful in the Northern and Southern Liberties, and taking their stands upon the wharves, they have collected the names of sailors and others, as well foreigners as Citizens. Baltimore has become very jealous, and I fear from the displeasure at the conduct of Col^{o} Smith, they have hazarded his vote and influence whatever it may me [*sic*] in the Question of Provision for the Treaty. They have drawn up a Paper, which is signed by almost the whole body of Merchants, in which they request *and instruct* him to promote by the proper provisions the Execution of the Treaty. His inclination was in favor of a Provision, but I am apprehensive, his Pride will be so wounded by *this instruction* that he may vote against his judgment to prove his independence. We shall probably receive from the House today a Bill making an appropriation for defraying the Expences of carrying into effect the Sp. Treaty.

We shall amend it by adding a provision for the Br. Treaty. If the House disagree, we shall adhere, and they will lop the Bill by refusing our amendment. We shall then add to the Algerine Bill an amendment providing for the British and Spanish Treaties. The House will also decide the Fate of this Bill. We shall then add to the Bill providing for the In. Treaty an amendment providing for the British, the Span^{h} and the Algerine Treaties. The House will also decide the Fate of this Bill, we shall then offer them a Bil^{l}, providing for all the Treaties; this likewise they may reject, but my Belief is that the opposition will give way before we have gone through this course.

Yrs. &c RUFUS KING

(Endorsed) Rufus King Esq., (No date) April 20. No. 3.

GERMAN STUDENT TAXATION.

TO THE EDITOR OF THE NATION:

SIR: In your issue of February 28, which I have just read, I find a short article concerning the taxation of students in the universities of North Germany. Göttingen is one of the universities from which—this article says—foreign students of "limited means" are kept because of the imposition of an income tax. In reply, I should like to say that there is at present in Göttingen a flourishing colony of thirty American students, some of them of two years' residence, and not one of whom has been called upon to pay any tax whatever.

The city of Göttingen levies a local tax on all residents of three months' standing; but from this tax students are expressly exempt.

Respectfully yours,

HARRIET FRENCH MIXTER.

GÖTTINGEN, April 10, 1895.

PROF. JAMES PILLANS.

TO THE EDITOR OF THE NATION:

SIR: I fear the lapse of forty years has weakened the memory of the Edinburgh prizeman of 1855, who in the *Nation* of April 4 writes of his Latin professor as "poor old Pillings." A man of sufficient eminence to find a place in Byron's "English Bards and Scotch Reviewers" might have been spared the ignominy of a name misspelled by one of his own pupils.

"Scott may perchance his name and influence lend,
And paltry Pillans shall traduce his friend."

A. D. SMITH.

SACKVILLE, NEW BRUNSWICK, April 18, 1895.

POOR INK ALSO.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent "H. D. C.," in the *Nation* for April 11, justly complains of the quality of paper now used in writing and printing and for other purposes. We hear, also, similar complaints about ink. This is no imaginary evil, and it is doubtless true that the greater part of the books, periodicals, and records printed or written on the paper and with the ink now in use will, within a century, have perished from the earth.

There are compensating features, however. Is it a matter for regret that the greater number of the books and periodicals of the day are

doomed to early destruction? The prospect of the utter annihilation of nine out of every ten current novels, poems, and magazine articles, and of many of the ordinary text-books for schools and colleges, is hardly one to make the judicious grieve. But paper varies in quality even as the stars differ in lustre, and fortunately the best books are as a rule (alas for the exceptions!) printed on the best paper—which in these degenerate days is, it must be confessed, none too good. While some of the good books must perish, it is the worthless that will first decay, from being printed on equally worthless paper. Behold an example of the great law of the survival of the fittest, and let us hope that it will clear the way for a generation of writers of higher ideals and of a less mercenary spirit.—Truly yours, M. W.

COLUMBIA, MO., April 13, 1895.

Notes.

THE prospectus of the English Dialect Dictionary to be edited by Prof. Joseph Wright, hon. secretary and literary director of the English Dialect Society, is now published. This great work will be issued by annual subscription—parts i. and ii. during 1896, and the remaining parts at half-yearly intervals. A guinea a year secures at least 288 pages of the ordinary edition; two guineas being the rate for a special edition of 250 copies on Whatman hand-made paper. Eight years will be required for completion, and a thousand subscribers are needed to launch the enterprise. Names should be sent to Prof. Wright at 6 Norham Road, Oxford; subscriptions (in advance of January 1, 1896) to the Rev. Prof. Skeat, 2 Salisbury Villas, Cambridge. The vocabulary will embrace all dialect words still in use or known to have been in use in the past 200 years in Great Britain and Ireland, together with all American dialect words still in use in the British Isles. Geographical area, pronunciation, and immediate etymology will all be shown. The specimen pages are very attractive typographically. It seems to us highly desirable that arrangements for delivery through some house in this country should be made, for the sake of American subscribers.

Part i. of Prof. Lydekker's 'Royal Natural History' will be issued immediately by Frederick Warne & Co., together with a pocket guide to British wild flowers, 'Wayside and Woodland Blossoms,' with colored plates; 'Angling and How to Angle,' by R. B. Marston; 'The Spirit of Cookery,' by Prof. Thudichum, and 'Dinners Up to Date,' with menus in French and English; and 'The Legends of King Arthur and his Knights,' compiled by James Knowles.

The Dean of Winchester's 'Life and Letters of the late Prof. E. A. Freeman' will be brought out in two volumes by Macmillan & Co., who promise also 'The Principles of Sociology,' by Prof. Franklin H. Giddings of Columbia, a new volume of short stories by Henry James, and an illustrated 'History of the Fan,' by Miss M. A. Flory.

The 'Letters of S. T. Coleridge'; a volume of Letters by the late Celia Thaxter, edited by Mrs. Fields; Justin Winsor's 'The Mississippi Basin,' 1697-1763; a 'Life of Gen. Thomas Pinckney,' by the Rev. C. C. Pinckney of Charleston; and a Texan civil-war novel, by Mrs. M. E. M. Davis, 'Under the Man-Fig,' are to appear directly from the press of Houghton, Mifflin & Co.

A posthumous volume is to be added to the works of Leconte de Lisle. Since the poet's death his manuscripts have been gone over by his publisher, M. Alphonse Lemerre, aided by Mme. Leconte de Lisle and MM. F. Coppée, De Heredia, and De Guerne. Some fifteen hundred unpublished verses were found, and to these will be added the "Apollonide" and the thousand verses of the "Passion." These last poems were suppressed by their author in the Poulet-Malassis edition, on account of what seemed to him their too idealistic spirit. The volume will also contain the panegyric on Victor Hugo which Leconte de Lisle delivered when he succeeded to Hugo's chair at the Academy. The book will appear at the beginning of May, and will be the fourth volume of the poet's complete works.

M. de Heredia, whose reception into the Academy has been long delayed on account, it is said, of the fastidious care which he has been bestowing on his discourse, will be received on May 30. François Coppée will make the reply to his address. Bourget's reception is fixed for June 13.

Among the posthumous papers of the painter Anselm Feuerbach, who died at Venice, February 4, 1880, in the fifty-first year of his age, were found the fragments of an autobiography, which were published in Vienna soon after his death under the title of 'Ein Vermächtniss,' with an appendix of remarkably pithy and pertinent aphorisms concerning art. This book, of which a third edition appeared in 1890, attracted considerable attention, awakening new interest in the life and labors of the artist, and exciting a very general desire for a fuller and more consecutive account of his career. This wish has now been realized by the publication of Julius Allgeyer's 'Anselm Feuerbach, sein Leben und seine Kunst' (Bamberg: Buchner). The biographer, a well-known engraver and connoisseur, first met Feuerbach in 1856 at Rome, and was so strongly drawn to him by ties of sympathy with his high aims and aspirations that the casual acquaintance soon grew into a warm and lasting friendship. This intimate fellowship continued for nearly a quarter of a century, during which Allgeyer carried on a constant correspondence with Feuerbach, and followed the development of his genius with lively interest and a clear perception of its marked individuality and uncommon versatility. He has turned his rare opportunities to good account, and produced a book which is not only an interesting biographical and psychological study, but also a valuable contribution to the history of the different schools of art that have enjoyed more or less reputation in Germany during the last half-century. A portrait of Feuerbach, painted by himself and engraved by Allgeyer, forms the frontispiece of the volume, which is also adorned with thirty-eight autotype illustrations. The table of contents and index are both good, and an appendix contains a list of Feuerbach's oil-paintings, water-colors, and sketches, 485 in all, with the names of the present owners.

The fact that the late Prof. G. J. Romanes, who began his scientific career as a dogmatic atheist, ended his life in the communion of the Church of England, was made known at his untimely death. Fragments of a contemplated book explaining and defending this change of view were found among his papers, and have been printed under the title 'Thoughts on Religion' (Chicago: Open Court Publishing Co.). What the work would have been had Prof. Romanes lived to complete it, cannot now be said; but it is certain that these disjointed notes have only the artificial value due to the personal reasons mentioned. De Maistre long ago remarked on the futility in general of the arguments of converted sceptics, and it is impossible to imagine the considerations which Romanes thought were efficient with himself proving as strong with other minds. The editing has been done by the Rev. Charles Gore, who exhibits commendable restraint, for the most part, not smoothing away obvious contradictions, or suppressing opinions which he cannot approve of, and only in one or two places betraying the complacence of one with a valuable theological trophy in his possession.

That the full use of all one's physical senses, especially in childhood, is necessary for normal psychical development, at first might challenge controversy from some. It does not when we reflect that deafness in infancy blocks the only natural avenue of mental communication, directly by excluding others and indirectly by preventing speech. The wonderful triumph over deaf-mutism and the added infirmity of blindness in Laura Bridgman and Helen Keller are exceptions that illustrate the rule. Nature is powerless to substitute one sense for another, but intelligent care may remedy the worst conditions. The untaught deaf are apt to be morose, obstinate, and self-centred. That some mental disability is apt to follow a partial want of aural power, and that imperfect speech indicates nervous deficiency or disturbance, probably occurs to few but physicians and very intelligent teachers. What too often is charged to inattention or stupidity in the dull child at school is simply physical insensitiveness to sound. A little book by Lillie E. Warren on 'Defective Speech and Deafness' (New York: E. S. Werner) treats of the relation between these states, and incidentally shows the enormous number of children whose hearing is imperfect and who are thus handicapped. The chapter (six) that distinguishes between the improvement of hearing and the development of hearing is especially commended, and all teachers of the young and parents of children whose sense of sound is in any degree defective are pressed to read this essay, that modestly but strenuously advocates the importance of the early recognition and efficient correction of these troubles. The author shows the consciousness of experience, and has made a valuable contribution to practical pedagogy with imperfect subjects.

The 'Home Treatment for Catarrhs and Colds,' by Leonard A. Dessar, M.D. (New York: Home Series Publishing Co.), "has been written with a view of supplying the general reader with a trustworthy guide of instruction for the proper care, prevention, and treatment of catarrhal troubles of the throat, nose, and ears, and their complications." It is hardly necessary formally to say that it does not accomplish this impossible service.

The progress of the age, one had almost said the wheel of progress, is distinctly shown by the reference to cycling that Dr. Mary Bissell Taylor makes in her 'Manual of Hygiene' (New York: The Baker & Taylor Co.). She says it "is a most desirable exercise and addition to our out-of-door sports," and adds, as with authority: "Although theoretical objections have been urged to cycling for women, the experience and observation of the writer have failed to demonstrate their truth." This is the first recognition of the newer locomotion that we have observed in formal treatises on health. The view taken is correct. The book as a whole is a good elementary one, although the style is very diffuse. It would

seem better adapted as a text-book for high-grade schools than for medical students, as designed.

With the coming of April's bloodroot and hepatica, we naturally look for the first out-door books. Mr. Joseph Jackson, in many rambles 'Through Glade and Mead' (Worcester, Mass.: Putnam, Davis & Co.), has thoroughly learned the plants about Worcester, and his book stands ready to guide the lover of wild things through fields, woods, and highways, showing him the various attractions they offer from spring's first awakening till the fading witch-hazel ends the year's pageant. A full classified list of the higher plants of Worcester County adds much to the book's value.

The Scribners issue a revised edition of Mrs. William Starr Dana's 'How to Know the Wild Flowers,' with 52 new plates and about 60 new flower descriptions, besides other additions. A deservedly welcome book is thus made still more acceptable.

The text of Part vi. of Mr. Wm. C. Harris's 'Fishes of North America' (New York: Harris Publishing Co.) is entirely given up to the catfish, which is declared to be emphatically the farmer's fish, in place of the inferior carp, "that humbug of angling and edible fishes." The two colored plates from oil-paintings represent the Eastern or Banded Pickerel and the Kingfish, Whiting, or Barb.

We noticed the other day a History of Florence, Mass., with special reference to its documentary and reminiscential account of the "Northampton Association of Education and Industry" at that place. A paper on the latter theme in the March number of the *New England Magazine*, independently prepared by Olive Rumsey, as the fruit of much intelligent research, will be found a material addition to Mr. Sheffield's chapters on the Association. Miss Rumsey's generalizations are for the most part sensible and sound, but she has been led astray by the accidental anti-slavery spirit and practice of the Northampton Community. The abolitionists as a body, much less their leaders with rare exceptions, were not diverted into socialistic experiments in the forties. The very definiteness of their task saved them from temptation to embark in schemes of universal regeneration. They were content, to borrow a phrase of Emerson's, "to make a sally against evil by some single improvement."

A recent journey through the northern part of Nicaragua is described by Dr. Bruno Mierisch in *Petermann's Mitteilungen* for March. A considerable part of the country traversed, though of extraordinary fertility, was uncultivated and without inhabitants simply from want of communication with the coast. On the accompanying map is indicated the route of a projected railway from the heart of this region to the head of navigation on the Rio Grande, 120 miles distant. In the higher districts the climate is delightful, but in the swampy plains the mortality from fever is appalling. There were evidences of gold in many places, but apparently not in very paying quantities.

The *Scottish Geographical Magazine* for April has an interesting account of British New Guinea by the administrator, Sir William MacGregor. Originally occupied to preserve Australia from close foreign neighbors, the three colonies, Queensland, New South Wales, and Victoria, share the responsibility and expense of the Government. It has been an eminently peaceful conquest, for Sir William says that he had "neither soldier nor policeman" to aid him in establishing his authority. Now the law is administered in the various coast settlements by native magistrates, and order maintained by some sixty Papuan constables. The people are still in the stone age, and there have been discovered "no old ruins, no building, or other remains of an older or different race." The progress is very slow, but in some districts large numbers of cocoanut-trees have been planted by the natives, and the habit of regular labor is being formed among them. Though traces of gold are met with at a great many different places, the hope of the country is in agriculture. Its soil is adapted to every tropical production, and as it lies just north of the hurricane zone, the crops are not liable to damage from this cause. Malarial fever of a mild type is the only prevalent disease. Prof. Wagner contributes an account of a new calculation, by zones of ten degrees of latitude, of the areas of land and water on the globe, in which he finds the proportion to be 1:2.54.

The Amherst Summer School of Library Economy will reopen on July 1 and close on August 3. A reasonably thorough education and some special aptitude for work among books are requirements for admission to this course. Particulars will be furnished by the instructor, Mr. Wm. I. Fletcher, on application.

The fourth session of the School of Applied Ethics will be held at Plymouth, Mass., for five weeks beginning July 8. A new feature will be the department of Education, "considered not as a professional matter, but as a social and ethical force and in relation to other such forces." The secretary is Mr. S. Burns Weston, No. 1305 Arch Street, Philadelphia.

A movement is on foot to set up a drinking-fountain in the old plaza at San Francisco as a memorial of the late Robert Louis Stevenson. Subscriptions towards a fund of $1,500 for that purpose may be sent to Mr. W. D. Adams, University of California.

—Mr. Mitchell Vincent, a professional engineer and draughtsman of Onawa, Iowa, has had the happy thought to plot the course of the Missouri in 1804 as laid down in the MS. journals of Lewis and Clark, at least for the Iowa portion of the river. He has obtained these data from Dr. Elliott Coues, the latest editor of the explorers, and has made a beginning with the stretch that bounds Monona County on the west. A few blue prints of this map are in private circulation. The plotting possesses an extraordinary interest and no small hydrographic value, inasmuch as it includes the United States survey of 1852 and the county survey of April, 1894, and thus exhibits the changes in the stream at two intervals of approximately forty-five years. The antics of this mighty river in alluvial soil are almost incredible; one who should attempt to follow literally in the track of Lewis and Clark in their ascent of the Missouri would have frequently to convert his pirogue into a "prairie schooner." The tendency of the river, on the whole, at this particular point, has been to straighten itself, and Iowa has been the gainer by the operation, at the expense of Nebraska. We hope nothing will prevent Mr. Mitchell from completing his task, and it were much to be desired that the whole length of the Missouri might be treated in the same way. His map renews the feeling we have already expressed that the original codices of Lewis and Clark ought to be published in full—if not by national authority, then by private liberality.

—Dr. John Kells Ingram's 'History of Slavery and Serfdom' (London: A. & C. Black; New York: Macmillan) is an expansion of the article "Slavery" in the ninth edition of the 'Encyclopædia Britannica.' The additions are considerable, but not sufficient to remove the impression that we are reading a summary which is too compact to have any literary character. The American section has been expanded as much as any, but in the 'Encyclopædia' it was absurdly inadequate, and it is hardly less so in the book. There is not a word about the colonial development of the institution, and while relatively a good deal is said about the anti-slavery sentiments of "the fathers of the American Union," nothing is said concerning the decay of such sentiments in the hot air of the cotton-gin prosperity. With these exceptions the outline preserves very well the salient features of pro-slavery aggression and the anti-slavery development. Those who are troubled by the writer's incidental opinion "that the Union in its present condition cannot long continue to exist," can reassure themselves by reading Mr. Bryce's new chapter in his 'American Commonwealth,' "The Home of the Nation." In conclusion, the segregation of the colored people from the whites is urged, either in Liberia or elsewhere—an impossible business through any mechanical device, and undesirable as the result of any gradual process of mutual alienation. In the bibliography of the subject there are only four titles on the American part of it, and these not the most significant. Von Holst's 'Constitutional History' is not among them, nor Olmsted's 'Cotton Kingdom,' a book likely to be as classical for the antecedents of our civil war as Arthur Young's 'Travels in France' for those of the French Revolution.

—The current number of the *Bulletin de Correspondance Hellénique* brings no special news from the excavations at Delphi. Mr. Louis Couve publishes, with an ample and learned commentary, some inedited inscriptions which illustrate the wide political relations still maintained by the Delphic shrine even after its actual power in Greece had passed away. The Ptolemies, the Seleucidæ, and the Kings of Pergamum continued, as a matter of tradition and policy, to consult the oracle with deference in regard to important undertakings, and to invite its representatives to preside over high religious functions—ceremonials of thanksgiving or of political significance. The Delphians in return pass complimentary decrees expressing their gratitude, and bestowing crowns, statues, and the various honors at their command on their royal benefactors. The situation reminds one somewhat of the present predicament of the Vatican. The most interesting of the decrees cited by Mr. Couve is one which records the thanks of the city and the honor of a crown and a bronze statue conferred on Nicomedes III. of Bithynia (91–74 B. C.) for his generosity in restoring to the temple thirty slaves who had formed part of its retinue, and had, through piracy or otherwise, drifted to that distant region. The list of functionaries is almost precisely similar to those of the temple at Delos, and includes a baker, a cook, some carpenters, and herdsmen for the sacred cattle. Notwithstanding the official certificate that is here given to the "piety" of Nicomedes, he is known to history as a vicious and unscrupulous tyrant.

—M. A. de Ridder, in his exhaustive paper on the Island of Gha, furnishes the complement to the researches of M. Cambanis as to the drainage of Lake Copais, which we noticed lately. This island, called also Goulàs ("the fortress"), is formed by the rising of the lake, and its area of about fifty acres is surrounded by Cyclo-

pean walls, which formed a system of defence in connection with a massive castle situated on the highest point, close to the northern edge. M. de Ridder gives a plan of this fortified encampment, accompanied by elaborate measurements. The fortified palace presents a general resemblance to those of Mycenæ and of Tiryns, with some suggestive differences of detail. The rooms are smaller, less abounding in ornament, and were hastily constructed, as if in view of some pressing emergency. The style of the palace and fortifications is of a piece with that of prehistoric structures in the vicinity—the three colossal drains which conveyed the overflow of Lake Copais into the "Catavothræ," or natural rock tunnels, and the well-known dome-shaped chamber at Orchomenus, called the Treasury of the Minyans. These, together with the fortifications of Goulàs, or Gha, M. de Ridder would refer to the later Mycenæan epoch, verging on the historic period. The island was converted hurriedly into a fortified camp, probably as a refuge against the inroads of some already threatening invader, before whose successful progress it was, a generation or two later, abandoned once for all. Some useful and novel illustrations of the development of Greek sculpture are figured and discussed in the minor articles. One of these is a funereal slab of Ionian origin, belonging to the sixth century, and representing in full-length profile a warrior with a wild boar at his feet, which is evidently a ruder forerunner of the well-known stele of Alxenor. Another example of the style and influence of the Ionian school of Asia Minor is a sphinx, or guardian genius of tombs, preserved in the Louvre and found in Cyprus. This also is of the sixth century, and is a rare type of its class, not only because sculptured in the round, but because the arrangement of the hair, and the expression of the mouth and eyes, show an archaism far advanced in method and artistic skill. The curves of the lips recall the expression of "la Boudeuse" in the Acropolis Museum.

—Dr. Charles Waldstein, recently elected Slade Professor of the Fine Arts in the University of Cambridge, England, who is at present (as Professor of the History of Art in the American School of Classical Studies at Athens) conducting excavations at the Argive Heræum, writes as follows from Argos, under date of March 28:

"As I write, I sit on the walls of the second temple of Hera (of the fifth century B. C.), while the men are massed on the slope below, to the south, where last year we found the first indications of a large building between twenty and thirty feet beneath the foundation walls of the second temple. As we wished to lose no time this year, Mr. J. C. Hoppin (Harvard, '93), together with our architect, Mr. E. L. Tilton of New York city, and Mr. T. W. Heermance (Yale, '93), began excavating a week ago, and carried on the work very successfully before my arrival here. The building below the south slope of the second temple promises to be one of the finest of the eleven buildings we have already discovered on this most favorable site. Of the north wall, which is of the best Greek masonry, four courses are standing. We have already followed it up for more than a hundred feet, and have not yet come to the end. The pillar bases in the centre are all *in situ*. On one of these last year a drum of the column was still standing, and we have since discovered two others. Here Mr. Hoppin found some well-preserved large fragments of the metopes from the second temple, together with two heads in excellent preservation, one of which (a warrior with a helmet) fits the neck of a fragment of a metope with the greater part of the torso. If our good fortune continues, we shall be able to present fine specimens of metopes of this temple, which is second only to the Parthenon in artistic importance. The grant of the Archæological Institute and (above all) the liberality of Mrs. J. W. Clark of Pomfret, Conn., enables us to carry this season's work to a termination without the worries of cramped means."

—In a couple of finely printed and fitly illustrated volumes entitled 'Unter den vier ersten Königen Bayerns' (Munich: Beck), Luise von Kobell gives a series of delightful sketches of social and political events under the first four kings of the Wittelsbach dynasty, covering a period of eighty-five years from the accession of the Elector, afterwards (1806) King Max Joseph, in 1799, to the death of Ludwig II. in 1886. The first section of the work (pp. 1-48) is a chronicle of the Kobell family, dwelling especially on the life and character of the author's great-great-grandfather, Ferdinand Kobell, an artist of considerable distinction and a most admirable man, whose letters to his son, Aegid, may be compared to those of Lord Chesterfield in lively humor and knowledge of human nature, but are far superior to them in moral elevation and in the inculcation of personal purity and integrity and right rules of conduct from an ethical as well as a conventional point of view. These letters, written from 1791 to 1793, record interesting incidents of the French Revolution, and contain repeated expressions of indignation at the arrogance and profligacy of the French emigrants on German soil. If the Duc d'Enghien was the frivolous and shameless fellow here described, his murder by Napoleon does not leave much room for regret. The most entertaining as well as the most instructive portions of these volumes are those in which the author relates her personal recollections, beginning with her first ball in 1838, ten years before the abdication of Ludwig I. Her position, first as the daughter of a Munich professor and popular poet and intimate friend of Maximilian II., and secondly as the wife of August Eisenhart, ministerial councillor and private secretary of Ludwig II., afforded her rare opportunities of observing the making of history from behind the scenes, and from this social vantage-ground she looked around her with uncommonly keen and inquisitive eyes. Her lively pictures of the weekly reunions of artists, poets, and scholars under the hospitable roof of the veteran philologist, Friedrich Thiersch, and of the life and conversation of the court circles and cultivated middle class in Munich during the past half-century, are very entertaining reading. Valuable, too, as a source of information for future historians is her portraiture of the unfortunate romanticist on the throne, Ludwig II., whose vain endeavor to reconcile the sentiments of a patriotic German and the duties of a constitutional monarch with unbounded admiration of absolutism as embodied in Louis XIV. of France, would have sufficed to make him crazy, if it had not been already symptomatic of incipient insanity.

IMBECILES ALL.

Degeneration. By Max Nordau. Translated from the second edition of the German work. D. Appleton & Co. 1895. 8vo, pp xiii, 560.

This book possesses the same qualities that brought the author's 'Conventionelle Lügen' to the notice of the press censorship in Austria: it pursues a certain philanthropic aim with something too much of vivacity. The author sees mankind, as he believes, on the brink of a precipice, and catches them by the skirts to hold them back, but allows himself meanwhile a line of commentary that hampers one's gratitude with reserves. He believes that the majority of the artists, poets, and novelists of the present day are mentally unsound, and develop (or exaggerate) a disease in the mind of the public that supports and appreciates them; and he refers to them collectively as "graphomaniacal fools, and their imbecile or unscrupulous bodyguard of critics." One thinks of Joubert's apothegm: *Il faut haïr et mépriser avec esprit.*

Herr Nordau grounds this extraordinary opinion on the newest of the sciences. Criminology, he says, has established two things: that insanity, vice, and crime are but varying degrees of the same thing, and that there are certain innocent and often unobtrusive traits that enable one to say beforehand of the person possessing them that he is of the criminal type. He examines the artistic output of the past two generations, and finds these premonitory symptoms in the works of Ruskin and the pre-Raphaelites, the Symbolists, Whitman, Tolstoi, Wagner, the Parnassians, the Æsthetes and Décadents, Ibsen, Nietzsche, Zola and the Realists, and we know not whom besides. He marshals them in review in a tone of boisterous exultation and abuse—much as if he had been a keeper in an asylum and had learned there to call a spade a spade. Walt Whitman is on one page "mad Walt Whitman," on another "crazy Walt Whitman." Ibsen is a "malignant anti social simpleton." "The pornographists" are "a filth-loving herd of swine." Ruskin's doctrines on art are "delirious," and their author is described as "raging and cursing." Idealist philosophers from Berkeley to Hegel are "solemn drivellers"; and so on. One paragraph, in which Herr Nordau has been parodying Maeterlinck, he closes with the remark that it is not "quite worthy of a mentally sound man to make fun of a poor devil of an idiot." We quite agree with him. And in another place (p. 318) he says that "he who has not learnt to impose some restraint upon himself in order not to shock others, is called by malicious Philistines not an æsthete but a blackguard." We should not choose this way of putting it, but we can see what he means.

This, however, is but manner and not to be insisted on. The book is described by its author as a bit of scientific criticism, and may claim to be judged as such. And here one thing must be said at once. Herr Nordau everywhere relies on the psychology which is not inaptly called morbid, as if it were a solid body of doctrine. It is not in a position to be dealt with in that way. Many facts, it is true, have been collected in its name, and some much-disputed generalizations have been made, but the science as a whole (whatever it may one day become) is as yet in the stage of absorbing light, not of giving it out. To read by it, as Herr Nordau everywhere does, would indicate a person who could have read without it. The only aid it could afford him is in the line of scattered observations. Whenever our author states a principle, it is to these he must be understood to refer. Very often he refers to them directly. He is perpetually quoting some report on lunatics and arguing from it as if it were a law of nature. He transcribes, for example, two strophes from Rossetti's "Troy Town," with its double refrain at the end of the first and fifth lines:

> "Heaven-born Helen, Sparta's Queen,
> (Oh, Troy Town!)
> Had two breasts of heavenly sheen,
> The sun and the moon of the heart's desire:
> All Love's lordship lay between.
> (Oh, Troy's down,
> Tall Troy's on fire!)"

His criticism is that the bracketed lines are not connected "in a rational way" with the rest of the verse, and that "Sollier remarks the peculiarity among persons of feeble intel-

lect." He might have remarked it in a song at the end of "Twelfth Night," Shakspere's favorite play:

> "When that I was and a little tiny boy,
> With hey, ho, the wind and the rain,
> A foolish thing was but a toy,
> For the rain it raineth every day."

Herr Nordau continues to quote: "'Idiots,' he says, 'insert words which have absolutely no connection with their object.'" There is a certain difference between "no rational connection" and "absolutely no connection." And further on: "'Among idiots constant repetition grows into a veritable *tic!*'" It seems hardly necessary to say that because certain idiots do this, that, and the other thing—walk, for instance—it does not follow that all who walk are idiots. It will hardly be believed that the scientific staple of the book is of this grade.

More than this, it is not only assumed that whoever acts like an idiot must be an idiot, but whoever writes like an idiot or paints like an idiot must be one. This is rather the more doubtful assumption of the two, and it underlies the whole book. Indeed, the relation between the author and his work is everywhere regarded as one of perfect simplicity. If Rossetti wrote a foolish poem (we are giving our author's opinion, not our own), Rossetti is at once set down as foolish; if Wagner wrote a libidinous opera, he must have been libidinous. In a sense, of course, this is true, but it is always necessary for Herr Nordau's argument that it be the whole truth; he infers immediately from the work that the author had no other or better powers than it displays. It would seem that the inference ought to be precisely the reverse. Whether or not an author have worse powers than appear in his work, he may have better. He cannot work above himself, but he may to any extent work beneath. Whether he did so or not can be told only from an intimate acquaintance with his life; and, indeed, any information about him that is to be relied upon—that is worthy of the name of scientific, which Herr Nordau claims for himself—must come from that side. Every book and every picture are no doubt bits of autobiography, but they are bits out of the context of the life as a whole, and they do not tell their own tale. It is skating on thin ice to conclude as unsuspectingly as Herr Nordau does from the statue to the statuary, from the novelist to the novel. It is breaking through to conclude insanity—in especial, when the life as a whole (which in such a case is the only rule approaching safety to go by) refutes it. Tried by anything except their published works, the artists of the present day will not, we imagine, appear to be less sane than their predecessors.

Herr Nordau at least has given us no reason to believe the contrary, and it is strange that with the knowledge he possesses of his subject he should have tried to do so. A large part of the literature of morbid psychology is devoted to insanity and genius, and there is scarcely a man of any eminence, from Socrates to Goethe and Napoleon, to go no further, that has not been given, on one ground or another, a place in both categories. It is not supposable that Herr Nordau is not acquainted with this literature, or does not put faith in it; it is of quite as high a character as what he relies on, and much of it is by the same men. But if the bulk of the leaders of the people have at all times been a little unsound, why treat the present situation as unusual? The anomaly would be for the *fin-de-siècle* poets to be sane. Herr Nordau seems to have left this portion of his science in repose. He has made up for it by his diligence in other directions. He has traced the peculiarly shattered condition of the nervous systems of modern artists and men of letters to the railroad and telephone and the pressure of modern life. If the preceding remarks are at all correct, he has here explained a fact which there is reason to believe does not exist.

It is fair to add that this book as a whole is full of entertaining facts that are not accessible to the general reader. It is written with great learning, and with a certain hard, unimaginative good sense. The reader may expect to find in it some reference to almost anything, from Jericho roses and Macaulay's New Zealander to indurating sections of the spinal cord, and treating them with neutrophyllic solution. It rejoices in citation beyond most books we know, and informs us in an illustration that we are inhabited by staphilo-coccus and strepto-coccus; and discusses the nature of the ego and of Hegelian idealism in an aside. If it fails of its purpose, the reason must be found in large measure in Herr Nordau's genuine aversion to any but scientific literature. Of all the authors that he mentions there is not one, we believe, that he praises except for the immediate purpose of heaping up contempt on some one else. He describes with enthusiasm (p. 543 of the translation) a time in the not far distant future when observation will have completed her triumph over imaginative and artistic symbolism, and art and literature will be extinct, and regards all witticism (p. 65) as the flightiness of an enfeebled mind.

"No witticism," he says, with the best faith in the world, "has ever made easier the discovery of any truth. And whoever has tried to hold a serious conversation with a quibbling person of weak mind will have recognized the impossibility of keeping him in check, of getting from him a logical conclusion, or of making him comprehend a fact or a causal connection. When presentations are connected, not merely according to auditory impressions of simple similarity of sound, but also according to the other laws of association, those juxtapositions of words are effected which the ignorant designate as 'original modes of expression,' and which confer upon their originator the reputation of a 'brilliant' conversationalist or author."

Then comes his invariable appeal to the idiots. "Sollier cites some characteristic examples of the 'original' modes of expression of imbeciles. One said to his comrade, 'You look like a piece of barley sugar put out to nurse.'"

The translator deserves great credit for his faithfulness in rendering the spirit of his author. The case was one of peculiar difficulty; the temptation must have been constant to soften down Herr Nordau's too exuberant phrase. As for faithfulness in the less important sense—the rendering of word for word—we have noticed no errors, but have not collated the translation with any large portion of the German text.

MYCENÆAN ART.

History of Art in Primitive Greece: Mycenian Art. From the French of Georges Perrot and Charles Chipiez. In two volumes. 8vo. London: Chapman & Hall; New York: A. C. Armstrong & Co.

At last the monumental work of MM. Perrot and Chipiez has reached the shores of Greece, and begun the study of its antiquities with the same exhaustiveness which has characterized their description of the arts of the older, Oriental nations. In their introduction to the book before us, they announce that three volumes of the French edition will be devoted to Greek art; which means six of the English translation. Surely it is both a courageous and a patient scholar who is willing to undertake a work upon this scale in the present rapidly developing state of our knowledge, when so much still remains to be learned, and we have in prospect the danger, if not the certainty, that the archæologists of the next generation will, with new materials, upset many of the favorite theories of this. Classical archæology is to-day probably the least exact of all the sciences. We have heard it defined as "the science of upsetting theories," and not undeservedly, since its knowledge has not yet outgrown the experimental stage. Much of what it accepts at present rests upon very flimsy foundations; and although its followers are constantly endeavoring to replace the weak materials by stronger ones, it is far from having attained its final structure yet.

The mere fact that Furtwängler, in his 'Masterpieces,' which was recently reviewed in these columns, has been able to show that there is another possible side to so many of the theories which have long been cherished as established, proves how far we are from the last word on the history of Greek art, and therefore how impossible it is that any book which aims to cover the whole subject should be of permanent value, at least so far as its conclusions are concerned. Indeed, Perrot and Chipiez's work itself offers proof of what we are saying; for, having been written before Dörpfeld's famous excavations at Troy in 1893, the bulk of what it says on the Trojan question is already antiquated, and this forms no inconsiderable portion of the book. We doubt, therefore, whether the time has come for such a work as the authors desire theirs to be, though none the less must we commend the thoroughness and diligence which have been brought to the task, and especially to M. Perrot's portion of it.

The volume on primitive Greece is arranged in the manner which is familiar to those who know the earlier volumes of the 'Histoire de l'Art dans l'Antiquité.' It begins with a long essay upon the country and the people, with their history down to the Doric invasion; after which follows what little there is to tell about the stone age in Greece. Then comes a detailed account of the remains of each of the centres of prehistoric civilization, such as Thera, Troy, Tiryns, Mycenæ, and the less important sites where tombs of that epoch have been found; and these in turn are followed by chapters on the architecture, sculpture, painting, and industrial arts of primitive Greece, with a summary of conclusions at the end. The illustrations are as numerous as in the earlier volumes of the series, and are, as a rule, of the same high quality.

While admiring the comprehensive character of M. Perrot's scholarship, and the suggestive manner in which he treats every subject that he discusses, it seems to us that the defects of the method upon which the History of Art has been planned become more apparent, and we had almost said more irksome, as it approaches familiar ground. Of the majority of the countries thus far included in the series, this has been the only complete and satisfactory manual we possessed, and whatever the authors were willing to give us was welcome; but with Greece the case is different, and we think it would have been wiser to assume that their readers either knew something of the subject or had easy access to such knowledge, unless the authors wished to put forth new theories regarding the topics described. This we do not find to have been done to any

extent, and, as a result, the present book suffers greatly from an appearance of padding. The introductory chapters, for example, tell nothing that has not already been told in a masterly style by Curtius, and in much less space. Indeed, they seem hardly more than an expansion of Curtius's description, with phrases substituted for words, at a corresponding loss of terseness and vividness. And of what use is it nowadays to go into a minute discussion of Lechevalier's theory of Burnabashi as the site of Troy? Yet, in the translation, twenty-five pages are occupied in controverting this and other theories, with a view to proving Hissarlik the most probable site; and after them ten more are devoted to Bötticher's hypothesis of the "Fire necropolis," only to show what most people who have looked into the subject already believe, namely, that it is not worth discussing. In the same way, lengthy descriptions are given to Tiryns, Mycenæ, and Troy, the greater part of which are rendered superfluous by the writings of Schliemann, Dörpfeld, and Schuchhardt, which are translated into both French and English, and to which we do not find that Perrot adds anything new. The need of filling a bulky volume on the first epoch of Greek art seems to have overbalanced all other considerations in the author's mind, and to have been the cause of introducing much matter which the reviewer, at least, would gladly have been spared. As to the general reader, he is fortunately not obliged to take more than he desires, and of this he will find enough to make the book well worth having.

As in the earlier volumes, we believe it is the second half of the book which will be found most interesting and serviceable. This is the first time that a full and comprehensive account of the "Island gems" has appeared in English, and both the description itself and the abundant illustrations accompanying it will make the book especially valuable to students who are seeking knowledge of this most interesting class of prehistoric antiquities. The same is true of the section on pottery, where the different styles of early Greek vases are brought together in a manner which makes a comparison of their points of resemblance and difference easy of comprehension. Although the materials for this study exist, in English, in the works of the writers we have referred to, and a few others, this is the first time they have been brought together in one book with equal fulness. The remains of the other industrial arts are described and illustrated no less satisfactorily, while the utmost possible is made of the scanty remnants of the sculpture of the period, even to the extent of including small terracotta idols, gold masks, reliefs on cups, and other objects which we should have expected to find classified among the smaller arts.

The fertile imagination of M. Chipiez has not the same opportunity it has had in some other volumes of the series, but full advantage has been taken of what there is, and as a result we have restorations of the "tomb of Atreus," both within and without, of the general aspects of Mycenæ and Tiryns, and of a Mycenæan palace, all of which would doubtless have surprised the contemporaries of Agamemnon quite as much as they do us. In his ability to make something out of nothing, and to carry restoration of details far beyond the reach of extant data, Canina is the only rival who has ever approached M. Perrot's collaborator. We must not omit mention of a chapter on the origin of Doric architecture, in which a new theory is put forward, based upon a resemblance which M. Chipiez finds between the fragments of an alabaster decoration from Tiryns, and the later combination of triglyphs and metopes on the Doric frieze. In this chapter no mention is made of Dörpfeld's masterly essay on the same subject, which the new theory is not likely to replace.

As to the translation, we find it difficult to speak without impatience of the ignorant, slovenly, and incompetent manner in which it has been done, contrasting most discreditably with the excellent work of Mr. Walter Armstrong in the earlier volumes. Even the cheap French novels, which are rushed through the press to outdo competing translators, receive better treatment, although in the present book the evidence points not so much to haste as to absolute inability to grapple with the English language, to say nothing of the translator's archæological qualifications. His familiarity with classical literature may be inferred from his spelling of classical names, such as that of Achilles, who appears consistently throughout the book as "Achylles"—except where he is referred to as "Peleide"—Eurymedon, who becomes "Euremedon," Dionysius of Halicarnassos, who retains his French name of "Denys"; or, to turn to geography, "Cape Tenerus," and "Phalarus," which it is hard to believe was meant for Phaleron. He has, moreover, an unaccountable predilection for the diphthong "æ," which turns up in the most unexpected places, and gives us "Rhætium" for Rhoeteum, "Præteus" for Proetus, "Træzen" for Troezene, "Alphæus," "Phenæus," and even "Ælis" (Elis), to select only a few of the many examples of its misuse. In cases where he might properly have used it, however, he frequently neglects his opportunity; and thus, instead of "Mycenæan" we have "Mycenian," both in the title and wherever else the word occurs. Hellas, in his hands, becomes easily a plural noun where occasion requires, as—"by her side were other Hellas" (i. 23), or "between these several Hellas" (i. 24); and we read that "the Thermopylæ were chosen as a meeting-place" (i. 97).

But the peculiarities of the translator are by no means confined to his classical knowledge. His use of plain, every-day English is no less extraordinary, and consequently we read of "the first essayals" of Greek artists; of a "retrocession in the march of progress"; of the hearth as "the ombilic, as it was styled by poets"; of places where "contacts productive of inestimable good had their being"; of earthenware which was not "cast on the wheel"; of "the Mycenian architect, like he of Orchomenos"; of designs "traced by an otiose graver"; and of the "more or less short handles or ears [of vases] which facilitated prehension." These are but a few flowers taken from a garden. Sometimes, in spite of them, the translation runs along with comparative smoothness for a few pages, until we suddenly find ourselves brought up with a sentence like this: "The most distinctive and essential peculiarity of the Greek nation, we may boldly affirm without seeming to ignore what has been attempted by others in this department, the action of all others more especially Hellas' own in forwarding ancient culture, is the foundation, the creation of the township or city" (p. 37). In the more technical portions of the book, and particularly in the chapters on architecture, the incompetency of the translator is most exasperating, as here he becomes almost unintelligible. His constant confusion of the words dome and cupola, and his use of "lining" where he means "facing," are characteristic examples. He speaks of the "stucco lining" of a gravestone, and the "lining" of an architrave, where he means the slab which covered it. The word projection does not seem to exist in his vocabulary, "salience" being his constant substitute for it. Thus a beam or moulding which projects heavily has a "strong salience," and a slight projection is interpreted as a "feeble salience." The effort of reading these chapters is increased by the fact that the etched plates are not numbered, although they are always referred to by numbers in the text; and the citations in the footnotes throughout the book are of the vaguest kind. References such as "Curtius, Hist. of Greece," or "Corpus Inscript. Græc.," without volume, page, or number, are not likely to be of much service to the reader.

In allowing a translation like this to leave their press, the publishers have treated both authors and readers with equal discourtesy. The high price of the book ought to be a guarantee of the best kind of work, and the class of readers for whom it is intended have a right to expect this; but such hack-work as has been applied to these two volumes, if continued through those which are to follow, will very seriously impair the value of what will undoubtedly be the most complete history of Greek art of our generation. To borrow a favorite phrase of the translator, "hence is explained why" we have dwelt upon its shortcomings with more detail than usual.

Half a Century with Judges and Lawyers. By Joseph A. Willard, Clerk of the Superior Court of Massachusetts. Boston: Houghton, Mifflin & Co. 1895.

HALF a century is a long stretch, but Mr. Willard's recollections go even further back, for he remembers Lafayette's visit to Cambridge in 1824. At that time he went to a school taught by Ralph Waldo Emerson, among others, and listened to the preaching of President Kirkland, Dr. Ware, and Rev. Abiel Holmes. Commencement day at Cambridge was then more democratic in its celebration than now, the streets being lined on both sides with candy-stands, and gambling, dice, and roulette-tables, while on the Common there were booths where fiddling and dancing went on, and learned horses and pigs were exhibited. The gamblers and roughs came out from Boston and fought and rioted for three days; but, lest we should boast of our superior refinement of manners, Mr. Willard adds that, "though football was played on the college grounds, there was no slugging and no broken limbs."

When he was a boy, Mr. Willard often went shooting in the Stoneham woods, never returning without half-a-dozen woodcock and as many partridges. Wild pigeons were so numerous around Cambridge that they were caught by hundreds with nets upon the marshes. Twice a day there was a stage between Cambridge and Boston, the fare being 25 cents, and Mr. Willard appears to have been on friendly terms with many stage-drivers, and to have early displayed a fondness for horses which he has always retained. He was fitted for Harvard, but, instead of entering, went to sea, and followed it for a number of years. He thinks Mr. Dana's 'Two Years Before the Mast' a little over-colored, for he made voyages up the Mediterranean and to the East Indies, and the crews in both instances were composed, with one exception, of members of good American families. With the exception of this foreigner every one of these sailors was a man of some education, and per-

fectly competent to navigate a ship to any part of the globe.

Mr. Willard's connection with the courts began in 1846, and has been continuous. By his birth he was placed upon an equality with the better class of practitioners at the bar, and by his capacity and fidelity to his duties he won general esteem. He has something to tell of nearly all the judges and lawyers of note in Boston for the last half-century, and something, too, of many of the humbler members of the bar. Some of his stories are old, and many of them are rather pointless, but not more than enough to make a pleasant neutral background for those that are really good. They are loosely strung together upon a slender historical thread, the constitution of the courts and the changes in their personnel being from time to time noted.

We quote in a random way a few of these anecdotes. Of Judge Shaw Mr. Webster said: "He can do the work of ten men, and at night eat ham enough to raise the market price in Cincinnati." He was rather terrible upon the bench, and his wit was not suggestive of the rapier. To a lawyer who had forgotten that he was retained in a case that was called, and who said that he really knew nothing about it, the Chief Justice replied: "I didn't suppose you knew anything about the case; I only asked you what you would have done with it." Judge Wilde had a lighter touch. He was trying a case when an attorney used some recondite word, and the judge said: "What is that word? I haven't heard it before." Counsel: "Please, your Honor, Mr. Webster has got out a new dictionary with ten thousand new words in it." Judge Wilde: "Mercy on us! I hope Choate won't get hold of it."

Of a certain judicial appointment which was offered, but declined, a nameless judge rather neatly said that better judgment was displayed by him who refused than by the one who made the offer. The late Sidney Bartlett was trying a case not long ago, in which the principal witness against him was a man sixty years old. In his closing argument Mr. Bartlett said: "I think your Honor should take Mr. B.'s testimony with some grains of allowance, as his memory seems to be affected by the inherent weakness of old age." Mr. Bartlett was then eighty-eight years of age. The late John S. Holmes is credited with some sharp sayings concerning judges. Being told upon the death of one of them that it was proposed to erect a monument to him, he observed that it ought to be a bas-relief. Speaking of candidates for a vacant seat on the Superior bench, he said that Judge —— ought to have it, as he had such an eminently judicial gait. Another judge was holding court, and the sun shone upon the back of his head. Holmes whispered to the clerk: "A beautiful illustration of Scripture—the light shineth upon the darkness and the darkness comprehendeth it not."

We could go on indefinitely with our quotations, but it would be hardly fair to Mr. Willard, and we will close our notice by repeating a very pretty compliment which was paid him in such a way as to justify him in including it in his repertory. Mr. George A. Torrey, in closing a case for the defendant, said:

"Now, gentlemen of the jury, you see that this writ is signed by my friend Mr. Willard, the clerk of this court. The *ad damnum*, as we call it, the amount claimed in this writ, is $5,000. There is a legend in this court-house that the jurors think Mr. Willard would not sign a paper summoning a defendant into court to answer unless he knew the plaintiff to be a respectable man and entitled to recover the amount sued for, and that Mr. Willard actually wants the plaintiff to recover what he asks. Now I wish to disabuse your minds of this. Mr. Willard signs all those writs, and we lawyers, when we issue one, put in what amount we choose, and Mr. Willard knows nothing of it."

Would that the clerks of all our courts might have characters that would make such legends concerning them credible.

A Book of Elizabethan Lyrics. Selected and edited by Felix E. Schelling, Professor of English in the University of Pennsylvania. [The Athenæum Press Series.] Boston: Ginn & Co.

Prof. Schelling's anthology of Elizabethan lyrics is made with excellent taste. The word Elizabethan, as was fitting, is construed in a broad sense, so as to include the half-century from the publication of 'The Paradise of Dainty Devises' (1576) to the death of Fletcher (1625). The word "lyric," too, has been liberally interpreted, but we find very little in the collection which could have been omitted without loss. Even "Farewell, ye gilded follies," doubtfully ascribed to Raleigh, who has fathered so many *adespota*, is in so characteristic an Elizabethan mood that it was certainly better to admit it by stretching the term "lyric" a little than to mutilate the volume by leaving it out. A great majority of the selections, however, are lyrical in the strictest acceptation. The great Elizabethans are amply represented, and, at the same time, much pains has apparently been taken to give due prominence to the lesser singers of the great song-writing age. The volumes of Bell, Bullen, and others have been of material assistance in this direction; but Prof. Schelling's collection is by no means a repetition of the work of any of his predecessors. It covers more ground, and has been prepared with greater care and a severer literary discrimination.

The texts are interpreted and illustrated by a body of scholarly notes. These, summing up as they do the results arrived at by former editors, and adding a great deal that is quite new, not only furnish everything that the student and the reader for pleasure can need, but will have to be consulted by all future investigators in this department of our literature. They are fully indexed, and there are also indexes of first lines and of authors and editors. The Introduction to the volume consists of two chapters, "The Elizabethan Lyric" and "Elizabethan Lyrical Measures," both well done. Prof. Schelling's monograph on Elizabethan verse-criticism, which appeared some years ago in the Publications of the University of Pennsylvania, may be read in connection with the second chapter. The Introduction is a welcome addition to the materials available for the critical and scientific study of English literature and English versification. The whole volume is creditable alike to the editor and to the series to which it belongs. Fully meeting the exigencies of the student, it is so arranged as at the same time to answer all the purposes of those readers who are in quest of intellectual enjoyment and find scholarly apparatus a bore.

Recollections of a Military Life. By General Sir John Adye, G.C.B., R.A. Macmillan. 8vo, pp. 382, with maps and illustrations.

This very attractive book gives an excellent means of comparing the life of a British officer with the experience of those who serve in other armies. No other military men in the world have so varied a career as English soldiers. This is well shown in General Adye's case. After a long and weary service in subaltern positions during the "long peace," he was assigned to duty in the military staff at Lord Raglan's headquarters at the beginning of the Crimean war. His personal narrative of that time is an excellent check on Kinglake's History, and gives many incidents, grave and gay, which lend life to the story of the siege of Sebastopol. Peace with Russia being made, he was sent to India and served both in the tropical southern region of Madras and in a lively mountain campaign on the Afghan border in the north. He has been successful in giving characteristic features of this service and an intelligent discussion of the Indian problem from his point of view. Returning home, he had a tour of duty at the Woolwich Artillery School and as Director of Artillery at the War Office, where he worked under Mr. Cardwell, then Minister for War, in the reformed organization of the army and its administration. After this, the troubles in Egypt arose, and he was sent out as chief of staff in General Wolseley's army.

Intellectually alert and physically active, General Adye profited by these opportunities to form opinions and to gather the fruits of experience, so that his comments on events and his discussions of policies are alike valuable. His style is plain and clear, without assumption or dogmatism, and we follow him sympathetically, finding him an instructive and persuasive guide in the history of affairs in which he played an important part.

He is a draughtsman of no mean ability, and his sketches in India ink are attractive illustrations of his story. Some of them, like the drawing of Lord Raglan's headquarters on the Chersonese, are of real historical interest; and others, like the outpost in Bootan, with the Himalayas in the background, have artistic merit. The book is altogether a welcome addition to the list of English works on military subjects.

Czar and Sultan. By Archibald Forbes. Scribners. 1894.

It is a pity that Mr. Archibald Forbes has chosen the above catch-penny and misleading title for his interesting book. The Sultan does not appear in it at all, the Czar in only two or three rather striking, if melodramatic scenes. The work is supposed to be the tale told to his nephews by a Scotchman who served in his youth as an assistant correspondent during the Russo-Turkish war. It is drawn largely from the writer's own exciting experiences, as well as from the accounts written at the time by himself and his friends of what they heard and witnessed. We are not quite sure whether it is meant for boys or not. If not, we could dispense with the pretence of a story with an introduction in the style of 'Lorna Doone,' and occasional little digressions into the family matters of the hero. On the other hand, thrilling as many pages are, others are over the head of the youthful reader. The geographical and strategical descriptions are by no means simple, and the whole book can be thoroughly appreciated only by one familiar with the general course of the war, likewise with the chief characters that took part in it.

Still, for both young and old lovers of battle-scenes, 'Czar and Sultan' contains much that is of interest. From first to last we feel the pleasure of a work whose author knows what he is describing and knows how to describe it. Scenes and characters stand out vividly before us. Again and again we are made to realize

what the war meant, the heroism of the Russian soldiers, the fearful and frequently unnecessary sufferings and privations they underwent, the incapacity of many of their leaders, the splendid fighting qualities of the Turks, etc., etc. It is hard to choose which one prefers from the numerous excellent passages. The one on page 68, too long to be quoted, conveys a most vivid impression of combat. The account of the September battle of Plevna is also a fine piece of writing, though not equal to MacGahan's description of the same events published in the *Daily News* correspondence, and from which an extract is taken. Mr. Forbes gives us frequent glimpses of Skobeleff, and some sort of an insight into the brilliant, if wayward, genius of the man, and the causes of his extraordinary success. Here is a sketch of him at first meeting:

"I thought then as a lad, as I have never ceased to think, that I never looked on a grander man. Over six feet in height, straight as a pine, the head carried high with a frank gallant fearlessness, square across the broad shoulders, deep in the chest, slender of waist, clean of flank, the muscular, graceful, supple figure set off to perfection by the white frock coat with the decorations and gold lace on it, Skobeleff, with his chivalrous bearing, looked a genial king of men. . . . No wonder that soldiers, friends, and women loved him! It was impossible to know him, to have him smile on you with that sweet, grave smile of his, and not to love him" (p. 16).

The portrait of Osman Pasha is less flattering and in contradiction to the opinion of his Russian captors:

"The officers of the staff of the Grand Duke Nicholas professed themselves struck with the power, energy, and determination disclosed in the features of Osman. 'It is a grand face; it more than fulfils my ideal of the man!' was the comment of Col. Gaillard, the French military attaché. Skobeleff was not less enthusiastic. 'It is the face,' he exclaimed, 'of a great soldier!' They may have been right. For my part, in Osman's lowering brow and heavy jowl I could discern no other expression than that of stolid, dogged resolution. To me there was no evidence of high intellect in the coarse, sullen features. It is true that there was a certain pathos in the dark, liquid eye, but as a whole I saw nothing distinctive in Osman's aspect. He was simply a Turk of the old unregenerate stamp—brave, merciless, and brutal, the type familiar to any who knows the Turkish race. He was a large-framed, thickset man, apparently of middle age—there was no streak of gray in the short thick black beard which covered the lower part of his face and but partly hid the thick sensual lips" (pp. 277-278).

There are many other passages which we should like to quote, and pages which could bear being repeated *in extenso*. They make the work well worth reading, even if the general effect is rather scrappy. The volume closes with a fine tribute to MacGahan.

Un Siècle de Modes Féminines. 1794–1894. Paris: G. Charpentier & E. Fasquelle.

Costume of Colonial Times. By Alice Morse Earle. Charles Scribner's Sons.

THE first of these two books is entertaining on account of an undeniable prettiness and vivacity which could have been imparted to it only in the vivacious capital from which it comes. It is impossible, nevertheless, in the literal sense of the word, to commend it to the notice of the gentle reader. For once in a way that highly apostrophized person, strictly considered as such, has been left out of account in the composition of a volume. A date, it is true, is here to be read at the foot of each florid page, but otherwise there exists not a vestige of the sort of printed matter that would ordinarily fill it. Instead, one, two, or several, as the case may be, lay feminine figures flaunt their costumes—or their partial lack of costumes, as the case may also be—on two hundred shiny cream-white surfaces, gay with the flounces and furbelows that the brief editors' preface announces in italics as printed exclusively "en couleurs." The impression that these pretty insipidities in crude polychrome will make on the beholder's eye is very much a question of the state of the beholder's mind. An unqualified admirer of the female sex—for a few such still survive—may very well wonder why, when women can make themselves as charming as they here occasionally appear in effigy, they should yet be perverse enough to disfigure themselves as they are oftener here also shown to do; while their stern censors, who are busy planting and watering reforms in this generation that the next may reap the increase, will easily find, on one page or another, texts ready made to their hands. A neutral observer could hardly put the volume to a better use than to let it serve as illustration to the probable and approximate garb of any of his favorite heroines of romance who may happen to have lived between the years 1794 and 1894. Whatever the point of view, however, from which it may be regarded, serious consideration need hardly be given it.

The other of the books named leans to the view—usually rejected by kindred volumes—that the apparel oft proclaims the man. If lovely woman has sometimes stooped to folly in the matter of clothes, she has had, in the past, a rival who has once in a while outstripped her in her excess of care for personal appearance. Much of the interest of Mrs. Earle's pages depends, in fact, upon the comparatively novel connection in which they present, gravely and seriously in their turn, names familiar in the grave and serious annals of the time they treat of. Even a judge, a governor, or a father of his country may unconsciously disclose some traits of elemental human nature in making his will, or in writing out an order for his tailor or his London haberdasher; and it is upon documents such as these, together with eighteenth-century newspapers and court records, that Mrs. Earle has drawn for her material. There are, accordingly, scattered through her pages, bits of familiar biography or glimpses of intimate domesticity wherewith to eke out personal acquaintance with colonial worthies, though such acquaintance, it should be noted, would have been greatly facilitated to any reader coveting it by the addition of an index of proper names.

The exact nature of the volume might with advantage, moreover, have been more clearly explained in the title. Upon examination its contents prove to be in the unsuspected form of a glossary. Forty pages are devoted to a "history" of colonial dress, while the remaining two hundred offer no consecutive reading longer than the six pages given to "wig," or the four or five given to "ring," "lace," or "hat." But the references provided are ample and interesting, and the definitions probably as complete as the vague and shifting nature of the material would permit. A verbal antiquarian might easily find additions to his store of curios in such terms as "liripipes," "orrice," "samare," or "sagathy"; and, as is suggested by the "foreword," portrayers of old colonial days, "not only in colors but in words," may be saved from anachronisms by consultation with a glossary such as this. Its transitions of subject need prove no obstacle even to continuous perusal with the class of persons of lively intellect who are able to find profitable and interesting reading in a page of the dictionary.

Europe, 1598–1715. By Henry Offley Wakeman, M.A., Fellow of All Souls College, Oxford. [Periods of European History.] Macmillan.

IN this volume Mr. Wakeman has provided not so much a history of the period as a running comment upon its main events and leading characters, presupposing the reader to possess already a fair knowledge of the facts. The style is vivacious and often polished, yet the excessive personification of nations and the tendency to epigram make its brilliancy at times seem too artificial. The most serious criticism we have to make on the book is its restriction to the field of international politics and dynastic rivalries; for, apart from the excellent brief sketch of the counter-Reformation and a page here and there on national finance, no attention is paid to the intellectual movements, industrial changes, and the development of commerce, or, at best, only enough to betray the limitations of the author's reading. For example: the *assiento* of the peace of Utrecht, as is well known, gave England the monopoly of supplying the Spanish-American colonies with negro slaves. Mr. Wakeman takes nearly twice as many words to explain it, and then leaves out the essential facts which to-day give color and interest to the transaction. He describes it "as the right to trade, under strict limitations, with certain towns in Spanish waters set apart for the purpose." This does not specify whether the towns were in Spain or America. The fact, as he states it, is of no more value to the modern student than any stray fragment of statistics. It is destitute of historical interest. The fact that has historical interest is that a breach was forced in the wall of Spanish colonial monopoly, and that not two centuries ago the exclusive right of supplying the Spanish colonies with slaves was secured by England as a diplomatic triumph, and with none of the moral reprobation which would have been visited upon it at any time during the last century. Mr. Wakeman has evidently paid no attention to the colonial interests of Europe, for he declares that, by the English Navigation Act of 1651, "the policy was first enunciated which was to govern the relations of the great maritime powers to their colonies for a century and a half—the policy, namely, which regarded colonies as mere feeders to the mother country" (p. 226).

When Mr. Wakeman states that the Pope's influence in the international politics of Europe ceased in 1648, the utterance is to be explained probably as an exaggeration; but what is to be said of the assertion on p. 2, that "the principal States of Europe at the present time are in all essentials absolute monarchies, and these monarchies are as absolute now as they were then [*i. e.*, 1789], with the two exceptions of Italy, which did not then exist, and France, which is now a republic, but has been everything in turn and nothing long"? We have, perhaps, given the defects of Mr. Wakeman's book undue prominence. Its literary merits will undoubtedly secure it an extensive reading; but as he has chosen to construct his work on old-fashioned conventional lines, and largely to ignore those phases of history which seem of especial importance to students to-day, it is inevitable that he should fail to interest them to the extent which might be expected from his powers as a writer.

Molluscs. By the Rev. A. H. Cooke; Brachiopods (Recent) by A. E. Shipley; Brachiopods (Fossil) by F. R. C. Reed. [The Cambridge Natural History, Vol. III.] Macmillan. 1895. 8vo, pp. xiv, 535, illustrated.

FROM popular series of works on natural history, which have so greatly multiplied of late years, expert readers have mostly ceased to expect anything more than a fair approximation to the usual principles of classification and a readable summary of facts long known to specialists. It is, therefore, an agreeable surprise to find in the present volume an account of the mollusks exhibiting real freshness and even some originality of treatment, and marked by a distinct endeavor to gather the most recent data. It is true that the work is done in the main on the old lines, and makes no pretensions to be a manual for experts, but Mr. Cooke has industriously gleaned from many sources the more recent additions to our knowledge of the habits and anatomy of mollusks, and has succeeded in preparing an account which offers to his readers a full and interesting description of all that most of them are likely to wish for in a work of this character. It would be easy to find points of detail affording opportunities for criticism, but, on the whole, the work has been well done. The geographical matters, in which English works are especially likely to show weakness, seem exceptionally accurate, though the author does canonize old Juan de Fuca without the assistance of the Church. Recent publications on the development of the brachiopods have made such a long step in advance that it is not surprising to find the classification of these animals adopted by Mr. Reed somewhat behind the times. There seems no good reason for separating the treatment of this group into two parts, recent and fossil, since, biologically, no line can be drawn between them. However, the more important facts known in regard to the embryology and anatomy of these animals are well stated by Mr. Shipley, and his general conclusions as to their relations are sensible and just.

The systematic part of both monographs suffers from the necessity of condensation and the endeavor to apply to general classification principles founded in some instances on a too slender morphological basis. But this is a defect which only time and more extended researches will enable naturalists to correct. For the present, the compilers have given us a very readable work, very nearly up to date, and it will doubtless have a wide and extended usefulness. The illustrations, though not especially well done, are largely new and original, and the book has an excellent index.

BOOKS OF THE WEEK.

Abrams, Albert. Transactions of the Antiseptic Club. E. B. Treat. $1.75.
Boissier, Gaston. L'Afrique Romaine: Promenades Archéologiques en Algérie et en Tunisie. Paris: Hachette; New York: Dyrsen & Pfeiffer.
Compton, Herbert. A Free Lance in a Far Land. Cassell. $1.
Dane, Daniel. Is She Not a Woman? Cassell. 50 cents.
Daudet, Alphonse. Fromont Junior and Risler Senior. Philadelphia: J. B. Lippincott Co. $2.
Everest, Rev. W. F. The Gift of the Keys, and Other Essays. London: Rivington, Percival & Co.
Forrest, Mrs. Dearest. Lovell, Coryell & Co. $1.
Garnett, Prof. J. M. Hayne's Speech. Maynard, Merrill & Co. 12 cents.
Hertza, Theodor. Entrückt in die Zukunft: Social-politischer Roman. Berlin: F. Dümmler; New York: Westermann.
Lavisse, Prof. Ernest, and Rambaud, Prof. Alfred. Histoire Générale, du IVe Siècle à nos jours. Tome V. Les Guerres de Religion. 1559-1648. Paris: A. Colin & Cie.
Meade, Mrs. L. T. Out of the Fashion. Cassell. 50 cents.
Miles, A. H. One Thousand and One Anecdotes. Whittaker. $1.50.
Optic, Oliver. In the Saddle. Boston: Lee & Shepard. $1.50.
Patterson, C. B. Beyond the Clouds. The Author. $1.
Patterson, Capt. Howard. Naval Dictionary. New York Nautical College. $1.
Romanes, G. J. Thoughts on Religion. Chicago: *Open Court* Publishing Co. $1.25.
Russell, W. H. The Great War with Russia. George Routledge & Sons.
Rutherfurd, Livingston. Family Records and Events. Dodd, Mead & Co. $12.
Sardou, Victorien. Gismonda. Street & Smith. 25 cents.
Scudder, Miss Vida D. The Life of the Spirit in the Modern English Poets. Boston: Houghton, Mifflin & Co. $1.75.

HENRY HOLT & CO.'S

NEW BOOKS IN SCIENCE AND PHILOSOPHY,

Descriptive Educational Catalogue, or New List of Books in General Literature free on application to 29 W. 23d St. Prices below are those to teachers.

McMURRICH'S INVERTEBRATE MORPHOLOGY.

vi+661 pp. $4.

"It is a pleasure and a relief at last to see a book of this kind, * * * a thoroughly first-class work, which we can conscientiously recommend to our University classes."—*C. O. Whitman, Professor in University of Chicago.*

"Takes rank at the head of all treatises on the subject intended for college use."—*Educational Review.*

KERNER & OLIVER'S NATURAL HISTORY OF PLANTS.

With 1,000 original cuts and 16 colored plates. Imperial 8vo, in 4 Parts. [*May.*]

An account, at once popular and thoroughly scientific, of vegetable life, of how plants obtain their food and build it up into tissue, of how they grow, adapt themselves to their environment, reproduce, and die.

MAC DOUGAL'S PHYSIOLOGY OF PLANTS.

Elementary Experiments. 8vo, 92 pp. [*May* 15.]

Simple experiments, giving a general view of the field, with a discussion of results.

SEDGEWICK & WILSON'S BIOLOGY.

American Science Series. Advanced Course. 8vo. *Second Edition, Revised and Enlarged.* [*August.*]

An introduction or accompaniment to zoölogy, botany, and physiology, not a substitute for them. Deals with the more general principles of morphology and physiology, based on thorough examination of a few typical forms. Illustrations specially drawn.

ZIMMERMAN'S BOTANICAL MICROTECHNIQUE.

Translated by J. ELLIS HUMPHREY, S.D. A handbook of methods for the preparation, staining, and microscopical investigation of vegetable tissues and products. 8vo, xii+296 pp., $2.50.

HERTWIG'S GENERAL ZOOLOGY.

Authorized Translation from first portion of Hertwig's *Lehrbuch der Zoölogie*, by Prof. G. W. FIELD. (*August.*)

A treatise for colleges comprising an historical sketch, a review of the general aspects of comparative anatomy, a statement of the doctrine of organic evolution, and chapters on the interrelations of animals and of plants and animals, and on zoölogical geography.

WILLIAMS' GEOLOGICAL BIOLOGY.

An introduction to the history of organisms, with special reference to the theory of evolutionary origin and the method of studying geological evidence bearing on it.

WOODHULL'S FIRST COURSE IN SCIENCE.

In New York Teachers' College Course. I. Book of Experiments, 93 pp. 8vo, paper, 50c. II. Text-Book. 12mo, cloth, 65c. III. Box of Apparatus. $1.50 *net.*

A brief, thorough, and practical course in light.

HALL'S FIRST LESSONS IN PHYSICS.

Quantitative Experiments for Pupils and Lecture Table. 12mo. viii.+120 pp. 65c.

Follows recommendations of Committee of Ten.

FALKENBERG'S HISTORY OF MODERN PHILOSOPHY,

From Nicolas of Cusa to 1893.

A comprehensive view, full and appreciative, in the portions on English and general nineteenth century philosophy, objective and free from bias.

PAULSEN'S INTRODUCTION TO PHILOSOPHY.

Authorized translation by Prof. FRANK THILLY. With preface by Prof. WM. JAMES. (*July.*)

Not a history of philosophy, but a beginner's guide to the study of the great problems of thought and the principal solutions proposed by the world's thinkers.

THE PHILOSOPHY OF SPINOZA.

As contained in the First, Second, and Fifth Parts of the "Ethics," and in Extracts from the Third and Fourth. Translated and edited by Professor GEORGE STUART FULLERTON. *Second Edition, Enlarged.* 12mo. vi+358 pp. $1.50.

THE PHILOSOPHY OF HUME

As contained in extracts from his "Treatise on Human Nature." Selected and Edited by HERBERT A. AIKINS, Professor in Western Reserve University. 12mo, 176 pp. $1.

A New Work on

Early Colonial Life.

Essays in American History.

By HENRY FERGUSON, M.A.

CONTENTS: Quakers in New England; The Witches; Sir Edmund Andros; The Loyalists, etc. 212 pages, 12mo, cloth, $1.25. (*Just published.*)

"These essays are judicial, and it will be long, if ever, ere their judgment is set aside."—*Dr. Wm. Stevens Perry, Bishop of Iowa.*

"We have in this book a good example of that cool, judicial temper which is so necessary in historians."—*The Critic, March* 23, '95.

Supplied by all booksellers, or by

JAMES POTT & CO.,

PUBLISHERS,

114 Fifth Avenue, N. Y.

GUILLERMO DOBLACHE'S "*Picarillo*" (natural, unsweetened, unfortified table sherry), bottled in Port St. Mary's, Spain, and shipped in cases of one dozen bottles each. For sale by PARK & TILFORD, New York, and all wine merchants. Send for price list.

YALE MIXTURE.

The choicest tobacco made, and pre-eminently a gentleman's smoke.

Marburg Bros., The American Tobacco Co., Successor, Baltimore, Md.

John Brown Among the Quakers, etc.

Including Black Hawk and Keokuk and Nauvoo and the Prophet. By I. B. RICHMAN, U. S. Consul-General to Switzerland. Price, $1.00. Hist. Dept. of Iowa. Address L. B. ABDILL, 520 Walnut St, Des Moines, Iowa.

"A valuable contribution to Western history."—FRANCIS PARKMAN.

"The thanks of the people of Iowa are due the Hist. Dept. for the publication of this excellent book."—*Burlington (Iowa) Hawkeye.*

The Nation.

NEW YORK, THURSDAY, MAY 2, 1895.

The Week.

THE decision of the Supreme Court to hear a reargument of the income-tax case before a full bench has given general satisfaction. The judgment of the 8th of April left the matter in an exceedingly unsatisfactory condition for the public and the Government, and in a by no means creditable one for the court. The passage of two judges from the negative to the affirmative side, in the middle of the judgment, without any explanation, was unfortunate in many ways. It may be right and proper that, when the court is equally divided, there should be no deliverance, but when two judges who have already passed and spoken on one part of an act take a different view of another part, but give no reason why, it makes poor laymen feel uncomfortable. Then the *stare decisis* doctrine, on which the Government took its stand so boldly, was not a pleasant one for the thinking portion of the American public. It was not agreeable to hear that an interpretation of the Constitution made four or five years after its adoption, in a totally different world from ours, was binding on all the judges a hundred or it might be two hundred years later. One of the great glories of Lord Mansfield is in having laid in England the foundations of commercial law; but suppose he had said that the fathers of English jurisprudence knew nothing about bills of exchange, or the custom of merchants, and that he therefore was not going to take any notice of them—how would he stand with this generation? And yet the Supreme Court has left us as regards the income tax very much where Englishmen would have been if Mansfield had said the only kind of property known to English law was real property. Our judges said one hundred years ago that land was the only source of income of which the Court would take notice. Since then new sources of income by the hundred have arisen, and a community of people, living by salaries, larger than the whole American nation in 1795, has come into existence. Surely we ought to be able to get the Court to explain to us what the Constitution has to say about salaries as income. Judge Miller's dictum, that a tax on salaries or professional incomes is "an excise," because the man who pays the excise can always charge it to his clients or employers, sounds very like the doctrine that the foreigner pays the customs duty; that is, what the men of the seventeenth century used to call "a merrie conceit."

It is hard to believe that a few weeks ago there were people in positions of influence in this country who were screaming for a war with Spain on account of the *Alliança* affair, and who could not even wait to hear whether Spain avowed or disavowed the act of the officer who fired the shot. Yet it is a fact, an amazing fact, that after Spain had disavowed the act and had promised investigation and reparation, a Senator of the United States expressed his regret that she had not refused satisfaction, and thereby given us an excuse for fighting her and seizing Cuba. The whole affair is now amicably settled. Spain finds that the commander of her gunboat exceeded his orders; she therefore disciplines him, disavows and apologizes for his unauthorized act, and promises that nothing of the kind shall occur again. Probably the only lasting mourner will be Senator Frye. As to the war correspondents, they can recoup themselves out of Nicaragua or Venezuela, and, when everything else fails, they can rely upon Mrs. Dominis, the ex-Queen of the Hawaiian Islands. The treasonable conduct of this woman in waving her handkerchief to the returning roadworkers has been somewhat obscured by the events at Corinto, but it is not too late to return to that subject.

We are often accused unwarrantably of throwing slights and disrepute on our own profession of "journalism," and denying its claims to human respect. But we ask any educated and intelligent man who would censure us to peruse the foreign articles of the *Tribune* on Nicaragua and Venezuela during the last two or three months. We do not think there is a more puzzling phenomenon in American society to-day than that the writer of the following (which we take from Sunday's issue) should actually be paid for it, and should be presented to the country as a professor of international law and public morals. Does not its appearance in a journal of old standing and the organ of a great party not only make journalism ridiculous, but make the American press contemptible in the eyes of instructed mankind?

> "There have been unpatriotic censors of American diplomatic methods who have strenuously objected to the active use made of the navy during recent years. They have been horrified by the preparations for coercing Chili after the Valparaiso outrage to the *Baltimore's* men, by the landing of marines at Honolulu, and by the concentration of a strong naval squadron in Rio de Janeiro. What would these querulous critics have said if the United States Government had assessed a bill of damages against a foreign state, demanded payment at sight, and sent a fleet to the chief port to enforce collection by seizure of the customs revenues? They would probably have characterized the performance as essentially piratical, and have condemned the outrage as a crime against civilization. England has no right in law or in morals to occupy foreign territory, to exercise sovereignty, and to seize revenues in payment of an indemnity levied ex parte on the 'stand-and-deliver' principle. Because England does this thing, and President Cleveland tolerates and sanctions it, these cavilling censors may be reconciled to it temporarily as one of the necessary details of imperial policy; but what a rub-a-dub of abuse there would be if the American navy were employed in that way!"

The writer of this is probably a young fellow who evidently not only has no knowledge either of the history of international law or of its rules, but has not heard of its existence. Had he done so, he would have been a little cautious in attacking the "unpatriotic censors" and giving his reasons. But he not only attacks them, but gives his own droll explanation of their error. He has not the least idea, any more than a French peasant or a Tennessee miner, of any difference between the Chilian or Honolulu case and the Nicaraguan case, and he lets it out with childlike simplicity. Now, these are the things which create popular contempt for journalism and make men ashamed to follow it as a calling. There is no calling like it in the indifference of its professors to excellence, accuracy, or improvement. In the legal, or medical, or clerical professions people try to employ the best men, the men who know, who can be trusted, who are accurate, who can predict; and this acts as a constant stimulus to all the members to do better, to be right, to be equipped for emergencies. In journalism any little man like this "young diplomatist" of the *Tribune* is picked up at a small salary, and allowed to pour forth column after column, month after month, of howling nonsense, displaying the crassest ignorance of his subject and the most shameless indifference to his own intellectual reputation, on the sole condition that he shall try to discredit somebody, or give pain to somebody, or make somebody besides himself ridiculous. What makes all this the more mysterious is that no metropolitan journal, certainly, has the smallest difficulty in getting competent men to discuss questions of international law. The cities and the colleges are full of them. They are passed by, and journalism made silly, by a desire to annoy the Administration and bring it into disrepute, not with intelligent people, but with fools and ignoramuses. In no other profession could men of any standing be got to degrade their own calling in this way, and that is why "the newspapers" are a good deal of a laughing-stock.

The Washington correspondents must be right a part of the time, as they contradict one day what they said the day before; and one of their stories, which has an air of verisimilitude about it, is that

Nicaragua would never have refused to pay England the $75,000 demanded had she not supposed that the United States would back her up in big-brotherly style. This gives us a hint of the hot water the squabbling Central and South Americans would keep us in all the while if the Monroe doctors had their way. Every time they felt like insulting a European power, every time one of their mushroom Presidents undertook to strengthen himself at home by doubling up his small-boy fist at big Great Britain, we should have to interfere to make the sacred soil of America a secure refuge for such antics. This possibility was clearly seen and pointed out by Calhoun in 1848, when he said of the theory of some of the Monroe doctrinaires of that day, that "it puts it in the power of other countries on this continent to make us a party to all their wars." When one considers the enormous aptitude of South Americans for war, and reflects how this would become practically infinite if they had to risk neither their own skins nor their own purses, it is clear that we shall have peace and comfort only when they are given clearly to understand that they must settle their own quarrels. If we have a protectorate over the half-civilized republics of Central America, we must be answerable for their conduct to foreigners and to each other. It follows logically that we must assume all pecuniary obligations which are made the basis of foreign claims against them. It would be much easier for us to pay $75,000 for Nicaragua than to go to war or even to go into a court of arbitration on her account. But think of the consequences of either paying or arbitrating for the half-breed governments of Central and South America. Money is what they all stand most in need of. Money is what they are always boiling with revolutions for. If Uncle Sam once becomes their paymaster, they will never be out of foreign difficulties as long as the world stands.

The attempt to commit the Democratic party of Illinois to the free coinage of silver a year in advance of the time for holding the State convention, is so obviously a cheat that the opponents of the policy have determined to split the party rather than submit to it. They have accordingly sent circulars throughout the State recommending Democrats to pay no attention to the call, and to treat the proposed convention as a bogus affair altogether. According to all party usages and rules, the platform of the last national convention governs the Democrats of Illinois and of every other State. Both this platform and the last one adopted by the Democrats of Illinois themselves are diametrically opposed to the free coinage of silver except by international agreement. Neither the one nor the other of these platforms can be overturned except by conventions called in the usual way and held at the usual time. The only effect of adopting extraordinary ways and times will be to disrupt a party which is in a minority now, and which will be battered out of all shape if this cheating policy is persisted in. The blatherskites and Populists who have secured a majority of the State committee, or rather a majority of a quorum, do not dare to take the chances of a campaign of education in their own party. They want to take advantage of a temporary craze produced by a combination of cunning lies and funny pictures called 'Coin's Financial School,' before there has been any opportunity to answer them. If they had any sense at all as party managers, they would be glad that a whole year intervenes before the regular time comes for holding the convention, so that public opinion may settle down to some solid basis of facts before platform-making becomes necessary.

Reports come from Chicago that the silver wing of the Illinois Democrats is "going over into the Populist camp." A basis for belief in this story is found in the announcement that the leader of the Populist party in Chicago will be sent in the delegation from his ward to the snap convention that has been called by the free-coinage men. It is to be hoped on every account that such a fusion will be carried through, and that all of the silver lunatics will thus get together in a single organization. The best thing that could possibly happen to the country would be to have all the people who believe in free coinage, whether they have been Republicans, Democrats, or Populists, get together on one side, and those who believe in sound money on the other. The movement for the snap Democratic convention in Illinois promises to hasten this result, and, while it may temporarily injure Democratic prospects, it will in the end prove a good thing all around to have the issue thus sharply made.

April 24 was a bad day for the 16-to-1 silverites. In the first place, the Iroquois Club of Chicago, which holds the same relation to the Democratic party there that the Manhattan Club does in New York, voted by more than two to one that the free coinage of silver "would be most unfortunate at this time, when signs of returning prosperity and renewed confidence are multiplying." The silverites tried to attach amendments of one kind or another to this resolution, but were regularly voted down. That was a very poor showing of practical results for Coin's Financial School, seeing that it was open all last year within a stone's throw of the clubhouse and had the attendance of the leading Iroquois. But this rebuff was not so bad as the one received at the Democratic conference at Des Moines, Ia., where a resolution was adopted declaring that "it is the sense of this conference that the two monetary metals should be kept at a parity." At this conference the 16-to-1 silverites wanted to hold an early State convention, in order to take advantage of the temporary flurry produced by "Coin's" picture-book. The conference, however, voted to put it off to August 7. In addition to these things, Congressman McCreary of Kentucky, who is a candidate for the Senate in opposition to Mr. Blackburn, declared himself unalterably opposed to free coinage, except as part of an international agreement, and Senator Brice of Ohio made a similar declaration.

The Waring episode has been very useful in bringing in information about the composition of the Grand Army, but there is very little of it which most people did not know already. The story which a well-known New Yorker tells in the *Evening Post* of 540 desertions out of 800 men in one regiment accounts for at least 540 of Waring's Grand Army assailants. We do not believe that any organization that has ever existed has done more to diffuse over a wide area, and among the plain people of the community, light views of the crimes of perjury and fraud and misrepresentation, when committed against the Government. It will take more than one generation to eliminate the pension poison from American morals. There is hardly a village in the land which does not contain two or three men who have lied about their careers and their ailments, and got others to lie on their behalf, for the purpose of extracting a paltry sum from the public treasury. The old theologians used to talk much of "national sins," but we doubt if, in the history of any country, a sin could be discovered more truly deserving the name of "national" than the pension fraud. Its guilt has been deepened, too, by the fact that it had its instigation or temptation in some of the noblest feelings of the human heart—love of country, gratitude to its defenders, tenderness for the memory of friends and relatives who had died in its cause. The deserters and bounty-jumpers and bummers who have traded on these emotions are very like the impostors who, on account of a lost purse, beg a dollar to enable them to reach the bedside of a dying mother. The funniest episode in their career is, undoubtedly, the demand made on Mayor Strong that he shall use the offices of the city government to protect them from criticism—that is, that he shall stop street-cleaning because somebody has called bummers bummers. The only protection to which these worthies are entitled is that afforded by the laws of the land and their own powers of vituperation.

The chief distinction of the Grand Army—one which nobody can deny it—is that of being the only political organization in history whose main object was the procuring of a cash dividend for each mem-

ber. Every other political party of which we have any record has professed in some manner to seek the happiness or profit of the community at large, and its own solely as a sharer in the general weal.. The Grand Army, however, makes no such pretensions. It says frankly that it will turn any party out of power, and any functionary out of office, who does not settle with it on the basis of monthly payments to each member "on the instalment plan." How this will affect the national credit or the public revenues, it says openly, it does not care in the least. It puts the country to ransom just as the condottieri did the small states of Italy in the Middle Ages. "We saved you," it says to us all; "now settle." We could, however, stand this impudence, but to ask that, besides paying, we must not inquire what we are paying for, or whether our captors were ever under fire in our behalf, is a little too much. We will pay, but we will not keep silent. We will not erect bounty-jumpers, deserters, skulkers, malingerers, and pension cheats into a sacred class of whom nobody must speak irreverently. They must take popular contempt along with their monthly "divvy."

It ought to surprise nobody to learn that civil-service reform is in peril at the hands of the Legislature, that not only is the bill which has been drafted to extend its operation in danger, but that the prospect is favorable for the passage of another bill which removes from the control of the civil-service regulations more than three-fourths of those now subject to them. This bill proposes to except from the operation of the rules "positions the compensation of which does not exceed $4 per day." An analysis shows that this would put back under the spoils system 67 per cent. of the places now subject to examination in this city, 85 per cent. in Brooklyn, and 86 per cent. in the State service; while most of the higher positions would also be affected, as these are generally filled by promotion from lower grades. Practically this would be about the same thing as repealing the civil-service law. The Republican majority in both houses is composed almost entirely of men who have no sympathy with reform of any kind, and who are out of all patience with a law which stands in the way of a "clean sweep" of all the offices and the filling of them with men who will not have to show any other qualification than political activity. The Governor can be depended upon to veto any bill nullifying the present law in part or in whole, but he is not likely to have influence enough to get the scope of the law extended. The literary men to whom is assigned the work of constructing the platform in the next Republican State convention will have a tremendous task on their hands when they come to treat of the work of this Legislature. The promises of last year's platform have all been broken, and a new lot will need to be invented which will not be so absurd on their face as to make the whole State laugh at the sight of them.

The passage of the Platt bi-partisan police bill by the Assembly was, as Mr. Pavey's speech showed, a genuine Platt victory. It was therefore a rebuke to the Committee of Seventy and a defiance to the "whole gang of reformers," for the real police-reform bills which these representatives of the city asked to have passed were not even considered. The bill which is now before the mayor for a hearing is in no sense a reform measure. It is, on the contrary, much more objectionable than the present law, for it engrafts upon our statutes for the first time, so far as police administration is concerned, the bi-partisan principle to which we owe all the police corruption, blackmail, and scandal of the past thirty years. Heretofore the principle has been put in operation without requirement of law. If this Platt bill be made law, its application will thenceforth be mandatory. The mayor will of course give a full and free hearing to all parties on this subject, and we have no doubt that the opponents of the bill will see to it that their side is well presented. It will be interesting to see who appears for the other side. Nobody advocated the bill at Albany save Platt and his personal agents. If there are other advocates of it, men who really represent sentiment in this city, they ought to appear before the mayor now.

Mr. Theodore Roosevelt has accepted Mayor Strong's offer of a police commissionership, and the city is to be congratulated on securing his services. He will be the best man in the Police Board since Thomas C. Acton and Joel B. Erhardt. After the departure of those men from office, the practice sprang up of appointing to the board seedy adventurers and professional politicians without any reputable business, men who had not been able to earn a living in any walk of life save that of politics. In selecting Mr. Roosevelt, and, before him, Col. Andrews, Mayor Strong has returned to the better practice of earlier days. Both these men have had no difficulty in obtaining positions and salaries on their merits. They meet what we have repeatedly urged should be the final test in all applications for public office, ability to show that private individuals or corporations have been willing to pay them salaries in reputable business. This test neither Murray, nor Kerwin, nor "Jimmy" Martin, nor "Johnny" McClave, nor Sheehan, nor any others of the long line of bi-partisans could meet. We are confident that with Messrs. Andrews and Roosevelt in the board, especially if the mayor is able to find two other equally fit men to work with them, a new era in police administration will be opened. Neither one of these men can be used for political purposes, and both are well qualified by experience and disposition to conduct the department in a manner most advantageous to the public—that is, intelligently and honestly.

Something ought to be done to the lawyers who abuse their office as members of the bar in trying to save criminals from the death sentence in this State. The appeals in Buchanan's case to the British Minister, to the Supreme Court in Washington, to federal judges for a habeas corpus, and then to the Supreme Court on appeal, are all really modes of advertising the counsellor. They are not meant to help the prisoner. The lawyer knows well they cannot help him, though they may be instrumental in getting money out of his friends. They are really ways of making the lawyer notorious, and they ought to be punished or repressed in some manner by the Supreme Court. A lawyer who "carries on" in this way, is what a quack is in the medical profession, and ought to be restrained of his liberty. Either he is too ignorant to practise at the bar, or he pretends to be ignorant for purposes of extortion. The subject is a good one for discussion at the Bar Association. These doings help to bring the administration of justice into greater and greater contempt, though, Heaven knows, the difficulty of getting a jury to try a corrupt policeman, as shown in McLaughlin's case, has already brought it pretty low in popular estimation.

The Democratic managers in Tennessee have done their best to turn over the State to the Republicans in next year's election. Last November, through Democratic indifference and disgust over the wretched behavior of a Democratic Congress, and after a vigorous Republican campaign, the Democratic Governor was defeated for reëlection by about 700 votes. If the plurality had been 700 the other way, nobody would have thought of disputing the result. But the Democrats controlled the new Legislature, and the managers resolved, in defiance of all precedent and without warrant from the Constitution, to throw out enough Republican votes to count in Gov. Turney for another term, allowing him to hold over while an investigation was made which should furnish some show of excuse for their course. The expected report has now been made by the legislative committee, and its acceptance is assured. The Democrats will thus avoid losing the governorship this time, but the indignation over the course adopted by the machine is so intense and widespread in the party that the Republicans will stand an excellent chance of carrying the State next year by a majority too large to be questioned. The counting-out game has been tried repeatedly in this country, both North and South, during the past twenty years, and there has never been a case when it did not react upon the party which resorted to it.

THE GRAND ARMY'S PROGRESS.

THERE has been a mighty thundering about the Grand Army in the past few days, but we have heard no still small voice asking, What are the facts? Pensioners and would-be pensioners, veterans with votes to sell, and legislators and would-be legislators eager to buy them, have been thrown into convulsions of noble rage at the mere hint that their organization stood for anything but the purest and most unselfish patriotism. To the question whether the Grand Army is what it professes to be, no one has risen to speak. Has it fallen away altogether from its original objects? Has it become a spoils-seeking, cash-hunting corporation, and ceased wholly to be an association for mutual benefit and the preservation of patriotic memories?

We are able to answer these questions out of the records of the Grand Army itself. A little volume has just been published by Fowler & Wells, called 'A Diary of the Grand Army of the Republic,' and in it are given the resolutions passed at the various encampments of the order from the beginning. Simply by following these along from year to year, one may trace the perversion of the Army to base ends, and out of its own official utterances show what a veritable rake's progress it has made.

The Grand Army was founded at Springfield, Ill., in the winter of 1865-'66, and its objects were then described as follows:

"(1.) To preserve and strengthen those kind and fraternal feelings which bind together the soldiers, sailors, and marines who united to suppress the late rebellion, and to perpetuate the history and memory of the dead.

"(2.) To assist such former comrades in arms as need help and protection, and to extend needful aid to the widows and orphans of those who have fallen.

"(3.) To maintain true allegiance to the United States of America, based upon a paramount respect for and fidelity to the national constitution and laws; to discountenance whatever tends to weaken loyalty, incites to insurrection, treason, and rebellion, or in any manner impairs the efficiency and permanency of our free institutions, and to encourage the spirit of universal liberty, equal rights and justice to all men."

Not a word here about pensions, not a word about offices. Mutual assistance and good citizenship were the end and aim. In fact, so late as 1884, we find that a collection was taken up for a comrade who had lost a leg in a railroad accident. This was proposed by "Comrade Tanner," presumably our old friend the "Corp," who certainly, in the light of his later theories, has a just claim on the Government for all that he himself contributed on the occasion.

But politicians outside and inside the Grand Army were not slow in finding out the possibility of exploiting "the soldier vote," and the soldier vote showed itself more and more willing to be exploited for a consideration. Trace the evolution of the idea, now become so harmful in our public service, that a veteran, no matter what his character or capacity, is entitled to the offices. Its beginnings appear in 1868, when Congress was urged to provide that "honorable service as a soldier or sailor should constitute a qualification for appointment." By 1881 the President was called upon to see to it that the laws which pliant Congress had by that time passed, giving the preference to honorably discharged soldiers and sailors, should be "strictly enforced." In 1883 the angry attention of the Army was fixed upon those "comrades holding official positions under the Government whose proper administration demanded a large force, but who employed very few comrades, and, in some cases, had turned them out to make room for civilians." Comrades unfortunately in the latter position were exhorted to "refuse to submit to such dictation" and to "hold the fort"—meaning the offices. The encampment of 1893 explicitly demanded laws "which would effectually guarantee a preference to veterans of the rebellion in public employment under the United States."

This growth of the mania for office did not go on without efforts to check it, nor without many plain words spoken in rebuke of it. In 1871 a resolution was passed declaring that "any comrade who endeavors to use the order as a political engine, for the purpose of gratifying any selfish political ambition, is recreant to his duty to his comrades." More than one of the early commanders-in-chief solemnly warned the Army of the evils and dangers upon which it was rushing. Gen. Devens, for example, said in 1875:

"It [the order] has no system of politics in which all cannot unite (whatever other differences they may have as to men or measures) who agree that what was done to maintain the Government was demanded by the highest consideration of patriotism and duty. Did it have any political objects in a narrow or individual sense; was it intended to elevate this man or party to power and place, or to prevent another from obtaining it, a proper and deep distrust would and ought to prevail in reference to it. No body of citizens, even if they have been soldiers, can be allowed to separate themselves in their political relations from the great body of their fellow-citizens and form a distinct class, without just ground of objection and complaint."

Compare these sober words of the Massachusetts soldier and orator with Gen. Collis's latter-day blast, telling how the Grand Army is now "devoting its energies to military education in the public schools," and is soon going to make itself "felt upon the subject of the immigration laws," with much else that the first leaders of the organization would have regarded as giving "just ground of objection and complaint."

It is in the matter of pensions, however, that the progressive sale of the Army to the devil—meaning the politicians—can most clearly be traced. At first nothing but "equalizing bounties" was asked for. A system of coöperative life insurance was discussed for two or three years in the period when self-help was thought of, but was never adopted. In 1871 it was "recommended that the provisions of the bounty law be extended to soldiers, sailors, and marines discharged by reason of disease contracted in the service." By 1874 the title began to rise, and there was a demand for "increased pensions." Soon came along "arrears of pensions," pensions for "survivors of rebel prisons" without proof of disability, "service pensions," "per-diem pensions," and all the other inventions to frighten and bribe politicians and wreck the Treasury. Nowhere was there recognition of the vast sums actually being paid out. When the nation's annual pension bill was leaping up from $28,000,000 to $64,000,000, thence to $106,000,000 and $158,000,000, the cry for new largesses was ever louder and more shameless. Even after the scandalous and wicked dependent-pension law of 1890, the Grand Army declared that this "would not satisfy the veterans." Nothing would satisfy them except an absolute turning over of the Treasury to their pillaging hands.

Such another record of progressive greed and dishonesty it would be hard to match. In fact, for ten years back the mask has been off the Grand Army. It used to have cooler heads, better advisers and leaders. The reckless pension intrigues were brought up year after year, but were regularly voted down. Soon, however, the minority became a majority, only to have to fight a still more reckless minority, which in turn captured the Army after a year or two of struggle. For at least ten years all pretence of saner counsels or self-restraint has been abandoned, and the more wild the scheme, the more unblushing the greed, the more eager and unconcealed the rallying of the Grand Army to its support.

These years of culminating shame have at last broken the prestige of the Army. Politicians of the baser sort may tremble at it still, the perfunctory frothing of the newspapers over it may go on at each new imagined insult, but the people as a whole, thousands and thousands of honest veterans themselves, are disgusted with it. Ten years ago a public official who spoke ill of it would have taken his life in his hands. Now he can smile at the yelping, for the rake's progress of the Grand Army has been too openly and disagreeably brought home to the American people to leave them much concern for an organization which has outlived its usefulness and its honor.

WHO ARE EXCLUDED.

Now that Col. Waring's spirited and sensible conduct is attracting public attention to the arrogant demands of the Grand Army for the veterans, it is well to point out what an entirely un-American principle of exclusiveness this body wishes to apply in filling and keeping filled all positions in the public service. In the first place, by making service in the civil war (one can hardly call it the "late" war after thirty years, although, apparently, the Grand Army has read no United States history since 1865) a prerequisite qualification, there is a depreciatory edict

uttered against all female service. Northern or Southern, native or foreign, old or young, no woman can be employed as long as there is a veteran claimant. This is a deliberate going backwards. One of the most striking incidents in the development of thirty years—but that, as we have said, the G. A. R. ignores—is the admission of women to multifarious employments of which the old law and practice knew nothing. There were times when the appearance of a woman in a department of the public service was sure to suggest dishonorable considerations; the institution of the classified service and competitive examinations has altered all that, and the extensive admission of women to work of all kinds suited to their constitution has been hailed by all sound patriots as a distinctly upward step in our national history. Yet the pressure of the "veterans" for preference in any and all cases, as establishing a paramount claim from which women are absolutely and physically excluded, tends to thrust them back to where they were before the war. It is declaring not that the aunts but the uncles shall have the prior claim with the rulers of our public service. Is the nation prepared to see this brand of inferiority set on its women?

Secondly, it is a deliberate exclusion of all men who are still in that period of life when their services are most likely to be useful. The war ended thirty years ago. It may be fairly estimated that the great majority of those who were mustered out in August, 1865, were over twenty-five years old. Really the line might be drawn at some years older with equity; but, for the sake of argument, and remembering that there were some very juvenile enlistments even to the last, let us say that the fifty-year limit will part the veterans from the rest of the nation in 1895. The "old soldier," therefore, declares that he is to be held, *ipso facto*, more competent for the public service than any one under fifty years old. One would think the mere statement of this principle of exclusion and preference was enough to cast ridicule on it. To say that the nation and the States and the cities shall solemnly announce that semi-centenarians are especially wanted in our public service, including positions of manual labor for which the women would not be competitors, is a little too absurd.

Thirdly, the veteran theory declares that, among men over fifty, any one who went to the war is more valuable for the public service than one who "stayed at home." This argument has been directly put in the last few days in the Legislature of Massachusetts. That is, when we are estimating the value of the probable services of those of our fellow-citizens who are in the decline of life, we are not to regard what they are proving themselves to be now, nor what they have proved themselves for thirty years past, but judge them solely by one short period—perhaps a few months or less in their career—when they belonged to the rising generation; that is to say, on a principle which cannot possibly give any indication of their fitness.

One eloquent defender of the rights of the veteran informed the Massachusetts Legislature "that when he enlisted in the war of the Rebellion, he was not asked to pass any civil service nor any snivel service." It is not probable that any one enlisting in an army would ever be called upon to pass a civil-service examination. But the very statement shows that in the heat of the war we accepted enlistments indiscriminately; and we are now reaping the fruit of that want of discrimination in the exhibitions that such veterans make of themselves. The use of a sneer that was antiquated ten years ago shows how little the "veteran" has kept up with the times, and is itself an argument against his arrogant demands.

It may be anticipated, however, that the Grand Army will make very light of our argument that women and younger men would be excluded. It has been more than once urged that as the veterans pass off the stage, their sons and daughters should have equal precedence with themselves — in other words, that we should establish an order of military nobility; that the sons and daughters of men who gained prominence in fighting should have the prior claim to public employment and public pay. If this is not reviving the system of William the Conqueror and Oliver Cromwell, it is hard to say what would be. Of course, a large number of those who press the cause of the veteran are careful to say that all they ask is that he shall be preferred if competent for the work. But what constitutes competency? Why, the fact that he was a veteran; and there they think the discussion ought to close.

THE SECRET OF DECLINING PRICES.

We thought that in time, in spite of 'Coin's Financial School,' somebody would rise up and attempt to account for the fall in the price of some particular commodity by advancing reasons disconnected with the silver question; and so it has proved. Unmindful of the "crime of 1873," and of the baleful influence which the repeal of the Sherman act is supposed to have exerted, the *Iron Age* publishes the statistics of one of the copper mines in the Lake Superior district, and affirms that the decrease in cost of production must be accounted for outside of any "appreciation of gold." A little table given is of much significance. Below is printed the product of copper in pounds of the Quincy mine, the yield, and the average cost for thirty years:

Year.	Product. Pounds ingot.	Yield per cubic fathom. Pounds copper.	Cost per pound Cents
1864	2,498,574	562	26.71
1870	2,497,500	528	14.90
1875	2,798,300	485	15.79
1878	2,868,500	397	14.01
1881	5,703,000	767	10.03
1885	5,848,530	710	7.50
1890	8,064,253	769	6.51
1894	15,484,014	584	5.68

It will be seen that the mine has not increased in average richness of ore, the yield per fathom being in 1894 about the same as in 1864; nevertheless the total output has increased seven times, while the cost of production per pound is but a fifth of what it was in 1864. Possibly it will be argued that wages have been cut down. The Quincy mine reports the average monthly wages earned by its miners under the contract system, so that the following table was easily compiled:

1870	$46 09	1879	$38 76
1871	47 08	1880	49 70
1872	60 62	1881	48 54
1873	62 92	1882	48 83
1874	48 38	1885	44 00
1875	46 74	1889	49 15
1876	47 13	1890	52 60
1877	43 79	1894	50 70
1878	41 50		

From this table it will be seen that wages in 1890 and 1894 were the highest since 1873. So the decrease in cost has not been at the expense of the laboring men. The true causes for this remarkable decline in the cost of mining copper are succinctly stated by the *Iron Age* thus:

> "The lowering in cost is, of course, due to a multiplicity of improvements in every department. We need only allude to the introduction of high explosives, the use of machine drilling, the employment of modern stamps for crushing the rock, the better methods of handling, the more economical engines for hoisting and pumping, the lowering of the cost of transporting the rock, the cheapening of the supplies, the reduction in smelting expenses and transportation to market, the lessening of cost of selling, and the distribution over a larger product of the general expenses and of outlays for administration."

"We cannot accept for this industry any claim that 'appreciation of gold' led to the steady decline," continues the *Iron Age;* "it was the ability to sell at lower prices, coupled with the necessity to do so brought about by vigorous competition from other great producing districts in all parts of the world, which brought about the lower level of prices."

It may also be recorded that the Quincy mine paid $400,000 in dividends in 1894. Since all concerned—the shareholders, the miners, and the consuming public—profited by the experience of this company during the last thirty years, it would seem that civilization had been advanced by so much. And thus another proof is added to the long list, that the decline in commodities is not due to an appreciation of gold, and that when accompanied by results like those in the Quincy case, even though forced through competition, such declines are blessings without disguise.

It is worth while to take a glance backward in order to see how the experience of the Quincy mine harmonizes with the experience of the world in general. Beginning in 1873 (the favorite starting-point of the silverites when they want to show how prices have been depressed by the

scarcity of gold), we find that the production of copper increased 97 per cent. in the next thirteen years, to 1885. This is according to Sauerbeck's tables. This increase was not confined to the United States alone. Spain, Portugal, Chili, and Germany had their share in it. It was during this period that the great copper mines of Montana were brought to light, while new discoveries in Arizona and in Canada added their quota to the world's product. This enormous output depressed copper to about one-half of its former price, and led to one of the most disastrous speculations on record. When the price had reached what was considered its lowest possible point, a syndicate in Paris, headed by a very rich man named Secretan, conceived the idea of buying up all the copper in the world's markets and contracting for the future supply. They began when copper was at £40 per ton in London and they carried the price up to £85 in a few months. This advance stimulated the production enormously. The syndicate was obliged to buy more than it had expected. To gain help it induced a large joint-stock company, the Société des Métaux, to join in the speculation. After these two concerns had taken all they could carry, they induced a great banking company, the Comptoir d'Escompte, to join them in "carrying copper." The output continued to increase till one fine day the Secretan syndicate, the Société des Métaux, and the Comptoir d'Escompte went down in a common ruin and the price of copper dropped to £35 per ton. Yet nobody thought of attributing the fall of copper to a scarcity of gold or to the demonetization of silver until the Secretan speculation had been generally forgotten.

THE NEW BULGARIA.

A STRANGE experiment in self-government was made when, seventeen years ago, the European powers created the principality of Bulgaria. The conditions seemed to render its success impossible. Two millions of peasants, suddenly freed from a five-century-long servitude, were started in national life with a ready-made constitution of which manhood suffrage and parliamentary government were the principal features. They were ignorant and without leaders. There was not among them even a family with a claim to rule. They had no army, though surrounded by hostile or jealous neighbors, and they chose for a ruler a young man of twenty-two, as inexperienced as themselves. It is true that the Bulgarians had a strong national spirit which the Turks had never been able to destroy. They were stanchly loyal to their church, and ardently attached to the land which they cultivated. Moreover, a singular desire for education had been aroused in them, mainly by the efforts of American missionaries.

Notwithstanding the encouragement which these facts undoubtedly gave, any intelligent student of history at that time would have been justified in predicting the speedy failure of the experiment, especially if he could have foreseen the events of the following years. Before the first decade of their national life had passed, these unarmed peasants were called upon to repel an unprovoked invasion. Their victorious leader was abducted like the heroine of a dime-novel, to be succeeded by one who apparently lacks all the best qualities of a ruler. The richest part of their country was nearly deserted by its inhabitants, who emigrated by the tens of thousands to Turkey. And the most insidious and determined enemy of their independence proved to be the Power which had liberated them from their bondage. In addition to all this, the state has been ruled from the beginning by a knot of self-taught officials, the most distinguished of whom was the son of a peasant. The people at large have been generally indifferent to, and have rarely availed themselves of, their constitutional rights, while plots, assassinations, intrigues, and corrupt elections have characterized their political history.

Under such circumstances it would have been remarkable had the Bulgarians merely maintained their independence and kept intact their constitutional liberties. They have done this and far more. Since 1886 their territory has been increased one-third by the rich province of East Rumelia, whose inhabitants preferred union with Bulgaria to the semi-independence granted by the Treaty of Berlin. Their finances have been so skilfully managed that, at the end of the first eleven years of their national life, their receipts had exceeded their expenditures by six and a quarter million dollars. In addition to meeting their ordinary expenses, they have equipped their army, paid for the war with Servia, built railways, established a national bank, and reduced their debt so that it now amounts to only a year and a half's revenue.

The increase of the national wealth is indicated by the fact that within six years they have added more than a million acres to their wheatfields, vineyards, and market-gardens; their annual imports have increased by more than $2,000,000, while their exports have more than doubled. The towns which, under the Turk, were falling to decay are being rebuilt with broad, well-paved streets, lined with offices, banks, barracks, and well-stocked shops. From one point of view, indeed, Bulgaria is to-day in an ideal position. Five-sevenths of her people are small farmers who own the ground which they till, and of the remainder a great proportion are landed proprietors. Every man, therefore, has a strong personal interest in the welfare and stability of the state. Then there are to be found in it neither the very rich nor the very poor. A recent traveller and competent observer, Mr. E. Dicey, says that in the three and a half million inhabitants there are not three hundred who have twenty-five thousand dollars. On the other hand, there is hardly a Bulgarian who depends absolutely and entirely for his livelihood upon his daily earnings, and who has not some small income of his own, derived from land or houses or cattle. Beggars, it is hardly necessary to add, are practically unknown.

This is confessedly the bright side of the picture. The peasant still lives in a rude hovel hardly fit for his cattle, and is content with a diet of bread, garlic, and water. He is burdened with debt for his land, and with the weight of the taxation, which falls almost wholly on the land, the Capitulations still being in force. To the thrift of the small farmer he joins his jealousy of foreign capitalists. Too poor himself to build the necessary roads, to exploit the mines, and to improve the harbors, he permits the great natural resources of his country to remain undeveloped because of his unwillingness to borrow money for these purposes. He is too ignorant to see the absolute necessity of strengthening the state and increasing its wealth and power. There is a grave danger, indeed, to which he is blind, that when the time comes for the Turk to leave Europe, Bulgaria will not be in a position to secure her rightful share of the empire. This condition of ignorance, however, it is to be hoped, will pass away with this generation, for the extraordinary desire for education—it might almost be termed a passion—which marked the last years of their bondage, still prevails. These peasants, whose average cost of living is four cents a day, who grudge every penny spent on internal improvements, are positively munificent in the support of their schools. The annual appropriation for public instruction by the Sobranye is nearly a tenth of the whole budget. Though this apparently includes the salaries of the clergy, it excludes the sums voted by the separate municipalities for educational purposes. In a country where no one, young or old, can afford to be idle, education is compulsory upon children between the ages of eight and twelve; and the cleanest cottage in the village, the handsomest building in the town, according to the testimony of a recent traveller, is the schoolhouse. But this munificence is not confined to the children of their own citizens. With a keen farsightedness, as well as a fraternal generosity, for which it cannot be praised too highly, the Sobranye in 1890 appropriated $600,000 for the support of Bulgarian schools in the Turkish province of Macedonia. Characteristic, too, of this enlightened spirit, which is the hope of Bulgaria to-day, is the fact that when Eastern Rumelia gave up its independent existence, the municipality of Philippopolis, the capital, changed the Parliament House into a public library.

It is impossible, of course, to foresee what time has in store for this strangely

interesting people. The folly or incapacity of their present leaders may bring disaster and the loss of their independence upon them. But to-day neither Greece, Rumania, nor Servia has the promise of this "peasant state."

A DEPUTATION AT HAWARDEN.

CHESTER, April 16, 1895.

ON the very threshold of England there is a spot where the traveller from America can rest, after a week of tossing by the ocean and of shaking by the mighty engines that force, against wind and wave, the iron shell in which he and its helpless tenants have been cooped. Liverpool, with its docks, its sailors, and its busy life, is too suggestive of the sea from which he has escaped. Here, in Chester, amidst Roman remains, mediæval walls, Tudor houses and shops, cathedral churches, and people who still bear the stamp of their Roman ancestry, the delight and relief of contrast to our American modernism, and to the noise, ceaseless motion, and crowding of steamer existence are inexpressibly refreshing. But within nine miles of the sleepy little town one of the most restless intellects of the human race seeks relief, in his garden and park, from the turmoil of political strife, and in his library at Hawarden has, in the investigation of almost every subject within the ken and beyond the ken of the human mind, found recreation from the harassing cares and embarrassing problems of public life.

Seeing from the papers that Mr. Gladstone was to receive on Easter Monday a deputation from Liberal clubs, of Leeds, Huddersfield, and elsewhere, we sought vainly in Chester for information regarding the event. We therefore took a train for Hawarden, hoping for some news there. The little village on the elevated southern bench overlooking the Dee is the shrine of the Gladstones, but, as is seldom the case with shrines, the most devout worshippers are the denizens of the holy place. Every cottage in the hamlet has a picture of the Grand Old Man and his guardian angel, Mrs. Gladstone, or of Mr. Gladstone offering his resignation of the premiership to the Queen, or of Mr. Gladstone and his descendants for two generations. We heard from a county constable that "The Deputation" was to present a case of books to Mr. Gladstone at the Hawarden Library. The library we found to be a temporary building of sheet-iron—the walls covered with books, and the intervening space so occupied by lateral bookcases as to allow scant passageway. The collection consists in the main of Mr. Gladstone's own books, and, as might be expected from the lifelong bias of his thoughts and studies, contains more than the usual proportion of theological works arranged as Anglican, Dissenting, and so on. It is the nucleus of a large library by which the great statesman hopes to be remembered in his beloved home, and therefore the Liberal clubs of these large manufacturing cities, composed chiefly of artisans, did a graceful act in presenting, with their verbal tribute of admiration, a case of books to their old leader.

Punctually, almost to the minute, Mr. and Mrs. Gladstone drove up to the library. His children and his grandchildren were already there, but the Deputation was not forthcoming. An amusing flutter pervaded the party. Scouts were sent out to stop passing vehicles, lest they might contain the Deputation gone astray. At length little Jenny came running from the post-office with a telegram, and the anxiety subsided, until the Deputation, which had missed a railroad connection, arrived in an omnibus. Fortunately their number was small, and therefore, as there was room in the very limited space round the stove in the library for us, though we were neither accredited correspondents nor delegates, we were courteously admitted. It seems almost like a breach of confidence to describe the scene, it was so private.

I had several times seen and heard the great orator in public since I first listened to his learned address on Medieval Universities when, as first Lord Rector of Edinburgh, he addressed its students nearly forty years ago. He had then just delivered one of his marvellously lucid budget speeches, as Chancellor of the Exchequer in Lord Derby's ministry, and he came almost straight from the House of Commons to talk to us as lucidly about the Middle Ages, its schools, and their system of teaching. At the election I had voted for Thomas Carlyle and against Mr. Gladstone, thinking it impossible that the member for Oxford, and one so deeply imbued with the English university system, could do justice to the peculiarities of our own. I little appreciated the amazing versatility and the elasticity of Mr. Gladstone's mind, or as little dreamt that the day would come when, as member for Midlothian, he would appeal to Scotland as against England for political support. He was then in the very prime of life. To-day he is a very old man—so old that it does not need his own assurance that not choice, but the infirmities of age—failing sight and loss of hearing—compel him to retire from active leadership. His face is furrowed with wrinkles like that of "La Liseuse" of Gerard Dow, his teeth have fallen out, his eyes are dimmer than of yore; but the magnificent masterful nose stands out more prominently and defiantly than ever. Nevertheless the fire of thought continues to burn brightly behind the withering features, which still respond to the emotions, though not as pliantly as of old, but as if with nervous effort. He walks and stands erect, but he had to ask of his audience permission to sit while he answered the set pieces which the delegates had carefully committed to memory, and which, considering the trying ordeal of addressing the greatest orator of this generation, they repeated with wonderful patness and presence of mind.

Beside him sat Mrs. Gladstone, younger, apparently, by many years than her husband, and around them stood their sturdy sons Herbert, M.P. for Leeds, and Henry; their daughter and son-in-law and grandchildren. It was as touching to watch the anxiety in Mrs. Gladstone's face before the old man began to speak, and how it gave place to relief and pleasure when he warmed up and showed his never-failing command of thoughts and power of expressing them, as it was to witness the extraordinary retention of mental power by Mr. Gladstone amidst waning physical strength. His speech was very impressively delivered. He left no room for doubting that he has retired for ever from active political life, and therefore he refrained from touching on any of the mooted questions of the day, domestic or foreign. But he gave his hearers good advice, which it is to be hoped they will follow, rather than the principles of the ultra-radical party under such leaders as Keir Hardie. These Socialist leaders advised their followers to subordinate all national questions to sectional issues, and, like the Irish members, to lend their aid to whichever party will pass their class measures, regardless of their influence on the community at large. Against such a spirit and such action, which unfortunately is too common, and is the most threatening danger on both sides of the Atlantic, Mr. Gladstone gave the following wise counsel:

"The whole body of the people, it may be said, is now put for the first time on its trial. The political history of the English people is highly creditable; but until lately they have had but little of the temptations which invariably attend the possession and exercise of power. The upper classes have been in the possession of power until recently in a very large degree. They have been in possession of it until within the last ten years—I mean the legal possession. They have not had an entire monopoly, but something more or less approaching a monopoly of it, and I think it is impossible for their most sanguine admirers to assert that they have always used it well. But if they have ever given way to the temptation to misuse and to forget the responsibility it entails, they have given way not to vices belonging to them exclusively, but to temptations which beset us all. It is the possession of power that in itself constitutes the temptation; and a most serious trial is now offered to the people of England—the majority of the people, who are in possession of a greater share of the political power of the country whenever they choose to exercise it, and who have now got to show whether their temperance, their moderation, and above all their preference of the general and national interest to interests which are sectional, is such as to show that they are altogether worthy of it. That trial is a trial which I most earnestly hope they will show they are able to bear with honor and advantage, and I have always reflected with great comfort that in one respect they have already shown a remarkable capacity for the exercise of power, and that is, in the characters of the men whom they have chosen to represent them in Parliament, who are called the Labor members, whose conduct has been admirable, and the choice of whom has been most creditable to those whom they represent and who have sent them to the House of Commons."

He then went on to talk about books, and the healthy recreation which workingmen derive from books of fiction, but only if the books themselves be healthy. He gave them a little homily on the harmony between science and religion, and ended by cordially inviting them, in his own and Mrs. Gladstone's name, to accept the hospitality of Hawarden.

The speech was as characteristic of the speaker in what was omitted as in what was said. That he should have been able to conceal, by even the remotest inference, what he thought on the burning questions of the moment, when he knew both sides were breathlessly waiting for his utterances, showed all the old self-control and astuteness. Also, though the flexibility of voice had gone, the wonderful power of weaving complex sentences is still intact. It was always a delight to listen to Mr. Gladstone's involved yet never, even unintentionally, misty periods, as he wove clause after clause, with the utmost deliberation, but never failed to complete his sentence and end with a word which formed the most appropriate climax. The old skill in marshalling his words is there still, but the music of the voice is gone.

As he told us, no statesman of England or Scotland has remained in harness so many years as he; and now, whether he wishes it or not, he must rest. But rest to Mr. Gladstone at eighty-five is harder work than most men are willing if able to endure. This was the second deputation which he had received and addressed that day. J. DOUGLAS.

THE IRISH LAND QUESTION.

DUBLIN, April 17, 1895.

THE Irish Land Question occupies, every year, no small part of the Parliamentary session,

The bills brought in year after year by Irish members are either contemptuously rejected, or passed over for want of time. This year, however, as a result of the report of a select committee of the House of Commons, the Government have brought in a bill and carried the second reading without a division being challenged. The opponents of the bill have so far contented themselves with threats that they will mutilate it in committee, and, if they consider it necessary, that they will have it rejected by the House of Lords. As introduced the bill is of the mildest possible character. It makes the period for revision of fair rents ten years instead of fifteen; it endeavors to give effect to the principle first laid down in the Land Law of 1881, that tenant farmers are not to be liable to rent in respect of improvements they have made; and it includes certain classes of farms that have hitherto been excluded from the benefits, such as they are, of the Land Law.

There are several reasons why an amendment of the present law is urgent The continuous fall in price of farm produce has made rents fixed ten years ago impossible. The administrators of the law, and the judges, have been drawn exclusively from the classes opposed by tradition, politics, and social circumstances to all reform and concessions to the tenant class. The decisions of the courts have resulted in the law being interpreted to mean the exact opposite of its plain grammatical intention in some cases, or in leaving it in a state of glorious uncertainty. A case recently decided by the Court of Appeal (the third court hearing the case) illustrates both the unfairness and uncertainty of the law as laid down by the judges. A short act in 1891 allowed certain leaseholders for long terms to have fair rents fixed under the law of 1881, which said that no rent was to be made payable by tenants in respect of their own improvements. The court of first instance held that the tenant of a small farm who had made valuable buildings and improvements on it, should pay rent only for the land as it was before the improvements were made. This decision was immediately reversed by the Land Commission, whose chairman is a judge of the High Court, receiving a salary of $17,500. The rent of the farm was raised from £11 to £18, and the principle was laid down that in these cases the tenant was to pay as the "fair rent" the full value of the premises, including all that he had spent himself. Thus the tenant had to pay twice over for any expenditure he made on his farm—first, in the original outlay, then in interest on this outlay to his landlord. The more he spent, the higher his rent would be.

Many other cases, similar in principle but involving larger values, were decided by the Land Commission in the same way; but no appeal was taken to the highest court, partly because of the great expense of such appeals, partly because it was supposed that the judge of the Land Commission knew, or ought to know, what the law was. The case first mentioned, however, reached the High Court of Appeal after two years, and the four judges who heard the case decided unanimously that the Land Commission judge was wrong, and that his decision would reduce the act of Parliament to rank absurdity. In a well-known English case Lord Justice Selwyn once said, "It is not the duty of a court of law to be astute to find out ways in which the object of an act of the Legislature may be defeated," yet this is just what the Irish land courts have been doing for fifteen years. This last decision of the High Court is attributed with much probability to the influence of public opinion, not to any purer interpretation of the law than had prevailed before.

Another illustration of the vacillating decisions of this court, or of the uncertainty of the law, is the case of what are called "town-parks," which are excluded from the fair rent provisions of the Land Law. These are lands not used for actual farming, which, to come within the statutory exclusion, must be situated "near a town or city." The court has been gradually extending the meaning of the term "town or city" from country villages of one thousand inhabitants until last year it laid down as the law that "any collection of houses" was a city or town. The lower courts readily took this to mean that the smallest rural hamlet, half-a dozen houses at a cross-roads, was a city, and that all land in the immediate vicinity of such places, though used as ordinary farming land, should be excluded from the Land Law. The present bill proposes to fix two thousand inhabitants as the rule for deciding what is a "town." Its object is to confirm the principles of the Land Law Act passed in 1881, which the decisions of the judges have reduced almost to a nullity, and to set at rest some uncertainties that were found in the entire patchwork code of the land laws.

Like every other proposal for reform, the bill is denounced by what the chief secretary termed an "irreconcilable junta" of landlords as confiscation, spoliation, and robbery. Though the principle of the bill has been admitted by its second reading without a division, opposition to all and every detail is threatened in committee. It seems, however, almost certain that the bill will pass successfully through the House of Commons, for nine-tenths of the Irish members are in favor of it, and a good many English Unionist members are likely to support them, recognizing both the justice of the proposals and the urgency of some reform. It is the rule with the House of Lords either to reject Irish bills brought in by the Liberal Government, or else by amendments to draw their fang teeth and defeat their objects. But on this occasion to reject or mangle the Land bill will be to drive the Conservative farmers into the home-rule camp, and justify the Nationalists in saying that no Irish reforms can be obtained from Parliament at Westminster, however urgent their need may be, and although they may be approved and demanded by nine-tenths of the Irish people. The Lords will therefore be in a dilemma: they must accept the Land bill, or give new life to and furnish fresh arguments for the home rule movement.

The bill is based on a principle the justice of which cannot be gainsaid, viz., that it is right as between individuals, and for the common good, that people should enjoy the fruits of their own expenditure, and that the small landowning class should not retain the right to appropriate to themselves all the value added to their estates by their tenants' outlay on works of permanent benefit and utility. The English mind has been at last convinced that what the landlord does in England in the way of equipping farms with buildings and all other works required for cultivation, the tenant does in Ireland, and that therefore the circumstances and incidents of farm tenure in the two countries are wholly dissimilar. The battle over the bill will be chiefly confined to the phraseology of the clauses which are meant to secure the tenant the benefit of his own outlay. Experience has shown that it is not so easy as it would seem to express in words that cannot and will not be misconstrued the plain intention, the admitted principle, that an Irish tenant is not to be mulcted in rent to his landlord for works and expenditure to which the landlord has never contributed a single farthing.

The partial famine and distress now existing in the west of Ireland forces the land question specially on the attention of the English Government. Every day that Parliament sits, the Chief Secretary for Ireland is bombarded with questions as to what he is doing for the distressed population in this or that western parish. Forty years ago John Bright said: "Large votes are annually required to keep the people quiet, and large votes are annually required to keep the people alive." It is very much the same case still, except that the people are fewer and the votes are proportionally smaller. Grants and loans of Irish money must be made nearly every year to keep the people alive and quiet, but the causes of pauperism and distress are not removed. If the population was superabundant when Bright spoke, it cannot be so now, when it is reduced by one-half. Where obvious causes of poverty and misery exist, it is absurd to attribute these evils to improbable and remote causes. High rents and absentee landlords who spend nothing on their estates are sufficient to account for most of the western poverty.

Not ten years ago the *Times's* correspondent, referring to absenteeism as a cause of poverty, wrote, "The western counties are the strongholds of absenteeism. In Mayo, for example, nine owners hold upwards of 20,000 acres each, and among them draw annually £100,000 from this poor western county." This would be quite one-third of the rental of the entire county of Mayo. The only expenditure on such estates is for agents, bailiffs, and poor-rates. The proprietors carry off one-third or one-quarter of the gross produce of the land, and no return comes back to the district except bundles of rent receipts. No services of any kind are rendered by the proprietors in return for the revenues they draw from their estates. Notwithstanding all the patching and tinkering of the land laws during the past forty years, it may still be said, in the words of Bright, that "a code of laws exists under which it is impossible for the land and the people to be brought together, and for industry to live in independence and comfort, instead of crawling to this House, as it does almost annually, to ask alms of the hard-working people of England."

Bright overlooked the fact that the alms and loans granted by the British Parliament come from funds supplied by Ireland to the imperial revenue. After the Union, overtaxation of Ireland led in sixteen years to her complete bankruptcy, and since the exchequers of the two countries were amalgamated, it is now admitted that Ireland's contribution to the imperial revenue has been at least twice as much as she should in justice have paid if she had been taxed with England in proportion to the means of the two countries.

AN IRISHMAN.

PASQUIER'S MEMOIRS.—XI.

PARIS, April 12, 1895.

THE sixth volume of the memoirs of Chancellor Pasquier has made its appearance. It covers the period extending from 1824 to 1830. I have been informed that it is the last to appear for the present. The Duke d'Audiffret-

Pasquier, who is the editor of the Memoirs, will give no publicity at this time to that part of them which relates to the reign of Louis Philippe, the Revolution of 1848, and the following years. This new volume of the 'History of My Time' derives its chief interest from the events which prepared the Revolution of 1830, and this Revolution itself. It opens with the death of Louis XVIII. The reign of this King had, on the whole, been a happy one; the prudent and shrewd old monarch had manœuvred artfully between the parties; he had preserved his dignity and the dignity of France before Europe. Pasquier gives curious details about the end of Louis XVIII.:

"He was not devout; in his youth he had, it was said, rather Voltairian views, though he kept up appearances. His political situation during the emigration forced him to manifest much regard for the priests, of whom so large a number had remained faithful to his cause. . . . He fulfilled all his religious duties; he went to church whenever his health allowed him to do so. . . . In his latter years the nature of his relation with Madam du Cayla was not such as to encourage in him very serious religious sentiments. When his last moment approached, he expressed no desire to receive any religious help; nobody knew how to approach him on the subject. It would have been a great presumption on the part of the Duchess d'Angoulême to do so. It was thought that Madam du Cayla alone, thanks to the influence she had acquired over him, could touch so delicate a chord. She accepted the mission and succeeded. The King saw a priest on the morning of September 13; he received the Communion and the last sacrament. He was fully conscious. The great almoner did not perform the ceremony well; the King corrected him with a strong and almost angry voice, telling him what he had to do. This service rendered by Madam du Cayla explains the position which she maintained at court, and how the Duchess d'Angoulême not only tolerated her, but even showed her a certain kindness."

It must be understood that Madam du Cayla (so, at least, I have always heard) was not the mistress of the old and invalid King; she was merely a favorite, a *persona gratissima*, with whom he liked to talk very freely, and who charmed him by her grace, her *esprit*, and her manners. The relation was very innocent; it nevertheless created much jealousy and envy in the court circle.

Louis XVIII. died on September 16, 1824; his successor was very different from him in every respect—narrow-minded, the very type of those émigrés of whom it was said that they had learned nothing and forgotten nothing. Louis XVIII, infirm, unable to appear on horseback, dragging himself with difficulty from one room to another, was nevertheless very imposing. He had much *esprit* and a wonderful memory. Strangely enough, coming after the most active ruler and captain who ever existed, Louis XVIII. was adopted and accepted by all the marshals and generals; he could speak to them in flattering terms of their campaigns and their services. He had been a liberal from the first days of the Revolution; he understood the necessities of his time, and he was a sincere partisan of parliamentary government. He had all the more merit because he found no support or echo in his own family. His brother, the new King, was good-natured, generous, but very unintelligent, politically speaking. He was born a century too late, and entirely misunderstood the aspirations and the necessities of France, entirely transformed by new legislation and new administrative methods. He had become the tool of what was then called the "Congregation," of the militant church party, headed by the Jesuits, and believed sincerely that his mission consisted in undoing all the work of the Revolution, and in bringing the French monarchy back to the times when Bossuet wrote 'La Politique tirée de l'Écriture Sainte.'

The short history of the reign of Charles X. was a perpetual conflict with public opinion and with the Chamber. He finally confided the premiership of his Cabinet to M. de Polignac, who prepared the famous Ordonnances which suppressed the liberty of the press, dissolved the Chamber, and restricted the suffrage. The secret was well guarded; it is the belief of M. Pasquier that nobody had any knowledge of the impending *coup d'état* except a financier named Ouvrard and a fanatical pamphleteer named Rubichon. This man could have had a revelation only from the Jesuits. Two months before the publication of the Ordonnances some Jesuits advised Von Werther, the Prussian Minister in Paris, that something was preparing. "Von Werther told me so," says Pasquier, "a month after the Revolution of July." Rubichon owed some money to M. Greffulhe; "he thought he would acquit himself by giving him good advice. On Thursday, the 21st, he said to him: 'Believe me, the Government is going to strike a great blow next week; look out for yourself accordingly.'" Rothschild, who had much to do with the Treasury, knew nothing and was in complete security, as were all the members of the diplomatic corps.

The Ordonnances were signed by Charles X. on Sunday, after mass, at Saint-Cloud. They appeared the next day in the *Moniteur;* in Paris there was general stupefaction. The King started early for Rambouillet, and, after a day's hunting, returned to Saint-Cloud only in the evening. Paris was early in a great fermentation, and the command of all the troops in Paris was given to Marshal Marmont, Duke of Ragusa. The blindness of the King and of the Cabinet was such that no military precautions of any sort had been taken, and no forces were marching on the capital. Polignac felt sure that there would be no serious trouble. Here is the account of an eyewitness of the evening of July 28 in the drawing-room at Saint-Cloud, which Pasquier relates *in extenso:*

"Arrived at Saint-Cloud between nine and eleven, it is impossible to describe my feelings in the court of the château. It was lighted as usual; not a guard more or less; the windows of the drawing-room open; a few persons coming on the balcony, listening, and retiring without any hurry in their walk, like people who come to breathe the cool of the evening after a burning day. The report of guns, however, was incessantly heard in the direction of Paris. What do I say? They became more distinct, and at times there was mixed up with them the lugubrious sound of the tocsin. I stopped a moment under the peristyle of the palace. Valets were sprawling on the benches, talking carelessly of the fighting in Paris. 'They are firing again! Hark! hear the bells. The people are about to march on Paris.' All this said with that tone of affected indifference which is learned with such perfection only in the atmosphere that envelops a court. From the anteroom I entered the *salon de service*, where I found an officer of the guard who told me all he knew of Paris, and he was well informed. 'And the King,' said I; 'what is he doing?' 'He is playing whist.' 'And the Dauphin?' 'He is at his game of chess.' 'What! not an order given round this palace, not a precaution?' 'Nothing, absolutely nothing.' I then decided to enter the drawing-room. I advanced slowly near the King, and I clearly perceived in his eye that any new-comer not in his intimate confidence annoyed him sensibly; not a word issued from his lips, except on the subject of the game. The Dauphin seemed quite as attached to his game of chess. . . . I felt the need of air, and I approached a window with one of the King's attendants. We listened together; a window still shut was from time to time shaken by the noise of the distant firing. This noise seemed to astonish nobody; not a question, not a mark of uneasiness. I approached the Dauphin; he gave me a nod of the head without saying a word. After a few moments I could not bear it any longer and left the room. When once I had joined, in another room, a few devoted and despairing friends, I recognized that the horrible truth was very clear to them, that none of them doubted that a terrible catastrophe was near. The news arrived secretly from moment to moment, always more alarming, but did not go further than the door of the royal drawing-room. The Duke of Duras entered, went out, moved uneasily near us, but when he approached the whist-table he was again silent."

As Pasquier says, such a picture, which he had from a person worthy of all confidence, cannot be invented. The commander of the military school of Saint-Cyr was at the moment the Count de Broglie. He came the next day to receive the King's orders and offer the service of the military pupils. He was very uneasy, and showed his uneasiness; the King finally said to him: "Well, my dear Count, I see that I must tell you all. Well, Polignac again had apparitions last night which promised him assistance, told him to persevere, and assured him a full victory." The Count de Broglie was so stupefied that he could not find a word to say. He met somebody after this interview, to whom he merely remarked, "All is lost." Polignac and his royal master had fallen into the most extraordinary religious mysticism; Polignac had real hallucinations and the King believed in their reality.

Pasquier gives with minute details an account of a mission of the Duke de Mortemart, who was charged at the last moment with making an arrangement with the leaders of the resistance to the Ordonnances, and with forming a new Cabinet. It was already too late; Paris was covered with barricades, a revolutionary government had taken possession of the Hôtel de Ville; Lafayette, Laffitte, and their friends were the masters of the situation. Unfettered in his movements, M. Laffitte was following out his designs. He had always had under his patronage a certain number of papers; he sent to them his instructions. The writers of the *National*, MM. Thiers and Mignet, had been, from the foundation of the paper, favorable to the Duke d'Orléans. They gave the signal, which was answered by the writers of the *Constitutionnel*, the *Journal du Commerce*, and the *Courrier*. The Deputies had been summoned to the Chamber. "They arrived in the room where the sittings took place; the talk at first was embarrassed; some spoke of M. de Mortemart, of proposals of which he was the bearer; others put forward the names of the Duke d'Orléans, of the Dauphin, even the name of Henri V. with a Regency, which might procure some advantages for the establishment of the constitutional Government. On the whole, the great majority was for the family of Charles X. Even those who were most opposed to him have since acknowledged it." Laffitte assumed the presidency of the Deputies, of whom there were not more than sixty. The country, he said, needed guidance. He was afraid of the proclamation of the Republic by the men who had fought at the barricades. He proposed that the Duke d'Orléans should be appointed Lieutenant-General of the kingdom, and that the tricolor flag should replace the white flag. A deputation was sent to the Duke d'Orléans with this important resolution. "I was passing," says Pasquier, "the corner of the Rue de Rivoli and the Rue Saint-Florentin. M. de Talleyrand, who was behind the curtain at the

entresol, knocked on the window and made me a sign to come up. I found him in a great state of excitement. He spoke at once of the Duke d'Orléans. 'They are going,' said he, 'to use him, and put him forward. He can play a fine and great rôle; but will he understand the situation? Will he know that above all he must negotiate?'" He evidently wished to be the negotiator; he would not hear of the Duke d'Orléans accepting the title of Lieutenant-General — Commander of Paris was enough; he had written in this sense a letter to Mme. Adelaide, the King's sister, which he showed to Pasquier and sent to Neuilly.

Charles X. remained inert at Saint-Cloud. When this untenable position was threatened, he retired to Rambouillet. Versailles was already in insurrection, as well as Saint-Germain. The Duke d'Orléans received at the Palais Royal the committee of the Deputies, who offered him the dignity and power of lieutenant-general. He did not think at that moment of a higher title. He had not conspired against the Restoration, though he had disapproved its policy. In revolutionary times minutes become hours and hours become days. Louis-Philippe had soon to choose between the proclamation of a republic, which certainly would have sent him as well as his family into exile, and the acceptance not of a mere general lieutenancy, but of the crown. He was to be a king or to follow Charles X. into exile. It is not difficult to imagine through what mental struggles he had to pass during those eventful days which followed the departure of Charles X. from Saint-Cloud to Rambouillet. Once he had made his choice, he did not hesitate. He went in person to the Hôtel de Ville, through the barricades, accompanied by Laffitte, Benjamin Constant, and a few Deputies. He found Lafayette on the steps, who embraced him. He was not yet King, but a barrier had now been thrown between him and Charles X. which nothing could remove. Charles X. had ceased to reign, and Lafayette had proclaimed that Louis Philippe was "the best of republics." Pasquier's chapters on all these events, and on the beginnings of the new monarchy, possess a thrilling interest.

Correspondence.

THE DECADENCE OF THE GRAND ARMY.

To the Editor of The Nation:

Sir: I do not wish to traverse so much the truth as the justice of what is said in the *Nation* of April 25 about the Grand Army. So far back as 1867 it was neither unnatural nor uncommendable that men who had then but lately passed out of the military life, should wish to found some sort of a civic organization by means of which they could still hold together and live again, in a kind of fashion, their interesting past. At that time, too, the motto chosen, "Fraternity, Charity, and Loyalty," had, in each of its members, a real meaning. And if your space permitted, I think I could demonstrate that the qualification for membership was not too broadly based in making honorable service in the Union army or navy, in any capacity or for any length of time, the test of eligibility, and leaving it to the official record, as contained in the War or Navy Department, to decide, in any case, whether the requirement of honorable service had been met.

My experience with the Grand Army dates back to 1870, by which time the politicians had fixed their attention upon the organization, and had begun to see what could be made out of it in the way of party and personal advantage to themselves. This exploitation of the Grand Army for purposes foreign to it brought it to the verge of a dissolution from which it was saved by the exertions of men who loved the organization for its own and its true self.

As to the pension abuses, such as they may be, they began with the Arrears act which President Hayes weakly signed against the strong opposition of Senator Sherman, then the most prominent member of his Cabinet. This the President did, not for the Grand Army or because of the Grand Army, but because the Democratic and Republican parties were running a neck-and-neck race for the "soldier vote"; a very small part of that vote being enrolled in the Grand Army. It was the Arrears act that opened the flood-gates, and I have some particular reasons for believing that those who passed the act, and those who were connected in every degree with its approval, had a tolerably fair appreciation of the consequences; but when ever was an enduring public interest allowed to stand in the way of a present political advantage, when politicians saw the advantage, and saw also that, if a recoil came, they could evade the responsibilities for their party and themselves? I submit that if you will bring your censure of the pension laws and administration, of the last fifteen years or so, to the test of reason, you will lay the blame not on the Grand Army, but on that bad working of our political system that throws the public offices and the powers of Government into the least worthy and capable hands, and leaves the better people to indifference or despair, except when they rise in revolt against some abuse that has grown too scandalous or oppressive to be borne. If the pension allowances ever reach the unbearable stage, they, too, will be overthrown in the usual manner, the just and unjust suffering alike.

Meanwhile, the readers of the *Nation* might like to hear from the lips of an honest and efficient official of the Pension Bureau how the system works. He said to me a few days ago: "Under Gen. Raum a feeling pervaded the office that our business was to allow pensions in every case where an excuse could be made for allowance, while under Judge Lochren the feeling is that pensions must be disallowed if possible; so that we are now rejecting meritorious cases where formerly we allowed those without merit."

I am one of the Grand Army men who believe that the pension roll and the list of pension applications could and should be overhauled, so as to remove the unworthy and let in the worthy. But to ask the Grand Army of the Republic to lift itself higher than other people or other organizations is asking too much of human nature. The "old soldier" has had it dinged into him for nearly twenty years past that his fair "salvage" for rescuing the country from shipwreck is vastly more than his wildest dreams of pensions and places, and if you want him to "let up on his unfortunate country," you must have a propaganda to enlighten him, as you are now preparing to enlighten those affected with the silver craze. And if you will stop to consider that those who darken counsel are our national governors, may you not conclude that a reform Congress, if it could be effected, would save the people so much that $160,000,000 for pensions would not be worth talking about with the same breath?

The Grand Army is composed of elderly men. If they have been overpastured by your politicians, make your politicians dispasture them, and don't scold or rail at them for acting just as nine-tenths of the readers of the *Nation* would act in their place. If they have fallen below the average morality or patriotism of the nation, their condition is more likely to be aggravated than amended by such hot and sweeping words as those of Col. Waring, who, I hope, will stay in office long enough to show what municipal government is on the anti-Tammany plan. C. F. B.

Washington, D. C., April 27, 1895.

MANUAL TRAINING VERSUS MILITARY DRILL.

To the Editor of The Nation:

Sir: An editorial in the *Nation* of April 11 on the subject of compulsory military drill in the public schools strikes a responsive chord in the hearts of all those who feel, with you, that the precious opportunity offered to those schools should indeed be used more effectively for "instruction in good manners, in the arts and love of peace, and in ambition to make the country decent and habitable instead of feared." With this thought in mind, some of us are taking comfort and hope in an awakened and critical interest in the possibilities of manual training as a moral and civilizing influence in these schools.

Dr. Hanford Henderson, however (principal of the Northeast Manual Training School of Philadelphia), in two timely articles in the *Popular Science Monthly* (November, 1894, and April, 1895), calls attention to the need of more *educational methods* in manual training, which, he says, is to-day "entering a new phase, and enlarging into a kingdom" "through the recognition of its psychological import." Dr. Henderson, who is a profound student of his subject, states his belief that manual training, *with adequate means*, should lead "inexorably to health, vitality, integrity, goodness, and happiness," and he regards it as "the herald of a coming education." Dr. Henderson, however, recognizes the fact that the possibilities of this hopeful factor in education "are merely foreshadowed in our present clumsy exercises."

Some of your readers will perhaps be interested to know that an effort is being made to improve upon the methods of the past, in Boston, where a course of manual training (with tools) is being worked out, whose exercises are based upon a "recognition of their psychological" as well as their physiological and ethical import. An opportunity for the study of these methods, as well as of the general problem of manual training, is offered in free training classes for teachers, now being carried on in Boston by Mrs. Quincy A. Shaw. Those interested in the practical value of this work would do well to visit the Massachusetts State reformatory at Concord, whose officers testify that the moral influence of this training of boys has never been equalled by any methods known to them. One officer of the institution has even expressed to the writer his desire to place his own sons in the convict classes, unless the same opportunity were soon to be offered to them in the public schools of the town.—I am sir, truly yours,

A. W. Fiske.

Milton, Mass., April 18, 1895.

MUNICIPAL-REFORM METHODS IN CHICAGO.

To the Editor of The Nation:

Sir: Those of your readers who are study-

ing the methods pursued by organizations working for municipal reform may be interested in the manner in which the ward councils of the Civic Federation of Chicago made the fight for better politics before our recent city election.

For purpose of illustration, the thirteenth ward is taken. Here as elsewhere the nominating conventions of the leading parties were held so late that, after it became apparent that the Federation could support neither the Republican nor the Democratic candidate for alderman, there was no time to put an Independent in the field, the time limited by law for the filing of the necessary petition having expired, and the nominee of the People's party was consequently endorsed. An active campaign of a week was waged, four public meetings were held, and twenty thousand circulars were distributed. The result showed that, while the overwhelming straight Republican vote carried everything before it, some fifteen hundred voters were, in all probability, led by the work of the Federation to support Mr. Wilson, giving him in all twenty-five hundred votes—a respectable showing, though still far below the number required to elect. The principal circular issued by the Federation is unique in Chicago ward politics. In part it is as follows.—Respectfully,

LEE F. ENGLISH.

CHICAGO, April 24, 1895.

"The policy of the Civic Federation in ward politics is briefly set forth in the following, quoted from a circular letter addressed by the Central Council to the ward councils:

"'When the candidates of both parties are good men, use no official influence to secure the election of either. If one candidate is good and the other bad, endorse the good one, irrespective of party. Where both candidates are so objectionable that a decent man cannot vote for either without feeling himself thereby disgraced, you should seek by every right means to unite public sentiment and secure the nomination of a right-minded, honorable man.'

. . .

"John W. Utesch, Republican, candidate for re-election [as alderman], has, from the date of his entry into the City Council down to February 25, 1895, consistently voted for every questionable and objectionable ordinance which has been adopted, as may be seen in part by reference to the published proceedings of the Council of the following dates.

. . .

"Previous to his election two years ago Mr. Utesch was in the business of grocer, which he has since given up, and he is now understood to be a professional politician. . . .

"We find that the Democratic candidate, Christopher Peterson, is a saloon-keeper at 350 Dearborn Street and 316 State Street, and a persistent office-seeker. We regard Mr. Peterson in some respects as more unfit for the position of alderman than Mr. Utesch, if that be possible.

"Hiram A. Wilson, the People's candidate for alderman, is a native of New York State, has been a resident of Illinois twenty-five years, and of Chicago sixteen years, working at his trade as carpenter. He has never held a political office, nor been a candidate, and was selected by his party for this office for his qualifications of sobriety, industry, and integrity. . . .

"The Thirtieth Ward Council of the Civic Federation, therefore, in view of the situation outlined above, have endorsed the candidacy of Hiram A Wilson, and urgently recommend that citizens who have the good of the community at heart drop for the time their party affiliations, and give their support, not to any party, but to the man who will best represent their interests in the Common Council.

. . .

"We also advise all voters, of whatever party or condition, to vote for the Civil-Service Reform Law, and thus secure permanency of employment and good and economical service in the city departments. The operation of this law will result in a larger direct expenditure of money among the workingmen and a smaller amount diverted to the pockets of the politicians."

A FIFTY-CENT GOLD DOLLAR.

TO THE EDITOR OF THE NATION:

SIR: In contemplating the efforts of the silver inflationists to provide a means of escape for the poor debtor from his obligations, it seems to me their sympathy is not broad enough. Why should they not go farther and also right the wrongs of the borrowers whose debts cannot be paid in "free silver"—those victims of grasping capital who, in order to obtain new loans or renewals of old ones, were compelled to promise repayment in gold dollars? If a fifty-cent silver dollar is to be given to one class, why not equally favor other unfortunates by supplying for their use a half-weight gold dollar? If it is right to make fifty cents worth of silver legal tender for a dollar, there is equal justice in calling fifty cents worth of gold a "dollar." This is no attempt at malicious *reductio ad absurdum*, but a sober suggestion to the "bimetallists" of a very proper method of bringing about a parity of the two money metals under free coinage. Such a policy might be a bitter pill for the silver-theory, gold practice Senators; but as they are entirely unselfish in the matter of aiding the poor man to pay his debts, they would not refuse their debtors a cheap dollar while offering a similar blessing to the debtors of those who had put their trust in the justice and honor of their country by stipulating for repayment merely in lawful money. E. M. D.

ST. LOUIS, MO., April 23, 1895.

SPAIN AND CUBA.

TO THE EDITOR OF THE NATION:

SIR: In reading the article on "Spain and Cuba" in your issue of the 25th inst., it was a disappointment to find that you made no mention of the very remarkable concession granted by Spain to Cuba, which was made a long time ago and is still continued. With a climate and soil well suited to raising tobacco, not one pound is allowed to be grown in Spain even for private use. You can confirm this statement by turning to O'Shea's 'Guide to Spain and Portugal,' where, under the head of "General Information," page ci, you will read the following:

"Tobacco is a monopoly of the State, there being about half-a-dozen huge factories—in some of the principal towns—Sevilla, Valencia, Santander, etc. The cultivation of the plant is forbidden in Spain—where it would succeed admirably—for the sake of benefiting the Habanas! The consumption of tobacco, in its various forms, amounts to some twenty millions of pounds per annum."

Yours respectfully, A. FLEMING.

150 ALLEGHENY AVENUE,
ALLEGHENY, PA., April 26, 1895.

[The tariff relations of Spain and Cuba, of which the tobacco monopoly forms a part, are too complicated to be discussed here.—ED. NATION.]

DEAN FARRAR.

TO THE EDITOR OF THE NATION:

SIR: The papers have copied one from another the statement that Rev. *Archibald* Farrar, D.D., Canon of Westminster, has been appointed Dean of Canterbury. It is to be presumed this beautiful mistake proceeded from a careless study of Whitaker's Almanack, where among the Canons of Westminster appears Archd. Farrar—*i. e.*, Archdeacon Frederick W. Farrar—a man, one would think, sufficiently well known to Americans.

WILLIAM EVERETT.

QUINCY, MASS., April 24, 1895.

Notes.

D. APPLETON & Co. publish immediately a 'Hand-book of Birds of Eastern and North America,' by Frank M. Chapman of the American Museum of Natural History, with more than 200 illustrations; an equally extensively illustrated work, 'Familiar Flowers of Field and Garden,' by F. Schuyler Matthews; and 'General Sheridan,' by Gen. Henry E. Davies.

G. P. Putnam's Sons have nearly ready 'William the Silent, Prince of Orange, the Moderate Man of the Sixteenth Century,' by Ruth Putnam; 'Wild Flowers of the Northeastern States,' delineated from life and popularly described by Margaret C. Whiting and Ellen Miller; 'Water Tramps, or the Cruise of the *Seabird*,' by George Herbert Bartlett; and 'Natural Taxation,' by Thomas G. Shearman.

A volume of 'Selected Letters of Pliny the Younger,' by Prof. Elmer T. Merrill of Wesleyan University, and 'The Essentials of New Testament Greek,' by Prof. J. H. Huddleston of Northwestern University, are in the press of Macmillan & Co.

Many regrets must have been felt (we have expressed our own) that the plan of the 'New English Dictionary on Historical Principles' was not consistent with the citation of poetical "familiar quotations" to the fullest extent. This would be quite possible in a "Dictionary of Literary English," such as has been lately proposed in England, and seconded by that sound philologist, the Rev. A. L. Mayhew, who would not include words obsolete before 1470, nor any not found in literature "in Charles Lamb's sense of the word." The work, he says, need not be bulky.

The Selden Society, well known to all interested in early legal history, announce the publication of their sixth volume, 'Selections from the Records of the High Court of Admiralty, 1390–1404 and 1527–1545,' edited by Reginald G. Marsden, author of the treatise upon Perpetuities. The business of the High Court of Admiralty was very considerable during the period covered by this volume, and played an important part in the development of commercial law. The address of the American secretary is Richard W. Hale, 10 Tremont Street, Boston, Mass.

Macmillan & Co. send us Mr. Aitken's charming reprint of the 'Life and Adventures of Mr. Duncan Campbell' in the Defoe collection (London: J. M. Dent & Co.), and their own of Michael Scott's lively West Indian classic, 'Tom Cringle's Log.' From Messrs. Putnam we have still another presentation of Irving's 'Alhambra' in fine, open typography, fit either for use as the "student's edition" it is denominated, or to be read by children and old eyes for simple pleasure. Mr. Arthur Marvin has supplied notes grouped at the end of the book, and an introduction. A New England story of Fugitive Slave Law days, Mr. J. T. Trowbridge's 'Neighbor Jackwood,' which has had a continuous life of nearly forty years, has been revised by the author, and furnished with an autobiographical chapter relating the genesis of the work and indicating the nature of the alterations and insertions.

Though now an historical novel, its missionary usefulness has no visible term in view of the persistency of color prejudice (Lee & Shepard). We can but mention a new translation of 'Paul and Virginia,' by Melville B. Anderson (Chicago: A. C. McClurg & Co.), and one of Daudet's 'Fromont Junior and Risler Senior,' by Edward Vizetelly (Philadelphia: Lippincott); strange companions on one shelf.

The third of Mrs. Constance Garnett's translations of the novels of Turgeneff is 'On the Eve' (Macmillan). Its defects are those which we pointed out in the case of the first, 'Rudin.' In the effort to match idioms, style is lost sight of, and the result is too frequently a mixture of colloquial and literary expression, such as a foreigner to English might lapse into. Think of the heroine "tidying" her hair, for example. Action and plot count for so little, relatively, in Turgeneff's masterpieces, and are so easily forgotten, that if the aroma and poetry are missed by the translator, almost all is lost.

Whatever bears the name of Adolf Harnack is to be regarded with respect, yet we scarce see the object in translating his lecture on 'Monasticism: its Ideals and History' (Christian Literature Co.). The subject is much too vast to be adequately treated in the compass of less than a hundred small pages, and the treatment unfortunately is verbose as well as insufficient. The reader is constantly in the hope of being on the verge of something concrete and definite, but this hope as constantly vanishes in a wilderness of words representing the inner consciousness of the lecturer rather than the external facts of his theme. He misses entirely the one central idea of monasticism, that in its essence it is irredeemably selfish; its object is to secure the salvation of the individual regardless of his duties to his fellows, and of the second great commandment to love thy neighbor as thyself. It is only in so far as it has proved false to this idea that it has been of service either to the Church or to mankind. It is remarkable that so well-informed a writer as Harnack should have fallen into the error of describing Loyola as the first who realized the possibilities of monasticism in strengthening and extending the authority of the Church. Dominic realized this three hundred years earlier and performed the same service as did Loyola. The theory of both was the same; the differences were in details, caused chiefly by the change in the environment and by the fact that Dominic had a scholastic and Loyola a military training.

Arthur Ogle, writer of the Stanhope Essay at Oxford for 1893, describes, in what he calls a "Study in Criticism," the opinions and career of 'The Marquis d'Argenson' (London: T. Fisher Unwin; New York: G. P. Putnam's Sons). His special aim is to show that a careful examination of D'Argenson's Journal would serve to correct the harsh judgments of that statesman's management of French foreign affairs from 1744 to 1747 pronounced by the Duke de Broglie and M. Zevort, the only historians who have recently devoted much attention to this phase of the history of France. Mr. Ogle does not seem to have made out his case. Even his own eulogistic description of D'Argenson leaves the reader with the impression that D'Argenson's policy was more ambitious than wise. Had Mr. Ogle devoted a few lines here and there to contemporary history, his hero's career would have gained in meaning and the essay in clearness. The style, too, is uneven, at times becoming inflated and sensational, as when, speaking of Frederick the Great's return to Berlin before the Saxon campaign of 1745, the author writes: "His sword had clicked again in the scabbard, his hand had fallen nerveless from the hilt, when suddenly a stray word let fall at a dinner table by Count Brühl was conveyed carefully to Berlin; tensely the fingers closed on the hilt, the sword leapt forth again bare and terrible, and at the end of a three weeks' campaign, which we cannot even read of now without dancing eyes and tingling blood, the lion of Brandenburg entered Dresden."

Laymen and archæological students alike will welcome the translation of Helbig's 'Guide to the Public Collections of Classical Antiquities in Rome' (Leipzig: Baedeker), of which the first volume has just appeared. It is based upon the German edition of 1891, but this has undergone a thorough revision by the author, with whom the translator, Mr. J. F. Muirhead (well known here as the editor of Baedeker's 'United States') has done his work in close connection. The present volume treats of the Vatican, Capitoline and Lateran Museums with the Palazzo dei Conservatori. The name of Helbig is to scholars a sufficient guarantee of the worth of this book. Others may be assured that in using it, as in using the chapters on art in Baedeker's 'Greece and Rome,' they are following the words of a master.

Prof. S. B. Platner's 'Bibliography of the Younger Pliny' is a work that will be of great service to students and lovers of that delightful letter-writer. It includes lists of over 250 editions, as many titles of works and articles on Pliny, and nearly a hundred translations of him into various languages. Such bibliographies are most welcome both to collectors and to teachers in charge of courses of research or "seminaries" in our colleges, and it is to be hoped that their number will increase. The present pamphlet is a reprint from the *Western Reserve University Bulletin* for April, 1895.

Mr. W. E. Hoyle, compiler of the admirably arranged and neatly printed classified and indexed catalogue of books and pamphlets in the Library of Manchester Museum, England, deprecates criticism on the ground that he is not a professional librarian. But really the only criticism we should make of his work is in the hyper-professionalism of the Dewey-Cutter book-marks, which are stated in the preface to have made their way into three other English institutions. We observe, by the bye, that Signor Chilovi, director of the National Central Library at Florence, praises, in his *Bollettino* for March 31, the practice of the Smithsonian Institution in accompanying each of its publications with a leaf bearing the thrice-printed title of the work for ready insertion in the subject-and-author catalogue and in the list of accessions.

The most notable thing in the *New England Historical and Genealogical Register* for April is the inserted slip announcing that this will be the last year of Mr. Waters's "Genealogical Gleanings in England," "unless considerably more money shall be received before July." Subscriptions to any amount may be sent to Mr. John Ward Dean, No. 18 Somerset Street, Boston. This announcement may well strike a chill in those who have turned eagerly and first of all to these Gleanings in each quarterly issue of the *Register*, and who remember both the brilliant and the less showy but not less sure discoveries of Mr. Waters by which the New World blood has been connected with the Old. We sincerely hope that the best-equipped explorer who ever yet attempted this bridging of the Atlantic will be sustained a while longer. His wills this month relate to Burgess, Phippen, Pitt, Chaplin, Gould, and many other families. An English contributor, Mr. Phillimore, continues his contributions to a knowledge of the Garfields of England, whose habitat was near Rugby in Northamptonshire and Warwickshire. They were mostly small yeomen and husbandmen, but some gained wealth as merchants in London. Connection with our American Garfields is not yet established.

M. René Doumic, in the *Revue Bleue* and in the course of an article on Gabriele d'Annunzio (of whom it has more than once been question in these columns), says that the Italian author has become as much the mode in Paris as was Tolstoi a few years ago. Count Melchior de Vogüé, who introduced the Russian novelists to the French public, has performed the same office for their Italian brother. The *Revue de Paris* publishes a translation of an early novel of D'Annunzio's. 'L'Innocente' appears in the *Temps* under the title of 'L'Intrus,' while 'Il Trionfo della Morte' appears, or is about to appear, in French dress in the *Revue des Deux Mondes*.

—A correspondent writes:

"In a note concerning Seiler's book showing by the etymology of borrowed words the things which Germans have borrowed from abroad, you remark that 'we call a fowl which is a native of the western hemisphere a turkey, while the French seek its origin in India (*Dinde*), and the Germans in Calcutta (*Kalkutischer Hahn*).' These names have been a puzzle to all lexicographers and have not been clearly accounted for by any, while they seem to imply an ignorance which may not have existed. You take it for granted that the givers of them did not know the fowl to be a native of the western hemisphere. The fact is, that when the names were given America was held to be a section of Asia, while India or Turkey still stood in the minds of the namers for all Asia more fully than we of the United States now stand for Americans. The turkey came to Europe from a part of America which still derives its name from India, and the French called that fowl *d'Inde* because they received it from the West Indies (Indies Occidentales), or from America (see Littré, s. v. *Dindé*; 'etym. *de* et *Inde* [Amérique; l'Amérique fut d'abord nommé Inde]'). No thought of our India. As for Germans, in seeking a name for the stranger who was to push their goose from her stool, they could not look to Calcutta, which had no existence till long afterward. Their name came from Calicut, a thousand miles away. Before Columbus had sighted the American main, Da Gama had landed in that Asiatic city. It was natural to call the turkey by the name of the port to which that fowl would be brought from the American province for export. Viewing Turkey and Tartary as essentially one, and also indissoluble from America, it was to be expected that the English would take a name for the new fowl from the predominant state of Asia and not from an outlying corner of it. According to Winsor ('Columbus,' p. 616), it took a full century for the entanglement of the coasts of Asia and America which Columbus had imagined, to be practically eradicated from maps. English, French, and Germans knew that turkeys were discovered in Mexico by Cortez in 1518, but Mexico was in trans-Gangetic India. The English may have believed that, as Fuller states ('Worthies' i., p. 431), bluff Hal had eaten turkey in 1519. They may have seen it earlier as a rarity brought by Cabot from Newfoundland. But that island belonged to the Grand Cham of Asia. They must have named it after the Asiatic Power just then striding to universal empire rather than after its unknown Mexican or northern coasts. It would seem, then, that the French did not seek a name in our India, nor the English in our Turkey; least of all did the Germans in Calcutta. While the hemisphere in which the turkey had his native habitat is now Western, it was Eastern when that fowl received its names in Christendom."

—In the current number of the *Architectural Record* Prof. W. H. Goodyear treats in a

novel way the interesting subject of curves in the longer lines of ancient architecture. The title of his article, "The Origin of Greek Horizontal Curves," is curiously non-descriptive of what is to follow, and the paper itself is written in very awkward English and with a contempt which almost seems wilful for the great virtue of consecutiveness in reasoning and in presentation of the subject. The paper is important, however. It contains an account of the discovery and the measuring of the curves and the sloping lines of the Parthenon, by Pennethorne, Hofer and Schaubert and Penrose, and mentions the little-known fact that Mr. Pennethorne discovered in 1833, and announced in his book forty years later, the existence of curves in the horizontal lines of the temple at Medinet Habu. The author's own contributions to knowledge in this unfamiliar field are contained in his account of measurements made in other Egyptian buildings, at Karnak, Luxor, and Edfu, and in the famous and often cited building at Nîmes, the largest Roman temple except the round Pantheon which has kept its roof and its general outline for us, and the best-preserved Roman building we have, always with the same exception: the *Maison Carrée*. In this familiar friend of travellers and theme of writers and students he has found curves where straight lines had always been assumed—in the entablature, in the line of bases of the engaged columns, and in the stylobate on which those columns rest. The curves observed and verified by Prof. Goodyear are, however, in horizontal planes, not, like those of the Parthenon stylobate, so carefully set forth by Mr. Penrose, rising vertically, or nearly so, from the ends toward the middle. A horizontal curve in the seemingly level sky-line of a long building will of course produce the effect of up-and-down curvature when the spectator is placed on a much lower or a much higher level. And it is this which is the chief and most important series of facts which Mr. Goodyear has to announce. It is indeed important, and a great step in a progress toward full knowledge of a subject as yet little understood.

—The State Historical Society of Wisconsin is jubilant over a vote of the Legislature on April 18, appropriating $180,000 for the preservation and accommodation of the Society's collections. This sum is simply for the erection of a fire-proof building, a site for this and surrounding space sufficient to insure safety from fire being freely given by the University. This Wisconsin Society, organized in 1849, is not a year younger than the State. Its local habitation was first a corner in the Territorial capitol, then a disused prayer-meeting room—then half a church basement. In 1866, before the completion of the State capitol, it was installed in its three largest apartments except the legislative halls. Ten years ago a wing was added, largely for its use, to the State edifice, but this addition proved a disappointment. Architecturally it was not adapted to the needs of the Society, and it was so poorly built that it fell down in construction, killing several persons. The accumulations are fast outgrowing their quarters, and their weight threatens a collapse. Worst of all, the historical wing, itself by no means fire-proof, and the main body of the capitol where the carelessness of any one in a hundred employees would precipitate a conflagration, are as closely joined as the Siamese twins. Such a catastrophe has been already more than once a hair-breadth 'scape. Pondering these facts, the Legislature, though times are hard, felt it wrong to leave its historic jewels longer "even in the force and road of casualty." The bound volumes in the Wisconsin Library are now 86,258, the pamphlets well-nigh the same number. Of its 8,000 files of newspapers, 735 date from before the year 1800. A full catalogue of this last department, with much bibliographical matter, is now in press. An alphabetical catalogue of seven volumes, including pamphlets, has been printed, and also several finding lists, as of works relating to the civil war, etc. A card catalogue is also completed. Twelve octavos filled with collections regarding the State's history have been published. In the museum are portraits of more than a hundred prominent pioneers, still more specimens of prehistoric pottery, Indian relics illustrative of aboriginal life, and a treasure of copper implements which, when exhibited at the Philadelphia centennial, was adjudged the best in the world.

—The third volume of Mr. Conway's 'Writings of Thomas Paine' (Putnams) shows "Common Sense" deep in political agitation and speculation, first in England and then in France. Against the prosecutions set on foot against him in England he protests vigorously, reiterating the leading conclusions of his 'Rights of Man,' and valiantly attacking the "placemen and pensioners," with Burke as their idol. With the American experience fresh in his memory, he naturally lays great stress upon a constitution; and it was while he was deep in his expositions to the English of the advantages of the American form of government that he was called to France a "citizen" and a member of the Convention. Mr. Conway's industry has brought to light a number of interesting papers prepared at this time and during Paine's imprisonment. After his release were penned the notorious bitter letter to Washington and the two pamphlets, 'Decline and Fall of the English System of Finance' and 'Agrarian Justice,' both intended for English consumption. Returning to America, Paine wrote a series of letters to the "Citizens of the United States," valuable for the sidelight they cast on Revolutionary history. We cannot but think Mr. Conway's enthusiasm has led him to include what may not have been written by Paine. The paper on Royalty (p. 101) seems to call for some proof of its being Paine's, though none is given. We note some careless proof-reading. Corneille Paw is twice given "Cormelle, Paw," and Gen. Greene's name is twice misspelt. Sieyès is, so far as we have observed, never accented correctly, and French names and words generally fare badly in this respect (see pp. viii, xiv, 4, 101, 127, etc.). On p. 164 we meet with "Colloit d'Herbois."

—Mr. Conway prints in full the remarkable series of memorials and letters addressed to Monroe by Paine when in the Luxemburg and apparently unknown to him when writing his 'Life of Paine.' We have read carefully this new and interesting material, with the editor's "historical introduction," in a spirit ready to be converted to his theory that Washington was the cause of Paine's imprisonment and condemnation to the guillotine, and that Morris was the deep plotter and responsible agent in this matter. We confess that we remain not only unconvinced, but of a belief that Mr. Conway has given a labored explanation of what is a very simple matter. Paine had accepted the title of "citizen of France." He sat in the Convention, representing a district of France, received pay as a representative, assisted in framing a constitution for the State, and voted on every subject before the Convention—even on the King's death. He was associated with the faction opposed to Robespierre, and naturally fell under his displeasure. Any accusation in such troublous times would be sufficient to throw him into prison, and an American Minister could properly only question the legality of the act and ask that Paine be given a fair trial. Indeed, legality could hardly be pleaded when the will of a tyrant was supreme. That Morris, in great personal danger himself, could deliberately "plot" this imprisonment and carry it through, is doubtful, and is not proved by the documents. That Washington was active in it, is even more improbable, and it is hardly necessary to point to the President's failing intellect to account for such an improbability. We can no more accept Mr. Conway's charge against Morris of having kept Monroe out of office for a time, as Monroe in his letter freely explains that incident, and without blame to Morris.

—More raw material for the projected English Dialect Dictionary comes to us in the shape of three fresh issues of the English Dialect Society (London: Henry Frowde; New York: Macmillan). The most bulky and important of these is the conclusion of the Rev. Oliver Heslop's Glossary of Northumberland Words (Mowband to Z), which abounds, like the previous parts, in terms associated with the coaling industry of Newcastle-on-Tyne, with Bewick's art and literature. A "Newcastle cloak" is a perforated tub formerly clapt upon the head and shoulders of a drunkard like a poncho, and so worn through the streets in punishment. "Newcastle hospitality" was partly responsible for this degrading spectacle, as it implied an excessive supply of drink. "Newcastle roads" meant railways "originally . . . made by laying down upon sleepers (dormants) two parallel wooden rails, each about four inches square." This was in the coal district as far back as 1632-1649. The settlers of the Massachusetts Bay Colony used freely many obsolete words of this vocabulary, as *pink*, 'an old-fashioned type of collier vessel,' and *pind*, 'to impound,' whence the New England town officer a *pinder*. The game *shinny* and the name still flourish among us, and *skedaddle* was revived (not adopted) on the Tyneside by its American vogue in the rebellion. *Scunner* (sb.) for 'dislike,' *through-other* for 'disordered,' *whig* for 'whey,' we have heard on the lips of Pennsylvanians. There is also a thinner Glossary of Words and Phrases used in S. E. Worcestershire, full of quaintness, as in the expressions *atternone folks*, 'people who are in the habit of beginning work late in the day,' *iffing and offing*, 'in a state of indecision.' The inhabitants of this district pronounce *fault* fawt, just as in Northumberland they say saat for *salt*. This glossary concludes with some entertaining folk-lore. Finally, we have the still slenderer Folk-Phrases of Four Counties (Gloucester, Staffordshire, Warwickshire, and Worcestershire), in which we have marked an excess of amusing examples: "A face that would stop a clock"; "his hair is as straight as a pound of candles"; of filial resemblance—"his father will never be dead as long as *he* is alive," and in general, of a close likeness—"to be the very spawn of a person"; for saints, sinners, and the Beecher family—"the people of Clent are all Hills, Waldrons, or devils"; "'tis a blessed heat, though, as the old woman said when her house was on fire."

—We have received from Westermann & Co. the first of a series of treatises on the oldest "Mappæmundi," edited by Dr. Konrad Miller of Stuttgart. The publication is intended to cover a comparison of the most significant world-maps now existing which are of earlier date than the fourteenth century, making it a convenient companion to Nordenskiöld's great atlas of engraved maps. This initial issue concerns the different codices of the comment on the Apocalypse written by the Spanish monk Beatus in the latter part of the eighth century, a treatise of interest to the students of the early cartography because there often goes with it a world-map, varying, of course, with the date of each particular transcript of the comment. Davezac, twenty-five years ago, had unearthed twenty-two of these codices in different parts of Europe; but Miller has increased the roll to thirty, mainly dating back to the interval between the tenth and thirteenth centuries. Ten of these have the world-map, and of these only three have before been known. He gives the first place to one now annexed to the St. Sever Codex in the great Paris Library. When this manuscript was received from the Marquis de Paulmy's collection in 1790, the map was lacking, but seventy-five years later it was recovered by Davezac, though at the time he did not recognize its connection with the St. Sever manuscript. Dr. Miller now gives us for the first time a full-sized facsimile in colors of this interesting map, and we read the legends clearly in his reproduction, which could not be done either in the representation given by Cortambert in 1877, or in the photographic copy published in 1883. The reproduction given by Kretschmer more recently in the great atlas published by the Berlin Geographical Society is a mere sketch, but it serves a good purpose in that collection among a series of world-maps of the Middle Ages. There is no branch of historical study receiving greater impetus from the fast-developing processes of reproduction than the study of the older maps.

SIMPKINSON'S LAUD.

Life and Times of William Laud, Archbishop of Canterbury. By C. H. Simpkinson, M.A., Balliol College, Oxford, Rector of Farnham and Examining Chaplain to the Lord Bishop of Winchester. With portrait. London: Murray. 1894. 8vo, pp. viii, 307.

NOTHING can be less true than Carlyle's saying that the execution of Charles I. dealt at flunkeyism a blow of which it has gone about sick ever since. On few things has flunkeyism more manifestly thriven. Had Charles, like James II., died in exile, he would never have been Charles the martyr. Churches would never have been dedicated to him as a saint, nor would many copies of 'Eikon Basilike' have been sold. So with Laud. Had he been allowed to end his days in impotency and peace, the anniversary of his death would never have been commemorated, as it was the other day, by the High Church party, with solemn services and processions, nor would a panegyrical Life of him by Mr. Simpkinson have appeared. His execution, after a delay which doubled its cruelty, and with hardly a pretence of law, was the act of the morose Presbyterians, English and Scotch, the gloomy hour of whose ascendancy it marks. It was one of the worst deeds of the Civil War.

Macaulay's portrait of Laud is in his usual vein of rhetorical exaggeration. It depicts Laud's temper as "diabolical," represents him as "hungering for Puritans to pillory and mangle," as "performing grimaces and antics in his cathedral," and "keeping a Diary which can never be seen without forgetting the vices of his heart in the imbecility of his intellect." Laud was testy, and perhaps sometimes insolent. He was reactionary, arbitrary as a ruler both ecclesiastical and political, and he took part, to his great discredit and ultimate ruin, in the infliction of cruel and ignominious punishments on some of the literary assailants of his system. But he was neither diabolical nor despicable. His Diary contains some evidences of a weak belief in dreams and omens, which, however, could hardly be taken as proofs of imbecility in the days in which the *Sortes Virgilianæ* were consulted by men of no mean intellect, while astrology retained its hold on such a man of science as Kepler and such a man of action as Wallenstein. Macaulay winds up by calling Laud "a ridiculous old bigot." A bigot is exactly what Laud was not. He had neither the vices nor the excuses of that character. Hallam, whose judgment of the archbishop is severe enough, says, with truth, that he never showed bigotry in the usual sense of that word. His faults were those of a martinet. A natural propensity to regulate other people had been enhanced in him by the exercise of petty despotism in the headship of a college. An academical reformer and benefactor, both in an eminent degree, and really learned himself, he respected the privileges of learning in other men, and was not hostile to free inquiry when carried on by such inquirers as Hales. He wanted common people to abstain from the discussion of spiritual questions, and be satisfied with the truth provided for them by authority. He also wanted universal conformity to his system of church government and ritual. The nation refused to accommodate him in either respect, and so it and he came to blows.

Hallam seems to think it open to doubt whether Laud was even in reality religious. We can hardly share the doubt; but Mr. Simpkinson, who, for a rehabilitator and a hagiologist, is candid, not concealing or perverting facts, though he puts his own glosses upon them, fairly admits that his saint "was frankly ambitious," and had been long desiring to mount to high place before he got there. Nor was he squeamish about the ladder. His scandalous compliance with the guilty passion of Lord Mountjoy, whom he married to the divorced Lady Rich, is piously ascribed by the biographer to the ardor of friendship. Friendship is also the name given to his not less scandalous connection with the profligate Buckingham. As Bishop of St. David's, instead of residing in his diocese and doing his duty to his people, he remained at Court to push his fortunes. When Mr. Simpkinson speaks of the promotion of Abbot to the Primacy as an intrigue, he probably means little more than that the Puritan (which in his eyes is the wrong) influence prevailed in that appointment. But it was certainly by an intrigue, and a very dirty intrigue, that Abbot was first, on pretence of his having committed an accidental homicide, disgraced and afterwards suspended in order to make way for the ascendancy of Laud. Laud's idea was that the best way of strengthening the Church was to put worldly power into the hands of bishops. Besides grasping the prime-ministership for himself, he got the treasurership for Juxon, and political offices for ecclesiastics in Scotland and Ireland. After Juxon's appointment, he flattered himself that he had done for the Church all that could be done. In fact, he had exposed her to fatal odium as the organ of arbitrary government, and paved the way for her overthrow. Mr. Simpkinson calls Laud's policy "a great experiment of ruling England by religion and for religion." "By bishops and for bishops," would have been nearer the truth. Could there be a doubt as to the monstrous impropriety and folly of thus uniting spiritual and temporal power in the same hands? The biographer labors to show that the army provided by Laud's Government for the subjugation of Scotland was sufficient. How came a minister of Christ to be meddling with armies at all?

Apart from Laud's infirmities of temper, and the special misdeeds into which they betrayed him, it is not difficult to understand his ecclesiastical position and do justice to his aims. The Elizabethan combination of Catholicism and Protestantism under the form of a compromise did well enough, and might seem to its authors a triumph of their statesmanship so long as there was little life in either part of it. But when, by the teachings and efforts of High Church divines on one side and of Puritan and Presbyterian divines on the other, life had been awakened in both parts, a conflict inevitably ensued. It then appeared that the proper domain of compromise is interest, not conviction. Nothing could have averted the conflict but disestablishment, for which only a few extreme and persecuted sectaries were yet prepared; the Puritan and Presbyterian being not less firmly convinced than the Anglican of the duty of the State to maintain the true religion and compel all citizens to conform. Ritualism has too deep a seat in human nature and has reappeared too often to allow us to regard it as a mere exhalation from the pit of Tophet. It was a matter of course that High Churchmen like Laud should desire and should use such power as they possessed to introduce ritualistic order and ceremony, in which the Puritan, equally as a matter of course, saw the symbols and harbingers of Popery. The symbols and harbingers of Popery in truth they were. Mr. Simpkinson ridicules the suspiciousness of the Puritans, which did sometimes take absurd forms. But we have had the whole play acted over again in the present century. Newman and his party ridiculed the suspicions of the Protestant fools who said that their teachings and practices would lead to Rome. They maintained, just as Laud and his party had, that ritualism, instead of leading to Romanism, was its true antidote. In each case it proved that the fools were right, and that the principles of sacerdotalism, sacramentalism, and ritualism, from whatever source they may have been imbibed, have a tendency to draw men in the direction of the place to which they belong. This was shown in the time of Laud, as afterwards in that of Newman, by a secession to Rome, including several people of social and political prominence. The alarm created by Panzani's mission among the Protestants was perfectly just. What Laud's own leanings as to reunion with Rome were, we shall perhaps know better when the Roman archives have been thoroughly explored. Outwardly he maintained an anti-Papal attitude. From submission to the Papacy his love of power and pride of place would have deterred him. But he might have been willing, as Dr. Pusey was when he wrote his 'Eirenicon,' to come to terms with Rome if Rome would have consented to treat on an equal footing, which she never has done, and never, without ceasing to be herself, can do.

The part of Mr. Simpkinson's work most open to exception, as it seems to us, is his treatment of the political character of Laud. This he tries to present as that of the minister of a popular monarchy wrestling with an aristocracy which defied the law and oppressed the people. Unquestionably there was an aristocratic element in the original opposition to Charles's Government, as well as a jealousy among the lay lords of the intrusion of churchmen into the great offices of state. The rebellion presented at first a faint analogy to the revolt of the feudal nobility of France against the autocratic and centralizing policy of Richelieu and Mazarin. But the men of London and other commercial cities who supplied the financial sinews of the movement were not aristocratic, nor were the freeholders of Buckinghamshire who rallied to the support of Hampden, or the yeomen of the eastern counties who charged under Cromwell. There can be no reasonable doubt what Laud and Strafford in their secret correspondence meant by the watchword Thorough. Their aim was government by prerogative—absolute monarchy, in fact, though Parliamentary forms were to be maintained. It does not follow that they were not conscientious in that aim, or that there was not something to be said for enlightened autocracy against the rule of a popular assembly, as a popular assembly was in those days, before the diffusion of political knowledge or the existence of a press. We know that an autocracy enlightened by a Parliament was the idea of Bacon. Richelieu, no doubt, seemed to himself to have wrought a great and good work. So, in the repression of feudal anarchy, he had; but he had also, by centralization and absolutism, laid the train for the French Revolution.

VON HOLST'S FRENCH REVOLUTION.

The French Revolution Tested by Mirabeau's Career. Twelve lectures on the History of the French Revolution, delivered at the Lowell Institute, Boston, Mass. By H. Von Holst. Chicago: Callaghan & Co. 1894. 2 vols., pp. 258–264.

Of the making of books on the French Revolution there is no end. The period has attracted, and continues to attract, writers of every type of thought and historians of every variety of ability and training. Philosophical writers declare of the Revolution, as Mirabeau declared of Paris, that the period is a sphinx whose secret must be dragged by force into the light of open day; but hitherto all their efforts have been in vain. Descriptive writers have used their best powers of imagination and their most hysterical diction in endeavoring to portray the life of the most picturesque epoch in modern history; and they too have failed because they trusted to imagination rather than to the painful process of research. Serious-minded historians have, indeed, attempted to narrate the events of the Revolution with accuracy and precision, but they have been generally caught either by the Scylla of philosophical disquisition or in the Charybdis of picturesque word-painting.

The title of Dr. Von Holst's book accurately indicates its contents. He has neither written a history of the first two years of the French Revolution nor a life of Mirabeau, but, in his own words, has tested the Revolution by Mirabeau's career. The writing of history in the form of an elaborate and explanatory biography of some conspicuous figure has often been tried, but never with complete success. Masson's 'Life of Milton' is probably the most glaring example in the English language of the impossibility of effectively combining history and biography, and its failure has naturally warned off others from attempting the impossible. To the history of the French Revolution also the method has been applied. Hamel's 'Histoire de Robespierre,' for instance, is not only a biography of the Pontiff of the Supreme Being and an enthusiastic effort to defend his character and actions, but is also a history of the Revolution from the Robespierrist point of view. Dr. Robinet in his 'Danton,' Georges Avenel in his 'Anacharsis Cloots,' and others, have found it necessary, in explaining or defending their heroes, to investigate minutely the history of their times, and have therefore written histories rather than biographies. Unfortunately, no skilled writer has yet attempted to deal with the lives of the only two men who played a conspicuous part in the Constituent Assembly, in the three distinct phases of the history of the Convention, and during the Directory, and whose careers were prolonged throughout the period of the Empire—namely, Merlin de Douai and Sieyès—although their lives would better illustrate the entire course of the history of the Revolution than those of political leaders like Robespierre and Danton, who did not survive to observe the immediate results of the period of storm and destruction. Dr. Von Holst had, however, most excellent reasons for selecting the career and character of Mirabeau as the peg on which to hang his reflections upon the history of the Revolution, for, although Mirabeau witnessed only the earliest scenes of the great drama, he was the only man of his time who understood the purport of what was passing in Paris and in France, and who possessed from his past experience and political genius an insight into the meaning of events.

The reputation of Mirabeau as a political philosopher has suffered from the fact that he has hitherto been studied solely as a principal actor in the early history of the French Revolution. It has been too much the practice to confine the study of political philosophy to the works of famous theorists like Hobbes and Locke, Montesquieu and Rousseau, whose speculations have influenced the history of political thought, and to neglect the works of the few great practical politicians who considered politics as a science, and, relying on their experience rather than on theories, have stated conclusions of greater value to political philosophy than the vague imaginings of the writers who are generally designated political philosophers. In the whole range of literature since the days of Aristotle no writers have expressed so clearly or analyzed so accurately the passions, the hopes, the intentions, and the actions of men living in a state of political rest or political unrest as Machiavelli, De Retz, and Mirabeau, and these great thinkers were essentially practical politicians. A careful study of the 'Prince' and the 'Discourses on Livy' of Machiavelli, of the Memoirs of Cardinal de Retz, and of the Notes for the Court contained in the 'Correspondence of Mirabeau with La Marck,' gives more insight into the probable action of men and of communities and of nations under any given conditions than all the speculations of the most distinguished theorists. From this point of view Mirabeau has never yet had justice done to him, and, with Machiavelli and De Retz, his importance as a political teacher of profound wisdom will never be recognized until political philosophy is rightly understood to mean something more than the examination of theories or the explanation of the inception and growth of existing political institutions.

Von Holst—and it is not the least of his merits—understands Mirabeau's greatness as a political philosopher as well as a practical politician. But it is with the latter side of Mirabeau's character that he is mainly concerned in his latest book. No previous writer has grasped more firmly the fact that Mirabeau's surpassing merit as a statesman lay in the fact that he thoroughly understood the political situation. While the vast majority of Frenchmen were dreaming roseate dreams of the peaceful regeneration of France, and fancying that a Declaration of the Rights of Man and representative institutions would peacefully inaugurate a new era for France, Mirabeau saw beneath the surface and understood that "revolutions are not made with rose-water," and that anarchy was the almost inevitable result of the swinging back of the pendulum from despotism. The pathetic part of Mirabeau's destiny was that he could not make others see what he himself saw so clearly; his was the voice of one crying in the wilderness, and the words of ripe wisdom and experience were wasted on the dull impotence of the Court and the excited expectations of the popular party. Clearly, although the task has been attempted before, does Von Holst set forth the efforts of Mirabeau to make the blind to see and the deaf to hear. Distrusted by the Court, which he alone could save, hated by the majority of the Constituent Assembly, which trembled at his oratory, feared his ambition, and could not comprehend his aims, he had to solace himself for being reduced to political insignificance with the ardent attachment of his personal friends and the love of the poorest classes in Paris, who dimly felt the greatness that was in him, and termed him, in their market slang, "our little mother Mirabeau." With justice and truth, Von Holst points the wisdom of Mirabeau and his vigorous efforts to save France from the disasters that were surely approaching, by dwelling on the benevolent ineptitude of Necker and the empty vanity of Lafayette. Again and again he insists on the lamentable behavior of Lafayette during the early period of the French Revolution, and with absolute sureness of judgment he says: "Not many persons who have cut a prominent figure in great times have lost so much by having the search-light of critical history turned upon them as Lafayette" (vol. ii. p. 58). But even if there had been no Lafayette and no Necker to oppose Mirabeau and to thwart his most cherished schemes, it does not follow that he would have succeeded in imposing his ideas on the Court or the people; his career previous to the Revolution had not unnaturally ruined his reputation, and it is not to be wondered at that respectable people found it hard to believe that the desperate roué, whose escapades and family troubles had made him notorious throughout France, was the one man able to see clearly the progress of events, and capable of directing it. Mirabeau himself knew that it was his bad reputation which nullified his political influence, and bitterly did he feel, when too late, the fatal result of his former passionate and disorderly life.

Dr. Von Holst disarms verbal criticism by stating in a prefatory note that he has published in the volumes under review the exact words of the lectures he delivered at the Lowell Institute. "This accounts," he says, "for some peculiarities of style. I have amply availed myself of the liberties deemed admissible in speaking. But I have undoubtedly

taken also other liberties with the English language, simply because I did not know any better." It is as a rule more agreeable to listen to popular lectures than to read them after they have been printed, just as it is more delightful to deliver lectures than to read the proof-sheets of their text as they pass through the press. Both these impressions are forced upon a critic by a careful and prolonged perusal of this 'French Revolution Tested by Mirabeau's Career,' which is chiefly valuable because the eminent historian confirms so strongly the opinion now generally held of the marked superiority shown by Mirabeau over all the statesmen of his time in genuine honesty, rare perspicacity, and profound political wisdom.

DEAN CHURCH.

Life and Letters of Dean Church. Edited by his daughter Mary C. Church, with a preface by the Dean of Christ Church. Macmillan & Co. 1894.

A SMALL duodecimo of 422 pp. is an agreeable variation from the biographies of Trench and Tait and Stanley, each in two volumes octavo, and the biography of Pusey, which doubles their amount, especially as it does not appear that Miss Church could not have successfully competed with the bulk of her forerunners' books. Such was the breadth of Church's mind that its various products might easily have tempted his biographer to an expansive exposition. Naturally the daughter did not care to be the critic of his life and writings, however well equipped she found herself for a sound appreciation; and to what little criticism we have here she has helped herself from others' hands, first in an elaborate preface by Dr. Paget, Dean of Christ Church, Oxford, a son-in-law of Dean Church, a piece of admirable discrimination, and next in a section by Canon Scott Holland of St. Paul's, a very noisy celebration of the Dean's cathedral administration, in really painful contrast with the Dean's quiet tone and modest self-depreciation. There are also interesting recollections from Dr. Barrett, in 1894 the president of the Congregational Union. The book has one exasperating feature in common with all English ecclesiastical biography: it speaks of the Dean of this cathedral and the Bishop of that diocese without giving the name of the incumbent. Now, not only do these great men die, but, while they live, preferment is a movable feast, and they go from place to place. One must have a better memory than Macaulay's for his senior wranglers not to be baffled here even with a file of *Whitaker's Almanack* to fall back upon. A little trouble on the writer's part would save the reader a good deal.

The life of Dean Church lends itself with singular felicity to the purposes of his biographer. He went to Oxford when he was eighteen years old; he stayed at Oxford, as student and teacher, eighteen years, at Whatley nineteen, and then nineteen at St. Paul's. But Miss Church, instead of giving a chapter to each of these periods of so nearly equal length, has given only ten pages to his youth, and has incorporated these with the chapter which covers the entire period of his Oxford residence. Yet his youth had much of special interest, much that was influential on his later life. That this had in it not a little that made it strongly individual, and distinguished it agreeably from the lives of many others to whose party he belonged, is to some extent explained by the fact that his father was an Irish merchant and his mother Anglo-German, that his grandparents were Quakers, and that his father was not "disunited" from their connection until 1814. This was the year of his marriage. Richard William Church, the subject of this memoir, was born at Lisbon April 25, 1815, where his father was engaged in business, but only till the next year, when he went to Italy and resided with his family in Florence until his death in 1828. Thus the boy had thirteen years of Italy, and they made a deep impression on his mind and heart. Leaving Florence when his father died, he did not visit it again for many years, but it remained for him the most fascinating place on earth, and his "Essay on Dante" has an accent of familiarity which no mere visit, however studious and prolonged, could possibly have given it.

His English schooling, like the latter part of Newman's, was intensely evangelical on the religious side, and when he went up to Oxford in 1833 he was sent to Wadham because it had a set of tutors noted for their evangelical sympathies. It was the very year of Keble's sermon (July 14), from which Newman dated the beginning of the Tractarian Movement. He met Newman and Keble for the first time in 1835, but his adhesion to the Tractarians was a matter of very gradual development. The letters are disappointing because they add so little to what we know already of the Movement in "the joyous swing of its advance" before the days of opposition and defeat. We have little even of young Church's personal impressions, mainly because his letters of the time were largely to his mother, and he softened to her as much as possible the sorrow which he knew his Newmanism would entail. His translation of St. Cyril for Newman's series in 1837 marked his definite adhesion, and when in 1838 he was a successful candidate for the Oriel Fellowship, it was understood that he was Newman's man. Mark Pattison was a competitor, and to him we are indebted for the contemporary testimony of another: "There is such a moral beauty about Church that they could not help taking him."

For the meagreness of the story here there is less call for sorrow because in the Dean's 'Oxford Movement' (1891) we have the best account of it that has yet been written. The exception to the average thinness is a long letter to Frederic Rogers, late Lord Blachford, the dearest friend that Church and Newman had in common, about the appearance of 'Tract 90,' and Newman adds a postscript about "the scrape he had got into." If Church's interest in the matter was profound, it is obscured by his humorous treatment of it, especially of Golightly's active and malicious subjection of it to his purposes in paying Newman off for a personal affront. Another letter to Rogers, in 1843, gives an elaborate and very humorous account of the row excited by the degree given to Edward Everett, then American minister to England, and understood to be a Socinian. It was pleaded in extenuation that he conformed in England and would sign the Apostles' Creed. The degree was smuggled in by the Vice Chancellor under cover of the uproar that prevented him (he said) from hearing the *non-placets*. The same year saw Pusey's suspension, and the secessions to Rome were getting ominous; but Church never felt himself to be in any danger. He was one of the proctors at the time of Ward's degradation in February, 1845; and when in connection with that it was proposed to condemn 'Tract 90,' their veto interposed an obstacle to this which could not be overcome. Nevertheless Newman's secession was consummated in the following October. Church was the last of his old friends to visit him on the eve of his departure, but after that they had no communication of any kind for fourteen years. Then the old friendly relations were resumed, and Newman was a visitor at Whatley and made his home at the Deanery during his London visits. Church's letters afford many interesting glimpses of the oratorian and cardinal. His children send him 'Alice's Adventures in Wonderland,' confident of his admiration. In and between the lines Newman's cordial dislike of Manning comes out plainly enough. Stanley's relations to Church at Oxford are particularly interesting because of their subsequent relations in London as Deans of Westminster and St. Paul's, with quite opposite ecclesiastical ideals. Always attractive in his depiction of personal character, Church is never more so than in his letter about Stanley, written soon after his death. Stanley had been very kind to him, and he could not help seeing that the kindness was for him personally, in spite of the line he took and the company he kept. It would appear that, in general, Church was much less dependent on ecclesiastical agreement than Stanley as a basis for friendship or esteem. Nothing in these pages is more beautiful than his cordial appreciation of men from whom he was separated ecclesiastically by an impassable gulf.

In 1852 he went to Whatley, an agricultural village of 200 people near Wells, in Somersetshire. The chapter devoted to his life there is the most interesting in the book, but the interest has very little to do with his duties as a parish clergymen. Concerning these there is little said; but, for "the quiet and still air of delightful studies," there could not be a better place, nor for the friendships that afford us entrance to the secrets of his beautiful and pleasant mind. Church's interest in science is a circumstance that will make his ecclesiastical position more problematical than any other. He wrote so intelligently of the discovery of Neptune that he elicited Le Verrier's ardent approbation. He corresponded frequently with Dr. Asa Gray, the Harvard botanist, and in perfect sympathy with his Darwinian opinions. He was no late convert to these, but, before the appearance of Darwin's epoch making book, took kindly to the famous 'Vestiges,' and in general to the idea of organic evolution. He wondered at the "shortness of thought" that found Darwinism incompatible with ideas of a spiritual order in the world. But towards the 'Essays and Reviews' that came out almost simultaneously, he was much less sympathetic, though the little finger of Darwin was thicker than the loins of that in its suggestion of a coming change. Applauding Darwin, he at the same time applauds Mozley's Bampton lectures on Miracles, and regrets "Stanley's insensibility to the immeasurable difference that miracle or no miracle makes in our ideas of religion." In fact there seem to be two Churches in the field—one secular, scientific, historical, literary, human; the other traditional, ecclesiastical, apologetic. And there are not wanting intimations that the basis of his mind was sceptical, and that he clung to the traditional opinion the more resolutely because he dared not trust himself to his own strength in the wide stream of modern thought.

The change from Whatley to St. Paul's was a remarkable one in point of worldly standing, but many will feel that it was not favorable to Church's genius. He did good work in literature in connection with his cathedral charge, notably the 'Spenser' and the 'Bacon' in the

"English Men of Letters," but he would have done much more in the Whatley rectory. He was too good to waste on the details of business management which a much smaller man could have attended to as well or better. Classed as a Puseyite and Ritualist, he was very different from Pusey in the breadth of his intelligence and sympathy, in the uncloistered quality of his learning and his thought; and as for ritualism, he cared little or nothing for its vestments and its posturings. What he did care for was the liberty of worship in the English Church. Nothing in his letters is so surprising as the absence of any desire on his part to make his way the universal law of doctrine or of ritual. The man is never lost in the official personage, however sometimes fettered and obscured. We always know that he is there with his beautiful intelligence and gentle heart, a man whose praise must be extremely sweet for those who are alive, to find it here; as where it is written of Mr. Goldwin Smith, "I think he has given us up too soon. So much nobleness and elevation are a loss to any society, and we can hardly spare him."

His letters have the apparently inevitable felicity of style that marks his various books, and it is interesting to find one of them written at the request of some one who would learn the secret of his charm. He can only say that he has watched against the temptation to use *unreal* and *fine* words, and read good English, Newman's in particular, with Shakspere's, Wordsworth's, and the rest. It is eloquent for his catholicity that Lucretius was his favorite classic, and Matthew Arnold's books an indispensable resource. But the evidences of this quality are many. His character was transcendent of all sectarian distinctions, and the adherents of every sect will find much to profit them in this practically autobiographic record of his scholarly and thoughtful life.

A History of Spain, from the Earliest Times to the Death of Ferdinand the Catholic. By Ulick Ralph Burke, M.A. Longmans, Green & Co. 1895. 2 vols. 8vo, pp. xx, 384; viii, 360.

We confess to a certain prejudice when taking up these volumes, for there is so much so-called history encumbering library shelves which is only pouring old wine into new vessels that the presumption is against the new claimant on the reader's attention. A fairly close examination of the book has, however, won our respect both for it and for its author. It is true that there is but little new material from inedited sources, but Mr. Burke has sedulously drawn his information from a very wide range of reading, not only on his direct subject, but on all related collateral topics; he has sifted out the more important points and has presented them clearly and impressively. A trustworthy history of Spain within moderate compass, presenting the results of recent researches, is a desideratum for English readers, and this he has succeeded in giving us, from the time of the Roman conquest to the advent of Charles V. and his dreams of a universal monarchy. No land in Europe has a history so varied and so romantic, in none is the national character so sharply accentuated, and it would require especial talents of the Dryasdust order to render the story dull. Mr. Burke has a keen eye for the picturesque, and the antitheses and contrasts of Peninsular annals lose nothing at his hands. Occasionally, indeed, the cautious reader may regard his judgments as too absolute or too vigorously expressed, but this exuberance is pardonable in one who evidently feels an intense interest in the events of his narrative, and an intense pleasure in the narration, and his conclusions as a rule are just, although more moderation in the presentment might be desirable.

There are occasional marks of hasty composition, which a careful revision or a friendly proof-reader would have removed. *Armes blanches* (i. 305) does not mean plate-armor of white steel, but edged weapons as distinguished from fire-arms. Sciarra Colonna did not cuff Boniface VIII. in the Vatican, but at Anagni (i. 286). There was no massacre at Carcassonne in the Albigensian crusades (i. 207, 208). "The enlightened Gregory XIII." was not Pope till a hundred years after the act attributed to him (ii. 189, 190). Confiscation was not an innovation introduced in the Inquisition of Ferdinand and Isabella (ii. 110), but had been remorselessly enforced from the thirteenth century. In vol. ii., p. 173, the battle of Seminara is described as a defeat for the Spaniards, and on p. 175 as a victory. On p. 103 the Inquisitor Torquemada is said to be the nephew of the cardinal of the same name, and on p. 104 is spoken of as his cousin. Such mistakes as these are trifling, and in no way detract from the substantial merits of the work, which we trust may pass to another edition and give the author the chance of removing them, for he evidently is one who is not disposed to spare himself in the perfection of his labors. Possibly in such a revision he may be able to introduce some improvement in the arrangement. He alludes in his preface to the difficulty he encountered as to this, which is self-evident from the very nature of a composite history of half-a-dozen warring States eventually united; but surely it was not necessary to sandwich an elaborate chapter on Spanish music between a narrative of the stirring events which placed Ferdinand and Isabella on the throne and a description of the measures which the new sovereigns took to reorganize the State.

The researches of Dozy have effectually stripped off the legendary glamour which so long glorified the protracted war of the Reconquest, and have enabled us to compare with some approach to accuracy the comparative civilizations of the courts of Cordova and Oviedo—not much to the advantage of the latter. Mr. Burke is under no illusions and does not allow his readers to remain under any. The picture he draws of mediæval rapacity and faithlessness is repulsive but true, and may serve to relieve the regrets of those who grieve over the progressive deterioration of modern times. His presentation of the character of Isabella is far removed from the rhapsodical adoration which has surrounded her with an aureole, and is fairly just, though we think he estimates unduly her share in the rehabilitation of the kingdom. The portrait presented of Ferdinand is, perhaps, too highly colored, for though it would be difficult to exaggerate the evil portion of his nature, he was not wholly bad according to the standard of the period. He was simply a typical man of his time, and his time was one which had few redeeming features. The sketch presented of his miserable ending, after a life of almost uninterrupted success, is vigorous and impressive, and conveys a wholesome lesson as to the worthlessness of human ambition.

We shall be glad to meet Mr. Burke again, especially if he will complete his work by carrying out the history of Spain from its apogee under the early Hapsburgs to its perigee under the later Bourbons.

The Works of Edgar Allan Poe. Newly collected and edited, with memoir, critical introductions, and notes, by Edmund Clarence Stedman and George Edward Woodberry. Vols. I.-III. Chicago: Stone & Kimball. 1895.

Forty five years have elapsed since the collected works of Edgar Allan Poe were published by his literary executor, Dr. Rufus William Griswold. The recent expiration of copyright has been taken advantage of by Messrs. Stone & Kimball for the publication of a revised and probably definitive edition in ten volumes. The editors, Prof. G. E. Woodberry and Mr. E. C. Stedman, have collated the various texts published during Poe's life, and, aided by his own marginal MS. notes, have doubtless arrived at the form finally approved by him. They have not tried to show the nature of Poe's revision of his prose, but have given a complete variorum of the poems.

To Mr. Woodberry has fallen the somewhat difficult task of writing the introductory memoir, the bare sketch of the author's unfortunate and unlovely actual life. The facts Mr. Woodberry has to deal with are not pleasant; by contrast with the brilliancy of Poe's literary achievement, they are pitifully sordid and squalid. The things he is known to have done need all the benefit of stress upon what he resisted to make him appear, outside of his genius, worthy of any more kindly sentiment than tolerant contempt. This memoir seems to us to express contempt without tolerance. The tone is given not by the necessary narration of that sequence of disasters entailed by Poe's constant relapses into drunkenness and by his vain and irritable temper, but by the mention of insignificant incidents which, in a short memoir not designedly censorious, might as well have been omitted. Such are the references to his questionable method of increasing his reputation; his untruthfulness in trifles; his working off on an admiring lady a poem long before addressed to a predecessor in his homage, and other unimportant but depreciatory facts. Prof. Woodberry is not guilty of deliberate disparagement, for he includes the best testimony to be found in Poe's favor; but he gives the impression of one whose attitude is not merciful to a fellow-man whose worst faults were as surely congenital as was his genius.

To Mr. Stedman is allotted the far more grateful duty of the literary introduction. That to the five volumes of tales (included in the first volume) displays the best critical spirit, being illuminative and sympathetic, cordial yet temperate. It shows how naturally the tales fall into well-defined groups, discusses their animating motives, form, and style, and their author's strength and limitations. Especially valuable as a corrective of harsh impressions derived from the memoir is his comment on the man as revealed in the work. He finds all of that, even the tales composed with purely artistic intent, vividly self-explanatory. "Their author," he says, "was a being of extreme physical and spiritual sensibility, proudly reliant upon his mental force, and terribly cognizant of his infirmities; so intent upon the one and the other as to bound a world by his own horizon." This seems to us an exact expression of the problem of Poe's character. The clearest inference from his work is that nothing really *was* for him except his own imagination, his own intellect, his own temperament. Unfortunately, his recognition of his defects took the shape of passionate resentment, passionate exculpation, minute reasoning-why, not of cool criticism;

hence the intensity of self-presentation in fiction and the woful failure in living.

The new edition is in every respect a very beautiful one, a fitting tribute to an apostle of the creed that "in perfect beauty consists the fullest Truth."

Ueber Vorkommen und Gewinnung der nutzbaren Mineralien in der Südafrikanischen Republik (Transvaal), unter besonderer Berücksichtigung des Goldbergbaues: Bericht . . . von Schmeisser, Bergrath. Mit 19 Karten und Tafeln. Berlin: Dietrich Reimer. Pp. 150.

THE teachings of political economists and scientists, notably of the great Austrian geologist, Prof. Ed. Suess, also a financier and member of Parliament, who attempts to prove in his published works that the available supply of gold in the earth's crust is already showing signs of exhaustion, had produced so much uneasiness in Germany as a gold-standard country that, under the direction of the Minister of Commerce and Industry, one of its official mining engineers, Herr Schmeisser, was sent in the summer of 1893 to the gold-fields of South Africa to examine into the mineral resources of that region and report upon its industrial conditions and the probable permanence of its supply of gold. The report, which has recently been published in a handsome royal 8vo volume, with abundant maps and sections, as the result of his four months' examination, is most opportune at the present moment, when gold-mining has received such a sudden awakening the world over. It has hitherto been difficult to learn what little is accurately known with regard to the geology or industrial conditions of this far distant region, and most accounts have appeared to be tinged with the exaggeration common to new mining districts. Herr Schmeisser's report deals, in German thoroughness, not only with the geology and mineral resources of the country, but also with its history and politico-legal relations, and has apparently been prepared with discrimination and due conservatism, yet his cold statement of facts shows a condition of things that might readily have aroused the most phlegmatic nature to enthusiasm.

As not only the language but the figures are intended for a German audience, we present a few of the striking facts in an English dress. The great bulk of the gold product of South Africa comes from the Witwatersrand district, though there are many other mining districts in which valuable auriferous quartz veins exist, and where already important mines have been opened. In the Witwatersrand the gold is found in beds (there called "reefs") of conglomerate, of which there are some forty or fifty in a sort of basin which dips southward in the Orange Free State. It has been considered by some that these conglomerate beds are old placer deposits, but the microscopical examination of specimens brought back by Herr Schmeisser seems to negative this idea. The outcrops of these beds have been traced for about fifty miles, but only a small number of the beds, and these for not more than a fifth of the distance, are at present actively developed. Within this area there were over seventy active mines in 1893, the deepest workings of which were not over 500 feet below the surface. Drill cores had been obtained, however, from five times this depth, which showed that conglomerates exist at that point which are equally rich with those in the mine workings.

The fact that the product of the mines is reported in unrefined gold, which varies in value, introduces an element of uncertainty into the figures of production, which are given here, however, in the estimated equivalent in fine gold. The product of the Witwatersrand district has increased from less than $500,000 in 1887 to over $26,000,000 in 1893. Herr Schmeisser estimates that the product for 1894 will be found to be $36,000,000, and that this will be doubled in less than ten years. He also enters into a somewhat elaborate calculation of the amount of gold that will have been produced in this district when the mine workings in the area now developed shall have reached vertical depths of 2,500 and 4,000 feet respectively, at which he considers it possible that the ores may still be extracted at a profit. These figures, which are in general accord with the estimates already made by the American mining engineer, Hamilton Smith, are for the lesser depth 1,070 millions of dollars, which is approximately the gold product of California up to 1890, and for the greater depth 1,745 millions, which is but little less than that of the whole United States up to 1892. If the estimates of Herr Schmeisser for South Africa and of Director Preston for the United States of the gold product for 1894 prove correct, the world's gold product for that year will exceed 180 millions, which is nearly 40 per cent. greater than that of 1891, and is double that of 1874.

The British Fleet. By Commander Charles N. Robinson, R.N. With illustrations. London: George Bell & Sons; New York: Macmillan.

WE have, in this stout but not unhandy volume, an interesting treatise upon the functions, organization, administration, and personnel of the British fleet. The subject is dealt with exhaustively, so far as the size of the volume will permit, and in an authoritative manner, both as to the origin of the navy, its history, and its present state.

The first part of the book, dealing with the functions of the navy, discusses the subject of naval power. The author credits Prof. Seeley, in his 'Expansion of England,' with having to some extent first recognized the true place of the navy in English history; but no writer has so ably expounded the real meaning of naval history as Capt. Mahan of our own naval service, though Vice-Admiral Colomb is regarded as the chief English authority for the ruling principles of naval warfare. The dawn of sea power is dated about the time of the discovery of the New World, which made a pathway of the ocean that had been heretofore a limit, and which changed the centre of gravity in affairs in the Old World from Italy and the countries of the Mediterranean to those bordering upon the Atlantic Ocean. In discussing the various changes in the sovereignty of the seas—a sovereignty not recognized by the laws of nations, but of whose existence, subtle but positive, there is no doubt either now or in the past — Commander Robinson quotes what Washington many times said, that to the independence of the American colonies the French navy was all-important. "Upon decisive naval superiority," Washington wrote, "every hope of success must ultimately depend." But our author, with others, draws a lesson from the Franco-Spanish coalition of this war, as well as from the similar coalition during the wars of the French Empire, respecting the inherent weakness of maritime coalitions. This lesson should be commended to those who favor an Anglo-American naval coalition, with the inevitable naval (and political) subordination of the weaker naval power.

In giving an interesting account of the flags and signals, past and present, of the British navy, the author dates the custom of carrying the national colors from an international agreement made in 1297, about which time are mentioned instances of ships hoisting false colors with a view to deceive; some Spanish vessels attacking English ships under the Portuguese national flag. The established custom of the present day allows the use of false colors to entice an enemy within reach, but forbids the exercise of any hostile act under any other flag than that of the nation to which the vessel belongs.

The second part of the book treats of the administration of the English navy. The wretched victualling and hygiene of the early days were probably no worse than those of the French, who used to have the custom of temporarily burying the dead, after action, in the ballast stowed in the bottom of the ship. Much curious information is given as to early laws and customs in both the navy and the merchant service of England, taking us back to what was known as the laws or Code of Oléron. These laws, though upholding the authority of the captain of a merchant vessel, especially enjoined upon him to take the opinion of the crew under certain circumstances (as to the weather, for instance), and requiring him to be governed by the decision of the majority. The treatment of the wounded, even as late as the time of the Restoration, when surgeons' warrants were bought and sold, can be imagined from Pepys's description of a man he saw just back from a fight with the Dutch, with a plug of oakum filling the socket from which he had just lost an eye.

But Commander Robinson does not confine himself to matters of the past; he describes in terse and graphic language the state of the British navy of to-day, less as to its material than as to its personnel, without which the service is nothing. He gives interesting details of the requirements for officers and men, which have gone far to make the English naval service not only the most efficient navy of the present time, but upon the whole the most efficient that the world has known. Of the requirements exacted of the officers, he says: "The high qualities which would have sufficed to make an efficient naval officer in Nelson's time would no longer be sufficient, at supreme moments, in these days. Every step in mechanical invention as applied to ships of war, every new complexity, every added means of attack or power of defence, has added, little by little, to the burdens borne by naval men, until at length to those placed in full command the charge might well appear unsupportable." Of the seamen he says: "These men also must possess the high qualities of moral and physical courage in such degree that they may stand calm and ready in the presence of dangers they can neither measure nor wholly understand."

Upon a question much under discussion in our own service he fully agrees with those who believe that our seamen, like our ships, can no longer be improvised, but that the training must be begun in boyhood, when the sense of duty and discipline can be awakened and the qualities of will and courage developed so that responsibility will be met without shrinking and danger without fear. Most of the officers of the British navy, and those whose opinion is counted of the greatest value, believe that the best qualities of a

seaman in bravery, hardihood, quickness of eye, and alertness can be developed only by a course of training under sails. The training of the officers and men of the British naval service is intended to be a war training, and its efficiency is tested by the annual manœuvres and the celerity of previous mobilization. With the advantages gained by rapidity of movement in these days, the efficiency of a navy depends largely upon the quickness of assemblage of men and material. The pathway of the sea is always open to the ready fleet, and the maritime frontier is now recognized by the strategic authorities of the day as the enemy's coast line and his seaports.

We can most heartily commend this book to all interested in naval matters.

An Introduction to the Study of Society. By Albion W. Small and George D. Vincent. American Book Co. 1894.

"Sociology," say the authors, is "the organization of all the material furnished by the positive study of society." It is first "descriptive"; *i. e.*, it gives an account of Society as it is; second, "statical — the ideal which right reason discloses of Society as it ought to be; third, dynamic—the available resources for changing the actual into the ideal." This is obviously a large field, and our conception of its extent is not lessened when we are told that descriptive sociology alone is concerned with all the positive knowledge *of man and of society* included under "Biology, Anthropology, Psychology, Ethnology, Demography, History, Political and Economical Science, and Ethics." Surely Jurisprudence ought to be added to this list, though perhaps it, together with Art, Literature, Music, and Architecture, is included under History.

We shall not attempt any elaborate criticism of this hand-book, but merely wish to point out that it has the usual peculiarities of treatises on this subject, peculiarities which may tend to explain why the science of sociology does not make the headway that its devotees would like. In the first place, the authors begin by showing that the teachers of the science have never agreed upon what its fundamental dogmas are. Comte was the first of them, and Professor Lester F. Ward, who has made himself responsible for two sociological treatises, one on 'Dynamic Sociology,' and the other on 'The Psychic Factors of Civilization,' is, according to the authors, the latest. And this is the way in which Professor Ward speaks of Comte: "So far as M. Comte's views on social status are concerned, they may be classed as generally unsound; *but with him this is nothing new.*" As for Herbert Spencer, the authors say that his sociology "ends precisely where sociology proper should begin." And we cannot find anywhere in the book any evidence that the various writers on sociology have agreed upon a single fundamental doctrine of their science. Now it is generally admitted that a branch of knowledge cannot be classed among the sciences unless there is an agreement of this sort among its teachers. Sociology, therefore, as presented to us by Messrs. Small and Vincent, no more demonstrates its claim to existence as a science than astronomy would if we found some astronomers insisting that the sun went around the earth and others contending that the earth went around the sun. Before the world can accept sociology, in the way, for instance, that it accepts economic science, there must be a consensus of opinion as to what it tells us. No doubt there is in economic science, as in every other science dealing with man, room for a great deal of controversy and difference of opinion, but that there is at the bottom of it a body of systematic truth, capable of exposition, as to the main points of which its teachers are agreed, is the only thing that keeps it in the rank of sciences.

Another peculiarity of sociology is that, while it professes to be the crown of all the sciences, its method seems to be such as has never hitherto produced any science, certainly any science dealing with man. The process by which the truths of political economy are arrived at, has been described very justly as a process of *abstraction.* We look at man from one point of view only—as a wealth-producing animal. For this purpose we neglect for the time all his other attributes, cease to think of him as a husband, father, son, or brother, warrior, artist, or diplomatist, and consider him as governed solely by economical motives. Of course, we are all well aware that a modern school of writers says this is all wrong, and very "narrow," and that it would be much higher and nobler to consider man in all the fulness of his attributes; but what we desire to point out is that this is not the way in which the science was created, or in which any generally accepted additions to it have been made. In the same way, if we examine such a body of truth with regard to man as is to be found in the pages of the 'Federalist,' we find that it has been arrived at by studying man as a political animal—and nothing else. The same thing is true of law. All the attempts made to evolve a *science* of law have been founded on the study of man as a law-producing and law-obeying animal.

Sociology is the only science in which the attempt is made to reverse this process; indeed, it reverses it *ex vi termini.* It introduces itself to our notice as the one science which, instead of proceeding by abstracting some one human tendency and considering that, undertakes to put together all the sciences relating to man in society and to tell us what the result is. But we ask at once, How can this be done? Man has a great many different and opposite tendencies; so has society. A synthesis of the whole would not be science; it could be the work only of omniscience.

If what we have said be true, such books as that before us are thoroughly misleading, because they teach the young to attempt the unattainable. When the authors say, for instance, that "social doctrine which omits to take account of *all available biological data*, is obviously partial and premature," we can only point out in reply that all the body of truth which we possess about man in society has been attained by people who have paid about as much attention to "all available biological data" as they have to counterpoint. Of course with sociology in the sense of the *sum* of all the knowledge that we have about man in society, no one can quarrel; but that, in our authors' view, would never do. A cycle of social sciences will not content them. What they insist upon is a brand-new science, which puts the others all together and evolves new truth from the compound. But when we modestly ask, What is it? they reply only in the mysterious language we have quoted above.

The Real Chinaman. By Chester Holcombe. Dodd, Mead & Co. 1895.

Despite its manifest limitations, this work is destined, we think, to take high rank in the army of books on China. It is calm, clear, and fair. It has those two qualities which, while necessary, are almost invariably lacking in the works of men who try to interpret the Chinese to us Western folks. It is really very uncertain which, in mutual relations, is the more hidebound, conservative, and bigoted in his notions, the average Chinaman or the average American. The first requisite, therefore, in trying to get two men of antipodally different worlds to understand each other is fairness. Mr. Holcombe, who spent more than fifteen years in China as missionary, interpreter, secretary of legation, and acting Minister of the United States, was and is, above all, at home in the language. He could understand both the compliments and the anathemas of Chinese, both high and low. He has been able, through familiarity with the vernacular literature, to see the moulds of thought and to know what ideas are foreign to the mind of the sons of Han. Fortunately for those who want to get at the truth, he attempts no defence, apology, criticism, or panegyric. He simply explains, and he does this with such a wealth of anecdote, narration from experience, and clear interpretation that we can fully and frankly stamp his work as the honest verdict of a judicially minded man. We are even inclined to believe that he has told the truth in certain chapters that will cause some little private irritation, and possibly profanity; for it is an open secret that the American Legation in Peking has not always been the elect place or means to assist the Chinese in understanding the best thought, purpose, or behavior of Americans.

What is still more remarkable about the book is, that it is positively interesting. We have read every word from the top of the title-page to the bottom of the last chapter, and we have been led along as if in a novel to the place where the index ought to be. The book is positively lively. There are some defects, however, which are manifest to the student. The author is uncritical in his methods; he seems to accept the fabulous and immeasurable eras of antiquity as if these were historical spaces well plotted out with indisputable landmarks of chronology. He seems to have very little insight into religious growth, and to be unacquainted with the methods and results of the study of comparative religion. There is a certain Chinese-likeness of mind in the book itself. The English is not immaculate, despite its limpid flow and charming style. So often does the author speak of a "custom as old as the Empire" that one is tempted to find in Mr. Holcombe's book a fresh argument for the late lamented Professor Lacouperie's thesis that civilization came from Chaldean regions in a substantially perfect form and was at once adopted by the Chinese, so that it has had neither decay nor growth. In furnishing his book with abundant illustration, the author has studied truth rather than art, all the pictures being reproduced from photographs. As they issue from the acid in tones which are sometimes "half" and sometimes a good deal less than half, we have the truth, as it were, out of the bottom of the well, undressed, and occasionally bedraggled.

The initial chapter pictures in strong light and with consummate skill that old world of Chinese Asia, now fast passing away, in which the Middle Kingdom was surrounded by vassal or pupil nations; the Chinese Emperor being the sun which shed light, and the sun of Heaven which gave rule, to the peoples who basked in the favor of the mighty orb, beside which they were as planets. Japan was the erratic and dangerous comet. Between China and the great circle of nations there was a

definite and well-understood relationship and intercourse established. Japan was the one exception, destined in due time to shatter and dissolve the system. The chapter on the government of China is one that could have been written only by one familiar with what goes on behind the scenes. With surprising freshness the author treats of the language, and adds the sauce of humor by serving up on his literary bill of fare the amusing blunders of missionaries and diplomatists. The home life of the people is set before us attractively, but in Chinese social life there is no woman's world. When, despite the explanations and protestations of Mr. Holcombe, a certain American minister at Peking insisted on congratulating the grandees of the Foreign Office upon the marriage of an honored Chinese envoy to an American lady, the only result was a silence that reminded one of the North Pole. Then, after prolonged terror and stupor, Prince Kung remarked, "It is very hot to-day." The chapter on religion does not add much to our scientific knowledge, but is attractively set forth. More clearly and convincingly than any of the writers that we have specially consulted on the subject, Mr. Holcombe explains the real facts in regard to so-called infanticide. It is not that Chinese parents systematically cast out their female children, declining to rear them, especially when sickness or famine prompts to exposure, but it is rather in bondage to the idea of demoniacal possession that they daily fill the dead-carts, and dump in heaps their awful loads on the rubbish-heaps. When a child falls sick, Chinese parents will equal the mothers and fathers of Christian homes in trying to save the child's life; but the moment they discover that nursing and remedies are of no avail, they place the child, usually naked, in an outer room, regardless of season or temperature, to see whether it will live or die. If it lives, it is a true human being. If it dies, it was an evil spirit come to torment and defile the family. Such a changeling or incarnation cannot be reared, or buried in the ancestral grave. Hence the awful mortality of children. Luminous and interesting descriptions of the courts of law, the civil-service examinations, etiquette and ceremony, trade and its tricks, and finance make up a singularly valuable and timely book on a subject of real interest.

BOOKS OF THE WEEK.

A New Dictionary of the Spanish and English Languages, Containing the Latest Scientific, Military, Commercial, Technical and Nautical Terms. Appletons. $1.
Berlitz, M. D. Méthode Illustrée pour l'Enseignement des Langues Modernes. Partie Française. The Author.
Boothby, Guy. The Marriage of Esther. Appletons.
Brandes, Georg. William Shakespeare. Erste Lieferung. Leipzig: Albert Langen; New York: Westermann.
Browne, G. W. A Daughter of Maryland. Novelist Publishing Co. 25 cents.

Copeland and Day,

69 Cornhill, Boston.

THE HOUSE OF LIFE: Being for the First Time Given in Its Full Text. DANTE GABRIEL ROSSETTI.

Containing three ornamental borders and one hundred and fourteen initial letters designed by Bertram Grosvenor Goodhue. Issued in an edition of five hundred copies on hand-made P. L. P. paper, square octavo, bound in limp Japanese silk-paper boards, $2.50; and fifty copies on thick hand-made Michallet paper, with rubricated initials, $5.00. But few of the ordinary edition remain. The rubricated edition is entirely disposed of.

This new edition of "The House of Life" is an excellent example of American typographical art, fully equal to the best specimens of the English and Scottish presses.—*N. Y. Mail and Express.*

TENNYSON AND HIS PRE-RE-PHAELITE ILLUSTRATORS. By GEO. SOAMES LAYARD. Octavo, Roxburghe, $1.75.

The purpose, stated in the preface, is to indicate "the method by which a book may be made to yield discursive and innumerable delights beyond and above those which are at first apparent." The book is well worth reading and cannot fail to interest even the casual observer of illustrations. — *Smith College Monthly.*

HENRY HOLT & CO., New York.

Yale Mixture.

A GENTLEMAN'S SMOKE.

You won't know the luxury of Pipe-Smoking until you use Yale Mixture.

A two-oz. trial package, postpaid, for 25 cents.

MARBURG BROS.,
The American Tobacco Co., Successor,
Baltimore, Md.

Persecution and Tolerance:

Being the Hulsean Lectures Preached before the University of Cambridge in 1893–4. By M. CREIGHTON, D.D., Lord Bishop of Peterborough. Crown 8vo, $1.25.

"Charming in thought and expression, and instinct with the love and charity befitting a Christian prelate."—*The Nation.*

Sold by all Booksellers. Sent, postpaid, by

The Nation.

NEW YORK, THURSDAY, MAY 9, 1895.

The Week.

THE Treasury receipts do not come up to expectation. From the new sugar duties less than $20,000,000 is likely to be realized during the fiscal year instead of the $40,000,000 which it seemed reasonable to estimate. Nor does the higher tax on whiskey appear to have increased sensibly the internal-revenue receipts. All told, the Government's income up to May 1 has been $260,000,000, as against $245,000,000 last year. Expenditures, meanwhile, have been cut down from $311,000,000 in the corresponding period of the last fiscal year to $305,000,000, but even so a deficit of $45,000,000 appears, which is not likely to be diminished in the two months remaining before the annual accounts are made up. This does not mean that the Treasury is or will be bankrupt. It has now, as the result of borrowing, of course, a net cash balance of $89,000,000, in addition to the gold reserve, at present $91,000,000. Thus it will be easy enough to pay all demands till Congress meets. But unless the outlook greatly changes by that time, it will be necessary to put the Government in funds by new measures of taxation—especially with the income tax already cut in two. Doubtless a supernaturally wise Republican Congress will devise taxes which nobody will have to pay, and which therefore will prove odious to no class of voters. Everybody must rejoice to observe, in the meantime, that almost exactly half of April's income of $24,000,000 was paid out in pensions. We all ought to be glad, that is, that the Grand Army and the claim agents have left us even a half to run the Government with.

Chancellor Harcourt's budget speech shows what responsible government can do in the way of forecast and control of revenue and expenditures. The revenue turns out to be some £500,000 greater than the estimates, and the actual expenditures £84,000 greater than the estimated; the surplus being £776,000 instead of £291,000 as estimated. Such precise results are possible only where a party leader can keep a firm hand on both taxes and appropriations, and is not subject, as he is under our headless system, to having his best-laid plans overriden by a log-rolling combination of the grabbers of both parties. Sir William's account of the generally prosperous condition of the country will be sad reading for President Andrews and the other prophets who were going to bring gold-standard England to her knees in six months. The savings-bank deposits are one of the surest tests of the well-being of the working classes, and when these have mounted from £35,000,000 in 1893 to £45,000,000 in 1894, it is clear that the kneeling process is hardly going to begin yet. As the chancellor intimated, with such proofs of a sound financial condition before her eyes, England will not be such a fool as to take a plunge into bimetallism, with or without ratios or international labels.

The reason why the Nicaraguan trouble could not be arbitrated is plain enough. The thing complained of by Great Britain was an insult to and outrage on one of its own officers. Nations do not arbitrate on insults. They arbitrate about nearly everything else, but do not submit to arbitrators the question how much they ought to get for being kicked or having their noses pulled. They may arbitrate about injuries to individuals by riots, or about territory or boundary lines, or abuse of power by naval and military commanders; but deliberate ill usage of one of their own officers by a foreign government no self-respecting power lets any third person pass upon. The trouble in such cases as the Nicaraguan is, that if such acts on the part of a small semi-barbarous government are allowed to pass, they are pretty sure to be repeated, and bombarding them or using force in such a way as to destroy life or property seems cruel. So that on the whole the seizure of a custom-house seems about the most humane way of settling the matter, if Government property cannot be got hold of in any other way. Most of our discussions of the affair here have been worthy of Bloomingdale or the State asylum. Where a lunatic has the advantage of sane dialecticians is in being released from all attention to facts or precedents.

While blatherskite Republican legislatures in Connecticut and New York are passing resolutions bewailing to high heaven the "open and flagrant violation of the Monroe doctrine," the State Department is having the said doctrine printed in a separate leaflet for distribution to all applicants. We may be sure, however, that the blatherskites will not apply. The last thing in the world they want is to know what the Monroe doctrine really is; and if they could be summoned before a body of trained logicians and asked to point out wherein the Monroe doctrine had been violated, they would refuse if the leaflets were as plenty as blackberries. What they mean by the Monroe doctrine is a general warrant for ignorance and insolence applied to foreign relations—that is to say, they mean it as long as they are out of power and irresponsible. Once in control of the administration, they would knuckle under to England as meekly as ever Blaine or Harrison did, when the pinch came.

There is gratifying evidence of the growth of sound-money ideas in the State of Indiana. It is only five years since both parties were badly infected with the silver delusion, and the Republican State convention welcomed the passage of the Sherman act as "a long yet prudent step towards free coinage." But now the Republican press of the State is fast becoming unanimous in its opposition to free coinage. The Indianapolis *Journal* in a recent issue published brief extracts from nearly twenty newspapers in different parts of the State, not one of which favored the 16-to-1 policy, while many put the arguments against it very forcibly. Indeed, the country press in all parts of the nation is making a far better showing than would have been expected by most people. Alabama, for instance, is a Southern Democratic State whose Senators, Pugh and Morgan, have been giving everybody to understand that their constituents were all crazy on this subject. In point of fact, however, not only are the Montgomery *Advertiser*, the Mobile *Register*, and other such leading journals in the large cities fighting the free-coinage scheme, but a canvass of all the newspapers, large and small, which have declared their position, shows that sixty-nine are against the 16-to-1 policy, and only twenty-eight for it, of which latter eight are Populist organs. The truth is that there is more noise than substance in the silver claims everywhere.

The fate of Mr. James Irving Burns of Yonkers, who introduced in the New York Assembly the bill for the practical repeal of the civil-service law, is one which frequently happens to statesmen who live too exclusively among men of their own way of thinking. Mr. Burns heard all his fellow-statesmen damning the civil-service law and expressing a desire to get it from between them and the offices. He, too, was looking for offices for his followers, and had discovered that he could not get them. So he thought he would please all good Republicans and get what he wanted by bringing in a bill to repeal the offending law. He brought it in, but as soon as it got before the public he discovered that the sentiment which statesmen expressed in private was so different from that which the public entertained, that few of them dared openly to support the bill, although it met the deepest longing of their hearts. Instead of making himself popular, Burns found that almost nobody was willing to stand with him, that even Speaker Fish said his bill must be withdrawn, and accordingly he withdrew it. There is no hope of its passage, therefore, and Burns will lapse back into the obscurity from which he emerged when he presented it. He has received his first lesson in the politician's art of

"pandering a little to the moral sense of the community."

We understand that the mayor adheres to his determination to leave the selection of the new police magistrates to prominent members of the bar. We trust this determination will not be overborne by the politicians urging him not to "delegate his powers," and to "use his prerogative," and so on; because any mistake about these appointments will be very serious for the city, and they are appointments about which it is easy to make mistakes. There will be a large number of candidates in whom politics and law will be mixed in about equal proportions, and a large number, too, whose character as politicians will stand higher than their character as lawyers, and many whose character as lawyers will be considerably puffed by influential lay friends. Nobody knows so much about the fitness of lawyers for judicial positions as other lawyers, and nobody is more interested in having good judges and magistrates. So that if the mayor will take the advice on these appointments of well-known members of the bar, he will not only confer a great boon on the city in the present case, but establish a most valuable precedent, which will bear fruit hereafter.

The Tammany police justices are naturally very unwilling to go. They have occupied a unique position. Never, we presume, since man established courts of justice, has such a body discharged judicial functions on a salary in a civilized state. There have been such judges before now, but they owed their offices to their ability to "lick" anybody who objected to them, or else have been members of a semi-barbarous community. The oddity of our men lies in the fact that they have held office in one of the foremost countries of the world in both arts and arms, and that some of the leading lawyers of Christendom might have appeared before them. This makes them extremely interesting, and both historians and sociologists ought to take a look at them before they leave the bench and go back to their old roosting-places, with no trace of their judicial honors left except the empty title of "jedge." Tom Grady is, however, the only one who laments aloud, but his lamentations are tinged with joy. He says people are beginning to see the mistake they made last fall, or, as he expresses it, are beginning "to see things in their real perspective." Tom knows bigger words than any Tammany man except Bourke Cockran. What troubles him most, however, is not so much the loss of his place as the charge that he and his fellow-justices "oppressed the poor." He feels this imputation keenly, and thinks it a rather ridiculous one to come from the Chamber of Commerce, which is engaged constantly in combinations to raise prices on the poor. Their last exploit in this line was raising the price of beef. Men who meet to raise the price of beef on the poor ought, Tom thinks, to keep silent about his qualifications as a police justice.

The announcement that Austin E. Ford is to have a fire commissionership cannot be wholly due to the labors of his "Civic Union" in the late canvass. We have no desire to underrate the earnestness and zeal of this organization, but it never numbered more than one hundred members, and one hundred men cannot do much in any canvass, let them be ever so well disposed. Its dissolution immediately or very soon after the election we ourselves ascribe to over-exertion. The members were exhausted and incapable of continuing their efforts in the cause of good government, and retired simply to recruit their strength. This, at all events, is a much more charitable theory than the one propounded by some malicious persons, that the "Civic Union" was simply intended to impose on Mayor Strong, and, having made its "claim" on him, retired from the scene. Nor do we ascribe Ford's fire commissionership wholly to the "Civic Union." We feel sure he has personal merits which he has not yet had an opportunity of displaying. But over and above these he had, as nephew of Pat. Ford of the *Irish World*, and assistant editor of that publication, an experience of explosives which must be useful to a fire commissioner, and which none of his colleagues will have. He filled this editorial office while the *Irish World* was preparing for the destruction of the British monarchy by chemical means, and undoubtedly made himself acquainted with the force, or "energy," as the scientists call it, of the various compounds used against life and property by anarchists and other evil-disposed people. The value of such a man in a department which has to deal with the results of the crimes of such people is easily seen.

We see there has been a split in the "O'Brien Democracy." A considerable portion of it has gone off and founded another "Democracy," which will, of course, have to be "recognized," for a Democracy without recognition would be like a tavern without liquor. The consequences of this split will, in our opinion, be serious and far-reaching, for there can be little question that all the other Democracies, and indeed all the other "organizations" which supported Mayor Strong, will split too. The advantages of splitting are so obvious that the tendency to disintegration which will now set in, will probably go far. City Democracies, like certain low forms of animal life, in fact propagate by splitting. They are, in scientific language, fissiparous. Each part, after the split, enters on a life of its own, fully furnished with the parental organs, and as capable as the parent of office-getting and office-holding. As the next election draws near, this asexual multiplication of the species will undoubtedly become more rapid, and Mayor Strong's successor will probably have twenty times as many "claims" to deal with as Mayor Strong himself. Ten "Civic Unions" is a moderate estimate of what fissiparity will do for that thoughtful society, while the capacity of the larger ones, like the State Democracy, for fissiparous increase in the public interest, is something which no prudent man will try to calculate. We should not be at all surprised to see one hundred and fifty organizations in 1898, carrying the people's candidate into power with an average vote of 50,000 a piece, and held together, as in a vice, by a chosen leader, whose demands for a commissionership or two no mayor will be able to resist. Whence offices are to come for them all we cannot say.

When the secretary of state of New Jersey, Henry C. Kelsey, admitted on the witness-stand last Thursday that, in plain violation of the law, he had been converting to his own use State funds at the same time that the State Treasury was borrowing money to meet its necessities, it would have been natural to look for an announcement of his resignation of his office along with the publication of this disclosure. Not the least indication, however, is given that resignation has even suggested itself to him, nor does the public across the river seem to look for so fitting a conclusion of the matter. One reason for this is that professional politics in New Jersey, no matter under what name, has been for a long time simply a means of jobbery. Take Kelsey's case, for instance. An editor and a county "lay" judge, he was appointed secretary of state as a political reward by Gov. Randolph as far back as 1870, and has filled the office continuously for the last twenty-five years. When his term expired the first and second times, he was reappointed by Democratic Governors and confirmed by Republican Senates. When next renominated, in 1881, the Senate refused to confirm him, but Gov. Ludlow appointed him to "fill the vacancy," and nominated him again in 1882, when a more subservient Republican Senate confirmed the nomination. He was again confirmed by a Republican Senate when nominated by Gov. Green in 1887, and once more in 1892, when he was the choice of Gov. Abbett. Kelsey, therefore, owes his long tenure quite as much to the favor of Republican Senates as he does to his influence with Democratic Governors. How large a part of the profits he confesses he has made improperly out of his office he has divided with his bi-partisan friends, it would be interesting for him at his next examination to state.

There is a slow-growing but encouraging public demand in New Jersey that the punishment of the persons responsible for the grave peculations which the Senate

committee is bringing to light shall not end with the mere exposure of their misdeeds. When the committee began its work, there was a disposition to believe that the inquiry would go no "higher" than State-house employees and men of similar position. Now, however, that the evidence has gone directly against the secretary of state and one ex-Governor, people are asking if the present Governor and other ex-Governors do not share more or less in the responsibility for the scandals. One of the requirements of the Constitution is that the Governor "shall take care that the laws be faithfully executed." An aggressively honest Governor, who is not a politician first and a servant of the people afterward, has all the power necessary to execute this command. The Governors of New York who preceded Mr. Tilden in office could have disrupted the canal ring just as he did, had they made up their minds to do so, and the Governors of New Jersey could have put a stop to the long-continued peculation there at almost any period. This was not to be expected of an Abbett, but it was not too much to look for it from a Werts or a Green. Gov. Werts has an immediate opportunity to show his appreciation of the situation. Three of the persons directly implicated by the testimony are members of his staff, namely, Brig.-Gen. Heppenheimer, Col. Leon Abbett, jr., and Col. John T. Van Cleef. Is the last named the only one who is going to resign?

The Columbia *State* strongly advocates a resort to qualified woman suffrage as a means of insuring white supremacy in South Carolina without any possible collision with the Federal Constitution. Moreover, it says this idea meets with marked favor, and will have its supporters in the coming Constitutional Convention. That such an innovation should be the result of emancipation must seem odd enough to those who remember how the ante-bellum South prided itself on its Chinese wall against isms; yet the situation is so desperate that we may well see woman suffrage enacted in South Carolina before it establishes itself in Massachusetts, the original seat of the agitation. We observe also in the *State* an extract from the Manning *Times* intimating that Col. Dargan, the intrepid editor of the Sumter *Freeman*, should either be confined as a lunatic or, if sane, "*requested* to desist" from stirring up strife between whites and blacks. The *State* thinks there is something sinister in the *Times's* italicising, and no doubt we have here a manifestation of that "Regulator" spirit which warned Mr. Hallowell out of Camden. The town of Manning was, we believe, named after the family of Mr. Richard I. Manning, who lately wrote to us that the Camden menace was only a practical joke. Col. Dargan, by the way, is abused because he addresses the blacks; but when he offers, as just now in Charleston, to present himself before a white audience exclusively, the press gives him the cold shoulder.

President Low's magnificent gift of $1,000,000 to Columbia College for a library building makes, we believe, nearly six millions that the college has received in gifts since he succeeded to the presidency. This may fairly be said to "beat the record" among American colleges, if we except the foundation of the Chicago University. It shows, too, what New York can do in the way of the encouragement of learning when once fairly appealed to. We believe it is not over twenty years since Columbia allowed it to be supposed that she stood in need of or received gifts. Since then the tide of local generosity and sympathy has been flowing towards her steadily, and she promises speedily to be one of the richest seats of learning in the world; and with money, we are sure, there will come steady growth in intellectual capacity and achievement.

The Presbyterian seminaries continue this year, as they did last, to refuse, gently but firmly, to walk into the General Assembly's parlor. This movement to compel them to turn over their funds and management to the Assembly was really a part of the conservative programme mapped out in the days of the Briggs controversy; and its flat failure now is but one of many signs that the fury of those days has largely spent itself. The churches are heartily tired of the whole thing, and of the odium it brought upon the denomination, and want it dropped altogether. In fact, as so often happens in theological controversies, the man over whom all the pother was made is disciplined and orthodoxy thereby vindicated, but the heretical opinion goes on eating its way into the clerical world just the same. Plenty of Presbyterian ministers hold the Briggs views and avow them; they are not troubled, unless it be by their own consciences, nor will they be unless they become unduly aggressive and pugnacious. In the modern theological world, so much at ease in Zion, views (the truth is) are becoming of less and less account, and the emphasis is getting to be placed more and more on good manners, humanitarian labors, and pleasant Sunday afternoons.

Contemporaneous despatches from St. Petersburg, Berlin, and Paris leave little doubt that Japan has agreed, on the joint demand of Russia, Germany, and France, to abandon her claim to permanent possession of Port Arthur and adjacent territory. That she will, in consequence, exact an additional money indemnity from China seems certain, and that therein she will have the support of the Powers that have insisted on her giving up her territorial pretensions is highly probable. It is only the form, not the justice, of the Japanese claim that they contest. Russia's object is sufficiently plain. If there is going to be any dismembering of China, she means to preside over the operation. Meanwhile, pending the completion of her trans-Siberian railway, and until she is ready to move to the south herself, she does not care to have a Japanese stronghold at Port Arthur over against her fortified railway terminus and harbor, Vladivostok. It speaks well for the wisdom of the Japanese Government that their great successes against China have not destroyed their ability to see straight. All the talk about Japan's having at a step taken her place among the first-class powers has not blinded her generals and admirals and diplomats to the fact that moderation and humility are still her wisest rôle in dealing with Europe. Thirty years more of consolidation and nourishing her strength may lead her to take a different tone; but at present not the least admirable part of her sudden rise to the world's notice is the restraint and clear-sighted wisdom that have marked her Chinese negotiations, compelled all the while to keep an eye on Russia and France in the background.

An Hawaiian Grand Army is already full tilt after the offices. It appears to be composed of those who took up arms in the late terrible struggle wherein one man was killed and as many as three or four wounded, and it proposes to let no man hold office under the Government who did not either fight or profess a fierce desire to fight in the recent insurrection. It sent an impudent demand to the executive and advisory councils that certain "disloyal" men in the departments be removed and their places given to true patriots. The ministers replied on April 11, abjectly enough, giving detailed reports in regard to all the men complained of. Nearly all of them turned out to be furious patriots, and retained their offices, but the attorney-general found "several laborers in the garbage department" who were suspected of monarchical sentiments, and whom he promptly discharged to make congenial places for the veterans. The latter were justly incensed, however, by the conduct of Chief-Justice Judd, who resented their inquisition and declared that "the Supreme Court has never required this [membership in a military organization] of any of its employees as a condition precedent to their employment." This looks bad for Justice Judd. As the *Hawaiian Gazette* says, his reply "reads very much as though he was somewhat offended at being thus approached, but it is always quite as well to assume a conciliatory rather than an arbitrary attitude." Evidently his long service under a queen has given him perverse ideas about qualifications for office, and it seems idle to look for impartial justice from a court presided over by such a judge. He should be removed at once to make room for a member of the Schuetzen Club.

SOME MONROE MYTHS.

We doubt very much whether there is any widespread popular interest in the Monroe doctrine, despite all the froth about it in the newspapers and in reform Republican Legislatures that compound for the corruption they are inclined to by damning all attacks on liberty and purity in far-away lands. Every trustworthy test of public sentiment in this country that the Jingoes have elicited since 1873 has shown that the vast majority of the people are peace-loving, that they are wrapped up in the pursuits and arts proper to a great industrial nation, and that they look upon these constantly recurring newspaper foreign wars, first with amusement, then with weariness, finally with disgust. Moreover, it is almost impossible to conduct a rational discussion with those who rage and fume about the Monroe doctrine. Not one of them has advanced a definite policy, in opposition to the policy pursued by the Government, least of all given a reason either for or against the Administration's policy, England's policy, or their own policy, if they have any. They are strong on English trickery, mighty on Gresham's imbecility, but about what they would do themselves, vague in the extreme, though always furious.

Furthermore, the refutation of most of their wild assertions may safely be left to time and the event. A week is usually all that is necessary to cover them with confusion as prophets. Last week they were begging everybody to mark their words that the British would never abandon Corinto. That is not the English way. Look at Egypt if you don't believe us. But the British sailed away on Saturday, and the prophets have nothing left for it except to affirm that this is only a new step in English intrigue and perfidy. This sensation will rapidly become ancient history, like that far-off, forgotten thing, the *Alliança* affair, over which, only seven short weeks ago, Mr. Whitney's blood was boiling at long range and the country was, journalistically, convulsed. Sensible men cannot be blamed for getting tired of chasing down one of these nine-days' wonders after another.

Still, there are some positive allegations about the Monroe doctrine which are brought out afresh at every occurrence of this kind, and of which it is doubtless well to expose the hollowness. Prof. Moore's historical article, published in the *Evening Post* on Saturday, left a whole train of these allegations dead along the track of his calm and convincing exposition of what occasioned the Monroe doctrine in the first place, what it was intended to accomplish, and what the terms in which it was couched meant, as explained by the very men who drew it up. But all that was a good while ago, it is said, and the practice of subsequent Presidents and secretaries has given the Monroe doctrine a different meaning and a new significance. Seward's name, in particular, is one often used in this connection. Didn't he sharply order the French out of Mexico? Why doesn't Gresham send a peremptory message to the British to quit Nicaragua?

Now, Seward's real position in the matter of interference in South American affairs was clearly stated by him in a despatch of June 2, 1866, to our minister in Chili. The state of affairs was very like that between England and Nicaragua. Spain, a monarchical country, was making war upon Chili, one of the sisterhood of American republics. Moreover, our minister to Chili, the not very prudent Kilpatrick, was visibly anxious to interfere and order Spain to the right about. But Seward pointed out the danger, the impossibility, of allowing South American countries to imagine that we could interfere to shield them from the consequences of their own folly. South American statesmen would interpret such an attitude on the part of the United States "in the light of their own interests and wishes." Said the secretary, with an eye to our foreign relations as a whole, "We could claim from foreign states no concession to our own political, moral, or material principles or interests if we should not conform our own proceedings, in the needful intercourse with foreign states, to the just rules of the law of nations." Then he added, as if in prophetic reference to our own Jingoes:

> "Those who think that the United States could enter as an ally into every war in which a friendly republican state on this continent becomes involved, forget that peace is the constant interest and the unwavering policy of the United States. They forget the frequency and variety of wars in which our friends in this hemisphere engage themselves entirely independent of all control or counsel of the United States. We have no armies for the purpose of aggressive war; no ambition for the character of a regulator. Our Constitution is not an imperial one, and does not allow the executive Government to engage in war except upon the well considered and deliberate decree of the Congress of the United States. A federal Government consisting of thirty-six equal States, which are in many respects self-governing, cannot easily be committed by its representatives to foreign wars, either of sympathy or of ambition. If there is any one characteristic of the United States which is more marked than any other, it is that they have from the time of Washington adhered to the principle of non-intervention, and have perseveringly declined to seek or contract entangling alliances, even with the most friendly states."

In the same letter he clearly showed the difference between the case of the French in Mexico and the Spanish in Chili, or, we may add, the English in Nicaragua. The United States were determined not to allow "the republican system which is accepted by the people" in any American state to "be subverted as an end of lawful war by European powers." This says nothing about a monarchical or aristocratic system voluntarily set up by the people themselves. Yet there is an idea abroad that the Monroe doctrine implies that nothing but democratic institutions can be recognized on this continent, however arising or introduced. As Wheaton points out, this is a pure myth. As a matter of fact, the United States were the first to recognize the imperial authority of Dom Pedro in Brazil and of Iturbide in Mexico. There is nothing in the Monroe doctrine, or in common sense, to prevent the people of any American country from setting up any kind of government they please. Nor is there anything in it, as Seward pointed out, to modify or overturn one jot or tittle of that international law by the rules of which the United States must be guided in all their foreign relations, if they are not to be "cut" or called to account by other nations, as surely as a man would be by his acquaintances if he should profess some rules of behavior inconsistent with ordinary good breeding or common morality.

SIX CENTURIES OF BIMETALLISM.

The present bimetallic controversy has given birth to nothing more profound and convincing than a book of some 400 pages entitled 'The History of Currency, 1252 to 1894,' by W. A. Shaw, an English author, who has done for the currencies of the civilized world what Lord Liverpool did for that of England in his classical work, 'On the Coins of the Realm.' Mr. Shaw's work, like that of Lord Liverpool, possesses a permanent historical interest far transcending the present battle of the standards. The efforts of the human race to extricate itself from the coil of the double standard of silver and gold are sketched by Mr. Shaw for a period of more than six centuries. The struggles of Laocoön, or those of the mad Hercules, were not more agonizing. Society was at dreadful strife with itself, and did not know what was the cause of its misery. But it found out at last, and delivered itself from its torment, and now some people propose that it shall voluntarily put on the shirt of Nessus once more. Mr. Shaw rightly says in his preface:

> "The modern theory of bimetallism is almost the only instance of a theory growing not out of practice, resting not on data verified, but on data falsified and censure-marked. No words can be too strong of condemnation for the theorizing of the bimetallist who by sheer imaginings tries to justify theoretically what has failed in five centuries of history, and to expound theoretically what has proved itself incapable of solution save by cutting and casting away."

To enumerate all the changes of ratio between silver and gold in all the countries of Europe during the period covered by Mr. Shaw's researches would be like counting the stars in the Milky Way. For example, in France the ratio "was changed in a single century more than a hundred and fifty times," and these changes were not, as is commonly supposed, mere arbitrary acts of the sovereign to fill the royal treasury. They were due to variations in the market value of the two metals after the legal ratio had been fixed. In almost every instance the initial steps for a change in the legal ratio were taken by the trading community. What took place in France was the common experience of Germany, England, the Netherlands, and Italy. And so they went on

weltering in ratio changes till the nineteenth century, when they found out what was the matter and applied the remedy. And now they are asked to plunge in again and welter a while longer.

The bimetallist contention that the action of France in fixing the legal ratio of 15½ to 1 kept the market ratio of the two metals steady from 1803 to 1873 has been in a staggering way for some time. Mr. Shaw gives it the *coup de grâce*. "At no point of time," he says, "during the present century has the actual market ratio, dependent on the commercial value of silver, corresponded with the French ratio of 15½, and at no point of time has France been free from the disastrous influence of that want of correspondence between the legal and commercial ratios. The opposite notion, which prevails and finds expression in the ephemeral bimetallic literature of to-day, is simply due to ignorance." In order to put the divergence between legal and market ratio in France in graphic form, he presents a chart showing the variations for each year beginning in 1803. In the first place the market ratio was not 15½ in 1803, and the law of that year did not make it so. The market ratio was 15.41, and it continued at that figure throughout the year. In 1804 a change began. Silver fell or perhaps gold rose (no matter which) so that in 1805 the market ratio was 15.79. Then it began to vibrate. In 1806 it was almost identical with the French legal ratio; it was 15.52. This was near enough for practical purposes, if it had only continued, but the next year it was 15.43 and the next it was 16.08. Between two years (1811 and 1813) the variation was from 15.53 to 16.25. To make a long story short, the market ratio, about the year 1820, became decidedly favorable to the exportation of gold, and remained so till 1853, when it became equally favorable to the exportation of silver, remaining so till 1867, when a fresh and permanent change took place. The French monetary commission of 1867, speaking of these fluctuations, said:

> "It is well known by all that this ratio [of 1803], by the simple reason of its being fixed, could not remain current. There was quickly a premium on gold, *and silver remained almost alone in circulation until near 1850.*"

This statement of a fact might be confirmed by a hundred citations from contemporary literature, both French and English. Mr. Robert Giffen, some years ago, presented the quotations of sterling exchange in Paris (which were really quotations of gold) from 1820 to 1853, showing that gold could not have been in general circulation when it commanded such a premium. When these figures were published, the bimetallists with one accord said that the divergencies were not sufficient to carry gold out of circulation. The fact that it did go out of circulation is now proved for the fiftieth time, but whether it will shut the mouths of Mr. Giffen's critics is very doubtful.

As this fallacy appears in 'Coin's Financial Schoo',' it is calmly assumed that the market ratio was steady at 15½ to 1 for seventy years, and that it was so because of the French law of 1803. If it was not steady—if it went wobbling about as Mr. Shaw's chart shows that it did—the whole argument falls to the ground. Yet it is necessary to explain why the market ratio was as steady as it was, and why the great gold discoveries of California and Australia in the fifties did not produce a greater divergence. The answer is easy. Modern commerce took a great start in the fifties. It absorbed the new gold with avidity. Gold was exactly suited to the new state of things because it possessed much value in little bulk and weight. Consequently it was welcomed by commerce, and especially by France, which gladly exchanged its bulky silver for it. So the mystery of the comparative steadiness of the market ratio during the great outpouring of gold in the fifties is explained by natural causes, and without reference to the French bimetallic law.

OUR JURY SYSTEM.

We were in hopes that something would be done at the late Constitutional Convention to adapt our jury system to the needs of modern society. We know very well that such matters ought as a rule to be left to the Legislature, but we have now had experience enough of the difficulty of securing from such bodies the enactment of any real reform in a shape approved by competent men. For permanent and well-considered changes in the structure and procedure of the government, we have clearly to rely in the main on the constitutional conventions. Still, the evils of our jury system are so glaring, and so promotive of crime, that it is surprising that neither the judiciary nor the bar have before now made any effort to reform it. In this city three weeks have been spent, by a judge and the lawyers, in finding twelve men to try a policeman for taking bribes. After these were found, two had to be excluded for fraudulent concealment of facts, so that the process is not yet over. In any other civilized country the whole affair would have been over in three days—one for preparation, one for trial, and the last for sentence in case of conviction. What is the reason for this astonishing difference?

It is in reality quite simple. In a country in which publicity reigns as it has never reigned anywhere before, in which the newspapers record crimes and offences as they have never been recorded elsewhere, we have a rule that anybody who has heard about a crime, and formed an opinion about it, is presumptively disqualified from trying the criminal. He has, the law says, to approach the case in ignorance about it caused by not reading the newspapers, or in the state of mental decrepitude which prevents one who reads of a murder from forming the opinion that anybody committed it. The acceptable juror has, in short, to be in a state of mind about the whole matter which it is difficult to find except among the grossly ignorant or the feeble-minded. Consequently the process of impanelling a New York jury, in a notorious case, is apt to consist in a search for twelve extremely illiterate or half-witted men—a process which it would be impossible to witness anywhere else outside the comic opera.

The encouragement which criminals get from this system, we need not point out. It increases very greatly the chance of escape which even the best jury trials hold out. The spectacle alone of the impanelling of a jury demoralizes the community and distinctly diminishes popular respect for the administration of justice, so that the escape of the criminals is by no means the whole of the evil it works. The worst of it is that it makes the attempt of the state to punish crime somewhat ridiculous. Clearly, nobody but the criminals and the "jury fixers" are interested in the continuance of the present state of things. The only obstacle such a reform would meet with in the Legislature would come from sheer frivolity or dislike of serious subjects; but this might be got over by patience and perseverance.

The truth is, that our jury law belongs to the age before newspapers, railroads, and telegraphs. It is somewhat like the Supreme Court view that the only incomes are incomes from land, and that men pay capitation taxes with something that is not income. However we may feel about it, we must do the work of the world, including the administration of justice, with people that will read newspapers and form opinions about what they read. There is no other class fit to do the work of the world available. Even the judges read newspapers. The old formula, "My attention has been drawn," is no longer available even for them. Nobody can now pretend that he does not see what is in the newspapers till somebody tells him about it. We have to do the best we can with the modern man, seeing that the ancient or mediæval man no longer exists. The earth, in fact, has to be "run" by the living, and not by the dead. We must take decent men's word for it that they can try a criminal according to the evidence in spite of the previous formation of an opinion. We cannot go on much longer picking out imbeciles, knaves, and ignoramuses to bring our malefactors to justice. The mere waste of time of the judges who preside over these processes is a serious injury to the public. Hundreds of important causes wait for adjudication, not while one criminal is being tried, but while a tribunal is being prepared to try him.

RELICS OF THE PAST IN LONDON.

London, April 16, 1895.

The Palace of Whitehall and its grounds, so associated with the names of English monarchs and rulers from the days of Henry VIII. to Charles II., occupied the district between

Charing Cross and Westminster, extending from the Thames up into St. James's Park. Part was burned to the ground in 1691 and the remainder in 1697. The space is now covered with streets, terraces, and public buildings. The boulevard of the Embankment occupies the river front. The ground is intersected by one of the busiest thoroughfares of London—Whitehall. On the east side of Whitehall, opposite the Horse Guards, still stands the old banqueting-hall of the palace. It was built in the Palladian style by Inigo Jones in the reign of James I. The ceiling is embellished with pictures by Rubens—the apotheosis of James I. in the centre, with allegorical representations of Peace and Plenty and scenes from the life of Charles I., the artist's patron. The most striking actual scene in Charles's life was there enacted. He was, on January 30, 1649, led out through one of the windows of the great hall and executed upon a lofty scaffold in front of the building. Under the Georges the pile was converted into a royal chapel, and that it remained until a few months ago.

The Royal United Service Institution, composed of members of the military, naval, and auxiliary forces, was founded in 1830 for the advancement of literary and scientific knowledge connected with the "services." It has a membership of 5,000, holds meetings at which papers are read, and publishes a *Journal*. The society early formed the nucleus of a museum. The collection was until of late wretchedly housed, and admission was to be had only by order from a member. Lately, by arrangement, Government has made over to it the banqueting-hall. Offices and a splendid lecture-theatre have been added. The museum is now arranged in the hall and its basement. It is one of the most interesting collections in London. Admission is at a trifling fixed charge—"soldiers and sailors in uniform free." Old flags wave from the gallery. The walls are covered with the weapons of all times and of all countries. The progress of the musket can be studied from the "brown Bess" to the magazine rifles now adopted by different States. Cannon are there from the rudest of old times and of half-civilized peoples to the most deadly quick-firing ordnance. The uninitiated may learn to realize the difference between "ordinary," "smokeless," and "cordite" powders. The weapons and ammunition of the time of the Crimean war appear almost playthings before present appliances. Large-scale models of war-vessels are there, from the Malay pirate and the ships of the time of James I. and the Hanseatic League, to the great three-deckers of the Napoleonic wars and the destructive 27-knot torpedoes of the present. Everything connected with modern warfare is expensive—these models even must have cost large sums. Perhaps one-fourth of the 6,000 square feet of the great hall is occupied by "models" of the battle of Trafalgar and a plan of the field of Waterloo. This latter is said to contain 190,000 little figures. A passing study of these will tend to a clearer conception of the crowning events in the careers of Nelson and Wellington than would a long course of reading. Much of the armor, weapons, and dresses has been taken in actual warfare.

It is the relics that will perhaps arouse the greatest interest in most minds. There is a heavy anchor taken up within late years from the wreck of a vessel of the Spanish Armada on the coast of Donegal. (How the past and the present are brought together!) The more precious objects are enclosed in glass cases: a portion of the standard presented by Queen Isabella to Pizarro; Commodore Drake's snuff-box; the sword carried by Cromwell at the storm of Drogheda; arms from the field of Culloden; the sword worn by Wolfe when he fell on the Plains of Abraham; scalping-knives and pistols of the Indian auxiliaries on both sides in the War of Independence and in 1812; papers relating to the private signals and the signal-book of the *Chesapeake;* a quadrant and other objects from the wreck of the *Royal George;* Captain Cooke's punch-bowl; his chronometer taken out by Bligh in 1787, and carried by the mutineers in the *Bounty* to Pitcairn's Island—a telescope belonging to the *Bounty*—the prayer-book used by John Adams in his morning and evening services with the descendants of the mutineers. Here, again, are weapons used by the insurgents in Ireland in 1798; Tippoo Saib's pistols found on his body; Sir Ralph Abercromby's pistols. Numerous are the records of Trafalgar—a portion of the *Victory's* flag; Nelson's hat and a lock of his hair; his desk and sword. (The clothes in which he fell are to be seen in the Painted Gallery at Greenwich.) We see before us the officers' sashes used in carrying Sir John Moore from the field at Corunna and lowering him into his grave on the ramparts of the Citadel. There is a memento of an Indian brave in the buffalo powder-horn taken from the body of the Shawnee chief Tecumseh at the battle of the Thames in 1813. Many are the reminders of Waterloo and Napoleon—the skeleton of the charger "Marengo," which the Emperor rode; the pocket-telescope, razors, and shaving apparatus left in his carriage; the desk and chair he used at St. Helena; the saddle of Blücher's horse; a map carried by Gen. Picton and saturated with his blood. A number of pikes used by the "Welsh Chartists at the attack on Newport in 1840" remind us that the present sedate inhabitants of the principality have fiery Celtic blood in their veins, as well as their brethren on the other side of St. George's Channel, whose Fenian pikes are also in evidence. The relics of the Franklin expedition are peculiarly interesting; most of them were brought home by Dr. Rae; one is especially affecting—a silver medal gained by a lad at school in 1830; taken with him (then a lieutenant) to sea in 1845; buried in his grave in the far North three years afterwards; and brought home with his remains in 1880. Numberless are the memorials connected with the Crimean campaign and with the ever-recurring Indian wars of the past century.

I have noted only a few of the principal objects in this absorbingly interesting collection. It was some time before the hurrying crowds and the spring sunshine outside recalled us to the present. D. B.

SOME CONTINENTAL LIBRARIES.—VI.

PARIS, April 12, 1895.

THE English and American nomads who wander up and down the Continent, pitching their tents here and there wherever tent-space proves reasonable and forage good, sooner or later arrive at Florence and meet a new experience. When the date comes which they had fixed for departure, they find that the tent-pegs have been driven within an invisible magic circle over which it is next to impossible to step. Instances are frequent of persons, especially women, who came to stay a year and have stayed twenty; of families who are always going home and never go, even for a visit; of girls who in the enchanted wood have met the fairy prince, etc., etc. Whether it be the beautiful little city itself, which admits of a more intimate affection than a large one; whether it be the enervating influence of the climate, giving rise to a malady similar to that which in the southwestern United States is called the "Texas lingers"; whether it be the unaccustomed presence of all those things which we call "home comforts," it is hard to say. I imagine it is a mixture of the three in proper proportions; but certainly in no other foreign city, large or small, has the English or American resident surrounded himself with so homelike an atmosphere. Shops abound that deal in everything we are used to; churches and doctors, dentists and chemists of our own persuasion are within easy reach; there are enterprising papers edited and published by English-speaking firms; the libraries are much frequented by women, who are made entirely welcome; and finally there is a circulating library of 170,000 to 180,000 volumes, to which popular works, as well as works not so popular, are added as they appear.

Every foreigner who has made use of the Vieusseux Library must regard it as behind our home libraries in only one respect—it is not free. That, however, from a business institution could not be expected. Founded in 1819, it has continued under the management of the same family, with a constantly increasing patronage. Its hours alone would make it popular with the majority of Americans, used to dropping in to their own libraries at almost any time; for the reading-room, with its reviews and journals in all languages, is open from eight A. M. to ten P. M., and the circulating department from nine A. M. to five P. M. Access to the shelves is allowed, and printed finding-lists are kept at the call-desk. When rebound, the books are backed and cornered with Florentine vellum which wears admirably, and in Florence costs much less than elsewhere. Sixteenmos and twelvemos were shown to me the rebinding of which had cost only ten cents, and the largest volumes (a set of Italian Parliamentary Proceedings) had been so bound at a cost of a dollar per volume. The title and number are written in black ink on the vellum back, and a sizing put over it. This prevents the erasure of the ink when the books are washed.

The proportion of Italian readers is small, I was told, and a large proportion of these are Hebrews. The majority of the patrons are the English and Americans, and of these the Americans read the more serious class of books. This is probably owing to the fact that many of the English borrowers are old residents and read for amusement, as they would at home, while the Americans are more likely to be spending a few months only in the city and to be reading up on art matters, Florentine and Italian history, etc. The library sends books not only to other places in Italy, but to subscribers beyond the borders of the country, and is, in fact, the Mudie's of Italy. It circulates single numbers of magazines as well as books, and tries to meet every want of a large reading public. No one who has not subsisted for months on the paper-covered literature of railway book-stalls, or spent a rainy week in a bookless hotel or pension, can appreciate the attraction of such a library in a foreign city.

The specialty of the Biblioteca Riccardiana, in the Palazzo Riccardi, is Italian (and particularly Florentine) MS. history and literature. It is a collection entirely for scholars in these lines, and is therefore less used than the other libraries, but is well worth visiting for the sake of some of its MS. treasures. One that particularly interested me was the note-and-

account book kept by Benvenuto Cellini, and the entry that first met my eye was that recording the amount paid him for the Perseus which now stands in the Loggia dei Lanzi. The Italian Dante Society has its headquarters and keeps its collection at the Riccardiana; hence the library is rich in Dantean books and MSS.

One need not be either a savant or a librarian to feel impressed with one's visit to the Mediceo-Laurenziana, the Library attached to the Church of San Lorenzo and approached through the cloisters. The entrance and the wooden ceiling, as well as the reading-desks or *plutei*, were of Michelangelo's designing, and to the latter the MSS. are still attached by chains. There are eighty-eight of these desks, which, with the accompanying seats, look a little like church pews. In the shelves under the slanting tops lie hundreds of bound MSS., the richest collection in the world, perhaps, as regards merit. The most choice are under glass, lying open on the inclined top of the desks.

Among other things, there are shown to the visitor who is interested a MS. of Tacitus, the only copy extant containing the first five books of the 'Annals'; the Medicean Virgil of the fourth century; the oldest MS. copy of the Pandects of Justinian, dating from the sixth or seventh century, brought from Amalfi by the Pisans, and afterwards taken by Florence in the wars between the two cities; the best MS. of Cicero's Letters; a beautifully illuminated copy of the 'Shah-Nameh'; Cellini's autograph Memoirs; and Petrarch's 'Canzone,' with full-page portraits on vellum, by Simone Memmi, of Petrarch and Laura. The modern department of the library, containing about 600 volumes, consisting chiefly of books of reference and works having relation to the MS. collection, is called the Biblioteca Delciana. The reading-room is circular, lighted from the top, and would accommodate about a dozen persons, I should think.

The history of this library is full of vicissitudes. Founded by Cosimo the Elder in the sixteenth century, it was continued by his sons, and much enlarged by Lorenzo the Magnificent, who sent collectors into all parts of the world to buy manuscripts for it. When the Medici were expelled, the Signoria confiscated it and placed it under the care of the Convent of San Marco, the monks of which finally bought it. Pope Leo X., Giovanni de' Medici, bought it back into the Medici family and had it brought to Rome. On the death of the Pope, Cardinal Giulio de' Medici sent it back to Florence and commissioned Michelangelo to construct a building for it next the cloisters of San Lorenzo. Clement VII. next interested himself in the collection and finished the building. The grand dukes took little thought for it, and it was probably during their time that many of the manuscripts were lost or mutilated; but the house of Lorraine was more careful, and took pains to guard the treasures and to provide catalogues. During its administration various other collections were added to the library, and the suppressed convents in the present century contributed many additions. In all, there are about 9,000 manuscripts and nearly 5,000 printed books.

The Government Library at Genoa is the Universitaria, occupying rooms on the upper floor of the University building. This, too, had for its basis the library belonging to the Jesuits, and its largest room exhibits the same architecture and general arrangement as the Jesuit library room at the Vittorio Emanuele at Rome. It has the right to a copy of every publication appearing from the press of Genoa and the province of Liguria, but this right does not increase its possessions to any extent. The report of 1893 gives the number of volumes as more than a hundred thousand—very nearly the number in the Marucelliana at Florence. Here first I heard candidly expressed the feeling that many of the old books on the shelves were cumberers of the ground and should make way for modern works of greater utility to students, who, after all, are obliged to live in their own century with the rest of us. The opinion did not, of course, apply to those works which have intrinsic value, or which help to reconstitute the past for us; but the majority of old books on theological subjects belong to neither of these categories.

The catalogues here were placed in the corridor through which all persons passed to enter the library, and were freely used. Some of them were manuscript volumes of forty or fifty years' standing, in constant use, yet showing scarcely a tear. The later volumes on modern paper presented a very different spectacle, and, after making due allowance in view of the greater use of the later catalogues, I could not help feeling a little discouragement at the inferior workmanship of our day in this respect. The first dictionary-catalogue that I had seen in Italy I found here—arranged on cards, by authors, titles, and subjects, in one series; but I was told that an excellent one of the same kind existed at Bologna. The work was only recently begun, but the convenience of it was beginning to be felt by those employed in the library. Nearly three hundred periodicals are taken, of which eleven are in English. There is a reading-room for women, though it is not much used. The building has furnace heat, and it is hoped that electric lighting may be supplied soon; all of which signs of modernity were encouraging or discouraging, according to one's view of the functions of a library. Most of us, I think, would look upon them as hopeful.

The Biblioteca Berio, or Municipal Library of Genoa, is one of the best of its kind in Italy. It is better off than many of the Government libraries, having about 7,600 lire per year to expend in books—a sum of much greater purchasing power than its equivalent in dollars. Its *orario* is the longest in Italy, probably, being from nine A. M. to ten P. M., without intermission, the only reduction being on a few feast days and during the summer vacation, when the hours are from nine to three. Its reading-room is large and well-lighted, looking on an open square, and the tables were all occupied. A system of metal checks as receipts for books in use is employed in this room—one I had never seen before except in the public library at San Francisco. Almost no women come to the library, but the librarian, Commendatore Belgrano, assured us that ample provision would be made for them when they desired it. Here, too, furnace heat has been provided for the past three years. The furnaces are built into the walls and are on a level with the rest of the library, and every precaution is taken against fire, though it would seem almost as easy to set fire to "the stern and rockbound coast" itself as to these stone buildings of Genoa. Electric lighting is hoped for here also. The dictionary-catalogue is another of the library's aspirations. The hours of the library being so long, and the readers chiefly men, there is not much demand for books for home use, about two thousand a year going out in this way. The collection numbers nearly a hundred thousand volumes. A most interesting report on the condition of the library was presented by the librarian and printed in 1888, in which the practical view taken of its scope and management and the ambition to extend its usefulness are most refreshing.

In spite of all I had heard of the Biblioteca di Brera, I should have felt it inadvisable to go out of my way so far as Milan if it had not been for a desire to see the school recently inaugurated in connection with the library. When, therefore, on arriving I found that, partly for lack of funds, the municipality had discontinued it this year, I was greatly disappointed. Strangely enough, this fact did not seem to be known at Florence. The school was at first intended to be one of Bibliology, and an extensive course was prepared by Prof. Fumagalli, the author of the leading work in Italian on library systems. It was found, however, that the students who came were in search of instruction that would take less time, and that would give them a commercial knowledge of books rather than fit them for librarianship; and as the continuation of the school depended largely on its ability to attract students, it was thought best to reduce the course and make it more applicable to the needs of this class. The hope was felt that, once interested in the subject, there might be young men anxious to pursue it further and in the direction first planned. Even with this concession, however, the students were few, and the municipality preferred to spend its funds, which were restricted, in work that would show more encouraging results.

As altered, the course contained not more than forty lessons, under the following heads:

(1.) The book before and (2) after the invention of printing.

(3.) The arts associated in the making of the book.

(4.) The selection of a stock of books and its management.

(5.) History of the book-trade.

(6.) Hints on the care-taking of books.

The greatest number of lessons were to be given on the fourth topic, and the next greatest on the second.

Since 1884, the Brera, which had been a general library, has made a specialty of the historical sciences, literature, philosophy, and social science, aiming to coördinate with the other libraries of the city in forming one large and symmetrical collection. Its Manzoni collection, kept in a separate room, and consisting of MS. editions and translations of Manzoni's works, biographical and critical material, autographs and portraits, is a very choice one and attractively arranged. It contains also the larger part of Manzoni's own library. In the line of social science and political economy the library is the richest in Italy. The number of volumes is about 200,000, the library having a right to copies of all books issued in Lombardy. As Milan is a considerable publishing centre, this right is of great value.

The reference-room was the first I had seen in which women might occupy any seats they chose, no table or room being especially reserved for them. About 6,000 books of reference are collected in this room in open shelves to which students have free access; and current periodicals are kept here also. A modification of the card catalogue invented by Staderini of Rome, in use in several libraries I had visited, was suggestive. The cards, which are square and fastened at one edge into a frame, are turned like the leaves of a book, from right to left, and, the frame being placed on a table with a top inclined at an angle of perhaps thirty degrees, one may stand and run through the contents of the cards with great

ease. Usually I had found the frame placed horizontally, so that one was obliged to bend the neck most uncomfortably in order to read the titles. Here, as in most of the Government libraries, the arrangement on the shelves is by the size and form of the book. Even when a library reports its classification to be by subject-matter, I have found that this means a primary division into very large classes and subdivisions by size and form.

It was with much regret that I left this library, knowing it to be the last I should see in Italy. Everywhere I had met kindness and courtesy, and if there are indications in Italy, as I cannot help thinking there are, that the people are making a fresh start in the direction of better education and a higher ethical standard, I am persuaded that the libraries, with their encouragement to study and investigation, are responsible in part. The conception of the library as anything but a *higher* institution of learning is not yet generally understood, it is true. There is no effort made to establish libraries of popular books, in order to induce the people to educate themselves. Such an effort on the part of the Government would be impossible at present, for lack of means. Equally impossible does it seem for the Government libraries to step outside of their present province, to take up the work of free circulating libraries. But it seems that the municipalities might do more in this line than they do. The Communal library at Genoa has a large number of workingmen among its Sunday readers, and the evening hours of those libraries that are open in the evening are among the busiest, people coming then who cannot come at any other time on account of their daily occupations. The reference-library does better for men than for women, whose leisure is apt to come a few minutes at a time in the intervals of household occupation, and for whom it is difficult to go out in the evening. For boys and girls, at the age when intellectual curiosity is at its keenest, the library which makes difficult the home circulation of books, or which has books only for persons already instructed, is of no avail as an educator. The Italians, I was told, are not a reading people, and I think it is quite true; but I cannot help thinking also that in Italy as elsewhere a well-calculated supply of free reading to be taken home would create a demand that would surprise those who should undertake to meet it.

MARY W. PLUMMER.

Correspondence.

SOME GRAND-ARMY POSTS.

TO THE EDITOR OF THE NATION:

SIR: Whatever may be the truth in regard to an influential minority of the Grand Army, or however much politicians have used the supposed soldier vote to saddle huge pension-bills on the United States Treasury, yet the tone of your articles in the *Nation* during the last two weeks does substantial injustice to all the posts of the G. A. R. with which I am acquainted. I am not a pensioner and have no pensionable disability. I have been a member of the order for fifteen years, and have belonged to posts in Ohio, Indiana, Illinois, New York, and Connecticut. In all that time I have heard but two subjects that have been at all prominent in the talk and discussions before the post. The first is Memorial Day. The second is the old army life—its pleasures, hardships, trials, and the amusing incidents that occurred. Both politics and pensions seem to be ruled out by common consent and universal desire. I have known an application for membership, already accepted by the post, to be withdrawn because the applicant had learned on inquiry of the members that the post could not help him get his pension claim through, and he is not now a member of the order. Whatever may be the pressure the Grand Army puts upon Congress or upon those in our large cities who have the power of appointment to office, yet I am sure, from my own knowledge, that the tone and spirit of the vast majority of posts in towns and villages is absolutely the opposite of the tone and spirit your articles ascribe to them.

I write this note that you may be apprised of another side of Grand Army life.

Yours truly, T. C. D.

MAY 4, 1895.

THE HELMHOLTZ MEMORIAL.

TO THE EDITOR OF THE NATION:

SIR: A few months ago Hermann von Helmholtz died, one of the greatest scientific geniuses of all time, whose name will not be forgotten as long as men care for the knowledge of Nature. His invention of the ophthalmoscope made the success of the modern oculist possible, his papers on the conservation of energy gave the strongest impulse to modern physics, his books on seeing and hearing became the basis of modern psychology.

It seems a matter of course that the present generation should express its gratitude in a lasting monument. Not only his friends and pupils all over the world, but men of science and physicians everywhere have supported this idea, and so last month an international committee was formed to collect money for the erection of a great Helmholtz monument in Berlin, where for the last twenty-five years he lived and worked. The plan has nothing to do with local patriotism. America, France, England, Italy, and Russia are represented on the committee; not a decoration of the city of Berlin is in question, but a universal expression of devotion to the spirit of natural science.

No doubt America will take a high place in the list of givers. There has been seldom such an opportunity to show that the United States does not stand behind any other country in intellectual interests. But America has a special reason for paying her respects to the genius of Helmholtz, since Helmholtz, in his seventy-second year, paid his tribute of respect to the genius of America. One year before his death he crossed the ocean, to study and to enjoy the scientific institutions of this country from the Atlantic to the Rocky Mountains, certainly the most famous European who has visited America for many years; and nobody who saw his noble personality in New York or Boston or Baltimore, in Philadelphia or Washington or Chicago, will ever forget him. The American members of the International Committee are Dr. Wolcott Gibbs, President of the National Academy of Sciences; Dr. Hermann Knapp, Professor of Columbia College; and Dr. Hugo Münsterberg, Professor of Harvard University. Contributions may be sent before May 25 to the undersigned, Secretary and Treasurer of the American Committee.

HUGO MUENSTERBERG.

NORDAU'S 'DEGENERATION.'

TO THE EDITOR OF THE NATION:

SIR: It is nothing less than a calamity that Max Nordau, in his remarkable book on the symptoms of degeneration exhibited by certain writers who have made names for themselves in recent years, has not preserved a just mean in his treatment of his subject, but has allowed his idea, which is a plain, scientific fact when applied to the really bad cases, to so far carry him away that he forgets that a certain amount of unhealthiness of nervous temperament is of no consequence whatever in instances of real genius. As Prof. James points out in the *Psychological Review*, he is really learned not only in contemporary French, English, and German *belles-lettres*, but in the literature of neurological medicine as well; and many of the objects whose odiousness he condemns—Parisian "pornographic" novels especially—are loathsome indeed and deserving of any amount of invective. There never was a book in regard to the value of which two disputants might argue long and both be so fully in the right. If one confines himself to the service which Nordau has rendered by his characterization of the incoherency of much that is run after, and especially of the utter inanity of the most offending of the Frenchmen, one can but praise the book; it is only when he extends his shibboleth to writers who, though his detailed criticism of them is in most instances sound, have in the end far more of strength than of weakness, that he makes the judicious grieve. The book is certain to be widely read, and to furnish ground for much discussion of the relation of morality and decency to art. M.

BUTCHERY, NOT TRANSLATION.

TO THE EDITOR OF THE NATION:

SIR: Apropos of the article in the last number of the *Nation* (April 25) on Mr. Gonino's translation of the work of Perrot and Chipiez on 'Art in Primitive Greece,' I send you, in a reprint from the *Independent* of the same date, an article by myself on the same subject. From it you will see that your reviewer has really spoken in very mild terms of the performance of Mr. Gonino. I write to you in the hope that the *Nation* may make a stronger protest against the repetition of such outrageous work in the important volumes that are to come. The last six volumes of the great work of Perrot and Chipiez have been butchered by Mr. Gonino in a way that makes them not only unendurable, but an abomination in the eyes of intelligent men everywhere. No one who has not had the misfortune to read the books, can form any conception of the crass ignorance and stupidity displayed by the translator on every page and in every *un*conceivable way. The books in their English dress are a blot upon the scholarship of the age, and, until they are retranslated, can only serve to bring the nascent science of archæology to shame and discredit.

In permitting such atrocious work to issue from their press, the publishers, as your reviewer justly says, have been discourteous to both authors and public. Indeed, they have insulted the intelligence of English-speaking archæologists wherever they may be. In atonement for this the publishers should at once withdraw from the market the last six volumes of this work. They should do this not only in atonement, but in the interest of their own

good name and of the good name of the authors as well. It should be done, too, as a matter of business, for no man in his senses will think of paying the great price demanded for these books unless he be ignorant of the fact that they have been foully butchered. The publishers should employ at once some competent scholar to revise, almost to retranslate, in fact, the *whole* of Mr. Gonino's work, and then republish the books. Nothing short of this will make them in any way acceptable either to archæologists or to men of general culture. In point of fact, archæologists should unite in a protest against the sale of the books, and above all things against a reappearance of Mr. Gonino.

Your reviewer's estimate of Mr. Armstrong's work on the first volumes of the series is a mistaken one, for Mr. Armstrong's work is nowhere good. It is merely passable; it may be endured, but he too is not above the commission of blunders that are quite on a par with some of Mr. Gonino's. In point of fact, an evil fate has been in constant attendance upon the publication of the work of Perrot and Chipiez in its English dress. J. R. S. STERRETT.

AMHERST COLLEGE, MASS., April 30, 1895.

"CAPITOL."

TO THE EDITOR OF THE NATION:

SIR: The earliest citation given by Dr. Murray for *Capitol* as used in this country bears the date 1843, and is by way of England. Previous to the Declaration of Independence, the buildings in which the colonial assemblies held their meetings were known by various names, among them being Assembly House, Capitol, City Hall, Colony House, Court House, State House, and Town House. Capitol and State House seem to be the only terms now used to indicate the buildings in which the State legislatures sit; and the vogue which the former of these has enjoyed in the present century may, with little hesitation, be attributed to the employment of the word when the Federal City was built. Indeed, until that time the term does not appear to have obtained anywhere except in Virginia; and its history there has not been pointed out. Beverly says that originally the term State House was employed in that colony, and this statement is confirmed by evidence obtained from other sources. The State House at James City was burned in October, 1698, and in the following November Sir E. Andros, who had offered to rebuild it in the same place, was succeeded as Governor by Francis Nicholson. It is the latter who is referred to below in the citation from Beverly. In 1780 the seat of government was moved from Williamsburg to Richmond. All of the quotations except the last two refer to the Capitol at Williamsburg.

"Be it enacted . . . that the said building shall forever hereafter be called and known by the name of the *Capitol*, of this his majesty's colony and dominion of Virginia." 1699, *Virginia Statutes at Large* (1823), iii., 420.

"Soon after his Accession to the Government, he caused the Assembly and Courts of Judicature, to be remov'd from *James*-Town, where there were good Accomodations for People, to *Middle-Plantation*, where there were none. There he flatter'd himself with the fond Imagination, of being the Founder of a new City. He mark'd out the Streets in many Places, so as they might represent the figure *W*, in Memory of his Majesty King *William*, after whose Name the Town was call'd *Williamsburg*. There he procur'd a stately Fabrick to be erected, which he placed opposite to the College, and graced with the magnificent Name of the *Capitol*." 1705, R. Beverly, *History of Virginia*, Book i., ch. iv., p. 99.

"Here is a small Fort or rather Battery mounted with 10 or 12 Guns, which were brought thither from *James*-City by order of Col. *Nicholson*, who caus'd a State house or Capitol to be erected" 1708, J. Oldmixon, *British Empire in America*, i., 273.

"The Cause of my being so particular in describing the *Capitol* is, because it is the best and most commodious Pile of its Kind that I have ever seen or heard of." 1724, H. Jones, *Present State of Virginia* (1865), 30.

"I laid the last top Brick on the Capitol Wall, and so it is now ready to receive the roof. . . . I had laid a foundation brick at the first Building of the Capitol above fifty years ago, and another foundation Brick in April last" 1752, J. Blair, in *Dinwiddie Papers* (1883), i, 146. (The Capitol had been burned in 1746.)

"Dined at the Club, and spent the evening at the Councils Ball at the Capitol." 1770, Washington, *Writings* (1889), ii., 281.

"At the ends of this street are two public buildings, the college and the capitol." 1775, A. Burnaby, *Travels*, 4.

"A propos of the Capitol [at Richmond]. Do my dear friend exert yourself to get the plan begun on set aside, & that adopted which was drawn here [Paris]." 1786, Jefferson, *Writings* (1894), iv. 196.

"A chaste plan sufficiently capacious and convenient for a period not *too* remote, but one to which we may reasonably look forward, would meet my idea in the Capitol [at the Federal City]," 1792, Washington, *Writings* (1891), xii., 107.

ALBERT MATTHEWS.

BOSTON, April 28, 1895.

Notes.

HENRY HOLT & CO. announce 'Tenement Tales of New York,' by J. W. Sullivan.

'Celibates,' a novel by George Moore, and 'An Experiment in Altruism' are about to be issued by Macmillan & Co.

The younger Dickens has to be more than ordinarily apologetic for his father in his introduction to the reprint of 'Bleak House' from the author's corrected edition of 1869 (Macmillan). Mr. Forster comes in for his share of blame for the failure of the Guild of Literature and Art, Dickens's abolitionist character has to be maintained against Lord Denman, and his criticism of Christian foreign missions against their advocates, while the reproachful shade of Leigh Hunt has to be laid. Not all will agree that the defence is valid at all points. The volume has the merits, including beauty and cheapness, of its predecessors reprinted from first editions.

So much ignorant nonsense is talked and written about Russia, and even most well-educated people have such vague or curious ideas about the land, that we greet every good book on the subject as a valuable acquisition—for example, 'Russian Rambles,' by Isabel F. Hapgood (Houghton, Mifflin & Co.). Miss Hapgood not only is familiar with the language and ways of the people she describes, she is also capable of feeling with them, of judging by other than a narrow American standard, and of sympathizing with much that was strange to her as it is to her readers. She has, besides, a keen sense of humor and a style that is at times almost too lively. During the two or three years she passed in the empire she learned and observed so much, which she tells so well, that she has given us a volume of distinctly exceptional merit. It is made up of chapters or articles of unequal length, some of which have already appeared in magazines. Moscow and St. Petersburg, a visit to Count Tolstoi, a trip on the Volga, and many interesting scenes in town and country, are equally well depicted. To any one who wishes to get an idea of Russia to-day, leaving out of consideration such serious studies as the great works of Wallace, Rambaud, and Leroy-Beaulieu, we hardly know of any recent book by a foreigner which we should recommend as heartily as 'Russian Rambles.'

Although the little work entitled 'On India's Frontier, or Nepal, the Gurkhas' Mysterious Land' (J. Selwin Tait & Sons), may be quickly read, it suggests the thought that it might profitably have been shortened. It could be boiled down into an interesting magazine article, a narrative of an adventurous journey in a country seldom visited. The attempt to make it something more than this is not a success. The material was sufficiently plentiful, but not every one can write a good book of travel. The author is evidently not a particularly keen observer, and most of his recollections savor of commonplace. His style is usually inadequate, at times positively bad. The headings of the chapters are often sensational, not to say cheap. That of the first of the two numbered xvi, "Impressive Interview with the Maharajah," leads us to expect something more than a few paragraphs which fail to impress the reader in any way. In the second of them, "The Maharajah's Assassination," a good opportunity has been lost for a bit of effective and interesting description. The stirring scenes witnessed by the writer are put into half-a-dozen meagre pages, which are followed by a long extract from the Bombay *Gazette*, containing the irrelevant letter of a French traveller execrably translated, with such expressions as "I know not absolutely why." The last chapter of all is full of rather ill-tempered remarks about English officials in India; then comes a final foot-note with a puff of the author quoted by the publishers from "one of the Calcutta dailies." Still, in spite of its faults, a couple of hours spent on the book is no great waste of time.

It will probably be some time before we know what has happened in Armenia, but it appears certain that massacres have taken place which, whether provoked or not, have been characterized by great and indefensible atrocities. 'The Armenian Crisis in Turkey' (Putnams), by F. D. Greene, "for several years a resident in Armenia," is a contribution to the literature of the subject. It is made up of letters, "largely based on the testimony of refugees from that region or of Kurds and soldiers who participated in the butchery," extracts from magazine articles, general information about the Armenians, about previous massacres, etc. Though the tone of the book is sensational, the comments of the author or compiler are on the whole temperate, even if he makes no allowance for exaggeration or for the fact, which he admits, that "no writer [of the letters] was an actual eye-witness of the massacre," while, like all other advocates of this kind, he is unable to appreciate how difficult and delicate it is for one or more of the European powers to intervene efficiently in such matters. We note the statement that Russian annexation is "a step for which the sufferers themselves are praying," and that "during a residence of four years in eastern Turkey I noticed a marked and rapid alienation of Armenian sentiment from England in favor of Russia, who now seems to them the only source of succor."

We have already reviewed, in the English edition, the first volume of Prof. W. M. Flinders Petrie's 'History of Egypt,' which covers the period from the beginning down to the Eighteenth Dynasty—that is, including the period of the Hyksos domination. The work is now procurable of Charles Scribner's Sons.

Probably it never occurs to men or women of average common sense that they are competent to enter a machine-shop or a cotton-mill and express an opinion upon the methods of work. But the benevolent layman rarely has such scruples about investigating (the technical expression is "visiting") a hospital whose machinery deals with vital material, and whose output measures health and disease. The few who, with the angels, fear to tread where others cheerfully rush in, should be very glad to study the plain and sensible 'Suggestions to Hospital and Asylum Visitors' that Drs. Billings and Hurd have prepared at Dr. Weir Mitchell's instigation (J. B. Lippincott Co.). It might not be a misapplication of charitable funds to distribute to those who are the censors of the charities, the little book these expert administrators have prepared. Zeal might then be equipped with intelligence.

W. Furneaux's 'Butterflies and Moths [British]' (Longmans) is a decided improvement on many similar works. It shows evidence of care in its preparation, is nicely printed on good paper, and the numerous illustrations are well executed. There are 241 in the text, while twelve colored plates add much to the general attractiveness. Part i. treats of the structure and life-history of the Lepidoptera and of their classification. Part ii. is entitled "Work at Home and in the Field," and in its directions for collecting, rearing, setting and preserving butterflies and moths, and their arrangement in cabinets, it will be found of equal service to British and American entomologists. Parts iii. and iv. are devoted to British butterflies and moths. Of the former the species are so few that place has been found for a figure and description of each one; of the larger moths, all the principal genera are represented in description and figures. A chapter on the micro-lepidoptera is included. An appendix "contains the scientific and popular names of all the British butterflies, Sphinges, Bombyces, Noctuæ, and Geometræ, arranged in their various families and genera," and concludes with a calendar for each month of the year, giving the names of the Lepidoptera that are to be sought for, with directions for the search after them.

The tenth and concluding volume of Edmond Scherer's 'Études sur la Littérature Contemporaine' (Paris: Calmann Lévy) is excellent. It contains twenty-two articles, among which must be named a strong one on "La Rime riche," which is a commentary on Banville's theory not to be passed by; one on Victor Hugo, in which, brief though it is, much is contained and a fair judgment rendered; a brilliant cutting-up of Saintsbury's 'Short History of French Literature,' in which some of the English critic's numerous errors are pointed out; two very interesting and impartial reviews of Bourget; an appreciative one of Green's 'History of the English People'; a striking portrait of "Le Grand Condé"; and, finally, a fine study of "L'Artiste et le Critique," of which Maupassant's 'Pierre et Jean' forms the starting-point. To this wholesome volume, serious and earnest in tone, like all Scherer's work, a general table of contents of the ten volumes is added.

M. H. de la Ville de Mirmont claims his doctorate from the Paris Faculté des Lettres in two volumes (Hachette & Cie.) of more than 1,100 octavo pages in the aggregate. One volume, in French, compares the mythology of Apollonius of Rhodes with that of Virgil. The author propounds the thesis that "the mythology of the 'Æneid' would not be what it is if Virgil had known no other Greek epic than Homer's." This we should be ready to admit *a priori* without these 800 erudite pages. How the delicacies of poetry fare in this learned dust-heap may be judged from one example. We are told that the reason why Virgil so often mentions the dawn is that Aurora was the daughter-in-law of Trojan Laomedon and the mother of Memnon, an ally of the Trojans. The other volume, on the 'Mosella' of Ausonius, deals, in excellent Latin and in the author's exhaustive way, with that exquisite little poem, its origin and date, its sources, metre, and style, and the various imitations to which it has given rise. This volume contains much valuable philological matter, and is in every way worthy of a writer two of whose learned treatises have already been "crowned" by the French Academy.

Heinrich von Poschinger's birthday memorial work has duly appeared, but with an important addition to the title under which it was first announced, being now called: 'Fürst Bismarck: Neue Tischgespräche und Interviews.' These "interviews," the collection of which seems to have been a happy afterthought, have swelled the volume to a large octavo of 427 pages, and form by far the most entertaining and instructive portion of it. The interviewers were American and European journalists, and the conversation was conducted in German, French, or English, according to the nationality of the inquisitor. Peculiarly piquant are the interviews with French journalists, especially that held with Henri du Houx, editor of *Le Matin*, on April 24 and 25, 1890. Interesting, too, is the statement made by Bismarck to the representative of a German-American paper in November, 1866. The Conservative party in Prussia had urged King William to recognize the Southern Confederacy soon after the outbreak of the rebellion, but Bismarck steadily opposed this policy, declaring that, whatever might be the issue of the civil war, the North would always be Prussia's natural ally. Poschinger's work is a much more valuable contribution to contemporary history than the extract from it printed in the February number of the *Deutsche Revue* would indicate. In this respect the "interviews" are superior to the "table-talk."

With characteristic patience, Mr. W. M. Griswold continues at Cambridge, Mass., the compilation and publication of his "Descriptiv Lists" of fiction, to whose utility we have frequently testified. We have now before us such a 'List of Novels and Tales dealing with Ancient History'—a dreary tract, for the most part, though it contains a few masterpieces; and a 'List of American Historical Novels,' in which the quoted "descriptions" or reviews are noticeably liberal in extent. Here the arrangement is conveniently chronological, and comes down even to the Charleston earthquake of 1886. At the other end of the line is 'Behemoth, a Legend of the Mound-builders.'

The feature of the *Book-Buyer* for May is a Bibliography of the original editions of the works of Whittier, compiled by Edward H. Bierstadt.

The Roman *Revista delle Biblioteche*, now beginning its sixth year, will be issued regularly every two months, with an enlarged title (*e degli Archivi*) to indicate its new concern for archives as well as for libraries. Its first fascicule under this arrangement contains some Dante anecdotes by T. Casini, and some observations by Hermann Loevinson on the necessity and the means of improving the quality of ink and paper for use in public offices.

The Secretary of Agriculture has instituted, through the agency of the Weather Bureau, a systematic investigation of climate, and its influence on health and disease. The importance of such an investigation, properly conducted, cannot be overestimated, especially to the increasing army of invalids who are constantly migrating from one section of our country to another in the too often illusory search for health. Such a study of the climates of the United States should be of practical value to every community, and the chief of the Weather Bureau asks for the cordial coöperation of the various sanitary authorities, societies, and physicians, who are willing to send "regularly and promptly" to the Bureau reports of vital statistics from their own localities, on uniform blanks, prepared and distributed, free of charge, on application. As compensation to these professional collaborators will be given all future publications of the Bureau bearing on climatology and its relation to health and disease, the hope being expressed that sufficient data will be secured to justify the publication of a climatological journal resembling somewhat the present Monthly Weather Review.

B. Westermann & Co. send us Parts 11–16 in continuation of the eighth edition of 'Ritter's Geographisch-Statistisches Lexicon,' which nearly conclude the first volume—a consummation to be wished by all who know by experience the value of this admirable gazetteer; also, the eighth of the fifteen parts of Langhans's 'Deutscher Kolonial-Atlas,' showing the German "sphere" in southwest Africa and protectorates and extension in Australia and Polynesia. From Dietrich Reimer, Berlin, we have Part xvii. of Kiepert's 'Grosser Hand-Atlas,' with Africa in full; the middle portion of South America; Chili and the Argentine Republic; the German Empire, etc. The South American sheets are particularly welcome. As usual, an index of names, and physical, vital, and commercial statistics, accompany each map.

The Union and Confederate Geographical Divisions and Departments continue to occupy the issues (33, 34) of the Government 'Atlas to Accompany the Official Records of the Union and Confederate Armies.' The map of the United States is repeated from date to date with fresh boundaries and denominations.

Bulletin No. 3 of the Geographical Club of Philadelphia contains the annual address of the president, Prof. Angelo Heilprin, in which he reviews the recent progress of geographical discovery and indicates some of the tasks remaining for the future explorer. These relate to the regions about the Bering Sea and Strait with a view to investigate the relations between Asia and America; West Central Africa and its pigmy race; and the coral islands, as the Bermudas, for the purpose of determining the nature of their origin. An account of a journey through Alsace and Lorraine by Mr. T. W. Balch, is given in Bulletin No. 4. It is illustrated, and has a map showing the lines of defence of northeastern France.

The latest brochure of the *National Geographic Magazine* contains an essay on Oregon, its history, geography, and resources, by Senator Mitchell. History preponderates; geography is subordinate and unscientific. The early misconceptions of the character of the region are well presented.

The list of geographical publications, for many years prepared by Koner and, until his death in 1887, published in the *Verhandlungen* of the Gesellschaft für Erdkunde of Berlin, has now been replaced by a separate volume issued by the society, with the title 'Bibliotheca Geographica,' prepared by O. Baschin. The first number, lately issued, is for 1891 and 1892, a stout octavo volume of 506 pages (Wester-

mann); the number for 1893 is promised soon. The titles are well arranged; general works in various departments of geography coming first, and descriptive works being afterwards carefully classified according to localities.

The Geographical Society of Munich celebrates the twenty-fifth anniversary of its foundation by publishing a special volume of essays by Ratzel, Penck, Günther, and others. A list of geographical works on Bavaria is contributed by Gruber; and an account by Ammon of the geology of the region around Munich, well illustrated by map and plates, will prove valuable to visitors to the capital who have scientific interests. The glacial phenomena characteristic of the Alpine foreland are excellently displayed in the neighborhood.

Prof. Gustav Hirschfeld of the University of Königsberg died in Wiesbaden on April 20, after a long and heroic fight with cancer. In the vain hope of obtaining relief, he even came to America and became an inmate of the New York Cancer Hospital for a time. In his great and minute knowledge of Asia Minor and all matters pertaining thereto he was easily without a peer. He was a Jew, gifted with intellect and charm of manner as are few men. He died in the very prime of manhood.

By a typographical error we gave a wrong address for subscriptions to the contemplated Stevenson memorial fountain in San Francisco. They should be sent to Mr. W. D. Armes, University of California.

—The event of the month among the magazines is the appearance in *Scribner's* of the first part of Mrs. Humphry Ward's dramatic study in feminine criminology. The action on this rustic stage has already waxed to a crisis of a degree of complexity that only a strong hand could so swiftly and inevitably have developed. The number also supplies to the reader an eclectic review of the crotchets, fads, and interests of divers of his contemporaries. Judge Howland is especially happy on the subject of golf—not, perhaps, tenderly solicitous to instruct and help forward the beginner, but a primed exponent of all (some may even think more than) "there is in" the game the Scot and his imitators hold dear. The article on "French Posters and Book-Covers," by Arsène Alexandre, leaves, with its capital illustrations, nothing to desire—unless to the deeply bitten—in information about the subject of the latest collector's mania, the best-known prizes of which are the work of Chéret, Grasset, or Willette, whose influence may even now be dimly detected on almost any advertisement board or sheet. The district must be remotely rural that can find nothing personal to itself in Joseph Wetzler's discussion, "Will the Electric Motor Supersede the Steam Locomotive?"; while a short, informal account of the Impressionists comes, at the hand of Jean François Raffaelli, from the fountainhead. It is interesting to learn that this artist's own choice of a class-name would have been the "Characterists," as defining "the whole artistic movement of our time"—"the search for what is characteristic." Finally, there is a story, "The Martyrdom of John the Baptist," by Wolcott Le Clear Beard, which gives with skilful reticence and a picturesque concentration of effect an impression of life as it is passed by those who dwell in the adobe habitations of Frog Tanks, at the foot of the Sierra Tucson, in the midst of the Arizona desert.

—It is more than a coincidence, it is a sign of the times, that each of the magazines in turn more or less directly brings into notice this Territory and the section to which it belongs. The *Century* contains a valuable account of the actual and possible redemption of the 800,000,000 acres of desert lying west of the line of the one hundredth meridian. The reclamation of Utah by its Mormon settlers, of Greeley in Colorado, of the Salt River Valley in Arizona, and, better known to the tourist, of Riverside in California, is described by pen, statistic, and picture as part of the accomplished work of the "miracle of irrigation." A forecasting of the stupendous work yet to be done in this region, vast enough to accommodate the entire present population of the United States, with "social and industrial systems better and purer than any the past has known," leads by a logical sequence to two questions of national importance: the first, how the Government shall dispose of its own half billion of irrigable acres, "the priceless heritage of the children of America"; the second, what means it shall take for the preservation of the forests, "nature's storage reservoirs." The loss, "by fire and avarice," that delay in the last issue is involving is only less enormous than the national callousness that suffers it to go on. This paper, "The Conquest of Arid America" by name, is the one completed article of note in the number, though a portrait of Rubinstein is accompanied by some readable reminiscences of the composer.

—The prevailing paucity of matter over which it is worth while to linger in *Harper's* is relieved by the addendum to the foregoing topic. Here the exploitation of sand and oasis is in the form of a story, "La Tinaja Bonita," by Owen Wister. The fictional element sinks promptly into the Lethean regions of the reader's consciousness, and what is left distinct is a haunting impression of the agonies of man and beast in a death in this New World desert, or, to be more exact, in the death that follows to a certainty upon the torture and delirium of drought unless the relieving water, if found, is taken drop by drop—not quaffed with the eagerness of desire. To appreciate the general unsatisfactoriness of the illustrations to a description of the Museum of the Prado in general, and of Velazquez in particular, nothing more is needed than a comparison with the fine frontispiece to *Scribner's*—a reproduction, by still another coincidence, of a work of the same master.

—It is, finally, in the favoring atmosphere of Flagstaff, Arizona, that the series of observations which form the basis of the paper on Mars in the *Atlantic* have lately been made. Although the superscription of this admirable paper is astronomical, and its contents reveal an intimacy with the physical conditions of the ruddy planet that may well make wonder grow at what the specialist's eye and reason combined can discover, its object is one "which appeals romantically, at least, to everybody." This is to determine whether Mars is peopled by intelligent beings, "although physically they be utterly unlike us, more goblins than men or animals." The present paper sums up the proofs from the existence of an atmosphere; the forthcoming one will deal with the proofs from the existence of water, the second of the two things in nature vital "to all forms of life of which we have any conception." Mr. Lowell's graceful literary handling of this scientific theme must strike even the most cursory readers not less than the opposition between his convincingly reasoned conclusions and those of Prof. Holden in the current issue of the *North American Review*. It is a pleasure to be able to praise also the literary form of a paper, "A Week on Walden's Ridge," written from a naturalist's point of view by Bradford Torrey, and also to find that, although Miss Repplier has changed her skies, she has changed nothing for the worse in her apposite manner of disposing of her subject. There are, indeed, features in her description of "Christmas Shopping at Assuân" that incline one to predict an agreeable development in an already agreeable talent. Some letters of Dr. Benjamin Rush, the defamer of Washington, edited by Paul Leicester Ford, fall in, in general drift, with a paper by John Bach McMaster, which has the somewhat thankless task of showing "The Political Depravity of the Fathers."

—New information on Madagascar, even though scanty, is to be welcomed in these days. M. Émile Gautier, in a lecture delivered at the Sorbonne in February, upon his return from the island, and published in the 53d *Bulletin de l'Alliance Française*, tells us that among the Hovas 100,000 pupils are being taught in some 8,000 schools by an equal number of indigenous teachers, the latter having been trained through the agency of 225 missionaries and four primary normal schools—a very satisfactory showing, if we place the entire Hova population, according to a recent German authority, at about one million, or one-third of the population of the island. The native teachers read and write well their own language and know the rudiments of some sciences and of a European language; in fact, there are several hundred thousand natives who read and write their language in Latin characters, and, still better, material for reading is provided for them. From six printing presses are issued books, both sacred and secular, and a considerable number of magazines, some even illustrated, besides two newspapers. Native clerks are already employed in French offices. M. Gautier regretfully adds that the work of civilization has been carried on in a large measure "by the enemies of France." Of the 8,000 teachers only 640, and only 17,000 of the 100,000 pupils, fall to the account of French missionaries, the remainder to English or Norwegian. On the other hand, it is a consoling thought that the Hovas do not seem to care whether their children are taught by English or French, by Protestant or Catholic, teachers; sons of the same family go, one to the French missionary, another to the English, a third to the Norwegian. They are largely attached to a religion which has more adherents in France than in England, the "*je m'en fichisme.*" M. Gautier's account of the bootless endeavors of Norwegian missionaries among the Sakalavas, the other great tribe of the island, seems to leave little room for doubt of their refractoriness, thus far, to all civilizing influences, whether Mohammedan or Christian.

—M. Paul Bourget's 'Outre-Mer' comes again in a new English dress and in handsome binding from the house of Charles Scribner's Sons. It has already been discussed at such length as instalment after instalment appeared in the press, the book itself is so long and parts of it so lacking in genuine interest, that an extended review is unnecessary. It gives the impression of being written too soon, before the "shocks" and "sensations" had resolved themselves into more definite and permanent shape. It is, indeed, a series of notes and sketches with conclusions come to and judgments formed that one cannot always agree with. But it is a singularly interesting work in that it comes from a trained and practised observer, who

sees and notes things which most of us merely glance at and straightway forget. The things are so, for the most part, only they either do not strike us at all or strike us lightly and differently. Americans rebel at being pictured as M. Bourget pictures them, but it is well to remember that as they appear, so they are to him —and in a less degree to the average foreigner. It must be allowed, on the other hand, that the French observer is at times under the influence of a theory, formed too easily, and to which, unconsciously, he seeks to adapt some part of what he notes. Yet there is deep truth in Bourget's description of much that marks American life and character, the crudity in certain matters, the love of display, the garishness, the feverishness, the restlessness. These traits it is unpleasant to be reminded of, especially by a master in the art of torturing analysis. Of the translation it can be said that it is above the average and reads easily, only occasionally calling up a smile or causing a knitting of the brows. In these days of misrepresentations of foreign tongues this is much to be thankful for.

—The first volume of Hatzfeld, Darmsteter and Thomas's 'Dictionnaire Général de la Langue Française, du commencement du XVIIe siècle jusqu' à nos jours' (Paris: Delagrave) is completed, and a first instalment of the second volume has appeared. The work maintains the high standard set by its authors, and, even in its incomplete form, is constantly referred to by every earnest student of French, having already acquired the rank of an undoubted and trustworthy authority. Less bulky than Littré or the Academy, the Hatzfeld-Darmsteter is destined to be the dictionary of general reference, the others keeping their position, of course, as on the one hand a storehouse of information, and on the other as the official authority. The plan adopted by the authors consists in first tracing the etymology of a word, and next accurately defining its original meaning, its present standard meaning, and finally its varied meanings, as they happen to be technical, special, or more general as caused by extension. In this way the history of the word is seen at a glance, and how valuable this is in tracing the changes in its signification need not be dwelt upon. For general practical purposes the new dictionary enables the student to dispense with a special dictionary of synonyms, as the shades of meaning are clearly brought out, not by definitions alone, but by abundant and well-selected examples. Idioms and proverbial expressions are in a similar way rendered quite intelligible, as may readily be seen by reference to the word *eau*, for instance, *franc*, with its numerous compounds, or *frais*. The work will be indispensable, and no higher praise can be given to it than this. It should be added that the print is particularly good, easy to read, and that the varieties of type employed greatly facilitate reference. According to the original announcement, the completed work should consist of two volumes; judging, however, by the contents of the first, it may be assumed that it will comprise three.

—The discovery of a new race in Egypt was announced by Prof. Flinders Petrie on April 17 to the Royal Society, Edinburgh. He has found traces of it throughout a district stretching for a hundred miles along the western bank of the Nile south of Abydos, but mainly at a spot thirty miles north of Thebes. Here, on the top of the plateau, 1,400 feet above the river, are the remains of a town with a cemetery in which he has excavated nearly two thousand graves. In them "not a single Egyptian object was found—not one scarab or cartouche, not one hieroglyph, not one piece of usual funereal furniture, a head-rest, or a kohl-pot, not one Egyptian bead, not one god, not one amulet, not a single piece of Egyptian pottery such as was found abundantly in the neighboring Egyptian town. And not one body was mummified or buried at full length; all were contracted, with the knees bent up to the arms." There were in the graves, however, adzes, needles and harpoons made of copper, exquisitely finished flint knives, beautifully formed stone vases, wrought by hand out of alabaster as well as hardest syenite, glazed crystal beads, and exquisitely colored pottery. This, too, was made by hand, the use of the wheel being apparently unknown. There are no traces of writing, beyond personal marks, nor of hieroglyphs, and the figures of animals are rudely drawn. The race was one of remarkable stature, some individuals being over six feet high. They had brown, wavy hair, prominent aquiline noses, and long-pointed beard, having a "strong resemblance to the Libyan and Amorite type." The condition of some of the bodies indicates the prevalence among them of ceremonial funereal cannibalism. From the relations of these remains with other tombs and monuments in this same spot, Prof. Petrie is inclined to regard this race as the people, possibly Libyans, "who overthrew Egyptian civilization at the close of the old kingdom, and so produced that dark age of the seventh and eighth dynasties, when the Egyptians seem to have been narrowed and oppressed by disaster"—that is, about 3000 B. C. Another discovery, of purely classical interest, was that of a more modern Egyptian town within a quarter of a mile of this ancient settlement, which proved to be the Nubt-Ombos mentioned in the 15th Satire of Juvenal. This clears up an old obscurity which has long puzzled his commentators, this town being close to Tentyra [Denderah] as he states, while the only hitherto known Ombi was one hundred miles distant.

ARISTOTLE'S THEORY OF POETRY.

Aristotle's Theory of Poetry and Fine Art. With a Critical Text and Translation of the Poetics. By S. H. Butcher, Litt.D., LL.D. Macmillan & Co. 1895.

To a certain order of minds a revolt against Aristotle is perfectly comprehensible. With Plato it is absolutely impossible to quarrel. He is a manner of divine "Weltkind"; but the master of those who know is so very knowing and so very sensible that the spirit of contrariety is aroused in those who are not perfectly amenable to dictation. When he says, in his cock-sure way, παρὰ ταῦτα οὐδέν, "That's all," the unregenerate soul yearns to prove that there is something else. When he brings out his "irrefutable sign," there are those who sympathize with one Alexinos when he expresses his weariness of the inevitable illustration—nay, more, rejoice to learn that the proof is not an infallible proof, and that milk has been found in men as well as in mothers. When he tells us, with his air of superior wisdom, not less offensive because his wisdom *is* superior, that "the sea-fight at Salamis and the battle with the Carthaginians took place on the same day, but did not tend to the same result," there are those who delight to think him blind to the larger historical aspects of things, who see a concerted movement that has suffered a double check, and who would no more divorce Salamis and Himera than they would divorce Gettysburg and Vicksburg, or would, at all events, say, with Freeman, "Hellas against Canaan, the elder Hellas against the elder Canaan, the younger against the younger, that was the cause to be judged on that memorable day"—only Freeman is another dictator who is apt to provoke dissent.

It is really very much a matter of temperament, as was said long ago, how a man stands affected towards Aristotle; and the revived interest in the great thinker due to the discovery of the 'Constitution of Athens' has evoked a good deal of animosity that manifests itself in many curious ways. Those are not all friends of Aristotle who believe in the Aristotelian authorship of the 'Constitution of Athens.' But the interest is undeniable, and does not seem to diminish with the lapse of time. The great edition of Sandys, which seemed sufficiently comprehensive to satisfy scholars at least for a brief space, was followed immediately by Kaibel's one volume on the style and text of the 'Constitution of Athens,' and Wilamowitz-Moellendorff's two on Aristotle and Athens—both works that deserve the closest attention. Indeed, one looks with dismay at the so-called literature that has gathered about the 'Constitution of Athens' since the time when Mr. Stead, in the *Review of Reviews*, called that important but somewhat disappointing resuscitation "the book of the month." And just as 'Trilby' gives a fillip to 'Peter Ibbetson,' and Hall Caine's 'Manxman' revives his earlier experiments, so the 'Constitution of Athens' seems to have called for new editions and new handlings of the 'Nicomachean Ethics' and the 'Politics,' both prime favorites with English scholars.

But Aristotle's æsthetics are not so much to the fancy of the average Briton as the 'Ethics' and the 'Politics.' The 'Rhetoric,' to be sure, has not been wholly neglected, and we had occasion some years ago to notice Mr. Welldon's translation of that treatise. But a large part of the 'Rhetoric' is applied logic, applied psychology, whereas the heart of Aristotle's æsthetic theories is to be sought in the 'Poetics'; and although Englishmen themselves had led the way to a juster appreciation of the 'Poetics,' there seems to have been an undercurrent of national resentment against a treatise to which French critics and French dramatists appealed for the cramping doctrine of the three unities. To be sure, it had been shown generations ago that Aristotle was not so narrow as he had been represented to be by people who had not studied him, and the famous "purgation of the passions" had been made a more intelligible process by Bernays, who was in close sympathy with the earlier and more robust type of English scholarship, and who counted among his admirers and friends some of the best English scholars of his generation. But the average Philistine would not heed the protest that Aristotle was not responsible for the French three unities. Shakspere had been insulted, and that was enough. And as for the Bernaysian *katharsis*, that was too much in the style of Molière's *ensuitta purgare* in the "Malade Imaginaire." But, whatever the reason, the 'Poetics' has been neglected by insular scholars so that a whole century has elapsed between the critical edition of Tyrwhitt in 1794 and the critical edition of Prof. Butcher.

Prof. Butcher's text steers between Susemihl and Vahlen—between Susemihl, who, ac-

cording to Prof. Butcher, "carries conjecture too far," and Vahlen, "whose adherence to the Parisian MS. borders on superstition"; and, so steering, is more closely coincident with the text of Wilhelm Christ than with any other. The doctrine of the dominant MS., like the doctrine of an infallible church, is a very great comfort to those who stick to it resolutely; but moments of infidelity come to the stoutest believer, and the temptation to make sense of a passage is too much for most of us at times. A luminous correction in an inferior MS. makes one crave some authority outside of the chance divination of a late reader. We swear by our Laurentianus, our Ambrosianus, in theory, but in practice we are prone to follow the example of the Israelites of old and disport ourselves in the groves of strange gods.

However, in this case, points of textual criticism, which cannot be considered here, will hardly affect the reconstruction of Aristotle's æsthetic catechism, which can be reproduced from the 'Poetics' with the help of his other works; and this reconstruction, with a consequent reinterpretation, is the aim of Professor Butcher's book, which he has entitled 'Aristotle's Theory of Poetry and Fine Arts.' The text of the 'Poetics' is faced by an idiomatic translation for which Hellenist and non-Hellenist alike will be grateful, for in an author like Aristotle a translation is often the best commentary, and it may be said here by way of parenthesis that if a translation is to be published with the text, as is very fashionable nowadays, it is well to put it as Professor Jebb has done and Professor Butcher has done—facing the text, and not as an appendix. The rendering ought to look the original in the eye, and not force the unlucky reader to have another copy of the text before him or to "shift from side to side by turns," like the fever-stricken wretch in the hymn-book. The translation is, as was to be expected of such a master as Professor Butcher, clear and fluent and idiomatic, and a contrast in its easy flow to the crabbedness and jottiness, so to speak, of the original; so that the translator has made the 'Poetics' accessible to those who are outside the Aristotelian lecture-room. He has given us Aristotle the man of the world rather than Aristotle the professor, and most people will think it a blessed change. And what is more, it is a legitimate change, for Aristotle has more than one style, and we have been taught of late that he was extraordinarily sensitive to his environment and reflected at every turn the authors with whom he was brought into contact. The association with Professor Butcher has evidently done him good.

The essays which follow the text and translation of the 'Poetics' are not all new; in fact, they are for the most part repetitions and expansions of certain chapters in the first edition of 'Some Aspects of the Greek Genius,' a work which was received with deserved favor, and which has been republished with the omission of the Aristotelian chapters and the addition of other matter. New in this volume are chapter vii. on the "Dramatic Unities," and chapter viii. on the "Ideal Tragic Hero." In view of all the tortures the scholars have suffered from *duplex recensio* and *contaminatio*, one cannot help fancying what would be the state of mind of a student who should try to find out without the help of the prefaces the exact relation of the earlier Butcher to the later, for several of the titles are changed, and the order is varied so that one is reminded of the 'Politics' or Propertius by i (i) ii (iii) iii (iv) iv (ii) v (vi) vi (viii) [vii] [viii] ix (ix) x (v) xi (vii). The new arrangement is a criticism of the old, but neither order seems to be inevitable, and a sketch-map of the ground to be traversed would have been welcome. The headings of the chapters do not quite suffice.

Without derogating from the merit of the new chapters, the two essays that are of most importance and interest to readers and author alike are the essay on "Imitation as an Æsthetic Term" and the essay on "The Function of Tragedy," in which the modern views of the *katharsis* are set forth. Prof. Butcher is not a thorough-paced Aristotelian, and recognizes freely the fact that Aristotle more than any other writer "has suffered from the intemperate admiration of his friends." "A far truer respect would have been shown him," he adds, "had it been frankly acknowledged that in his *Poetics* there are oversights and omissions which cannot be altogether set down to the fragmentary character of the book; that his judgments are based on literary models which, perfect as they are in their kind, do not exhaust the possibilities of literature; that many of his rules are tentative rather than dogmatic; that some of them need revision or qualification." In short, Prof. Butcher seems to have some degree of allowance for the rebellious spirits mentioned in the opening of this notice. But as to "Imitation," he contends that Aristotle is quite right, if we interpret the word as an æsthetic term correctly. It is, to be sure, "a somewhat infelicitous term" which Aristotle had inherited from his predecessors, but he has charged it with a new meaning which it is our business to discover. By "Imitation" Aristotle does not mean "a literal copy, a mere facsimile of the world of experience." "Imitative art in its highest form, namely, poetry, is an expression of the universal element in human life." "Art, in imitating the universal, imitates the ideal; and we can now describe a work of art as an idealized representation of human life—of character, emotion, action—under forms manifest to sense."

The other important chapter on "The Function of Tragedy," or the doctrine of the *katharsis*, has remained essentially the same with slight expansions and little corrective touches. The *katharsis* Prof. Butcher takes, with Bernays, to be a medical metaphor, and the process of purgation a homœopathic process. "But it is only under certain conditions of art that the homœopathic cure of pity and fear by similar emotions is possible." We must rise from the particular to the universal, and it is this universality as the "characteristic note" of Aristotle that commends him to the student of Greek life and human life. And this is the drift of all Prof. Butcher's teaching; this must be the burden of every true prophet of Hellenism, though few prophets of Hellenism have Prof. Butcher's clear vision and his attractive style. "All that has been bequeathed to us by Greece," he said in the preface to his former volume, "is modern almost as truly as it is ancient; for it rests on the essential sameness under all circumstances of man's nature and faculties." Greek literature mirrors our every-day life. Aristophanes comments on the follies of American society, the vices of American politics, and the fallacies of American finance; and when we read the soliloquy of Ajax in Sophocles, we think of Gen. Chang at Wei-Hai-Wei. This essential universality of Greek life and Greek literature shows itself also in the universality of Greek æsthetics as summed up by Aristotle, and it is Prof. Butcher's great merit to have handled not only with complete mastery of the subject, but with clearness, vividness, unfailing charm of style, and spontaneous happiness of illustration, a subject which would naturally escape into the realm of arid technicalities and abstruse formulas.

FLINT'S SOCIALISM.

Socialism. By Robert Flint, Professor in the University of Edinburgh. London: Isbister & Co.; Philadelphia: J. B. Lippincott Co. 1895.

THE world may well be weary of socialism, both in fact and in name; but it is idle to suppose that the movement is going to die out after a time. It is as permanent as envy and discontent, and it is as truly described now as in the time of Aristotle as the perversion or corruption of democracy. Since this form of government is likely to prevail generally in the future, there is certain to be a steady tendency towards socialistic experiments; and unless the conservative forces of society are concentrated in opposition to this tendency, we may presently witness some episodes as startling as the French Revolution. Prof. Flint justly observes that to ignore a movement of this kind for fear of propagating it by talking about it, is not the part of wisdom. His purpose, therefore, is to study the phenomenon with care, to examine its causes and its consequences, and to watch its progress. Like Gamaliel, he favors no violent measures of repression; inclining rather to wait and see if the socialistic counsel, being of men, will not come to naught.

Socialism, according to Prof. Flint's definition, is any theory of social organization which sacrifices the legitimate liberties of individuals to the will or interests of the community. The objection to such a definition as this is obvious. It is meaningless unless we have a previous definition of legitimate liberties; which it is not an easy matter to furnish. Prof. Flint, in the course of his discussion, does furnish approximately such a definition, and in this way meets the objection. Yet we incline to regard the definition offered by Mr. Bradlaugh in his debate with Mr. Hyndman as having peculiar merit. "Socialism," he said, "denies individual private property, and affirms that society organized as the State should own all wealth, direct all labor, and compel the equal distribution of all produce." Undoubtedly, as Prof. Flint urges, there are many socialists who do not go to this length. But it is immaterial that those who profess a doctrine do not in practice carry it out. The premises upon which socialism rests are undeniably those stated by Mr. Bradlaugh, and without these premises no socialistic movement, whether moderate or extreme, can be justified.

In his criticism of other definitions, however, Prof. Flint appears to us to be frequently very just and very keen. Bishop Westcott, for example, declared that socialism seeks such an organization of life as shall secure for every one the most complete development of his powers. This is exactly the aim of those who believe in human freedom, and who are, properly or improperly, now commonly called individualists. As Prof. Flint says:

"In its two great forms of communism and collectivism, socialism is, of all economic and political systems, the one which most manifestly treats humanity as merely a mass or sum of individuals. The 'society' to which it sacrifices individuals is just the majority of individuals. What it aims at is not . . . the attainment of the highest good of the whole and of every one in relation to the whole, but the attainment of the equal good of all, however much sacrifice of the exceptional and higher good of any may be requir-

ed for that purpose. Socialism as an historical reality demands the equality of individuals in regard to means, opportunities, labor, and enjoyment. It directly appeals to the egoism and selfishness of the great majority of individuals."

In emphasizing equality as the very essence of socialism, these observations of Prof. Flint's go to the bottom of the subject.

It may be doubted if the theories of Karl Marx are worth any one's powder and shot. It is very improbable that those who profess these theories would be affected by appeals to their reason; but in any case we must confess that Prof. Flint's appeals are a little weak in their logic. He does not appear to be quite at home in political economy, and labors under the impression that Ricardo's demonstrations furnish the basis for Marx's inflated superstructures. Marx himself perhaps believed that his conclusions flowed logically from Ricardo's premises, but, as Prof. Marshall has very clearly shown, such a belief is without foundation. It must be admitted that Prof. Flint has better company than Karl Marx in misunderstanding Ricardo, but there is no such obscurity in Ricardo's language as to justify Prof. Flint's economic dogmas. Prof. Flint flatly declares that it does not take even double the quantity of labor to procure a given quantity of gold that it takes to procure the same quantity of silver. "It does not require more labor to extract or gather gold than to work in a coal or tin mine." In other words, he appears to maintain that the labor of a thousand men, applied to producing gold, would procure at least half as many ounces of gold as the same labor would procure of silver, if applied to the production of that metal. Fortunately the refutation of socialistic theories does not depend upon such exceptionable statements as these.

Nor is Prof. Flint more profound in his criticism of Mill. Mill declared "that the sole end for which mankind are warranted, individually or collectively, in interfering with the liberty of action of any of their number is self-protection; that the sole purpose for which power can be rightfully exercised over any member of a civilized community, against his will, is to prevent harm to others." Prof. Flint declares that the production of good is as legitimate an aim as the prevention of harm. It must be admitted that Mill's principle is a purely formal one, and it cannot be denied that the prevention of harm tends to the production of good. But the value of Mill's principle lies in its recognition of human liberty as an end in itself. It compels legislators, or would if they paid attention to it, to have proof that an action is reasonably certain to cause more harm to others than will be caused by its prohibition before they prohibit such action. In short, Mill's doctrine regards individual liberty as intrinsically good, and it regards restraint upon this liberty as an evil, only to be tolerated in so far as it tends to establish more liberty than it suppresses. As a guiding principle in legislation this is far safer than the "promotion of the general welfare" without reference to the liberties of the subject. All the positions that have been won by men in their struggle against despotic rule have been won against the claim of Government to promote the good of its subjects, and through the assertion of the right of individuals to determine for themselves in what their welfare consists. That is the sum and substance of all our bills of rights.

We should be conveying an altogether wrong impression of Prof. Flint's teaching did we not hasten to acknowledge that he practically admits this truth. He maintains that there are simple, definite, and well-ascertained moral laws which both states and individuals ought to recognize. There are certain fundamental human liberties essential to the true nature of man. There are economic laws which cannot be violated with impunity. Moreover, what the state can and cannot do, may do well or must do ill, is determinable by reflection enlightened by experience. Whenever the intervention of the state tends to diminish self-help and individual energy, it is unwise. And, finally, what Government may undertake is very largely determined by the state of public opinion. "It is not enough that a Government should be itself convinced of the justice and expediency of its intervention; it is also important that the justice and expediency thereof should be perceived by the nation at large."

These propositions appear to us to constitute a definite and substantially complete doctrine of the limits of governmental activity, and they are stated and expounded with admirable lucidity and fairness by Prof. Flint. His book is full of suggestive criticisms of socialistic doctrines and tendencies, put in such a way as to arrest the attention and convince the understanding of the ordinary reader. As to the iron law of competition which has called forth so much denunciation, he recognizes at once the principle that humanity requires the State to relieve the destitute and helpless whenever private charity fails; but with this qualification he shows that industrial competition is nothing but industrial liberty—the affirmation of every man's right to labor, and to live by his labor. "The real opposite of competition or liberty is compulsion or slavery, the authoritative assignment to each man of the work which he has to do." Concerning the attitude of socialism towards the institution of the family, he shows that it is impossible to controvert Morris and Bax when they declare that under socialism the development of the family is to take place "on the basis, not of a predetermined lifelong business arrangement, to be formally and nominally held to, irrespective of circumstances, but on mutual inclination and affection—an association terminable at the will of either party." And concerning democracy, he asks the pertinent question whether it raises to leadership the ablest, wisest, and best, or the incompetent and unworthy.

The chapters upon "Socialism and Morality" and "Socialism and Religion" are full of good sense and wise counsel. Socialism is strong in its recognition of the great principle of human brotherhood, but hitherto its application of this principle suggests a paraphrase of the characterization of the Irish—"Fighting like divils for conciliation, and hating each other for the love of man." "As yet it has led chiefly to hatred and strife, violence and bloodshed, waste and misery." "The leaders of Socialism have largely acquired their power by appealing not to the reasons and consciences, but to the envy, the cupidity, and the class prejudices of those whom they have sought to gain to their views."

We could quote indefinitely from the store of wisdom which Prof. Flint has accumulated for us, but it is much to be wished that every one who desires to learn what socialism means should read this book for himself. It would be a real service to the public to revise it, omitting the notes, which are of interest only to scholars, and the tiresome and technical discussion of Marx, and to offer it in a cheap edition.

RECENT FICTION.

Men Born Equal. By Harry Perry Robinson. Harper & Brothers.

The Tale of Chloe, and Other Stories. By George Meredith. Ward, Lock & Bowden.

The Mermaid: A Love Tale. By L. Dougall. D. Appleton & Co.

Entrückt in die Zukunft: Socialpolitischer Roman von Theodor Hertzka. Berlin; F. Dümmler; New York: Westermann.

THE drift of argument in 'Men Born Equal' is not towards proof of the truth and triumph of the idea of natural equality, but of its fallacy and at least temporary failure in the United States. This is a very serious work, and respectable in motive, sentiment, and composition. It would be more entertaining if neither of those qualities was so conspicuous. It is the story of an honest, educated, and intelligent young man who is regarded as one of the leaders of a political party formed by fusion of Populists and Democrats in a Western State. From the beginning he is seen to be uncommonly ingenuous, which is prophetic of a short term in politics and significant of the author's intention to scatter the Populist hosts as the leaves of the forest when autumn hath blown. The young enthusiast, Mr. Marsh, is an orator. The oratorical habit is so confirmed that he cannot resist it at dinners, luncheons, or even afternoon teas. Vainly do elderly important Republicans enter into competition; their most ponderous and stately utterance is but fuel for his consuming flame. No quip or merry jest is allowed to disturb the solemnity of his careful periods, and he seems always to be talking the printed leaders of well-informed country journals whose readers would resent any attempt to please with a rattle or tickle with a straw. The silent and deadly political work is done by an Irish boss, an astute Democratic candidate, and a "delegate" who eggs the Labor Unions on to strikes and riot with an eye sternly concentrated on his own interests. These well-known figures are drawn from life with accurate knowledge of the game and their way of playing it. They, of course, lie and scheme and steal right under young Mr. Marsh's nose, and it takes a series of tragic accidents to open his eyes and show him what they are about. Some of these accidents are quite in the line of expectation, but two at least—a murder and a suicide—are gratuitous, and suggest that the author is offering tardy compensation for a suspected dulness in the lengthy political disquisitions.

The blend of romance and purpose is rather better than in most novels of the kind. The smooth course of Miss Holt's love for Mr. Marsh is naturally broken when she believes that he is engaged in demolishing her father's fortune and character; as naturally resumed when she knows that he isn't and never has been. All the minor characters are carefully drawn and useful in the movement except one Mr. Blakely, a bird of ill omen who hovers about restlessly, leaving a blight wherever he happens to linger. Novels that discuss public questions elaborately are inevitably dull unless the ideas are unusual or the manner light and brilliant. In spite of the common sense and grasp of political complications displayed in 'Men Born Equal,' we fear that most people will find it very hard to read.

Mr. Meredith's volume of tales reprinted from old magazines includes one old-time tragic story and two modern comedies. Though sufficiently marred by the author's idiosyncrasies and affectations, they are still good,

and move both to tears and to laughter. It is worthy of note that there is hardly a sentence in the book the meaning of which may not be grasped on sight; which goes to show that the author is not absolutely dependent on tangled phrases for a fair expression of his genius. The title story tells what a milkmaid duchess did at the Wells under the distinguished patronage of Beau Beamish. Without any set description, Mr. Meredith portrays vividly the manners of the period and place, and, by a masterly exercise of the art of insinuation, places us thoroughly *en rapport* with Chloe, gives us the measure of her keen intelligence, and shows us her capacity for love and for despair.

The situation in the second story is farcical, and in farce Mr. Meredith is not exactly agile. To Americans, the retired draper, Mr. Tinman, may appear an impossible character, but the satire lavished upon him makes clear the reason why the author is not beloved by the Philistines of his native land. The quarrels between the devotedly British Tinman and the home returned Australian are very funny, and Mrs. Crickledon is one of those delightful dames who, like the rustics of George Eliot and Thomas Hardy, make one long to spend a lifetime in their company. The third story is pure comedy, brilliantly sustained, with the old-fashioned happy ending. The limit prescribed for a short story seems to us to make a capital restraint for Mr. Meredith. Though some may miss his profound philosophy, many get a chance to perceive and appreciate his dramatic power and his bold, striking impressionism.

Miss Dougall, who has hitherto been known as a writer of purpose novels, now ventures a romantic love-story. The central situation of 'The Mermaid' is very well imagined, but, being highly fantastic, demands for its support more fancy and a lighter touch than Miss Dougall has easily at her command. By converting the merry mermaid into a devoutly religious woman, heroically nursing plague-stricken inhabitants of the Magdalen Islands, she destroys the mood which she has been at pains to excite, and cheats us into assisting at a melancholy spectacle. From a mixture of motives, one gay, one grave, any sort of good effect is missed, and the transparency of devices for prolonging the mystery shows a marked decline in the ingenuity which contrived the plot of 'Beggars All.'

About five years ago Theodor Hertzka published a Utopian romance entitled 'Freiland,' in which he depicted an ideal community that he subsequently attempted to realize in a colony founded by him in Africa. Whether the colony still exists is not known to us; but, however that may be, Hertzka is again in the field as a contributor to the class of literature that received so great an impetus from the success achieved by Edward Bellamy. His new book is a great deal shorter than his former one, and he calls it 'Entrückt in die Zukunft'—a title which might easily tempt shallow-witted scoffers to the emendation "Verrückt in der Gegenwart." The story employs machinery similar to that used in 'Looking Backward.' The hero, a young French physician, falls asleep in his room in Paris, and, on awakening, finds himself in a new world existing two hundred years later. Everything is different from what it used to be. Poverty has been abolished, as has been also private ownership of land and of the instruments of production. The whole earth is the home and property of the human race united in a single family. Repulsive, unwholesome, and degrading work is done by the forces of nature. There are degrees of wealth, but the differences between the poorest and the richest are not great. Every human being is assured not only the necessaries of life, but all its comforts and many of its luxuries. Children are not dependent on their parents nor wives on their husbands. Men have learned to fly, and for long journeys employ air-ships which are propelled by making use of the magnetism of the earth, and travel at the rate of 300 miles an hour. Expeditions have been sent to the Moon, but have unfortunately not yet returned, although it has been ascertained that the travellers composing them are alive and well, in spite of their inability to leave their lunar abode. The story ends abruptly, without offering a clue to the mysteries it suggests or to the purposes which the author had in mind when he wrote it.

Memorials of St. James's Palace. By Edgar Sheppard, Hon. Chaplain to the Queen. Longmans, Green & Co. 1894.

THE visitor to London who sees for the first time the low, unattractive mass of red brick buildings at the foot of St. James's Street, will perhaps find it difficult to believe that these insignificant buildings constitute a royal palace of very considerable antiquarian interest. Historians are accustomed to speak of the Court of St. James's or the Cabinet of St. James's, but our minds do not always connect these phrases with the shabby red brick buildings aforesaid. Mr. Sheppard's chronicles of the palace tell how unceremoniously a visitor once entered the cabinet in the reign of George II. It appears that he lost his footing and fell down a flight of stairs, and, bursting open a door at the foot of the stairs, was precipitated into a room, and lay stunned on the floor. When he came to his senses he found a severe little old gentleman with a red face washing his head and applying sticking-plaster to his wounds. This was the King, and the room he had so abruptly entered was the King's closet—the veritable "cabinet of St. James's."

It was in 1532 that Henry VIII. purchased the site of an old leper hospital which had existed from time immemorial, and, having pulled down the old buildings, erected a "magnificent and goodly house," the greater part of which is still in evidence, though the east wing was destroyed by fire in 1809. The Stuarts and the earlier Hanoverian monarchs lived a good deal at St. James's, but during the last century it has been mainly used for drawing-rooms and other state ceremonies. It was here that Queen Anne in 1710 received "four Indian Sachems or commanders of the nations in the North parts of America"; and on June 1, 1785—a memorable date—the first envoy from the United States of America made his appearance in the reception-room. In this very reception-room, and the other rooms connected with it, were formerly hung the priceless Raphaels, Correggios, Titians, etc., collected by Charles I., which were afterwards sold at ridiculously low prices by order of the Council of State during the Commonwealth, and found their way to the Louvre and other Continental galleries.

The unhappy prince known in history as the Old Pretender was born at St. James's on June 10, 1688, and the curious circumstances attending his birth led many people, including Bishop Burnet, to believe that the veritable prince died, and that another infant, introduced in a warming-pan, was substituted. George IV. was also born at St. James's in 1762, and among the earliest presents sent to the young prince were a curious Indian bow and arrow from his father's faithful subjects in New York. Among the deaths we find that of Queen Mary in 1558, and that of Prince Henry, eldest son of James I., in 1612. He seems to have been a very promising boy, of scholarly tastes, and, moreover, "passionately devoted to tennis, golf, and other athletic exercises." If the prescription sent to him by Sir Walter Raleigh, who was at the time a prisoner in the Tower, had produced the desired effect, the Puritan immigration to New England might never have taken place, and many other things might have been different in consequence. In 1737 Caroline, wife of George II., died at St. James's, after an agonizing illness of twelve days, in the midst of which, as the story goes, on her advising the King to marry again, he sobbed out: "Non, non; j'aurai des maîtresses."

The first royal marriage at St. James's was that of Mary, eldest daughter of Charles I., to Count William of Nassau in 1641, the issue of this marriage being William III. In 1734 the eldest daughter of George II. married another prince of Nassau, who was remarkable for his hideous appearance; but as a compensation the wedding music for this occasion was composed and conducted by Handel. In 1795 George IV., then Prince of Wales, married the unfortunate Princess Caroline; and it is related that she disgusted the sensitive George, and probably laid the foundation of future unhappiness, by an injudicious indulgence in onions shortly before her first meeting with "the first gentleman of Europe." The chapel royal in the palace has seen other sights besides royal marriages and funerals. When the eloquent Dr. South was preaching there one Sunday to the court of Charles II., he noticed that many of his hearers were asleep. He suddenly changed his tone and called Lord Lauderdale, who immediately awoke. Then the Doctor said: "I am sorry to interrupt your repose, but I must beg you not to snore so loud lest you awaken his Majesty." Later on, the chapel became too popular as a fashionable meeting-place, so that in 1700 Bishop Burnet had the pews raised higher to stop "ogling and sighing." Queen Anne did not like the chapel, and preferred to have prayers read in the outer room while she dressed. On one occasion she ordered the door shut, whereupon the chaplain immediately stopped; and when the Queen sent to ask the reason, he very properly replied that "he would not whistle the word of God through the keyhole."

From time to time distinguished foreigners have been entertained at St. James's. In 1638 Marie de Médicis established a miniature court there, to the great annoyance of the whole nation, until finally Parliament voted her £10,000 on condition that she quitted the country at once, which she did in 1641. In 1698 came Peter the Great, but the only interesting thing recorded of him is that his favorite beverage was "hot pepper and brandy." After the peace of 1814 the Emperor of Russia, the King of Prussia, and Marshal Blücher spent some time at the palace, the Marshal becoming a prime favorite with the London public, who waited in crowds for the chance of seeing the white-haired veteran smoking his pipe at the window.

Theatrical performances were frequently given at the palace in the time of the Stuarts, presumably in the great ball-room, as there is no permanent stage in the building. In 1633 "The Taming of the Shrew" was given by the King's company, and in 1637 "Julius Cæsar," while Evelyn refers to a number of perform-

ances after the Restoration. In 1837, shortly before the accession of Queen Victoria, a ball was given where the minuet was formally danced for the last time at the English court. At different times great deputations of citizens have appeared at the palace to present petitions of one kind or another. In 1765, for instance, the London periwig-makers appeared in force, carrying a complaint of the fashion, recently adopted by gentlemen, of wearing their own hair. They implored his Majesty to restore the old fashion by wearing a wig. Whereupon some humorist of the period got up a sham petition from the carpenters, requesting the King to wear a wooden leg and cause all his courtiers to do the same. Up to the end of the seventeenth century great numbers of people used to come every year to be touched by the reigning monarch for the King's-evil, but the sound common sense of William III. put an end to the practice.

Mr. Sheppard has gathered together a great mass of information about the palace, its internal economy, and the people who have lived in it, and in so doing has enjoyed special facilities for consulting old documents and official records. He has produced an interesting and readable book, rendered particularly attractive by a variety of excellent illustrations.

The Great Dominion: Studies of Canada. By George R. Parkin, M.A., Hon. LL.D. University of New Brunswick. With maps. Macmillan & Co. 1895.

Mr. Parkin's work is, we are told, a compilation from letters contributed by the author to the London *Times*. The volume is interesting and in some measure instructive reading, for Mr. Parkin knows his country well, and has had the fullest access to official sources of information. The latter fact, however, is a seriously qualifying one, for intelligent and even able as the author is, he has, in preparing his work, placed himself in the position of an advocate holding a brief not only for the Dominion Tory Government, but for its anti-continental and Jingo ally, the Canadian Pacific Railway. The partisan attitude of Mr. Parkin towards the latter may be judged from the fact that while he devotes an entire chapter to the road, he contents himself with but two single-line and belittling references to the Grand Trunk Railway, the great pioneer enterprise of the country. The author's point of view in his work may be further inferred when we recall the fact that Mr. Parkin is a notable colonial apostle of Imperial Federation, that dream of British unification and aggrandizement so dear to poetic minds, and note that his present work has apparently been called into existence to refute the strictures of Mr. Goldwin Smith on the political and economical condition of the Dominion, expressed in that brilliant writer's recent work, 'Canada and the Canadian Question.' It is but fair to Mr. Parkin to say that while he assumes the rôle of reviser of Prof. Smith's judgments, he does so with frank and unembarrassed candor, insomuch, indeed, that the reader who is at all conversant with the subjects discussed is at times in doubt as to the author's real opinions, and asks himself whether Mr. Parkin is what he assumes to be, or, on the contrary, is rather inclined to agree with Mr. Smith in not a few of that writer's sane and ofttimes trenchant criticisms. The difficulty we have referred to will be appreciated if we cite Mr. Parkin's views on some of the chief topics discussed, on which Mr. Goldwin Smith has preceded him in giving readers of Canadian affairs a careful and frequently striking judgment.

"'Rich by nature, poor by policy' might be written on Canada's door," is a dictum of Mr. Goldwin Smith's, expressed, as is usual with that writer, with the telling force of an epigram. The phrase is his summing up of the Canadian policy of protection, applied in a thinly populated and over-governed country, which needs above all things for its economical well-being free access to the great markets of its own continent, together with an honest and enlightened government, and the inducements to make the Dominion a rich rather than a poor country to live in. The criticism covers a number of points which Mr. Parkin attempts to meet either by general denial or by a gloss which is contradicted in detail by his own admissions. Let us take one or two brief examples. Of the national policy of protection and the benefits of the United States market to the Canadian producer, Mr. Parkin has this to say: First, as to the fisheries of British Columbia: "Halibut and black cod are found in the greatest abundance off the Island of Vancouver, but the development of a large fishery is hindered by the difficulty of access to adequate markets" (p. 166). Second, in regard to the tariff and the discontent which it creates among the population in the border constituencies: "It may be admitted that along the borders, where the frontier, with its custom-houses carrying out the regulations of a high protective tariff, offered hindrances to local trade, a certain amount of annexation talk was in past years heard" (p. 186). Thirdly, of the grinding effects of a high tariff and the imperious need of improved economic conditions, Mr. Parkin states: "There seems to be a consensus of opinion throughout the Northwest, in the agricultural communities of the East, and among men of independent thought everywhere, that the first object of Canadian statesmanship should now be to make the Dominion a cheap country to live in" (p. 202). And fourthly, respecting the near market: "In what I have said there has been no intention to question the great value to Canada of the freest trade relations attainable with the United States" (p. 197).

That Canada suffers from being over-governed, Mr. Parkin does not dispute. In the Maritime Provinces, especially, with three Governments for a small area, he thinks over-government fatuous. "A regular system of government by ministries based on party lines tends," he observes, "to become absurd when applied to such small constituencies, and ends by personal considerations and mere wire-pulling taking the place of anything that can be dignified by the name of policy" (p. 237). This expression of opinion seems to indicate that Mr. Parkin, like Mr. Goldwin Smith, is not enamored of party government, and this is more clearly emphasized in speaking also of the Provinces by the sea, where, as Mr. Parkin affirms, "much talent, effort, and time are spent in trying to squeeze public and private prosperity out of politics," and where "the hope is constantly indulged of help from some god's hand thrust out from the political machine," instead of energetically meeting commercial depression and the atrophy which has overtaken the country as the result of its isolation and handicapping trade policy. On the vexed subject of the exodus to the United States, Mr. Parkin is also at one with Mr. Goldwin Smith, though he takes the matter less seriously and treats it as the outcome of mere natural conditions. He also agrees with Mr. Smith in respect of the non-paying character of the Intercolonial Railroad, but explains this on the ground "that rates over the road have been designedly kept low so as to encourage interprovincial trade," which, however, it does little to foster.

The condition of things in the French Province opens Mr. Parkin's eyes to the same evils which Mr. Goldwin Smith notes. The chief of these are the fossilizing character of race isolation, the retarding effects of primitive modes of agriculture, the decadence of Quebec now that the English have left it, the reckless and corrupt system of provincial administration, and the migration of masses of the people to the factories of New England. The sinister influence of French-Canadian parties in Dominion affairs, and the separatist aspirations of the French race in an English colony, Mr. Parkin appears to treat lightly, though he counsels moderation and liberality in both elements of the population, and adds complacently that the English Provinces can afford to be calm under all conditions. "Their real political danger," he affirms, "lies not in Quebec and the Frenchman, but in the recklessness of party conflict, which has more than once tempted their politicians to sacrifice principle in order to win the French vote. The French vote, on the other hand," he adds, "has seemed at times to be won rather by the particular concession it had in view than by a reasoned and honest policy." Here, as in many other instances, Mr. Parkin, so far from disagreeing with Mr. Goldwin Smith, apparently agrees with him, and takes up his parable against the things which Mr. Smith censures and has been deemed disloyal for censuring.

Despite what we have said, and the fact that Mr. Parkin travels over much of the ground which Mr. Goldwin Smith has already so well covered, there is much that is readable and instructive in his volume. Whatever its inconsistencies, the author, from his point of view, is no doubt justified in preparing and setting his work before the constituency of readers who will presumably welcome it. Nor will the candor with which it is written lessen its acceptance by those who are not likely to relish its ultra-British tone and the Imperialist purpose which has admittedly inspired it. That candor, as we have said, will puzzle not a few readers who, with us, discern the ostensible purpose which has called the book into existence, however well or ill it may happen to serve the end in view.

BOOKS OF THE WEEK.

IN THE Buckram Series

18mo, gilt tops, with Frontispieces, 75 cents each.

THE TIME MACHINE.

An Invention. By H. S. Wells. Reprinted from "The New Review."

The extraordinary adventures of a man who invented a machine by which he could project himself into futurity. With Frontispiece by W. B. Russell.

THE WAYS OF YALE.

Third Edition. Sketches, mainly humorous. By Henry A. Beers (author of "A Suburban Pastoral").

"There is only one fault to find with Prof. Beers's book, and that is that there is not enough of it."—*N. Y. Times.*

A MAN OF MARK.

Fifth Edition. A tale of a South American Revolution. By Anthony Hope.

"More plentifully charged with humor, and the plot is every whit as original as that of 'Zenda.' . . . Pictured with such nearness and intimacy of view that the wildest things happen as though they were everyday occurrences. . . ."—*Life.*

HENRY HOLT & CO., N. Y.

A Primer of Evolution.

By Edward Clodd, author of "The Childhood of the World," "The Story of Creation," etc. Illustrated. 16mo, polished buckram, 75 cents.

"Mr. Clodd . . . has in the present volume provided a summary of the doctrine of evolution in a form that commends itself for its breadth of reasoning, its exactitude in scientific detail, and the clearness and impressiveness in which the whole argument is set forth. . . . It is not too much to say that no one can call himself even fairly well educated without having mastered the greater part of the information which Mr. Clodd so attractively presents."—*Beacon, Boston.*

New System of Declensions and Conjugations. Highly recommended by teachers and educators. Price, $1.00. "Companion," for practical work, 30 cents. Specimen copies to teachers half price. Address

Rev. MAX S. MOLL, Rochester, N. Y.

"Mirabeau stands out as the central figure of the times, the Greatest Statesman of France."

The French Revolution

TESTED BY MIRABEAU'S CAREER.

Twelve Lectures on the History of the French Revolution, Delivered at the Lowell Institute, Boston, Mass.

By Dr. Herman E. von Holst.

"In these two well-printed volumes Dr von Holst performs for students of the French Revolution a service similar in character to what he has already done for United States Constitutional History This is his principal achievement in these lectures, that he has applied to Mirabeau's part in the early stages of the Revolution a more appreciative and really more competent critical study, based upon and enlightened by his fuller and better command of the principles and spirit of constitutional government. Dr. von Holst thinks and writes on a basis of stanch Anglo Saxon morality, which makes his book in many parts a vigorous and luminous object-lesson for the study of what is promising to become, if it has not already reached that eminence, the mystery of all abominable mysteries, American politics and politicians."—*New York Independent.*

Printed at the Riverside Press, on English paper, uncut edges. Two volumes, 12mo. Price, $3.50 net.

Von Holst's Constitutional and Political History of the United States.

"Professor von Holst has the analytical capacity and the candor and courage which are requisite for his task."—*New York Times.*

"His labors, indeed, have been immense . . . A work which every student must needs possess in its entirety."—*The Nation.*

"A masterpiece as to depth, clearness, impartiality, and scope. It seems the testimony of a disinterested witness; one who needed no cross questioning; one who in the direct narrative omits no significant detail. In these passing years, when teachers and writers are attempting to kindle new flames of patriotism in old and young hearts, this production is timely indeed."—*David Swing.*

The Set, eight volumes, large octavo, 3,560 pages. Index over 300 pages. Price, cloth, $25; sheep, $30; half calf, $38.

*** *For sale by all Booksellers, or will be sent, prepaid, upon receipt of price, by the Publishers.*

Callaghan & Company,

CHICAGO, ILL.

HOUGHTON, MIFFLIN & CO.'S

NEW BOOKS.

The Mississippi Basin.

The Struggle in America between England and France. 1697-1763. With full Cartographical Illustrations from Contemporary Sources. By Justin Winsor, author of "Cartier to Frontenac," "Christopher Columbus," etc. 8vo, gilt top, $4.00.

This volume takes up the story of American exploration where Dr Winsor left it in his "Cartier to Frontenac." It traces the counter movements of the English and French, in adventure, trade, and war, for the possession of the Great Valley.

Letters of Celia Thaxter.

Edited by A. F. and R. L. With four Portraits. Handsomely printed on the best paper and carefully bound, cloth, gilt top, uncut front and bottom, each volume bearing a statement that it is a copy of the First Limited Edition. A few copies have been bound entirely uncut, with paper label, making a most desirable volume for collectors or for the purpose of extension. 12mo, $1.50.

A book of singular literary and personal charm, produced in a unique and exceedingly attractive style.

Selected Essays by James Darmesteter.

Translated from the French by Helen Jastrow. Edited, with an Introduction, by Prof. Morris Jastrow, Jr., of the University of Pennsylvania. With a Portrait. 12mo, $1.50.

A book of great interest on religious aud Oriental subjects by one of the foremost scholars of modern France.

Ten New England Blossoms and their Insect Visitors.

By Clarence M. Weed, Professor in the New Hampshire Agricultural College. With Illustrations. Square 12mo, $1.25.

A book of ten popular and delightful essays on certain blossoms and the visitors they attract.

Life of Charles F. Barnard.

By Francis Tiffany, author of "Dorothea Lynde Dix," etc. With a Portrait and a view of Warren Street Chapel. 12mo, $1.25.

An admirable account of Rev. Charles F. Barnard, who was for many years in charge of the Warren Street Chapel in Boston, where his fine intelligence, his heroic persistency, and his unsullied philanthropy secured for him the kind of success which such men as he most covet

Life of Gen. Thos. Pinckney.

By Rev. Charles Cotesworth Pinckney. With a Portrait. Crown 8vo, $1.50.

General Pinckney's record included military service in the Revolution and in the war of 1812; he was Minister to Great Britain under Washington, negotiated the treaty of San Ildefonso with Spain, served in Congress, and was a candidate for Vice-President. His grandson has now written his biography, in which he has incorporated some fresh historical material, and has produced a volume which is welcome both as history and biography.

The Nation.

NEW YORK, THURSDAY, MAY 16, 1895.

The Week.

THE President has performed well the most trying task which confronted him, in the reorganization of the United States Civil-Service Commission. His choice of the one Republican who is to serve in that body was liable to the criticism of all Republicans whose highest conception of partisan duty is partisan querulousness; and any Republican who has been identified with the upbuilding of what may be styled the machinery of civil-service reform is regarded by them with suspicion, as probably a Democrat or Mugwump disguised for some deep and deadly purpose of malevolence. Moreover, three-fourths of the work of the Commission for a few years to come must be done with the Post-office Department, the comparatively recent classification of the free-delivery post-offices having given rise to numberless controversies which are not the less vexatious because obviously short-lived, so that whoever was appointed commissioner was bound to be subject to the keenest hostile scrutiny. Finally, there are reasons which make geographical considerations of more account now than they will be, it is hoped, when public sentiment in favor of civil-service reform has become more evenly distributed over the country. In Major Harlow all the requirements seem to be admirably met. His regular standing as a Republican needs no better certificate than the postmaster's commission voluntarily given him by President Harrison. By the most violent stretch of the spoilsmen's imagination he can hardly be classed as a doctrinaire in civil-service matters after thirty years of service in all grades of public employ. As long as the administration of the Post-office Department remains in Democratic hands, no better guarantee of its honesty could be given than the choice of a Republican expert to watch it and report on its shortcomings. The demand that the civil-service reform movement make itself more distinctly felt in the West is answered by the selection of a commissioner from the heart of the great Mississippi valley. In short, it is hard to discover where the most captious critics will look for material out of which to concoct a complaint against this appointment. A Democrat, Col. William G. Rice of Albany, is named for another of the vacancies. Col. Rice has held office with credit under the State and city governments, and has shown executive ability in business life. Mr. Procter, the holding-over commissioner, has proved himself an efficient administrator, and the board as now constituted will command equally the respect of all good citizens and the hatred of the spoilsmen.

The more one wants to fight foreign nations and "cheek" the universe in arms, the more one ought to desire good discipline in the army and navy. No person ought, therefore, to be so angry with Admiral Meade and so anxious to have him tried and punished as the Jingoes. There is no surer preparation for defeat and humiliation than the appearance of tonguey politicians among the soldiers and sailors. Naval and military "jaw" is the sure forerunner of disaster. A soldier who cannot keep from publicly criticising his own Government is rarely formidable to the enemy. The history of nearly every country in the world has illustrations of this rule. A debating, deliberating army is the curse of any nation, as poor Spain has learned to her cost. The Jingoes, therefore, should now be the foremost in demanding a court-martial on Admiral Meade. He lets the world know that he differed about public affairs with "the Administration," that is, his superior officers; that he was, in common with "the people at large," "disgusted" with it; and that his asking to be relieved, and hauling down his flag, meant that he was unwilling to "continue his connection with it." This shows that the connection was not a military connection, which means silence and subordination, but a political connection, which means free gas, blatherskite, soreheadism, disgruntlement, and sourness. He added that he was "an American and Union man, two things that this Administration cannot stand"—meaning thereby, if he meant anything, that his official superiors were hostile to the Government of the United States and extremely disliked subordinates who were faithful to it. It was this contempt for his official superiors which brought McClellan to ruin, and it was this way of talking about even the *de facto* Government of his country which caused Marshal Bazaine to be condemned to death, and led him to surrender a first-class fortress almost without resistance. The truth is, that this variety of soldier is as a rule not a fighting man. No soldier or sailor when in active service can properly play the part both of a military commander and of a politician. He cannot successfully keep an eye both on the enemy and on home politics. He cannot stand ready both to blow the foe out of the water, or turn his flank on shore, and at the same time stand ready to "quit his connection" with his own Government when he disapproves of its policy. If our Government allowed such talk from its military men to pass unpunished, and at the same time built a large navy, it would pave the way for its own ruin. It is hard to keep any class out of politics in America, but the army and navy must be kept out of it or be abolished. Soldiers must not be allowed to treat their commanders-in-chief as a public enemy.

The Hawaiian minister used to be "pulverizing" Gresham every day or two a few months ago, but even he must admit now that the other fellow is under the millstone. The letter of the Secretary of State demanding his recall, made public on Thursday, contains the record of Mr. Thurston's own abject confession of "official impropriety," and leaves even the head-line editors without a spark of fight in them. What the Hawaiian minister was caught doing was acting as general press agent for the defamers of the Administration and all concerned with it. When confronted with the evidence of his guilt, it did not take his powerful mind long to conclude that he had better take the next steamer home. So far as he is concerned, this close of his diplomatic career is a fitting sequel to its beginning, when he put his name to a document intended to deceive President Harrison and the American people, and which he knew to contain falsehoods. The occasion is a good one to remind the flamboyant press that the net result of their patriotic attacks on their own Secretary of State is, up to date, the wreck of two foreign ministers. No wonder that Mr. Thurston and poor Señor Muruaga thought that Gresham was a spiritless and imbecile creature whom anybody could insult with impunity. Too late they found him as prompt as Washington in the Genest case, ready to take in silence all manner of abuse from the press, but quick to resent attacks on the dignity of the Government by a meddling foreigner.

It is not yet clear what will be the effect of Judge Goff's decision in the United States Circuit Court declaring unconstitutional the registration laws of South Carolina and forbidding the State to take any further action under those laws. The Governor has announced his intention to appeal to the Supreme Court, while still preparing for the convention. The Columbia *State*, organ of the conservative Democrats, points out that the injunction does not apply to the managers of the election, and predicts that the Tillman-Evans element will instruct these managers to go ahead and refuse to receive the ballots of unregistered voters. This would make the election illegal, and, as the Tillmanites can hardly expect to control a convention legally elected, the *State* thinks that they would be glad to escape from the dilemma in this way. Tillman, however, predicts that the convention will be held, and that "it will be composed of

white men principally, who will take care of South Carolina and see that white supremacy is maintained within its borders." Gov. Evans has issued a fire-eating proclamation of defiance, "Constitution or no Constitution, law or no law, court or no court." The leaders of the negroes, however, talk very sensibly. An address issued by the officers of the Colored Ministerial Union says that they will "vote for and with our white friends for good government, seeking only for that minority representation which any reasonable white man will accord us," and that they "recognize the fact that intelligence and money must rule."

For four months the time and attention of the legislators of Delaware have been largely occupied in the intrigues over the vacant United States Senatorship on which a rich gas speculator named Addicks had set his heart. Public business has been neglected, reforms that were urgently needed have been pushed into the background, the air has been full of charges of attempted bribery, the tone of public sentiment has been lowered, the respect of the people for their lawmakers has been destroyed, the reputation of the State has been smirched. The session ended on Thursday in a snarl that leaves the senatorship in doubt, and renders it probable that the seat will remain vacant for two years. Delaware has no such official as Lieutenant-Governor. The Constitution provides that, "upon any vacancy happening in the office of Governor, the Speaker of the Senate shall exercise the office until a Governor elected by the people shall be duly qualified." It is silent as to the effect of the assumption of the acting governorship upon the office of Senator which he had been filling. The Republican Governor elected last fall died a few weeks ago. The President of the Senate, a Democrat, succeeded as acting Governor. A temporary President of the Senate was chosen in his place, and he occupied the Governor's room. On Thursday afternoon, however, he resumed his position as President of the Senate and claimed the right to vote for Senator. Without him there were twenty-nine votes; fifteen constituted a majority, and Dupont had fifteen (four Republicans remaining faithful to Addicks to the end). With him there were thirty votes; sixteen were required for a majority, and nobody could get sixteen. The session closed with the declaration by the acting Governor and Speaker of the Senate that no choice had been made, and a claim from the floor by the Republican Speaker of the House that the acting Governor had no right to vote, that Dupont had a majority of the legal votes, and that he was elected. The controversy will, of course, be carried to Washington. The acting Governor may perhaps appoint a Democrat as Senator, though the decisive majority cast in the Senate two years ago against the proposition that such a vacancy is one which can be filled by executive appointment leaves small chance of his admission. Dupont will doubtless present his irregular credentials, but it does not seem probable that he will be admitted.

The meeting of the State Bankers' Association at Jackson, Miss., on Thursday, and the speech made by Congressman Catchings endorsing President Cleveland's financial policy and Gov. Stone's position on the silver question, will have an excellent effect in carrying forward the plans of the Memphis sound-currency convention to be held on the 23d of this month. It is now announced that Secretary Carlisle will make five speeches in the South, including the one which he will make at Memphis. Already we hear that the silver-men are intending to assail Mr. Carlisle with questions founded upon his early speeches in Congress on this subject. Undoubtedly he will give satisfactory answers, and none could be more satisfactory than the one which Chief-Justice Chase gave when he dissented from the opinion of the majority of the Supreme Court in the Legal-Tender Cases. He said that reflection had convinced him that he was wrong when, as Secretary of the Treasury, he gave his approval to the legal-tender act. Nobody need be ashamed to say that. Another and greater precedent may be found in the example of St. Paul. Obstinacy in following a wrong policy, after one has begun to doubt its soundness or wisdom, is the mark of feeble minds. If everybody who was captivated with the silver heresy back in the seventies had been determined never to change his opinions, we should have had free coinage at 16 to 1 long ago.

Another glib bimetallic assertion breaks in pieces on the hard facts. We refer to the assertion that the exports of gold-standard countries to silver-standard countries must necessarily decrease in volume and finally disappear. You see, the impossibility of maintaining a "par of exchange" in this case is an almost insuperable bar to international commerce under such conditions; and President Andrews has explained to us what a golden opportunity (of course he must have meant silver opportunity) the United States has to wrest from England and Germany their foreign trade with silver-standard nations by ourselves going to the silver standard. Now comes Herr Soetbeer the younger, in the *Frankfurter Zeitung*, and proves that England's and Germany's exports to silver countries have not fallen off as silver has declined in value, but have increased, in proportion to the total exports, since 1889. In that year the per cent. to silver countries of the total English exports was 2.7; in 1893 it was 3.6. The corresponding figures for Germany are 15.7 and 16.1. As Horace Greeley used to say, "Is there to be no end of lying?"

Lord Farrer's question to the English bimetallists, asking what ratio they propose to adopt for international free coinage, has brought out some differences of opinion among them, but has not dampened their ardor. Some of them are in favor of 15½ to 1, others go for 16, still others for 20. One man has hit upon the magic ratio of 23½. Another naïvely asks Lord Farrar whether he would accept 25. But most of them are in the happy frame of our own Tim Campbell, who would not allow a little thing like the Constitution of the United States to stand between friends. A little thing like a ratio ought not to stand in the way of a great reform in the currency systems of the world. The bimetallists remind us of Ben Wade when, as the head of the committee on the conduct of the war, he insisted to President Lincoln that Gen. McClellan should be removed. "Whom shall we put in his place?" asked Mr. Lincoln. "Anybody," said Wade. "Oh, *anybody* will do for you," replied Lincoln, "but I must have *somebody*." So it is with the bimetallists. A broad general ratio will answer for them, but the business world requires a particular ratio. In this emergency Prof. Foxwell has suggested a "climbing ratio," which begins with the market ratio, say 32 to 1, and then climbs (up or down) to the historical ratio of 15½. We fancy that the pupils of 'Coin's Financial School' will have something to say about this when the time comes.

The gradual fall of sterling exchange is the full vindication and complete triumph of the bond-syndicate transaction of last February. That operation had for its main object the quieting of the public mind until business in this country could get on a better basis. The public mind that needed quieting was not merely the American but the foreign as well. It was supremely necessary that the possessors of floating capital on both sides of the ocean should be convinced that the gold standard would be maintained here. The first step to this end was to stop gold shipments and at the same time to turn the gold movement in this direction. A mere replenishment of the gold in the Treasury, if the outflow to Europe continued, would have availed nothing. The second fifty-million loan lasted less than three months. A third one, of the same kind, would not have lasted one month. What killed the panic was the drop of sterling exchange below the gold-shipping point. The Government had no apparatus for accomplishing this end. The syndicate had. It was impossible to pay too high a price for this service, since it was the foundation and *sine qua non* of the business revival which has since taken place, and of which we have gratifying evidence from day to day.

Judge Lawrence is on the war-path again. He writes to the editor of the *Reporter:*

"Unless the New England States stand up strong for adequate wool protection, the country will be driven to favor free woollen goods. You will not believe it. The slaveholders would not believe that slavery extension would endanger them, so they drove on and slavery fell. You are following a similar road. I regret it."

This is the old "howling-waste" argument. Unless the Ohio wool-growers got their bounty, Olneyville should be a resort for jackals, and the bittern should perch on the ruins of Dobson's factories. But the Judge should not be thus envious at the prosperity of the wicked. It doubtless galls him, as it does the *Tribune*, to see the woollen-manufacturers thrive, so humorously careless of protectionist oracles of woe, but he and his fellow-woolites can similarly thrive if they adopt similar means. Enterprise and intelligence applied to wool-growing will do for it what they have done for woollen-manufacturing. Moreover, when American woollens are beginning to be sold right in Bradford, the Judge's threat of free woollens does not carry with it anything like its old terrors.

Commissioner Roosevelt's acts and words since entering upon his duties give gratifying assurance that the high expectations formed of his usefulness in the Police Department will be realized. He says that his personal regret that the examinations for admission to the force have been taken away from the Civil-Service Commission and given to the Police Board is shared by his fellow-Commissioners, and adds: "But, having this duty imposed upon us, we propose to conduct the examinations on civil-service lines: there will be open competitive examinations for all positions, and every man will come in on his merit, without regard to his politics." Mr. Roosevelt's assurance on this point is all that the public will need to convince it that the examinations will be what he says they will. Of course the evil results of the new system will be felt as soon as we get a commission which does not share the views of the present one.

"Lou" Payn's unblushing confession on the stand on Thursday that he was Platt's corruption agent at Albany, buying and selling legislation for corporations at the bidding of his master, merely makes matter of public record what was well known before. We commend also to the attention of the Union League Republicans who are so fond of doing things at the demand of their friends "up the State," Payn's statement that "for thirty-five years he had been interested in the election of Speakers, United States Senators, and that sort of thing," coupled with the remark that he "did not work for fun." The *Tribune*, owing doubtless to "pressure on its space," did not find room for these revelations. But it will not, for that reason, intermit its severe condemnation of corruption at Washington. Speaking of Washington, a great many people are saying that the record of the last Congress for imbecility and corruption and defiance of the popular will is pushed very hard by that of the present New York Legislature. If virtuous Republican editors had not exhausted themselves and their adjectives in denouncing Democratic incompetence, we might look for some remarks on Republican incompetence. But they are too busy getting ready to "pull all together for 1896."

Careful examination of the bi-partisan police law strengthens the conviction that, instead of being in any way an improvement upon the old law, it is in many ways a more objectionable statute. While it was pending, public attention was directed mainly towards its bi-partisan requirement and the provision removing the examinations of candidates for the force from the Civil-Service Commission. Now it is discovered that it contains a provision forbidding the appointment for chief of police of any one except the deputy chief or an inspector or a captain. This makes it impossible to go outside the force for a head, and, of course, adds greatly to the difficulty of reforming the force. Then, too, it was urged for the bi-partisan idea that commissioners of opposite political faiths were especially desired in order that transfers of duty for policemen at the polls on election day might be made by them; the claim being that Kerwin and Murray aided powerfully in the defeat of Tammany last year by ordering such transfers. Now it appears that the bi-partisan law takes this power to transfer from the board and bestows it on the Chief of Police. That is to say, the bi-partisan object of the bi-partisan law is defeated by the law itself. This shows what a wonderful legislator Lexow is, and it shows also what a wonderful lot of legislators the Republican members from "above the Harlem" are when they clamor for and secure the enactment of a law which does precisely the opposite of what they think it is doing.

We hear much of the dangers of socialism, French, German, and other, with its propositions for the confiscation of property, but a nearer danger is that public treasuries the world over will be wrecked by waste and extravagance. The French Minister of Finance goes on his knees to the Chamber to beg that expenses may be kept down, no more sinecures created, no more useless railways built on state account. Ex-Speaker and to-be Speaker Reed sounds a note of alarm in reference to the next Congress, hoping that Representatives from all parts of the country will go to Washington prepared to surrender meekly all their little appropriation bills, so as to keep down the nation's outlay. What the appropriations are wanted for, why they are so swollen from year to year, is clearly shown by the revelations made almost daily in New Jersey, at Albany, and in this city. Direct stealing has to be provided for on a large scale, and indirect stealing on a still larger. By the latter we mean, of course, the creation of useless offices, the payment of extravagant wages, and a general willingness to "work" the Treasury for all it will stand. The report of the Commissioners of Accounts, summarized in the *Evening Post* of Saturday, shows what fine pickings the care of the municipal buildings has afforded. Double the number of employees actually needed, wages far above the market rates, decrepit relatives and absentee friends in a political emergency foisted on the pay-roll—these are the well-known phenomena which the Commissioners set forth. Such methods, given full swing in State and nation, will soon bring government into so miserable an estate that the Socialists will hardly think it worth while to take the bankrupt concern over.

Mr. Balfour's Primrose Day speech was devoted mainly to eulogy of Mr. Chamberlain, and to showing how indissoluble is the alliance between the Liberal-Unionists and the Conservatives. He admitted, however, that the present arrangement could not go on for ever, and predicted complete absorption of the Unionists by the Conservatives. What the united party was to stand for was, of course, defence of the Constitution and the Church, but in addition it was going to be a mighty bulwark of individual liberty, and a strong fortress against socialism. This would go to the very foundations of belief, did we not, unhappily, have a contemporaneous Conservative platform to show us just what Conservative opposition to socialism means. In the Mid-Norfolk bye-election of April 24 the candidate who wrested the seat from the Liberals promised the electors that, "instead of trying to destroy constitutions or pull down churches," he would go in for "useful social reforms, such as providing better houses for the working classes, finding them what land they may require at a fair price, and making some provision for their old age." As Mr. Balfour guarantees this programme to be anti-socialistic, we must infer that the better houses are to grow like mushrooms, the land to be found in unexplored parts of England, and the old-age pensions to be let down from heaven. The whole thing must seem to Chamberlain like one of Mr. Balfour's neatest sallies. Chamberlain has a pretty idea of socialism himself, and, when he gets to be Tory Chancellor of the Exchequer, will develop schemes that will make Sir William Harcourt's confiscatory budget seem fairly Arcadian in its simplicity.

THE SOUTH CAROLINA CRISIS.

It is a singular coincidence that the State which precipitated the war of secession through its attempted repudiation of the Federal Constitution a generation ago should now again bring to the test another question of hardly inferior importance—the question how far the Government of the United States, under the amended Constitution, may interfere with the processes of State laws when those laws affect the highest prerogative of a State in the formation of a constitution for the commonwealth. For this is the issue that has been before Judge Goff in the United States Circuit Court at Columbia, and was passed upon by him on Wednesday week.

By itself, the decision of Judge Simonton, another Federal judge, at Columbia on the same day, practically annulling essential provisions of the Dispensary act as in violation of the Interstate Commerce law, would be important enough to engage general attention, but it sinks into insignificance in comparison with the broader questions and wider consequences involved n the other case. Every citizen of every State is concerned in this latter decision, because the whole issue of State rights is bound up in it.

The present Constitution was adopted in 1868, during the reconstruction era, when the carpet-baggers and negroes were "on top"; and although there has been agitation for a new one ever since the native whites resumed control in 1876-'77, no steps were taken in that direction until Tillman came into power. The last Legislature passed an act providing that an election for delegates to a constitutional convention should be held on the third Tuesday in August next, and that the body should meet on the second Tuesday in September. Certain citizens of South Carolina last month applied to the Circuit Court of the United States for an injunction to restrain the State officials from taking further action under the registration and election laws, on the ground that those laws are in violation both of the State Constitution and of the Federal Constitution. Judge Goff granted a temporary injunction, and on May 8 made it permanent.

The chief points of attack were two. The State Constitution provides that "every inhabitant possessing the qualifications provided for in this Constitution shall have an equal right to elect officers." The qualifications are that one shall be a male citizen of the United States twenty-one years old, a resident of the State one year, and of the county in which he offers to vote sixty days, next preceding the election. The Constitution further provides that "the right of suffrage shall be protected by laws regulating elections," and that "it shall be the duty of the General Assembly to provide from time to time for the registration of all electors."

In 1882 a registration act was enacted, which still remains on the statute-book, and which was enlarged by amendments passed in 1893 and 1894. The practical effect of these provisions is that, for an ordinary election occurring in November, registration ceases early in July (except for those afterwards coming of age), which operates to require a residence in the county of 120 days—in violation, as is contended, of the constitutional requirement of only 60 days' residence. For the election of next August, registration was to be allowed until a month previous, but the difficulties put in the way of getting on the roll the name of any man objectionable to the supervisor are almost incredibly great. A man who is once registered must preserve the certificate then given him and show it at the polls as a condition of voting—which, it is alleged, is a new qualification for the exercise of the suffrage not warranted by the Constitution. If he moves, not simply from one county to another, but even from one precinct to another, and even from one residence to another in the same precinct, he must surrender his old certificate and get a new one. If he loses his certificate, he can get a new one only by proving to the satisfaction of the supervisor, upon such evidence as the latter may require, that he really lost it, and has not destroyed or sold it. If he has never been registered, he must make an affidavit setting forth his full name, age, occupation, and residence when the act of 1882 was passed, or at any time thereafter when he became old enough to vote, "and the place or places of his residence since the time when he became entitled to register"; and this must be supported by the affidavits of two "reputable" citizens who were each twenty-one years old in 1882, or at the time when the applicant became entitled to register. These, and sundry other provisions unnecessary to chronicle, are, it is held, in violation of the State Constitution, as establishing qualifications for the suffrage not required or warranted by that instrument.

The other chief point is the claim that these State laws violate the Federal Constitution. The latter provides that the electors of the lower branch of Congress in each State "shall have the qualifications requisite for electors of the most numerous branch of the State Legislature." These qualifications, it is contended, must be set down in the State Constitution, and any attempt by State law to establish other qualifications violates the right of the citizen to vote for members of Congress, and so is obnoxious to the Federal Constitution. The fifteenth amendment forbids any abridgment of the right of citizens of the United States to vote "on account of race, color, or previous condition of servitude." While the registration law in question does not specifically discriminate against the negro, its rigorous provisions regarding the procurement of a certificate, its preservation, and its restoration if lost, are notoriously directed against the ignorant and migratory blacks. A justification for an appeal to the Federal judiciary is found in the provision of the Federal Constitution that "the United States shall guarantee to every State in this Union a republican form of government," and in the contention that the practical effect of the registration laws of South Carolina is to put that State under the rule of a white oligarchy.

The main reliance of the attorneys on the other side was the argument that the action was virtually directed against the State, and so was forbidden by the eleventh amendment, declaring that "the judicial power of the United States shall not be construed to extend to any suit in law or equity commenced or prosecuted against one of the United States by citizens of another State, or by citizens or subjects of any foreign state"—though the present action, it will be observed, was brought by citizens of the State itself. It was also argued that the matters complained of were political rather than judicial, and consequently not the subject of judicial cognizance, and that adequate remedies for any grievance might be obtained at law in the State courts. Judge Goff, however, brushed these contentions aside, and made the injunction permanent on the ground of the unconstitutionality of the registration laws.

The case will, no doubt, be carried up to the Supreme Court of the United States. Unless, however, there is immediate action and that tribunal takes up the question out of order, no decision can be reached until next autumn, as the court's summer recess is near at hand. In that case the election for members of the convention cannot be held, unless the Governor at once summons the Legislature in special session to pass a new registration law. Gov. Evans, who seems as youthful in mind as in years, at first declared that he should "treat the proceeding with the contempt it deserved," but he has learned something during the past fortnight, and now announces that "we will take no action without mature deliberation."

VARIOUS REPLIES TO "COIN."

The amount of literature to which 'Coin's Financial School' has given birth is increasing every day. A pamphlet of high merit, entitled 'Coin's Financial School Answered,' by John G. Floyd, editor of the *Banker's Magazine*, has been issued from the office of the latter publication. This contains not only an exposure of the particular fallacies and falsehoods of the misleading book to which it is a reply, but also special articles on wheat prices and cotton prices—the former by Mr. Alfred C. Stevens, editor of *Bradstreet's*, and the latter by Mr. Samuel T. Hubbard, jr. These articles show that the statistics of production and consumption of wheat and cotton fully account for the variations in price, and

that the money supply has nothing to do with it.

Next in the list is an admirable catechism of 174 pages, entitled, 'What Is Money? A Discussion of the Silver Question, with a Brief Historical Account of the Coinage Legislation of the United States,' by Rozel Weissinger of the Louisville Bar, published by the *Courier-Journal* Printing Company, Louisville. Mr. Weissinger is a practised writer and debater on financial questions, and also knows how to put his ideas in plain language for plain people. Another work, more on the plane of 'Coin's Financial School' itself, is entitled, 'Cash vs. Coin,' and is published by Charles H. Kerr & Co., 175 Monroe Street, Chicago. This is an illustrated work of 121 pages. Still another is entitled '$ or ?' *i. e.*, 'Dollars or What?' by W. B. Mitchell of Chattanooga, Tenn.

Another work, of a serial kind, has been undertaken by Prof. Laughlin in the columns of the Chicago *Times and Herald*. This is a methodical exposure of the falsities of 'Coin's Financial School.' "Coin" had the impudence to introduce the professor as an attendant at his lectures and to put a lot of foolishness into his mouth for himself to answer. This was such a dirty trick that the professor at first intended to pass it over with silent contempt; but when he learned that most of the readers of the book took it *au grand sérieux*, and thought that he (Laughlin) had really been at the "school" and had said the things ascribed to him, he decided to make it hot for the rascal who had put him in a false light before the country. The result is a series of articles showing up the lies in the book and blasting it thoroughly. For example, as to the "crime of 1873," *i. e.*, the charge that the coinage act of that year was passed secretly or silently, he takes up the legislative history of the bill and puts in tabular form the principal events of its course through Congress, showing that it was before that body nearly three years, that it was received in the usual way from the Secretary of the Treasury, was printed and referred to the proper committee of the House, reported back with amendments, printed again, debated, passed, sent to the Senate, printed again, etc., etc.; the dates being given in each case. As the Forty-first Congress expired after the bill had passed one house, but before it became a law, it was taken up again in the Forty-second Congress, and all the proceedings were repeated. This was the reason why it was before Congress so long a time—two years and ten months.

When the silverites are confronted with these facts, they have nothing better to say than that the newspapers of the country did not take any notice of the measure at the time. The author of 'Coin's Financial School' delivered a lecture on this theme at Minneapolis—a real lecture, not a bogus one like those at the Art Institute in Chicago—in which he took pains to read from the files of various newspapers of the time when this bill passed, in order to show that the reporters did not say that silver had been demonetized, although they did say that the coinage act was passed. As silver had been virtually demonetized in 1834, there was no reason why they should say it. But their saying it or not saying it made no difference as to the good faith of Congress in passing the law. Take up the statute-book of that year and see how many other laws the newspapers of Chicago and of Minneapolis reported in detail. If the criticism means anything, it means that the newspaper reporters of that day were in the conspiracy to prevent the public from knowing what Congress was doing in reference to silver. This is a falsehood as barefaced as the statement that the bill was passed secretly.

Perhaps the most valuable contribution in Prof. Laughlin's series is his exposure of "Coin's" juggling with the prices of farm products. He shows that "Coin" took one article only (wheat) because that one had declined in price, and then tried to make people believe that if wheat had declined, everything else had declined, whereas corn, oats, and pork are as high now in gold as they were in 1873. Although wheat has declined very considerably since 1873, it is a fact that a given number of bushels of it will buy more farm implements and machinery now than they would then. The professor presents a table showing the number of bushels of wheat, corn, and oats respectively that were required to buy the seventeen agricultural implements named in 1873 and also in 1889, from which it appears that in 1873 all those kinds of implements required 569.4 bushels of wheat to buy them, and after "the crime of 1873" only 388.1 bushels. "But," continues Prof. Laughlin, "when the comparison is made between implements and corn or oats, the gain of the farmer is something quite surprising since 1873. In 1873 a binder could be bought by no less than 769.2 bushels of corn and in 1889 by only 421.8. The difference is amazing. Corn has not fallen at all in comparison with gold, but the articles bought by the farmer have. All those implements required in 1873 no less than 1,645.1 bushels of corn to buy them, while in 1889 they could be bought by only 886.7, or about one-half. And the same thing is true of oats in nearly the same degree."

Prof. Laughlin's exposures of the other falsities in 'Coin's Financial School,' as far as he has gone, are as thorough as those which we have here noticed. We hope that he will pursue them to the end.

THE MAYOR AND THE BI-PARTISAN BILL.

Mayor Strong's approval of the bi-partisan police bill suggests several considerations. In the first place, we may allege, without fear of contradiction, that had he declared, in answer to the Committee of Seventy, that he would accept such a bill for the city, he would not have been nominated, or, if nominated, would not have been elected. This is as plain an induction from all the facts of the situation last fall as is possible in politics. The platform of the Committee of Seventy, on which he was nominated, says:

> "We demand that the public service of this city be conducted upon a strictly non-partisan basis; that all subordinate appointments and promotions be based on civil-service examinations, and that all examinations, mental and physical, be placed under the control of the Civil-Service Commission."

His answer to this was, that the platform "met with his entire approval," that he would "administer the affairs of the government of the city in the interests of good government, and absolutely non-partisan," and that he "would make all appointments without regard to party lines." It was these declarations that drew the majority which elected him. It is not unfair to assume, that had he said that he would approve and accept on behalf of the city a bill making bi-partisanship compulsory in the composition of the Police Commission, and taking from the Civil-Service Commission the control of the examinations for admission to the force, tens of thousands would have treated his application for their votes as absurd.

In the second place, it does not seem as if the facts of the case left an opening for a misunderstanding of which the charitably disposed could give the Mayor the benefit. There is no interpretation of the terms "bi-partisan" and "non-partisan" under which an honest man can take shelter if he uses the one when people expect him to use the other. Non-partisan appointments mean appointments made without any more reference to the candidate's political opinions than to his religious opinions, and with an eye solely to his fitness for the office. Bi-partisan appointments mean appointments made mainly with reference to a man's political opinions, and for the express purpose of making him in his office a representative of the party to which he belongs. It is impossible to confound them. Mayor Strong has not confounded them. He knows that the bill of which he approves requires that the Police Commission shall contain four partisans, and that the object in putting them there is to enable them to look after the interests of their party. He knows, too, that the Committee of Seventy had not in their mind any such body when they nominated him. They were then filled with horror over the working of a board made bi-partisan solely by usage or courtesy. Had he said, "If you elect me, I shall approve of giving this courtesy or usage, the results of which so shock you, the force of law, and making it permanent and perpetual," would they have thought for a moment of nominating him?

That he did not misunderstand the demand of the Committee of Seventy for the removal of examinations for admission to the police force from the control of the Police Board, is shown by the fact that, almost immediately after coming into office, he so altered the civil-service regulations as to take from the police the partial control they had previously exercised over the conditions of appointment to the police force, to exclude from all share in the examinations the police officers who had previously served on the examining board, and to place every step in the process under the control of the Civil-Service Commission. This was plainly what the Committee of Seventy desired, and his change in the regulations showed that the Mayor so understood them. When they put this plank in their platform, they were filled with indignation over the abuses which had resulted from even the partial control of the Police Board over the nominations. One of these was the conversion of appointments and promotions into articles of merchandise, the proceeds of which the bi-partisan Commissioners divided between them. The present bill, however, destroys even the slight check on them which the Civil-Service Commission formerly exerted, and hands over the whole work of selection and appointment to the Police Commission—an arrangement which even Gilroy did not dare to ask for, much as he would have liked it, or Croker's Legislature, with all its audacity, dare to provide. The only possible excuse for this is that the Mayor will provide such good Commissioners that they will not imitate their predecessors, but the Committee of Seventy had considered this and disallowed it. They did not say that the Mayor was such a good man that he might be trusted to do as he pleased in the matter. They said, "This is our view of what the organization of the force requires, and we will nominate no man who does not agree with us."

We have reserved to the end what we consider the saddest part of this unhappy business, and that is the adoption by the Mayor, without a murmur, of the Platt pretence that a bi-partisan board is necessary to secure fair elections. All we know as to the opinion of the country people on this subject we hear from Plattite politicians. We cannot recall the report of one disinterested person on that subject. That they demand it, we have no trustworthy evidence. But even if they had demanded it, might we not fairly have expected a reform mayor of New York to tell them in manly tones that our experience in this city during the last twenty years proved that they were grossly mistaken; that cheating went on freely at all elections, owing to the low character of the Police Commissioners and the indiscipline of the police force, and that bi-partisanship in the board, instead of curing it, aggravated it; and that the absolute rejection by the Plattites, without reason or discussion, of the plan of taking away the control of the elections from the police, and giving it to a bi-partisan election bureau, showed clearly that the demand for police supervision was a demand not for fair elections, but for the means of rewarding the Murrays and the Kerwins and other paltry adventurers who live on our corruption or supineness? It was a mayor who would have done this in words that would sound like a trumpet-call to the conscience and reason and public spirit of the State, that we hoped we had secured, but whom it is plain we must manage to do without.

We will not go so far as to say with some downcast friends of reform to-day, that we have gained nothing by Mayor Strong's election. How much we have gained it will be impossible to tell till we see what kind of police magistrates he selects. But we are obliged to confess that the good we have got from it is largely due thus far to the badness of Tammany. The city had sunk so low that any change was sure to be a change for the better. Nearly every appointment made, except Col. Waring's, has been made on partisan grounds, and this with a persistence which leads charitable people to suppose that Mayor Strong really understood by non-partisan *multi-partisan*—that is, offices for all parties instead of offices for one party. Let us hope that this explanation has something in it. It is the only road out of the bewilderment which saves his credit without damage to our intelligence.

The consequences most to be feared from what has happened are two in number. One is, that it will encourage the Plattites and the politicians of both parties to believe that there is no fear of their losing New York as a field of intrigue and plunder; that as long as they can retain their hold on the Legislature, the city offices and revenues may be relied on to furnish materials for "deals," and that no popular "rising" will ever really threaten their power. The other is, that the enthusiasm for righteousness which was roused with such difficulty last summer, and, when roused, did such mighty things, and, with the law on its side and the offices in its possession, might, under competent leadership, have laid the foundation of a new city, will fade under this heavy blow. We trust this will not prove true, but there is no disguising the fact that the work of redemption is likely to prove much longer than people supposed, and a severer trial of faith and courage.

EMBARRASSED FOREIGN MISSIONS.

The veteran secretary of the American Board of Foreign Missions, Dr. N. G. Clark, wrote lately in the *Outlook* of "the decline of popular interest in foreign missions at the present time." As a most practical proof of such decline, he mentioned the embarrassed finances of the missionary boards. Some of them are burdened by heavy debts. The treasurer of the Presbyterian Board has just published his annual statement, soon to be laid before the General Assembly, and from it we learn that the fiscal year closed with a deficit of $176,000—about one-fifth of the usual total income. The year before, the deficit was $102,000.

Dr. Clark denies that "the prevailing financial depression" is enough to account for this situation. Money can be had in plenty for religious and charitable work that arouses enthusiasm. But the edge somehow appears to have been taken off the missionary appeal. Tested by the practical response, says this experienced mission secretary, "the argument from the moral degradation and wretchedness of the great masses of the non-Christian nations seems to have lost its power." What is the explanation?

Partly, we think, the passing of the missionary movement from its romantic and heroic into its prosaic and business-like aspect. One reason, we presume, for the high character and remarkable achievements of the pioneer missionaries is that the cause, at the time it appealed to them in their young manhood, was one to stir the pulses of the finest natures. Men like Calhoun and Goodell and Coan and Duff and Livingston were of large mould, could see the immense opportunities to be grasped and the vast influence to be wielded by those first in the field, and went out not simply under the stress of powerful religious motives, but with the zest and eagerness of explorers and adventurers. Seventy-five years have changed all that. System and organization, necessary but deadening, have made a business like any other out of the missionary life. Missionary service is as well established as the India service, as a regular means of livelihood, and missionaries come and go in shoals, with motives doubtless as excellent as ever, but with an inevitable loss of the old-time distinction and influence. This dulling of the interest and imagination that used to attach to their office necessarily affects their cause also in the popular mind.

We can but agree, too, with what Dr. Clark says about the effect of the world's knowing the heathen better. Travel and world's-fairs and parliaments of religion and the going to and fro of the newspaper correspondent have revealed unsuspected heathen virtues, some of which we might copy to advantage. The coming of Buddhist and Mohammedan missionaries to our own shores is rather a grotesque affair, to be sure, and smacks a good deal of a spirit of bravado, yet it witnesses to a growing feeling that the advantages are not all on one side. In the face of this better knowledge of many of those peoples whom we have been wont promiscuously to call heathen, it has been getting more and more impossible to be so sure that they have everything to learn from us, and we nothing from them. It is this, we believe, as much as any relaxation of theological fibre, which makes missionary

speakers nowadays so shy about asserting the damnation of the Chinese or Hindus unless the Gospel is sent them, and so ready to insist upon the humanitarian, brotherly aspect of missionary labors.

But the deepest cause, we suspect, of the decline of interest in missions is the fact that they have been so long conducted on what may be called the crisis theory. The chosen theme of missionary orators for a generation at least has been the critical situation of the heathen world. Japan was evidently going to experience a mighty national change, and how ought Christian efforts and contributions to be directed towards making sure that that change should be a national adoption of Christianity! The millions of India were swaying in the balance, to be won or lost for Christianity, and the next few years would tell the story. That is substantially what has been said in a hundred pulpits and before thousands of missionary gatherings—but it has been said for thirty years steadily. No wonder that the perpetual crisis has got to be a little stale. Hard-headed pew-owners see that the world wags on much as usual. They hear of the new crisis in Japan, but they remember a whole series of Japanese missionary crises, away back to Perry's time, and they button up their pockets as resolutely as Franklin did his in the first part of Whitefield's sermon.

There are signs, however, that a different spirit and a different style of appeal are coming in. Canon Scott Holland recently made a missionary address on the slowness of mission work, in which he distinctly admitted that the old eager expectation of immediate results was mistaken, and affirmed that the real glory and truest success of missionary labors were to be found in long and patient teaching and training and waiting. It seems clear, in fact, that missionary boards must take long looks ahead, and urge plodding work and giving in place of spasmodic. Let them frankly admit, what is practically the truth, that the heathen are very well contented as they are, that they do not want to be converted, that the work of influencing them must necessarily be long and arduous, and must be accomplished more through schools and hospitals and training in the arts of civilization than by impulsive preaching. With such a clear understanding all round, a solid basis to stand upon would soon be reached, and we should not be likely to see this alternation of swollen receipts and a crippled treasury.

VICTORIOUS JAPAN.

TOKYO, April 15, 1895.

To an impartial observer, Japan has preeminently displayed three qualities in her struggle with her gigantic neighbor. The first of these is the moderation of her conduct towards China in declaring war. It is now known* that not Japan but China was the first to contemplate war. As long ago as 1882 the Chinese Government seriously discussed the question of invading Japan and reducing her to a subject State, and Li Hung Chang was repeatedly urged to assume the responsibility of conducting the armies of China against her smaller neighbor. Li Hung Chang was, however, far too astute to undertake the expedition, because he was aware far more than the ordinary Chinese officials that China was in no wise prepared for such an enterprise. Though these proposals were supposed to be a profound state secret, they were soon disclosed to the Japanese Government, and produced at the time the greatest excitement in military circles. The truth is, China has never forgiven Japan for discarding Oriental in favor of Western civilization. It was only a question of time, therefore, when the Chinese Government would seek an opportunity of revenge against her island neighbor for her recreant conduct, and Japan in turn was resolved to be ready and possibly even the aggressor in the inevitable contest. On no theory except that China has been contemplating war for many years, can we explain the enormous amount of ammunition which the Japanese have found stored away in all the places they have thus far captured. Considering all these circumstances, we are bound to acknowledge that the Government of Japan acted with the greatest fairness and forbearance, at least in the preliminary stages of the war.

Not less creditable to Japan, moreover, was her complete readiness for beginning the war. Not only did she have her soldiers in perfect training, so far as the appropriations for the army would permit; not only was her navy in a state of great efficiency; but, like the Prussians with regard to France in 1870-71, the Japanese military authorities had a far better knowledge of the state of China than the Chinese themselves. The military maps of China in possession of the Japanese Government are models of excellence, when we consider the condition of affairs in China and the difficulty of getting accurate topographical information. All roads and distances are so minutely drawn, towns and even villages are marked in such detail, that the wonder grows how the Japanese were able to gather all this knowledge in a country with so few facilities for a careful survey. It is evident that the Japanese Government has quietly been engaged for many years in the preparation of these ordnance maps. The military authorities have shown a perfect acquaintance with the position and resources of the Chinese fortresses, their strong points as well as their defects. Without going into detail, we may say that the Japanese have shown wonderful knowledge, skill, and efficiency, while the Chinese have not understood or appreciated the importance of the simplest defensive tactics.

Most important of all, however, in the present war is the thorough organization of the Japanese army and its entire military equipment. In some respects the Japanese have advantages for carrying on war, even over Western countries, in the peculiarly simple character of their civilization. Their commissariat can dispense with many things which in the West would be considered almost necessities. They do not need draught-horses, since most of the hauling in Japan is done by coolies, who are strong, active, intelligent, and almost invariably good-natured. Good roads are in consequence far less a necessity to the Japanese commissariat than they are in the West. Where roads do not exist at all, they can resort to pack-horses, a mode of conveyance much practised in the interior mountainous districts of Japan. The Japanese artisan is laborious and dexterous. He can quickly adapt himself to new conditions, and, with the simplest tools in the world, he can make almost any article of ordinary utility. For instance, I have seen five or six Japanese carpenters, with perhaps two dozen tools, build a very good house in a primeval forest within a month without resort to machinery or any manufactured commodity except perhaps a few nails and a small amount of paper. The working classes can sleep comfortably on a straw mat, three feet by six, with a single thick quilt. The Japanese Government has utilized to the fullest extent all these advantages for the army and especially the commissariat. Even in Tokyo, which is remote from the seat of war, tinsmiths may be seen busily engaged in putting up meats and vegetables in small tin boxes (each box containing a single man's rations), of which a certain number are packed in a large tin case. A special body of coolies has been organized by the War Department to transport all the military stores to the railways, and the whole process goes on so quietly and smoothly that the ordinary currents of business and commerce are undisturbed. Indeed, so far as Tokyo is concerned, it is difficult to imagine that Japan is engaged in war.

Newspaper correspondents and military attachés testify to a similar orderliness and organization of the forces in the field. The Japanese soldiers have shown courage in action almost at times to the point of temerity. They are as a rule indifferent to danger or death, but courage and audacity have always distinguished the Japanese soldier. On the other hand, organization is a wholly unique element in the Japanese army. In the past history of Japan we have endless stories of individual courage, but very little of the general plan of the battles. But the Japanese at present acknowledge that the distinctive superiority of their armies over those of China lies almost wholly in perfect organization—a result of close study of European models adapted to Japanese conditions. The Chinese often show no lack of cases of individual courage, but of moving and acting in concert we see not a trace. Their armies seem to be merely a collection of atoms in juxtaposition without any cohesive force. Never before, perhaps, has the value of organization and social cohesion been proved more strikingly than in the present contest between China and Japan.

Because of the presence of these excellent qualities in the Japanese, all the more flagrant appear the lapses from them, as in the Port Arthur massacre and the want of provision for the safety of Li Hung Chang. While these exceptions are grave, they stand out in strong contrast to the general conduct of the army and the Government. And if the Japanese have the moral force that they ought to have, they will turn these lapses to good account. A repetition of the Port Arthur affair would to-day be far more difficult than its original occurrence, if for no better reason than that foreign critics have shown the inconsistency between Japanese professions and practices. Similarly, there are signs that public opinion is crystallizing against the *soshi* in a way never before seen, and if the final result of the attempted assassination be the extinction of soshi-ism—this relic of Chinese teaching—the price paid, though a species of vicarious atonement, would not be too high for so great a consummation.

THE CURTIUS FESTIVAL AT OLYMPIA.

ATHENS, April 21, 1895.

THE great event of the month to those interested in archæology has been the recent festival held at Olympia in honor of Prof. Ernst Curtius's eightieth birthday—an anniversary which, it will be remembered, was celebrated with much éclat in Berlin on the 2d of last September. It was decided then to postpone the celebration at Olympia until the following spring, that being a better season of the year for visiting Greece. To the archæological world it seemed a peculiarly happy idea to meet at Olympia in honor of the venerable savant who had been the means of bringing its long-buried treasures to the light again, after so many centuries of oblivion. Accordingly, the gathering at Olympia yesterday to witness the unveiling of the bust of Curtius included representatives from many nations and of various branches of art and letters. From an early hour in the morning the sacred Altis was thronged by an immense crowd of country-folk, who, in their gay costumes, grouped picturesquely about under the trees on the surrounding slopes, made up a scene which vividly brought to mind the descriptions of the ancient gatherings at Olympia. In the middle of the large central hall of the Museum, with the gods on either side and the beautiful Victory of Paionios behind, had been placed the draped bust of Curtius, a work of the Berlin sculptor Schaper, being a copy in Pentelic marble of the one which ten years ago was presented to Curtius by his friends and admirers on his seventieth birthday, and which now forms one of the greatest ornaments of the quiet house in Berlin. The inscription upon the pedestal of the Olympian bust runs as follows: "ERNST CURTIUS—ΕΡΝΕΣΤΟΣ ΚΟΥΡΤΙΟΣ. Von Freunden und Verehrern gewidmet am 2ten September, 1894. *'Η ἑλληνική κυβέρνησις τιμῆς ἕνεκεν ἐνθάδε ἵδρυσε.*"

The exercises were opened by Prof. Wilhelm Dörpfeld, First Secretary of the Imperial German Archæological Institute at Athens, who, in a speech of masterly eloquence, gave a rapid sketch of Curtius's work at Olympia, and in conclusion called upon those present to join with him in crowning this latest of the Olympic victors with the crown of wild olive. He then withdrew the light covering which hid the bust, amid great applause. M. Kavvadias, General Ephor of Antiquities in Greece, then spoke in the name of the Greek Government, accepting the bust, and dwelling at length upon the great services which Curtius had rendered to the world of art and letters. Other speeches followed, notably that of M. Homolle, Director of the French School at Athens, whose graceful tribute both to Curtius as a scholar and to German achievements in archæology, was much appreciated. Wreaths of laurel were presented by Prof Percy Gardner, in the name of the British School at Athens and of the Society for the Promotion of Hellenic Studies, and by Mr. Richardson in the name of the American School of Classical Studies at Athens. Dr. Dörpfeld then crowned the bust with a wreath of wild olive presented by Miss Jane Harrison in the name of the Empress Frederick of Germany, and with a wreath of laurel from the Crown Princess Sophia of Greece. In conclusion, enthusiastic cheers were given by the audience for Curtius, for Greece, and for Germany.

The ceremony at the Museum was followed by a banquet, under the genial auspices of Dr. Dörpfeld, at which, besides the opening toast to the King of Greece, whose warm interest in the work at Olympia was dwelt upon by Dr. Dörpfeld, numerous toasts were proposed to Curtius by the representatives of the different literary and scientific bodies present. In conclusion, a congratulatory telegram to Curtius was read aloud by Dr. Dörpfeld, to which the company responded with applause, a copy being afterwards passed round for the signatures of all present, to be sent to Berlin by post.

It may not be amiss here to state briefly the facts with regard to Curtius's work at Olympia, which is now a matter of twenty years ago. As far back as 1837, when Curtius, then a youth of three-and-twenty, made his first visit to Greece, the idea of excavating at Olympia had already taken firm hold upon him. It was not, however, until the 10th of January, 1852, when he gave his famous lecture on Olympia before a large and scholarly audience in Berlin, that the matter was brought before the public. The enthusiasm awakened that evening in the minds of all his hearers, but particularly in that of the Crown Prince Frederick of Prussia, was destined to bear its fruit, though at a somewhat distant day. The outbreak of the Crimean war, the financial and political troubles at home, all combined to make an undertaking of the sort an impossibility for many years to come; but at length, after the successful termination of the war with France, the hour arrived for the fulfilment of Curtius's plans. The excavations at Olympia were undertaken by the German Government, at a cost of nearly a million of marks, in the name of the German people now for the first time a great and united nation. The Reichstag passed a unanimous vote for the raising of the necessary sum, and, in 1874, sent Curtius as plenipotentiary to Greece to make arrangements. On the 27th of April, 1874, a treaty was drawn up and signed at Athens, giving Germany the right of excavating at Olympia for a period of ten years, under certain conditions to be observed by both parties. A committee was appointed at Berlin, consisting of Curtius, Friedrich Adler, and Busch. At the same time, a staff of trained archæologists and architects was appointed, which had the direction of the work at Olympia, and personally conducted the excavations during the whole period of six years.

The task undertaken proved to be no slight one. The Altis itself, or sacred enclosure of Olympia, measuring some 200 metres by 175, had, owing to the inundations of the rivers Alpheios and Kladeos, entirely disappeared beneath a sandy deposit some five to seven metres deep. The entire extent of the region excavated included, however, much more than the Altis, as many buildings lay outside the sacred precinct. But the results amply justified the time and money expended. When the Hermes was brought to light, all who saw it felt that it alone more than compensated for the entire undertaking, while the rich harvest of bronzes and sculptures, of coins, inscriptions, and terra-cottas, not to mention the *forty* buildings found, more than fulfilled the hopes of all who had so eagerly followed the course of events.

No account, however, of the excavations at Olympia would be complete without at least a passing mention of the forerunners of the work. The idea of excavating at Elis was by no means a new one with Curtius. Already in the course of the last century, no less than four scholars, representing respectively France, Germany, and England, had called attention to the fact that in all probability a rich harvest awaited the fortunate excavator at Olympia. The learned Benedictine Montfaucon in 1723, Winckelmann in 1763, Chandler in 1766, and Fauvel in 1797, all both felt and urged the desirability of ascertaining what still remained of the ancient splendors of Olympia. The two latter, indeed, were fortunate enough to be able to visit Elis themselves—a difficult thing in those days—and to see the ruined temple of Zeus in the midst of a desolate plain. Curiously enough, it is Chandler who is generally given the credit of having first discovered this temple, whereas in reality it was Fauvel, who, though writing later than Chandler, was the first to rightly identify it as the temple of Zeus mentioned by Pausanias.

In the early part of the present century, three English travellers, Leake, Dodwell, and Gell, successively visited Olympia between the years 1801 and 1808, and to their accounts we owe many facts which otherwise would have been lost to our knowledge. Some twenty years later, in 1829, at the close of the Greek war of Independence, the French, following the example set by Napoleon in Egypt, landed a body of scientific men and scholars in the Morea, where for six weeks they engaged in excavations upon the site of Olympia, this being the first attempt at anything like a systematic undertaking of the sort. The Louvre owes some of its most interesting Greek sculptures to this campaign, which, however, was destined never to resume its labors, and it was reserved for Curtius, as has been said above, to carry out the project of his early youth only after a lapse of thirty-eight years.

Perhaps the most important result thus far of the excavations at Olympia is the unexpected light they have thrown upon the history of Greek architecture. The forty buildings brought to view represent, according to Prof. Adler, a period of more than nine centuries (from circa 670 B. C. to circa 250 A. D.) Some of them are unique of their kind—buildings known to us hitherto only through vague and often contradictory descriptions of ancient writers. Such are notably the Council Hall, the Treasure-houses, the Gymnasium, Palæstra, etc. Very important material has thus been added to our still imperfect knowledge of the development of Greek architecture. Perhaps the most interesting building of all is the Temple of Hera—the most ancient temple hitherto discovered upon the Greek mainland.

But although many questions have been answered by these excavations, many more still remain unsolved. As Curtius himself says, in his official report, "a work like that at Olympia can never be said to be *finished*." Indeed, many new problems have been opened up to the archæologist—a fact for which every true student should be grateful. The chief value of the Olympian excavation lies not so much in the separate finds, however valuable in themselves, as in the fact that it has opened up new horizons to the student of the past, and has added a touch of fresh truth to its somewhat indistinct colors. Curtius's example is one of steadfast devotion to an idea throughout a long series of years and under circumstances which would have utterly discouraged a lesser man. It is to his energy, enthusiasm, and noble perseverance that the world owes to-day one of its greatest advances in the history of Art.

D. KALOPOTHAKES.

BARANTE'S MEMOIRS.

PARIS, April 24, 1895.

THE Souvenirs of the Baron de Barante, published by his grandson, M. Claude de Barante, form a very valuable document for the history of our time. The fifth volume, which

has just been published, extends from 1832 to 1837, very critical years for the Government of July, which had to obtain its *droit de cité* among the old governments of Europe, and to put an end to the revolutionary movements which were a natural consequence of the overthrow of the Bourbons.

In 1832 M. de Barante was still at Turin, a most difficult diplomatic post. I have shown how in his despatches he noted the fact that, under a veil of the most reactionary sentiments and of a total subserviency to Austria, the Italian feeling was slowly growing, and that the hatred of the *forestieri* and the aspiration for Italian independence and unity found accomplices in the highest ranks of the nation, even in the royal family of Piedmont. M. de la Tour, the minister with whom Barante had to deal, seems to have had large and clear ideas on many points. Speaking of the state of Greece, he said to Barante: "It is quite possible that Europe will have to occupy itself with Greece. The Ottoman Empire is going to pieces. The Pasha of Egypt is striking perhaps the last blow. The partition would be a great affair." Metternich had already said in Paris, in 1827, during a journey which he made to that city, that Greece was a dangerous spot. "We must know what we want. If it is the destruction of the Ottoman Empire, let us go at once to the end. Let us divide Turkey and reorganize Europe; if not, let us abandon Greece to herself." The battle of Navarino had been followed by the creation of the kingdom of Greece; the Egyptian question was not settled. M. de la Tour wanted a Congress. "It is evident," writes Barante, "that the interest of the House of Savoy would be identical with that of France. It would see a way of realizing what has always seemed to it its destiny—that is to say, the establishment of a kingdom which would embrace all the north of Italy."

M. de la Tour regretted that Europe had not chosen a Piedmontese Prince for the new kingdom of Greece, especially since Europe had made very good terms for this new kingdom:

"Without speaking," said he to Barante, "of our right to Achaia, which still figures among our titles, it would have been better to choose an Italian. The community of manners and of language is greater between Greeks and Italians. Trade has established continued relations; our navy renders the communications frequent. No European establishments have lasted so long in the East as the Italian establishments. We could have offered only the second son of the King, a child, or Prince Carigman, of the younger branch, who is seventeen years old. But, so a regency had been adopted, this would have been no objection."

On July 28, 1833, the statue of Napoleon was replaced with great pomp on the Vendôme column, in presence of the King, the Princes, the Marshals. M. Thiers was there on horseback, in his minister's uniform, and it was at his signal that the veil fell which covered Napoleon. The Duchess de Dino was in London at the time with Talleyrand; she was one of Barante's faithful correspondents, and wrote to him: "At a distance I could not readily imagine this scene in the Place Vendôme, where my little friend Thiers appeared as drum-major, and where, for the greatest glory of all, people screamed at the same moment, 'Vive le roi! Vive l'Empereur! Vive la Révolution!' One must have been there, and have gone successively through the rapid transformations of Paris, to understand it or find it simple. Decidedly, I am horribly *rouillée*, and people will find me so much behind the times that I shall be ashamed."

I would recommend to those who are interested in the diplomatic history of France in our time an official despatch of Barante's dated Turin, May 8, 1834, which gives an account of the relations of France and Piedmont during the year 1832. It is impossible to paint more accurately the difficulties with which the Government of Louis Philippe had to deal during that period, the jealousies of the great Powers, the petty opposition which was made everywhere to a King who was looked upon as a usurper, the animosity of the Legitimist party in Turin, the fears of the Court of Sardinia. The incidents which troubled the Powers are now well forgotten, and in reading the despatches of Barante we feel at times as if we were in a *terra incognita*. We can hardly understand passions which resemble so little our own. *Où sont les neiges d'antan?* says the poet. Where is the Holy Alliance? and where are the Carlists of Turin? The incidents of parliamentary life in Paris formed the chief element of the vast correspondence of Barante. Time has deprived them also of their interest; the letters of Molé, of Guizot, of Thiers, of the Duke Decazes have become less interesting than the more familiar letters of the Duchess de Broglie and the Duchess de Dino.

The Duchess de Broglie had a tender soul and a poetical mind; she writes from Coppet: "How sweet it would have been to find ourselves in this place where we were once so young, where we lived such a strong life. Coppet is now a temple, a serene and peaceful temple." She has visited the battle-field of Waterloo: "It moved me much, but makes one think more of the greatness of the fallen man than of those who triumphed over him. The lion which they placed in this great solitary field seems like the image of the conquered more than of the conqueror." The Duchess de Dino wrote generally on politics, but she was not pedantic; at times she had great delicacy of touch. You may judge by this:

"Your own disposition prepares you to receive mild impressions better than painful ones. This is what I call being happily born, and it is also what makes people keep their equilibrium better, and preserve a clearer heart and mind, near you than near anybody else I know. I have often experienced this; I am grateful to you for it, and it is what makes me particularly regret you here [she writes from Rochecotte], where more than one cloud has passed over my thought which your amiable disposition, your sweet and discreet friendship, would certainly have blown away. You are not the person to whom I have told most of the particulars of this life, but you are the person by whom I have always felt best understood; you have never insisted on what appeared to you, and the extreme delicacy with which you indicate without articulating makes your company singularly comfortable, sweet, and agreeable. I am quite pleased to make this avowal to you."

These lines do equal credit to Barante and to the writer: they are singularly delicate, and suggest that Barante must have been a very delightful friend. On the following page we find a long letter of Cavour's, but, such is the exigency of chronological order, Cavour appears in it very different from what we afterwards saw him. He is writing from London, in 1835; he is completely absorbed in political economy; his observations on the state of parties are, I am obliged to say, very commonplace. The true Cavour was still in the bud.

In September, 1835, Barante was appointed Ambassador to St. Petersburg. It was a most difficult post in those times, as the relations of France and Russia, which were very cordial before 1830, had been completely altered by the Revolution of July. The Emperor Nicholas affected to treat Louis Philippe as a usurper; he considered himself the chief representative of the doctrines which had ruled Europe since 1815; he felt great irritation towards a revolution which was in opposition to these doctrines. Moreover, the Revolution of 1830 had had its effects in Belgium and in Poland; it had also drawn France and England together, and this modified the political relations of all the European Powers. Nicholas was an autocrat, and had no need of concealing his sentiments, as Austria and Prussia were obliged to do, to a certain extent. The French embassy to St. Petersburg was, in consequence, almost a post of danger; but it was felt that it could not be in better hands than those of Barante, who concealed the firmness of his doctrines under unimpeachable good manners and great moderation of character. Barante received his instructions from the Duke de Broglie:

"Without being blind to the advantages which the close alliance of the cabinet of Saint-Petersburg formerly had for us, we understand perfectly that, in the present circumstances, not only would it be dangerous to reëstablish it, but even there would be a dangerous blindness in seeming to desire it, and to direct ostensibly towards this end the combinations of our policy."

Barante stopped at Weimar, where he saw the Grand Duchess, sister of the Emperor of Russia. "She is evidently very *spirituelle*, but her deafness, her union with a husband who is evidently so inferior to her, her life in a little provincial town, all gives her an air of sadness and discouragement. Thirty years of such a life do not seem to have inspired her with any resignation." He remained some time in Berlin. "The atmosphere of Germany seems to me even more pacific than the atmosphere of France [in 1835]. Berlin seems to me more *bourgeois* than thirty years ago. Nothing is heard but reasonable words."

Barante was received for the first time on January 10, 1836, by the Emperor of Russia, who treated him at once as if he had always known him, and talked with him on all the affairs of Europe with an easy and familiar volubility. He spoke of Louis Philippe "without embarrassment, without bitterness, but also without any show of affection." He knew how much Europe owed to him for the preservation of peace; he had undertaken a very difficult task. He spoke of the courage shown by the King when his life was attempted, of what the Queen must have felt. "'You will have to make some new laws; you will come to it.' 'That will depend on circumstances,' I replied; 'with our form of government and in our situation, we must wait till public opinion is warned and enlightened.' 'Well, then, the merit consists in taking advantage of the moment.'" Nicholas spoke lightly of the new kingdom of Greece, of the new King. "I think him a little mad." The Emperor was adverse to creating constitutional institutions in Greece. "One of the difficulties of the country is the number of Greeks who have been brought up abroad, and who bring back habits and ideas to a country where they are without application."

How happy Barante must have been, in his exile at St. Petersburg, to receive letters from his French friends. On January 14, 1836, the Duchess de Broglie writes to him:

"Dear Prosper: I write to you amidst the preparations for a ball. Our winter is a succession of festivities of which you can form no idea. People are convinced that they ought to sing and dance from morning till night in

order to consolidate the Government. I sometimes think that something better could be done. When I came back on July 30, 1830, to Paris, silent and calm after such a terrible crisis, with the trees of its boulevards torn, the streets full of barricades, I hardly thought that I should soon be obliged to give parties like those of the old régime. It is fortunate, it is better so, more rational; but somehow the result is a sort of discouragement and of disdain for human affairs. Is there so little difference between things different? The world becomes very uniform; material objects are getting more and more assimilated; we have everywhere the same feasts, the same flowers, the same carpets, the same suppers. Life seems to be taken *à la entreprise*, and governments, too. The originality of which we have dreamt, the seal which we should like to see on all the acts of those we love and our country—all this is a dream. We must take our hearts somewhere else, and it is even better not to speak of it. I finish thus this tirade, which is not very clear."

It is clear enough; it shows in the Duchess de Broglie a person who was better than the world she lived in, a soul tormented by a higher ideal, a pessimist, a dreamer. She had something in her of the genius of Mme. de Staël.

Polish affairs hold a very important place in the despatches of Barante. He soon understood that Russia was particularly sensitive on the question of Poland. Nesselrode complained bitterly of the reception which the Polish refugees had met with in France; Russia had never received nor encouraged the Carlists. The Emperor was in a constant state of irritation on the subject; he complained also constantly of England. Barante was not long in perceiving that Nicholas was even more hostile to England than to France. Orloff told him once: "If you knew Lord Palmerston as I do, you would know that he is capable of anything; he is a man of passion and of vanity. Remember the bombardment of Copenhagen in 1807, in time of peace, when England had been trying to inspire Denmark with full security. Who knows if they don't now want to bombard Cronstadt? We know that there is a difference between England and France: you don't believe that we are preparing to conquer Constantinople or to occupy the Dardanelles; you would not embark in a senseless war with her; it would be a general war, a convulsion for all Europe."

Correspondence.

THE REVELATION CONTAINED IN THE MADISON LETTER.

To the Editor of The Nation:

Sir: The Madison letter published in the *Nation* April 25, 1895, *never before published*, is "newly discovered evidence" of the highest character, being the testimony of that witness who is now universally conceded to have stood first in the world of the framers of the Constitution.

It contains a revelation in regard to the intent and purpose of the term "direct taxes" as used in the Constitution, and in regard to the understanding of the people of the United States concerning that term when they adopted the Constitution; and, what is still more extraordinary, it shows that the term, in the estimation of the men who used it, did not refer to the kind, or character, or nature of the tax itself, and that the framers of the Constitution never considered the subject of taxation from the philosophical or politico-economic point of view, but were wrestling with the stern necessities of the question, How shall the people of these several States be induced to pay a Federal tax? The letter also shows that all the learned arguments upon the economic questions what is a direct tax, and what is not a direct tax, and what did the world know about direct and indirect taxes in 1787, may be thrown into the waste paper basket.

On the 29th of January, 1789 (after the adoption of the Constitution, but before the organization of the new Government), Madison wrote to "Col. G. Thompson," setting forth his "sentiments" in relation to a proposed alteration of the Federal Constitution, and giving his reasons why he disliked "a change of that part of it which authorizes direct taxes." He says to Col. Thompson, in the beginning of the letter, "Should I judge amiss, your candour will excuse the communication. Should I judge aright, your discretion will make a proper use of it." Col. Thompson, in the plenitude of his "discretion," did not "make a proper use of it," and Madison, apparently, having submitted the question of publication to Col. Thompson, did not feel at liberty to publish it himself, and the letter has remained unpublished until on the 25th of April last it was brought to light through Mr. Worthington Ford.

Here let it be clearly apprehended that the great question before the Supreme Court is simply this: What is a direct tax within the intent and meaning of the Constitution? If the income tax is a direct tax, it must be laid and apportioned among the several States in the ratio of representation. Massachusetts having, say, a third as many representatives in Congress as New York, the citizens of Massachusetts collectively must pay only one-third as much of the entire income tax as the citizens of New York, etc., etc. This apportionment among the States not having been made in laying the income tax, it is unconstitutional if it is a direct tax. Conversely, if the income tax is not a direct tax, it does not come within these restrictive clauses of the Constitution. It has followed, of course, that the forensic struggle has been to show, on the one side, that the income tax is in its nature a direct tax; that it bears directly on the individnal citizen who pays it; that it is not an excise, etc.; and on the other side that it was not a tax known to the framers of the Constitution; that it was not a tax which they had or could have had in mind when they used the term "direct taxes," and hence that they did not intend to restrict that kind of a tax to distribution among the States in the ratio of representation. In other words, it is argued that the restriction was intended for certain *kinds* of taxation then known to the framers specifically and termed "direct taxes."

Madison first alludes to the apparently conceded fact that the ordinary expenses of the new Government would be met by duties, or by duties and excises. Concerning the ordinary revenue of the Federal Government, therefore, there was then no dispute. It was provided for. Everybody knew what duties were and everybody knew better then than everybody knows now that an excise was an English tax laid upon a domestic commodity. So far there was neither State nor sectional jealousy.

But there would be wars and national "emergencies." Then the future Government would need extraordinary revenues. Blockades might cut off imposts and even reduce the ordinary revenue. The nation already knew by bitter experience what it cost to carry on war without money and without credit. How should this extraordinary revenue be provided when the day of necessity should come?

Manifestly it could be raised by but one of two methods: either *indirectly*, by "requisitions" on the several States, as under the still existing Confederacy, or by taxes laid *directly* by the Federal Government. Duties and excises were not indirect taxes, they were not under discussion or consideration; they were not in the case at all. *Indirect taxes* were taxes procured indirectly by "requisitions" on the States; *direct taxes* were taxes laid *directly* by the Federal Government. The framers of the Constitution evidently had never looked at the subject from a politico-economic point of view; they had never given a thought to the philosophy of taxation; the term "direct taxes," as they used it, did not refer to the kind or character or nature of the tax, but to the fact that such taxes were no longer to be laid indirectly through "requisitions" upon the States, but directly upon the taxpayer by the newly constituted taxing power. Indirect taxes would be a thing of the past, of the expiring Confederation; taxes directly laid by the future Government would supply its extraordinary revenue when needed.

But here State jealousy had entered into the problem which the framers were solving—the difficult problem of taking power from the individual States and transferring it to this new, unknown, and distant central authority. If Congress could lay a tax directly upon the property of the citizens of all the States, might it not be so laid that the citizens of Virginia would have to pay more than the citizens of New York? How should the power so transferred be restrained?

The Convention answered the question by the word population. The new power of direct taxation should be given to Congress, *but the system of quotas*, with which the people of the country were familiar, *should be retained*. The inhabitants of Virginia, thereafter as theretofore, should contribute under this new power of direct taxation only the old quota of the whole amount laid upon all the States. The means would be by the direct taxation of the Federal Government; the amount (or proportion) would be precisely what it had been before. The safeguard of ratio remained inviolate; only the agency of collection was changed. The power of direct taxation should impose no greater liability upon the taxpayer in any State than the power of raising money by "requisition" had imposed.

But here another element of discord came in: Were slaves inhabitants or property? The previous limitation upon the direct powers of taxation was a safeguard; the next concession was a compromise. The slaves, the "other persons," should be reckoned at three-fifths of their actual number; and the power of direct taxation should be exercised, not literally in the ratio of population, but in the modified ratio of representation. And hence we have the clause, "No capitation or other direct tax shall be laid unless in proportion to the census or enumeration hereinbefore directed to be taken."

Attorney-General Whitney, in his recent argument, said that the term "direct taxes" is not to be found in any law or statute anterior to the Constitution. Madison now explains to us why the new and unknown and undefined term appears in the Constitution at all—because it stands for the power of direct taxation. The framers supposed when they were limiting the *thing* that they were limiting the power. Instead of saying, "The power of direct taxation shall be exercised only in the ratio of representation," they said in effect, "The taxes imposed by the

new power of direct taxation (*i. e.*, the direct taxes hereby authorized) shall be distributed among the States hereafter as they have been heretofore, in the ratio of population as modified by the Constitution (*i. e.*, on the ratio of representation)."

Having now the historical situation plainly in view, let us turn back to the Madison letter and behold how clear the intent and purpose of the term appears, and that it was the two forms of taxation, direct taxes and State requisitions, which were kept in logical antithesis. At the outset of his discussion Mr. Madison states the question and brings the alternatives plainly to the front:

"The question to be considered then is, *which of the two systems, that of requisitions or that of direct taxes*, will best answer the essential purpose of making every State bear its equitable share of the common burdens."

They remain in the front. It is not direct taxes or duties; it is not direct taxes or indirect; the alternatives are: taxes coming direct from the general Government, or taxes indirectly levied by requisitions on the States.

"From the reasoning of many on this subject it would seem as if the question concerning *requisitions and direct taxes* was whether direct taxes shall be levied or not. This is by no means the case. If extraordinary aids for the public safety shall not be necessary, direct taxes will not be necessary. If extraordinary emergencies call for such aids, the only question will be *whether direct taxes shall be raised by the General Government itself, or whether the General Government shall require the State Governments to raise them.*"

He carries these alternative necessities to the end of his argument: Direct taxes or requisitions? Extraordinary revenue, shall it be levied directly by the Government or indirectly through the States? And with the recognition of these alternatives is the recognition of the existing quotas measured by an equal rule of taxation which might be philosophically imposed when each State would contribute only its just proportion.

"But besides these general considerations, which affect every part of the Union, there are others which claim the most serious attention of the southern parts of it, & of Virginia particularly. *If direct taxes be prohibited, and no reliance can be placed on Requisitions* the inevitable consequence will be that whenever public exigencies arise, the duties will be accumulated on imports, until they shall have yielded every farthing that can be squeezed out of them. Now who is it that pays duties on imports? Those only who consume them. What parts of the continent manufacture least and consume imported manufactures most? The southern parts. It is clearly the interest of the southern parts, therefore, and of Virginia particularly, that trade should not be overburdened; but that *direct taxes when necessary* should come in aid of that fund; *since being laid on all the states by an equal rule provided in the Constitution, they tend to equalize the general burden on every part of the continent.*"

His political sagacity was never more incisive than when Madison intimates in this letter that it is the commercial and manufacturing States which have reason to distrust the provision that allows Congress to exercise the power of direct taxation. N.

WASHINGTON, May, 1895.

CAUSE AND EFFECT.

TO THE EDITOR OF THE NATION:

SIR: Having read your strictures upon the Grand Army with a feeling that it was not a full statement of the case, I greeted with pleasure the mild protest of "C. F. B." from Washington. May I quote as a text the main point of his letter?

"I submit that if you will bring your censure of the pension laws and administration of the last fifteen years or so to the test of reason, you will lay the blame, not on the Grand Army, but on that bad working of our political system that throws the public affairs and the powers of government into the least worthy and capable hands, and leaves the better people to indifference and despair, except when they rise in revolt against some abuse that has grown too scandalous or oppressive to be borne."

In analyzing this plea we have to bear in mind that Congress is made up in one house of 356 members from districts, and in the other of members from forty-four States. There is no person in either house who represents the nation or is responsible for the public interest. No member has any authority or any legitimate influence over any others, so that his interference with them on behalf of the general interest is naturally regarded as an impertinence. There is no leadership and no common rallying-point. Getting a majority, therefore, means an accumulation of units much as the coral insects are said to build up islands in the West Indies, with the difference that these are permanent, while the other structures are as shifting as the kaleidoscope. Of course, party is the chief cement, but party has come to be only one of the instruments by which private interests work out their schemes. Now the building up of a majority in this way is a task of such stupendous difficulty that it can be undertaken only by those possessed of immense resources, either financial or political. But if these resources are big enough, there is not much doubt of the result, because there is no, or very slight, opposition to be feared from the public interest, which is wholly unrepresented. All the circumstances favor attacks on the public purse, while the defence is reduced to a nullity. This is the whole secret of the success of protective tariffs, the free-silver interest, big naval expenditures, and of such combinations as the Sugar Trust and the Standard Oil Company.

It lies at the root, also, of the pension business. There are certain men in Washington, known as pension agents, whose business it is to secure pensions for applicants, for a commission (we will suppose) of 10 per cent. A pension law, therefore, which, by means of arrears, would involve no more than one hundred and fifty millions of dollars—and I believe ours covers more than double that amount—would mean fifteen millions in the pockets of these gentry. As they are past masters in the art of manipulating Congress, all that they require is applicants. Go into any town or village, and you can hear endless accounts how the emissaries of these agents are scouring the country, entering every family and stimulating it to find some member or friend or acquaintance who can present some trumped-up claim connected with the war. Is it any wonder that men should lend a ready ear to a paternal Government anxious to fill their pockets in spite of themselves? Is it any wonder that the Grand Army, from an honorable association based upon patriotic memories, should have been converted to a great extent into an instrument of the pension agents? The disastrous effects of our evil methods of government are far worse than a drain of the Treasury in that they tend to degrade and lower the character of our whole people.

Hear a few words from a French writer (M. Étienne Lamy, 'La République en 1883'), upon similar circumstances:

"For if nations make governments after their own image, it is still more true that governments give to the people their virtues in the long run and their vices with a terrible promptitude. Is it supposed that this people, if it reads impotence or servility on the forehead of its chiefs, will preserve intact its respect for authority, and meanwhile will remain inaccessible to the errors, to the abasement, of those whom it despises? How can the caprice of fortunes which nothing justifies, and the scandals of those which everything condemns, fail to turn aside the modest labor and the conscientious efforts upon which are raised with such slowness the success of honest people? . . . Such is the fecundity of error."

The antithesis to this picture is found in your own comments this week upon the English annual budget which has just been presented. A year ago, Sir William Harcourt, in a total amount of over 400 millions of dollars, estimated a surplus of $1,500,000. The actual surplus was $3,800,000, differing, on the right side, from the estimate by one-half of 1 per cent. on the total budget. The expenditure differed from the estimate by $420,000, or one-tenth of 1 per cent. on the total budget. It is just this thing, repeated in substance every year for half a century, which has made English national finance beyond all comparison the first in the world. Can any one compare it with ours of the last ten years without a blush of shame?

Yet the difference is not in the character of the people, except as the British has been raised by a long period of the example of such government, nor in the character of the House of Commons as compared with our Congress. It is simply and solely because the English finances are managed by one man, not necessarily a trained financier, while ours are managed by a mob. If we wish to rescue our Treasury from becoming more and more an object of contempt and laughter to the whole world, the only possible resource is to put the Secretary into Congress and let him fight his way if he can, and as, in the long run, he in all probability will, to the position of an English chancellor of the exchequer. G. B.

BOSTON, May 10, 1895.

POE'S MORAL NATURE.

TO THE EDITOR OF THE NATION:

SIR: Will you permit me to correct a statement made in your notice of the new edition of Poe? It is of some consequence because it implies a wrong notion of the copyright law, about which it is important that literary people should not have indefinite or hazy ideas. You say that the publishers "have taken advantage of the recent expiration of copyright," which you date from the issue of the works of Poe edited by Dr. Rufus Wilmot (not William, as you have it) Griswold in 1850. But nothing was covered by the 1850 copyright except the editor's "memoir." Poe's tales and poems had been published from twenty to four years previously, and the copyright on any contribution could not have extended, under the most favorable circumstances, more than forty two years from the date of first publication. If all legal requirements had been complied with, the copyright on 'The MS. Found in a Bottle,' for instance, would have expired in 1875. But, in fact, if there had been any copyright on this production, it would have ended in 1861, and that on Poe's last published article in 1878, the original term of copyright (twenty-eight years) never having been renewed, since neither the author nor his wife was alive at these dates. Nor would it have made any difference, except in half-a-dozen cases, if he or she had then been living, for, with these exceptions,

Poe's writings were published in uncopyrighted periodicals, and were not individually entered.

In view of the additional light thrown of late years on Poe's career, and the fact that the *Nation* has several times pricked the bubbles blown by Ingram and other admirers, it is strange that your present critic should blame Prof. Woodberry for mentioning other faults than his hero's drunkenness and irritable temper. "His worst faults," you say, "were as surely congenital as was his genius." His worst faults, however, were not the ones named, but his utter lack of honor. Nor was this lack the result of ill treatment or misfortune. His first employer, T. W. White, whose honesty and even generosity are admitted even by Poe's defenders, declared, from his early knowledge of him, that "he was an unmitigated rascal." But his moral character is perhaps best illustrated by incidents related in a letter lately written to me by one of his few surviving contemporaries, and which I desire to put on record:

"Jan. 10th, 1895.

"My Dear Sir:

"The incident to which I alluded was as follows: Poe called on me one day in great glee and said: 'I have a good joke on Griswold. I met him the other day and suggested to him that he should get me, through his publishers, to write a review of his last work, "The Poets and Poetry of America." He said it would be a good idea, and that he would speak to his publishers about it, and said, "I am sure they'll pay fairly, and I think you can go on and do the work without waiting." Well, I wrote the review, and, a few days after, handed it to him, when he gave me the money for it from the publishers.'

"'Well,' I said, 'this is nothing more than the ordinary bookseller's device, and I dare say your review was a fair one and will be of use to the work.' 'There lies the joke,' he replied. 'I began at the very beginning and did not allow a single merit in the book: I assailed it to the extent of my powers, and should like to have seen Griswold's face as he read the manuscript.' I looked at him and said, 'That is a very good joke, doubtless, for you, but Griswold and the publishers paid you; of course you returned the money?' 'No,' said he, 'I spent it.' He had not the least idea that he had been doing a very contemptible thing, and it was impossible to get angry with him because, in spite of his unsurpassed ability in certain lines of literary work, he was in morals an absolute idiot.

"In other instances I remember that he showed this lack of appreciation of right and wrong, and one of them was his trip to Boston. He came to me one day looking very dilapidated, and I knew from that fact he was just recovering from indulging to excess in liquor, for Poe was naturally a very neat man in his person, and dressed with great care even when poorest. Whenever you found him slovenly or careless in his dress, you knew that he was on a drinking bout or he had been on one. I said to him rather testily: 'You have been on another of your sprees.' 'Well,' he said, 'it is the last; I never intend going on another.' I said, 'I have heard that so often it has lost its force with me, but what can I do for you? what do you want?' 'Well,' said he, 'I don't know what to do; I am in a strait.' 'What is the matter?' 'Well, you see, they have invited me in Boston to deliver an original poem, and I have been in such a condition that I am unable to do it; I have got to go next week.' 'Well,' I said, 'write to them that you have been indisposed, because you have been (I consider it a case of disease in you), and postpone the event.' 'But,' said he, 'I want the money.' 'Well,' I said, 'you can't get the money without you earn it.' He said, 'I'll fix it,' and went off. The next thing I heard was that he went down to Boston and read 'Al Araaf,' a poem which he wrote when he was a young man (he said when he was a boy, but that is another of his figments). They were disappointed. It was not what they expected, but they treated him with great courtesy, gave him a supper, and, speaking under the influence of champagne and excitement, he let the facts out. Of course, they became very indignant, and when Poe came back he wrote an article in the *Broadway Journal* in which he assumed that he had gone there with this poem in order to test their acumen. He had not the least notion that he was doing anything wrong. He never had. Anything that he did was right, regardless of its morality, or lack of it; and everything he said was true to him, however false it might be. I could cite numerous instances of his recklessness of assertion and bold statement without basis. In morals, as I have said before, he was an idiot. . . ."

Yours, etc., W. M. Griswold.

Notes.

Dr. Elliott Coues's edition of the 'Expeditions of Zebulon Montgomery Pike to the Headwaters of the Mississippi River, the Interior Parts of Louisiana, Mexico, and Texas, in the Years 1805-6-7' is now definitely set down by the publisher, Francis G. Harper, for appearance in the early fall. The reprint will be in three volumes, and Dr. Coues's pious labors have more than doubled the original matter. His annotations have been as minute and painstaking as in the case of his Lewis & Clark, with which the later publication will be uniform in style. The plates of the edition of 1810 will be reproduced in facsimile, and there will be added a folding historico geographical map of the Upper Mississippi. Only 1,500 copies will be printed, in two styles.

Macmillan & Co. announce a new series of "Royal Naval Handbooks," to be edited by Commander C. N. Robinson, author of 'The British Fleet.' First on the list is 'Naval Administration and Organization,' by Admiral Sir Vesey Hamilton.

Archibald Constable & Co., London, have in preparation 'Icebound on Kolguev,' Russia's Arctic island, by Aubyn Trevor-Battye, with numerous illustrations, and a work on Nicaragua by Archibald Colquhoun, author of 'In the Shan Country.'

'Modern Opera-houses and Theatres' is the title of a sumptuous work in three volumes with 220 plates which Messrs. Edwin O. Sachs and E. A. E. Woodrow propose to publish through B. T. Batsford, 94 High Holborn, London. It is to contain descriptions with plans, etc., of all the best of the recent European playhouses; but the prospectus does not suggest any inclusion of American theatres, some of which certainly are worthy of insertion—the Metropolitan Opera-house, the Casino, and the Madison Square Theatre in New York, and the Auditorium in Chicago, for example.

M. François Descoste, who was one of the earliest of the "Ralliés," and who published in 1893 two volumes on the 'Jeunesse de Joseph de Maistre,' which were crowned by the French Academy, will bring out this month a new work in which he continues his previous studies. This will be entitled 'Joseph de Maistre pendant la Révolution,' and it will contain some unpublished letters which display great perspicacity on the part of De Maistre. He predicted the course of the Revolution with remarkable accuracy, and as early as 1796 called Bonaparte the future King of France.

A new volume of the 'Journal' of the Goncourts, the eighth, will appear during the present month. This, unlike its predecessors, will see the light first as a volume, and not in the form of feuilletons; M. de Goncourt being of opinion that his work has been made to seem more fragmentary than it really is through its appearance in instalments. In order to avoid the annoyance which some of the later volumes gave to M. Alphonse Daudet, the author has read the notes of the present 'Journal' to his friend, who repays the civility by lavish praise of the new book.

A book of Charles Baudelaire's, hitherto unknown, will soon appear. The good luck of such a find as that of an authentic manuscript of the author of the 'Fleurs du Mal' fell to the lot of M. Félix Grélot and Professor Mainard of the Collège Chaptal. They discovered and bought it at a public sale. 'Les Mœurs et Coutumes de la Belgique' is the title of it, and it is said to treat the Flemings, men and women, with harsh and brutal satire.

M. Paul Bourget has had much trouble in the choice of a name for his new novel. M. Huysmans forestalled him in the use of 'En Route,' and when he thought to fall back on 'En Marche,' he found that that title also had been advertised some time ago in the announcement of a forthcoming volume by Mme. Séverine. So he is still *à la mer*, if one may venture to say so.

The Appletons have brought out a handy Spanish-English and English-Spanish dictionary—a much-abridged Velazquez. So far as our tests go, no sources have been consulted except the larger Velazquez, as we discover nothing changed in the abridgment except the accentuation; this has properly been made to conform to the Academy's new rules. There is a new sub-title, making claim to "the latest scientific, military, commercial, technical, and nautical terms," but we perceive no enlargement in these lines. The necessary brevity of definition and almost entire absence of idiomatic phrases would often make this little volume a blind guide to beginners in Spanish; but for a traveller's ready reference and quick handling it is well adapted, and its clear print and neat binding are attractive.

As Meinhold's 'Amber Witch,' in Lady Duff-Gordon's excellent translation, has now been before the English-speaking public for fifty years, and as Messrs. Nutt & Co. (London) feel justified in reproducing it in a very handsome illustrated edition, we may presume that criticism has pronounced its final verdict upon it, and that it has the *Genius* (in the Roman sense) without which, as Martial tells us, a book cannot hope to live. It is a little surprising, considering the romantic possibilities and fascinations of horror involved in the witch superstition, that romancers have not made more of it. In fact, Balzac and Hawthorne excepted, we cannot at the moment remember any novelist of really great powers who has made it the motive of fiction. And when it has been handled, it has usually been approached from the wrong side; the romancer taking the modern view, and implying his indignation at the dense stupidity, irrationality, and horrible cruelty which the modern mind sees in the whole thing. But the higher artistic possibilities lie in the treatment from the opposite point of view—that of the thorough witch-believer, to whom humanity is, in very terrible truth, environed by the powers of darkness, and a trifling neglect, a hasty expression, or the malignity of a crippled old crone, may unlock a postern and let the world of horror burst in. It is from this point of view that Meinhold, as Pastor Schweidler, has treated his subject, and it is this that makes his narrative so effective.

A third edition of M. Gaston Paris's 'La Poésie du Moyen-Âge' having been called for, the distinguished philologist thought himself justified not only in issuing it, but in adding a second volume of the work under the same

title (Paris: Hachette), for which all students of literature will be deeply thankful. Two only of the articles in this volume have been composed since 1885, the date of the publication of the first volume, the others ranging from 1871 to 1884. The subjects of these articles vary; "La Littérature Française au XII^e siècle," "L'Esprit Normand en Angleterre," "La Poésie Française au XV^e siècle," being among the most interesting. That on "Les Contes Orientaux" will be read with pleasure in connection with the discussion of the question of their origin in Bédier's 'Les Fabliaux,' reviewed in these columns two years ago. It is gratifying to find M. Paris setting his face like a flint against that wrong-headed chauvinism, one of the forms of protection, which is at the present time seeking to keep out of French literature all foreign influences, even though Sarcey and Lemaître, and occasionally Larroumet, are among its promoters and defenders. "The intellectual world," he says, "is the world of free trade, and the more one imports, the more is one likely to export." These pages of his preface are pregnant with truth.

'La Fortune Privée à travers sept siècles' (Paris: Armand Colin & Cie.), by Viscount G. d'Avenel, is a summary of his large and important work, 'Histoire Économique de la Propriété, des Salaires, des Denrées et de tous les Prix en général, depuis l'an 1200 jusqu'en l'an 1800.' In this summary the subject is treated no less exactly but more popularly, with the view of placing the results of M. d'Avenel's investigations within the reach of a larger circle of readers. He has the art of making matter which, from the necessary accumulation of facts, risks being dry, quite attractive.

A few years ago Michael Bernays resigned his professorship in the University of Munich and retired to Carlsruhe for the purpose of devoting himself exclusively to literary studies. The first fruit of this leisure is a work entitled "Schriften zur Kritik und Literaturgeschichte," in four volumes, the first of which, 'Zur neueren Literaturgeschichte,' has just appeared (Stuttgart: Göschen). More than one-half of this volume is given to a criticism of Voltaire's tragedy "Mahomet" and Goethe's rather free version of it. The title of this essay, "Der französische und der deutsche Mahomet," conveys a very inadequate conception of the richness and variety of the contents. It is, in fact, an admirable dissertation on the genius of Voltaire, keenly analytical and remarkably suggestive, and showing vast reading thoroughly assimilated. The same broad and truly scholarly treatment characterizes also the shorter discussions of "Goethe's Relations to Walter Scott," "Schiller's Letters to Dalberg," the originals of which are in the University Library at Munich, and "Goethe's and Schiller's Correspondence." Prof. Bernays exhibits a familiarity with the whole range of modern literature, American as well as European. On p. 314 he shows that Buckle's comment on Voltaire's tragedies is taken from Auger's article in the 'Biographie Universelle,' and on pp. 330–33 that a famous verse of four lines in Voltaire's "Alzire" is the almost literal translation of a passage in Rowe's "Tamerlane."

Three new English magazines make their first appearance this month. We have already received *Chapman's Magazine* (published by Chapman & Hall, and edited by the firm's manager, Mr. Oswald Crawfurd), which will confine itself to fiction, without illustrations. The first issue contains a short story by Anthony Hope, a romantic drama by Stanley Weyman, and the first chapters of a serial by Bret Harte. The *Twentieth Century*, "of the familiar half-crown type," will include literary and dramatic criticisms, and among its first contributors are Sir Edwin Arnold and Lord Byron. The *Catholic Magazine* has Lady Annabel Kerr for editor, and promises, for the popular price of sixpence, fiction, literary and religious matter, with pictorial accompaniments. Among its contributors are Lady Burton, Canon Barry, Mrs. Gilbert (Rosa Mulholland), and Mr. C. Kegan Paul.

A late number of the *Westminster Gazette* devotes nearly two columns to the "Football Butcher's Bill" in the United Kingdom for the past season, premising that the cases particularized "do not represent one-tenth part of the accidents." Analysis shows that there were 20 deaths, 53 fractures of the leg, 11 of the arm, 26 of the collar-bone, besides 68 severe injuries of various kinds. "Another distinguishing and peculiarly unpleasant feature of the football play of this season has been the increasing tendency of players and the public to visit their disappointments upon the referee."

Mr. Herbert Welsh will have entire control of a new four-page weekly, *City and State*, which adds another to the list of municipal reformatory publications so numerous at the present time. It will be issued from No. 1305 Arch Street, Philadelphia.

The *American Journal of Science*, now nearing the end of its third series and seventy-eighth year, presents in its current (May) issue a sketch of the late Prof. James Dwight Dana, with a bibliography, and a frontispiece portrait —a fine old Yankee face, comparable in science to Emerson's in ideality.

Visitors to the museum of the Royal United Service Institution at Whitehall, described by our London correspondent last week, will take increased interest in the building—the old Banqueting House—if they peruse the April number of the *Portfolio*. Mr. W. J. Loftie, with much antiquarian industry (not so sure-footed as to dispense with liberal conjecture), and with much intemperate zeal for the cause of Charles the First, exhibits the extent of the palace of Whitehall at the time of its partial destruction by fire, and the two ambitious designs for its rebuilding by Inigo Jones, who would have made of it the largest building in the world. A portrait of this famous architect and copies of old prints illustrate the narrative in a satisfactory manner. The most surprising revelation is, that while the Banqueting House was built with window-spaces, these were not pierced and glazed till a very recent period. "The ground-floor windows were opened first for the United Service Institution." The royal martyr was taken out to be beheaded through a hole knocked in one of the window-spaces.

The One Hundredth Bulletin of the Boston Public Library contains a chronological index of Norse historical fiction, including Denmark, the titles of works by and relating to Goethe, and a catalogue of the Thayer Library. This is the gift of four sisters, and consists of 5,269 volumes, chiefly "works of history and illustrative biography, some of which are rare and valuable." A great number of the volumes are "extended" by the insertion of portraits and plates. An idea of the collection may be gained from the fact that there are seventy-six titles under Theodore Parker. The illustrations of the Bulletin are a series of seven views taken from the State House in 1858, together with a view of the front of the building.

The annual report of the Geological Survey of New Jersey for 1893 contains an interesting chapter by Salisbury and Kümmel on Lake Passaic, a body of water once held between the Newark or Watchung Mountains and the Highlands, when the present outlet of the included lowland was blocked on the north by the ice of the glacial period. The existence of the lake was indicated in Cook's report for 1880; it is now more definitely traced by means of its shore-lines and deltas. During the greatest advance of the ice, an immense morainic embankment was built in front of it, forming the transverse ridge from Morristown eastward. As the ice melted northward, various shore benches were built. They now no longer stand level, but ascend slightly to the north, rising 67 feet in 25 miles, thus indicating a northward elevation of the land since the disappearance of the lake. The outlet of the lake was by a notch in the trap ridge near its southwest end, now 331 feet above sea-level. The discussion is well illustrated by a large-scale map, by far the most elaborate representation of a feature of this kind yet published in this country. It is worth noting that the investigation was facilitated and the conclusions firmly established through that mapping of the surface geology of the State which the Survey has initiated, and in which it is a pioneer. The report concludes with a detailed list of minerals of New Jersey and notes of mineral localities, in the interest of investors and prospectors; this will be elaborated and republished if found of practical value.

The Senatus of Aberdeen University has resolved to confer, at its forthcoming commencement, the degree of LL.D. on a woman. The distinguished recipient of this unusual honor, Miss Jane E. Harrison, is already a member of the council of the Society for the Promotion of Hellenic Studies, presided over by Prof. Jebb of Cambridge, and is an accepted authority on Greek archæology, notably vases. It will be remembered that Columbia College, at its centenary in 1887, conferred the honorary degree of L.H.D. on Miss Amelia B. Edwards, in recognition of her studies in Egyptology; but Miss Harrison will be, we believe, the first woman to receive such a degree from any British University. In international accord with this action of the University of Aberdeen comes the announcement that an English student, Miss Grace Chisolm, has received from the University of Göttingen a Ph.D. degree in mathematics, likewise stated to be "the first degree conferred on a lady by a German university." Miss Chisolm, a daughter of the former warden of the Standards, had previously won first-class honors in mathematics at both Oxford and Cambridge, without, of course, any chance of a degree.

The University Extension Summer Meeting will be held in the buildings of the University of Pennsylvania, July 1-26. There will be a session of the department of Civics and Politics, with lectures from three to four hours daily. The director is Mr. Edward T. Devine, 111 South Fifteenth Street, Philadelphia.

—The reader of President Hyde's 'Outlines of Social Theology' (Macmillan) would be sure to think the author very young, for all his "semilunar fardels," were it not that before now old men have renewed their youth when drinking of the new wine of Hegel. The President of Bowdoin is one of many who are delighted with that vintage, and also one of those who seem to have learned nothing from those "fine days for theology," as Strauss called them, when Hegel himself rejoiced in his system like a conjurer in his bottle, and produced from it the whole body of the Lutheran theology, and even the Lutheran consubstantiation. When,

a little later, Feuerbach proceeded to produce from the same system his atheistic 'Essence of Christianity' with equal facility and as good warrant, the wiser began to suspect that here was the prophet's compass, "which, when I had taken it in my hand, did turn whichever way I would." Ignorant or forgetful of all this, many, since then, have found in the Hegelian metaphysic the rationale of their orthodox theology. As time goes on, "the form of sound doctrine" gets to be more and more purely formal, less and less sound. Dr. Hyde carries himself in quite an orthodox fashion, and has grave admonitions for heretics of various names, but his own doctrine, stripped of all disguises, resembles the traditional orthodoxy far less than it resembles the heresies which it deplores. His Christianity is a neo-Christianity, its several doctrines such as would have cost him his "good and regular standing" in any evangelical church fifty or even twenty years ago. But we have changed all that. Dr. Hyde will not be tried for heresy, and he will get more praise than blame from the traditionalist organs for his ingenious device for keeping up appearances. It should be said that both his general ideas and his neo-Christian doctrines are often reasonable and impressive, but the connection of the latter with the former is purely arbitrary. The conclusion is not in the premises. Hegel did not find the facts more plastic to the idea in his 'Natur-Philosophie' than Dr. Hyde has found those of historical Christianity. Evidently his studies have not taken him in the direction of New Testament criticism. His conception of Jesus is purely subjective—what "social theology" demands, and not what criticism requires. The whole thing is prophetic of the opposition with which a consistent rationalism will have to deal in the near future—an opposition essentially rational, but masquerading in the clothes it has inherited from former generations.

—M. Albert Vandal has just brought to an end the very curious and interesting series of letters of Napoleon which he has been publishing in the *Revue Bleue* in the numbers running from March 30 to April 20. These letters were written in 1808-9 by Napoleon I. to his ambassador in Russia, Caulaincourt, Duke of Vicenza, and until now have been sought for fruitlessly. M. Vandal himself made a long and patient search after them at the time when he was engaged on his 'Napoléon et Alexandre I^{er},' but all in vain, though he, or his correspondents, ransacked public and private archives throughout France and Russia. Caulaincourt's letters were found, but only one brief note, and a fragment of a letter of Napoleon's. M. Vandal, then, had to gather the Emperor's thoughts and plans as best he might from such portions of them as were quoted in the ambassador's replies. A little while ago, however, some papers left by the Count de la Ferronnays, who was ambassador in Russia under the Restoration, were intrusted to M. Costa de Beauregard for a literary purpose. Among these was a *dossier* containing the long-missing letters. It is likely that these were still in the Russian archives at the time when the Count de la Ferronnays was ambassador at St. Petersburg, and that he had them copied for his private collection of state papers. There is no possible doubt of their authenticity.

—The dates of February 2, 1808, and April 10, 1809, mark the beginning and the end of this correspondence. The story that is told is of the course and the ending of the flirtation with the Emperor Alexander which Napoleon began at Tilsit. On the French side, indeed, it seems to have been much more than a flirtation. Napoleon would have been glad to make of Russia the pivot on which his European policy should turn. He even seems to have considered seriously his old dream of the conquest of the East by means of a Franco-Russian alliance. He had captivated Alexander at Tilsit, and he strove by every means to maintain his supremacy over that (as he thought) changeable and flighty soul. So he sent Caulaincourt, a man greatly in his confidence, to St. Petersburg, and wrote him with his own hand, constantly, the most minute directions. Courier after courier bore instructions how best to flatter Alexander's wishes, or dissipate his fears, or excite his hopes. Everybody knows how the attempt failed. The Spanish rose; Austria, unchecked by Russia, attacked; Alexander refused to Napoleon his sister's hand, and so the mirage faded. Besides their historic interest, these letters show once more that amazing mastery of details which was characteristic of the genius of Napoleon.

—The fourth volume of Dr. Hans Blum's 'Fürst Bismarck und seine Zeit' (Munich: Beck) records the history of four eventful years from the formation of the North German Confederation in 1867 to the ratification of the Peace of Frankfort and the close of the first session of the Imperial Diet in 1871. The volume begins with an account of the visit of King William to the Paris Exposition in June, 1867, accompanied by the crown prince, Moltke, and Bismarck, who was made the special object of hostile demonstrations on the part of the Parisian populace. Napoleon, however, showed him marked attention, and even consulted him as to the propriety of introducing parliamentary institutions into France. Bismarck advised him to do so, but at the same time warned him that such a conciliatory measure would not suffice to preserve and perpetuate his power, which could be effected only by a strong and well-disciplined imperial guard, wholly devoted to his interests. Bismarck was convinced that the chief danger of war would arise from the desire of the French Emperor to impart strength and stability to a rootless and rickety dynasty, and that the best means of maintaining peace would be to make him feel that he was firmly seated on his throne and could turn a deaf ear to chauvinistic clamor. The French prime minister, Marquis de Moustier, held himself aloof from these discussions, remembering doubtless the sharp retort which he had received in 1855, when, as French ambassador in Berlin, he ventured to criticise the course of Prussian politics and to suggest that it might lead to Jena. "Why not to Leipzig and Waterloo?" was Bismarck's ready reply. The publication in parallel columns (p. 247) of the original Ems despatch and Bismarck's condensation of it is a complete refutation of the charge that Bismarck provoked the war by the falsification of this important document. The account of what occurred in the interview of Benedetti with the King of Prussia is essentially the same in both papers; Bismarck added nothing and omitted only a few circumlocutional and superfluous phrases, but his terser version of the facts set them forth in a clearer and stronger light, and sent a thrill of patriotic indignation and enthusiasm through the whole German people from the Alps to the Baltic, so that Moltke was perfectly justified in exclaiming: "Before, it was a *chamade*, now it is a *fanfare!*"

—Blum gives a concise and cursory sketch of the war of 1870, making only casual mention of military movements and feats of arms, but dwelling on diplomatic incidents and other occurrences more or less personal to Bismarck. During the discussion of the Luxemburg question in the French Chamber, Thiers made a speech in which he declared that the political unity of Germany was a menace to French power and prestige, and that to sow dissension between the German States and to keep them divided had been "the inviolate policy of France since the days of Louis XIV." When Jules Favre came as a negotiator of peace, and asked, in a melancholy and injured tone, with whom Germany was waging war now after the battle of Sedan and the fall of the Empire, Bismarck, remembering Thiers's remark, replied, "With Louis XIV." The answer also clearly implied that one of the conditions of peace would be the reclamation and recovery of Alsace and Lorraine, which that monarch had annexed to France. At a parliamentary soirée given by Bismarck on July 12, 1869, the Bavarian delegate, Dr. Joseph Völk, expressed his surprise that Prussia had not resented, *vi et armis*, the provocations of France in the Luxemburg affair. Bismarck paused for a moment and then said: "I have passed a long and painful week in thinking over this question of a war with France. Not that I fear defeat, for Moltke assures us that we shall conquer. The point to decide was whether we should enter upon such a conflict even with the certainty of victory, and we resolved not to wage war unless forced to do so. We have considered the immense losses and the sorrow and distress brought upon thousands of families. Believe me, gentlemen, I have a heart as feeling as yours. War is always war. The misery of the countries it devastates, the anguish of widows and orphans—all this is so terrible that, for my part, I should never resort to it except in a case of extreme necessity." Numerous instances are given of Bismarck's kindness of heart as shown in his care for the comfort of the common soldier and especially of the sick and wounded.

—The spirit of Fichte and Vom Stein is not moving the powers which guide the destinies of popular education in Prussia at the present time. According to statistics gathered from the *Pädagogische Zeitung* (Berlin), the leading State of Germany is sadly behind the middle and small States in the care for her common schools. While in Bavaria 13,500 classes, in round numbers, are in charge of 13,600 teachers, aside from over 10,000 special teachers of religion, drawing, singing, etc., there are in Prussia only 70,000 teachers to 82,700 classes, and the number of children under one teacher is sixty in the former and seventy in the latter state. In 1891 the average salary of the Prussian common-school teachers was 1,203 marks, inclusive of all perquisites, and their condition has not been bettered since then; in Bavaria, in 1892, the average income, exclusive of perquisites, amounted to 1,496 marks. In Prussia 30,730 teachers receive less than 1,050 marks (7,600 less than 650 marks, and many of these less than 540), while the minimum figures in the minor States are as follows: Baden, 1,100 to 2,000, according to years of service; Saxony, 1,000 to 1,800; Hesse, 1,000 to 1,600; Saxe-Weimar, 950 to 1,600; Saxe-Gotha, 880 to 1,630; Saxe-Meiningen, 1,000 to 1,800; and in the little State of Anhalt, 1,100 to 2,100. Compulsory attendance at the *Fortbildungsschulen*, which receive the children after the completion of the course in the *Volksschule* and

provide for further instruction from the fourteenth to the sixteenth or even the eighteenth year, is well-nigh an accomplished fact in Saxony, Hesse, Baden, and Saxe-Weimar, while Wirtemberg and Bavaria are not far behind. If a similar requirement existed in Prussia, some 1,800,000 children would be found in these institutions; the actual number, however, is insignificant. There are no recent statistics on the subject, but in 1890 the attendance in the rural schools of this class was little over 11,000, and in the budget for 1895–96 only 30,000 marks is set down for this item. In Bavaria 344,500 children receive instruction during their fifteenth and sixteenth years. The tone in which the above-mentioned organ of the German Teachers' Association discusses the questions of popular education in the fatherland is on the whole admirable in its moderation, independence, and evident conviction of the full import of the deplorable situation.

SAMUEL J. TILDEN.

The Life of Samuel J. Tilden. By John Bigelow, LL.D. Harpers. 2 vols., 8vo, pp. 416, 442. 1895.

Mr. Bigelow's long and close intimacy with Tilden, and his own large experience in politics and in authorship, made him naturally the literary executor of his friend, as he was a trustee of his estate. The resulting biography, now before us, has an assured historical value corresponding to the importance of Mr. Tilden's career by reason, first, of his efforts at municipal reform in the city of New York, next of a similarly wholesome movement in the State, and finally of the memorable contest for the Presidency of the nation in 1876. It raises, moreover, an interesting psychological problem, when the question is asked how he came to be the factor he was in the stirring events of a critical time in the history of his city, his State, his country. What was the physical, moral, and intellectual make-up of the man by which he was fitted to take so prominent, and in the main so honorable, a part as a leader of the best elements of his party in administrative reforms?

The crisis in Tilden's life was, of course, the Hayes-Tilden contest for the Presidency. Before that time he seemed to have been called from the work of a successful and industrious lawyer to sudden glory as the leader of a great popular movement to rescue the city and the State from the fangs of Tweed rings and Canal rings. He was carried on the crest of the wave of popular favor, and was made the leader of his party by a fiat which the political managers of the time had no choice but to obey. If Tilden had any capacity for the enjoyment of gratified and honorable ambition (and this seems to have been the strongest sentiment in his nature), the two or three years before 1876 were the fruition and the satisfaction of his life.

The canvass for the Presidency and the struggle over the counting of the vote opened a period of detraction and vilification which, no doubt, wretchedly embittered the life of both Tilden and Hayes for several years, and left painful wounds which were never wholly healed while they lived. These two men, whose personal lives were pure and who were both singularly free from the vices, grave or petty, which cast stains on private reputations, were yelped down by the dogs of partisan politics till they stood at bay, breathless if not despairing, and might themselves well doubt their own consciousness of honorable purpose, and wonder whether they were not, without knowing it, the vilest of men. One side of this horrible picture Mr. Bigelow has given with full detail, backed by the voluminous documentary support which Congressional investigations and blue-books can give. We wish he had regarded his task more completely that of the historian, and, as he has discriminated between the acts and purposes of Mr. Tilden himself and those of the less scrupulous agents of his party, had judged with equal discrimination in regard to the moral attitude of Tilden's opponent. But to this we shall recur.

Mr. Tilden's physical and mental constitution was peculiar from his childhood. Born of the stock of English colonists of New England and New York, his ancestors for two or three generations were farmers in the lovely valley of the upper Hudson, and he was the first of his stock to exchange country life for a professional career. Severe illness in early childhood left him with a weakened digestive system, and the consequent lack of full nutrition kept him all his life frail in body, and made his existence a long regimen of medication and careful diet. As often happens in such cases, the active brain outruns the body, and the boy who is excluded from the romping pleasures of youth grows precociously old in appearance and manner, and has, according to the old saw, a "gray head on green shoulders." Part of this is only manner, and is due to the constant association with grown people. In Tilden's case, however, the brain itself was of uncommon fibre, and the matter of his thought as well as his fashion of expressing it showed uncommon maturity. He was didactic from the cradle, and seemed impelled to analyze all the problems of life and conduct, and to formulate elaborate judgments for the guidance of himself and others. The gravity with which such children will lay down the law has something comical in it, growing out of the contrast between their lack of experience and their solemn unconsciousness of the need of it to justify their sweeping conclusions. But the crude egotism of youth is soon tempered by contact with the world, and, in Tilden's case, ceased to be offensive while it still remained "odd." Its traces were seen all his life in a tendency to lecture his audience, in the instructive and not in the fault-finding sense. He was sometimes prolix, always seriously argumentative, never oratorical or eloquent; but his matter was pretty sure to have weight and to command the attention of intelligent listeners.

His education was imperfect, for his delicate health interrupted his systematic studies; and although he began a college course at Yale, he spent less than a year in the college, and did not graduate. His zeal in politics was such, however, that although the boy was only a preparatory student in the academic course, he was already discussing political questions with Van Buren and writing practical advice in political conduct for the use of Jackson. He kept up this sort of touch with affairs during life, and both through the newspapers and in pamphlets and letters intended for circulation he loved to give his views on each new situation, even when he wholly refused to accept office or to seek the usual rewards of political activity.

His work at the bar was distinctively characteristic of his mental constitution. His mind was strongly analytic. His strength was shown most strikingly when, in a great mass of facts or of conflicting testimony, he applied his powerful analysis until the true and the false were exposed, and the material things were brought together in an impregnable array, to which simple legal principles were applied with the most telling effect. This power of finding a simple clue to the true theory in the midst of nebulous masses of conflicting statements often had the effect of genius, when it was, in fact, only a sagacious application of laborious and systematic analysis. This talent and power of work was of supreme value in unravelling the complicated affairs of corporations, detecting maladministration through the entangled business of years, furnishing at once the detection of the causes of ruin and the clue to a more hopeful management. He came to be looked upon as a sort of wizard who had magical powers of insight into that which was blind to others. There arose an extraordinary demand for his services, and his professional income surpassed anything before known at the American bar. A judicious and fortunate investment of it made him a rich man.

In all this his methods were those of an almost scientific induction, free from the seductions of eloquent advocacy, if not destitute of the graces of voice and of manner. He was always the equity barrister rather than the jury advocate. Even before a jury he treated the twelve men in the box as he would the chancellor, and made his impression by his lucid simplification of involved matters and his logical application of established legal principles.

His lack of the emotional was seen in every phase of his life. He cared little for poetry; fact, and not fancy, satisfied him. He did not marry, partly, no doubt, because his frail health furnished prudential reasons for the life of a social anchorite, but partly also because he lacked the warmer sympathies which lead to love. His seemed to be a somewhat cold intelligence, but he seems also to have been just, to have admired honesty, to have been true to principle, and to have had high courage when courage was not easy to find. All these qualities were shown in the victorious fight with the Tweed ring and the Canal ring, and he had fairly won the reputation of a fearless as well as a most able leader of reform at a time when scoundrels in power seemed so strong as to make it suicidal to attack them.

Such was the man and such the circumstances when he was made Governor of the State and the candidate of his party for the Presidency. The notorious scandals of Grant's Administration made a loud demand for reform in national affairs. Liberal Republicans hoped to secure it by the election of a reformer tested and tried within the party. Liberal Democrats secured the nomination of Tilden as one whose record was good security for an inflexible rule of good government in the Presidential office. In politics Tilden had been a "Barnburner" in 1848, and had supported Van Buren and Adams. In 1860 he still believed in the manifest destiny of America to be "all free," but fear of the consequences of secession and dread of civil war kept him in the ranks of the Douglas Democrats. During the war he was a war Democrat, and after the war he was earnest in advocating full and final acceptance of the constitutional amendments establishing freedom.

Looking back at the events of 1876 in the light of a fuller knowledge, we can now see that there was no more danger of a reaction against liberty then, had Tilden been elected, than there was in 1884, when Cleveland was elected. The situation did not warrant great excitement, much less revolutionary measures. The questions were really administrative ones

and in no sense constitutional. It is, however, the nature of political controversies to exaggerate the importance of party success; and a great number of Republicans no doubt believed that the election of Tilden meant the loss of nearly all that was gained by the national triumph in the civil war. Feeling thus, they were prepared to be warped in their judgment of the means used to keep their party in power. This does not mean that they would applaud a false return or justify a forgery. It means that they could be easily misled by plausible assertions of unscrupulous managers, and easily blinded as to the real character of the things done by the returning-boards in Louisiana and Florida under the direction and advice of prominent Northern politicians.

Mr. Bigelow has conceived his office as biographer to be that of an advocate for Mr. Tilden and the Democratic party. He is a prosecutor, arraying the evidence of fraud and wrong in the elections in the contested States, in the making up of the returns, in the final count under the decisions of the Electoral Commission. He feels at liberty to ignore the history of the country and of the Southern States from the close of the war to the election of November, 1876. He thinks it enough to show that Mr. Tilden refused personally to authorize attempts to purchase electoral votes that were said to be in the market. At the same time he feels at liberty to hold President Hayes responsible, on the sole evidence of his accepting the office awarded him by the Electoral Commission, for all the detailed frauds and crimes that were committed in New Orleans or Tallahassee. This is not judicial; it does not even represent the settled public opinion which has gradually grown up, as time has quieted passions and given to men of average intelligence a better perspective of the contest of 1876 and the events which led to it. The significance of Mr. Tilden's life is almost wholly in its relation to history in a critical period. His biographer throws away his opportunity to become an authoritative interpreter of those events when he hesitates to take the historical view, and ignores the wrongs on both sides which led to the shocking demoralization of the time.

The civil war ended in the disfranchisement of the dominant and intelligent class in the South. Their struggle to regain leadership and political power was more or less revolutionary. The enfranchisement of millions of uneducated freedmen made them the tools of unscrupulous adventurers, and led to a saturnalia of misgovernment and peculation. This abuse of the governing and taxing power induced a resort to terrorism and "Kukluxism" as a corrective, because the white property-holders could not by legitimate means throw off the yoke. Kukluxism and the appeals to terror led the weaker and less intelligent into every manner of fraudulent stratagem to keep power. Each party could point to real abuses. No party ever did evil that good may come without finding that the slippery downward path led to anarchy, and to vulgar individual crimes of every name and nature, from robbery and embezzlement to forgery and murder. It is only mockery to show the obverse of the medal and refuse to exhibit the other side.

For the men who took part in conscious wrong doing, history will not have mercy. The "visiting statesmen" must stand in the pillory they have erected for themselves, and the only pertinent question will be as to the full extent of their guilty knowledge. Here, however, the biographer, by taking the partial view, weakens his case. As he insists, with justice, that Mr. Tilden is not to be held morally responsible for attempted purchase of corrupt electors by agents whom he disavowed, so he is bound to bring no similar railing accusation against Mr. Hayes without definite evidence of personal complicity with wrong. It is well enough to argue in regard to the vulgar herd of corrupt tools, that promise in advance to "take care of them," followed by appointments afterward to salaried offices, makes a good case of purchase. But to argue that the transfer of John Sherman from the Senate to the Treasury Department was a bargained reward for his visit to New Orleans is ridiculous. So, to say that Garfield's election to the Senate by the Ohio Legislature, and his subsequent nomination and election to the Presidency in 1880, were a similar payment for similar services rendered is equally absurd. The history of those political events contradicts the theory, and no contracting party is strong enough to warrant specific performance of such a bargain if any one were fool enough to make it. The responsibility of the statesmen named may be grave enough, and the task of their biographers may be no light one; but Mr. Bigelow has done much to make it easier by offering so weak an issue for debate.

The historian's point of view will include the general corruption of politics, and the substitution of venal combinations to secure the offices, with their power and profit, for the patriotic organizations to carry out a large public policy for the general good. It will recognize the fact that returning-boards have not been confined to the Gulf States, but have been organized in nearly every Legislature of the Union, and in Congress; for the election committees of these bodies have scarcely pretended to disguise their purpose of "counting in" their own political friends in open contempt of the evidence of honest election. Reformers have demanded in vain that contested elections shall be decided by judicial bodies acting upon judicial evidence. The "counting in" of Gov. Turney by the Democratic majority of the Tennessee Legislature the other day is only the most recent example of the widespread need of the application of the methods of honest business to politics.

While we thus treat Mr. Bigelow's arraignment of the frauds of 1876 as a one-sided statement that does not rise to the plane of history, we must still reiterate the truth that it claims serious and thoughtful attention from every man who loves his country, and who desires, in the words of the reformers of 1876, "to make this a pure government once more."

THE MIGRATION OF SYMBOLS.—I.

The Migration of Symbols. By the Count Goblet d'Alviella. With an introduction by Sir George Birdwood. London: Constable & Co. 1894.

VARIOUS significations attach to the word symbol. As here employed, it means whatever so represents a person or thing, by general agreement or by analogy, that its presence alone may evoke the conception of the other. The cross stands for Christianity; the flag for one's country. Religious sentiment especially makes large use of symbols; those which have served as the figured representations of divinities have always commanded the highest degree of veneration. Such material vestiges of their beliefs transmitted to us by past generations form the subject-matter of this remarkable volume, the fruit of exhaustive labor expended in bringing together the latest discoveries in ethnography and archæology, in history and philology.

There is a kind of symbolism so natural as to be common to the human race—a disk for the sun, a crescent for the moon; possibly this is true of even more complicated analogies—a tree for human life, or an equilateral cross for the four directions of space. On the other hand, the borrowing of symbols is the commonest thing possible. Soldiers take their religious symbols with themselves to foreign lands; coins propagate them over immense distances. Egyptian scarabs are found from Sardinia to Mesopotamia, carried by the armies of the Pharaohs or the ships of the Phœnicians. To determine whether analogous symbols were produced independently, or were derived from the same source, we must look chiefly at the intricacy and singularity of the forms.

The earliest monumental forms of religious symbols are found to be but few in number. Of the most important of them the history is traced by our author, one by one, first among particular peoples, and then over the whole area of countries where they are found. His main purpose, however, has been to investigate the limits within which such symbols have been disseminated, and to discover how far in the course of their wanderings their meaning as well as their form may have been modified. Symbolical figures may have a common origin without necessarily having the same meaning; and they may differ in appearance and yet be genealogically connected. All this is what the title chosen for the book is intended to imply. The conclusion drawn is, that such religious symbols as are common to the different historical races of mankind have not originated among them independently, but have been carried from one to the other, either in the course of their migrations, or by conquest, or by commerce. There are but few exceptions to this rule, the truth of which is demonstrated by an overwhelming induction of instances ancient and modern.

There is, to be sure, another whole class of symbols, consisting in acts or rites, which are not touched upon in the present work. As already intimated, our author has confined himself to figured representations; and of these only such are specially investigated as from their importance or their complexity seem most likely to shed light on the general conditions that govern their transmission. These principal forms, as has been said, are but few in number. The most important are the Gammadion, or Swastica, a cross with its extremities bent at a right angle; the sacred tree of the Assyrians; the sacred cone of the western Semitic peoples; the Crux Ansata of the Egyptians, a cross surmounted by a handle; the winged globe of the Egyptians; the Caduceus, or winged rod, of the Phœnicians; and the Trisula, or trident, of the Buddhists. In our limited space we can do little more than present some of our author's conclusions in regard to these principal figures, so far as it is possible without the help of the illustrations, which form one of the charming features of the book; and we must of necessity pass over much of interest to be found in the vast mass of materials collected by him relating to other emblems.

The Gammadion is so named from its being a combination of the Greek gamma four times repeated. It is the most interesting as it is one of the most widely distributed of all the symbolical forms. It is found among all the nations of Europe and of Asia (with certain significant exceptions), in Africa, and in both the Americas. By the Anglo-Saxons it was called the *fylfot;* while in India it bears the name of the

swastica when the arms are bent to the right, and *sauwastica* when turned the opposite way. If the arms are rounded off while curving backwards, it takes the name of the *tetrascele*, or four-legged figure. From its constant presence upon altars, idols, priestly vestments, tombstones, and sepulchral urns, it is clear that it possessed the attribute of a talisman or amulet. Many have been the attempts to explain its mystical significance. It has been regarded as the symbol of fecundity, both as importing the union of the male and female principles, and as especially the symbol for the female sex; of water, from its resemblance to the meander, or Greek fret, from which it has been supposed by some to have been derived; of lightning, because it can be separated into two zigzags or interlaced Z's; and of fire, or rather of the fire-drill by which fire was generated by certain primitive races. But the tendency of recent investigators is to consider it a symbolical representation of the sun or of a solar divinity. This interpretation may be considered as substantially demonstrated, since Percy Gardner has discovered among the coins of the city of Mesembria in Thrace (a name signifying midday) one struck with the gammadion bearing in its open centre an image of the sun, and others stamped with the legend MEΣ, followed by the same symbol. The four branches are supposed to represent the solar rays in motion in the four directions of space. But the sun does not restrict itself to darting its rays in all directions; it seems also to be animated by a circular movement from east to west. To symbolize this a literal four-legged figure was sometimes employed, or the same thing was indicated by a three-legged figure, as the one form is found to run into the other.

The question naturally suggests itself, Where was the cradle of the gammadion, whence it was carried to the four corners of the Old World? In the attempt to solve this problem one thing, at all events, has been established: it is found to be almost the exclusive property of the Aryans. It occurs among all the Indo-European peoples (except the Persians); but it is completely wanting among the Egyptians, the Phœnicians, and the Mesopotamians. A reasonable explanation for this has been found in the supposition that the symbolism of those nations possessed other figures which discharged a similar function. The real talismanic cross of all those countries, stretching from Persia to Lybia, is the *crux ansata* of the Egyptian monuments; and their principal symbol of the sun is the winged globe. Where the gammadion predominates, neither of these symbols has ever taken root. A natural inference has been drawn from this that the gammadion is the survival of a symbolism of the common ancestor of the Aryans. Accordingly arguments based upon its predominance have been invoked towards the solution of the burning question of the Origin of the Aryans. Our author has provided a table in which he attempts to make out a genealogy for it upon alternative suppositions. According to this table the remotest periods to which it has been traced back are as it has been discovered by Schliemann at Hissarlik upon numerous whorls made of baked clay, and also in his excavations at Mycenæ, on the one hand; and, on the other, as it is found upon sepulchral urns of the so-called Villanova type, in certain cemeteries of northern Italy, classed as belonging to the early Iron Age. From this table it also appears that there have been two successive periods of the dispersal of the gammadion over the whole of Europe: one in prehistoric times, upon pottery with incised geometric decorations (the Villanova type); the other contemporaneous with the imitation of Greek coins. Now, which of those two periods, Hissarlik or the early Iron Age in northern Italy, is to be regarded as the earlier? In which direction did the current of emigration *via* the valleys of the Po and the Danube flow? Was it, as has been heretofore believed, westward at the time when the civilization of the Bronze Age was introduced into Europe, either by the Celts, according to Bertrand, or by the early Italians (Umbrians), as Helbig, Pigorini, and the Italians generally believe? Or was the emigration in the opposite direction, as maintained by those holding to the opinion, steadily growing in favor, that the Aryans originated in northern or central Europe, and spread thence in an easterly and southerly direction? If this were the case, Hissarlik and Mycenæ would be later than Villanova, and thus another burning question, the age of the so-called Mycenæan civilization, is opened up.

We think our author has not discriminated sufficiently in stating that the gammadion is found in Europe in the Bronze Age. That period is best represented by the *terremares* of Emilia, in the valley of the Po, and the gammadion has never been found upon the pottery of the terremares, although so stated by our author. This pottery has very marked characteristics easily recognizable; the most striking is a crescent-shaped handle. On the bottom, it is true, there are to be found various forms of the cross, chiefly equilateral; but these furnish no stronger argument for the presence of the gammadion than for the *crux ansata*. The fact is, that the gammadion does not occur in Italy earlier than in the well-known cemetery of Golasecca (or Sesto Calende), near the outflow of the Ticino from Lago Maggiore, and southward in the cemeteries characteristic of the early Iron Age, to be included among which is the one containing the peculiar "hut urn" shape, found under the lava on the Alban hills, near Albano. So, also, when our author makes the statement that the gammadion "occurs in the north and west of Europe, with objects of the Bronze period, . . . and seems to have been introduced into Germany, Denmark, Sweden, etc., in the same manner as that in which the Runic writing was brought from the Danube valley to the shore of the Baltic," surely he forgets that the Bronze Age in the north of Europe has been proved to be later than the Iron Age in Italy. As for the Runic writing, its introduction into the north was even as late as the sixth century B. C.

In Asia the gammadion occurs as early as upon a bas-relief at Ibriz, and upon a cylinder, both of which are regarded as belonging to the Hittite civilization; but it may very well have been derived by them from Hissarlik. In general the Hittite art seems not earlier than the ninth century B. C. Throughout the far East, in China and in Japan, the gammadion can be easily traced to the swastica of the Hindus; but how it came to the Hindus is a question quite as difficult as how it got to Europe. Our author inclines to the opinion that they derived it from the Caucasus, where an early civilization prevailed closely allied to the Mycenæan industrial and decorative type; but this still leaves a gap to be accounted for—why it is lacking among the ancient Persians. It still remains an archæological problem waiting for future discoveries.

In western Africa the gammadion has also been found upon some curious bronzes captured by the English from the Ashantees; and it occurs in both North and South America. Our author thinks it probably originated spontaneously among the Ashantees, and possibly upon this continent also, although he inclines to the opinion that the fact of its being employed as a religious symbol among the Pueblos implies an early communication between America and the Old World, probably by way of China or Japan. We fail to see much force in this argument upon the theory of its being a solar emblem. On the other hand, he has stated in a different connection that the pre-Columbian cross is a kind of compass-card, representing the four quarters of the heavens, from which come the four chief winds which bring the rain. This is the opinion that generally prevails among American archæologists, who have found a striking corroboration of it in an engraved shell gorget discovered in a mound in Mississippi. On this is inscribed an equilateral cross inside of a square, each of whose sides supports a bird's head turned in the same direction—the whole forming a veritable gammadion. In its simplest form two examples, made out of native copper hammered into a thin sheet, were found by Mr. Moorehead in the Hopewell mound in Ohio, as well as two others of a highly decorated pattern, in which a combination of secondary figures, circular, or resembling the petals of flowers, is set between the arms of the cross. All of these were exhibited at the World's Fair in Chicago and attracted a great deal of attention. When we bear in mind how essential to the support of human life over large portions of our continent was the maize-plant, it seems more natural to suppose that a religious symbol for the rain, on which its growth so much depends, originated here spontaneously, than to search for any foreign origin for it.

The Sacred Tree, one of the oldest of symbols, had its origin in Mesopotamia, one of the oldest civilized centres. From its simplest form, a stem divided at the base, surmounted by a fork or crescent, and furnished with cross-bars midway, it developed into a tree of varying species. Later it grew to be of a highly complex and ornate pattern, but it was invariably associated with religious subjects. Finally, it always stands between two living creatures facing each other. At first these were shapes of monsters, such as winged bulls or griffins, or real animals. Later they were human, or semi human, personages, priests or kings, in an attitude of devotion. The migration of both these types can be readily traced. The tree between two monsters or animals passed from Mesopotamia, on the one hand, to India, where it was employed by the Buddhists, and after them by Brahmanical sects, and it has continued in use in that country down to the present time. On the other hand, it passed to the Phœnicians and from Asia Minor to Greece. From the Persians, also, it was introduced, through the Byzantines, during the Middle Ages, into Christian symbolism in Sicily and Italy, and it even penetrated to the west of France. The other type, placed between two human, or semi-human, personages, followed the same route into India, China, and Eastern Asia. It is also to be found in ancient Mexican and Maya codices, and this our author regards as additional evidence of a pre-Columbian communication between the Old World and the New. The autochthonist theory on the contrary finds in it merely a development of the rain-cross into a tree form, or a representation of the maize-plant in a foliated pattern as is seen in the well-known stele of Palenque.

Wherever found, in the Old World, certain

features seem always to obtain: the attitude and expression of the two human figures, the form of tree, the arrangement of the branches, and the frequent presence of a pair of volutes between which the stem arises. The origin of these volutes may be attributed either to the clusters which adorn the image of the Chaldæan palm-tree, or to the horns which were a distinguishing sign of divinity among the Assyrians. The tree itself varies in different countries; the constant reappearance of these accessories constitutes the essential feature of the symbol. A curious detail occurs among very different peoples, the presence of serpents sometimes twined around the stem, sometimes only placed in the background. From this, Christian art has borrowed the model of the scene of the Temptation. In some creeds the tree is replaced by other objects, an altar, an urn, or a pillar. Christian art frequently places at the side of the cross (its "Tree of Life") two living creatures, lambs, doves, or peacocks. When the use of armorial bearings began to develop in western Europe, heraldic art copied from Eastern fabrics the habit of employing pairs of animals opposed to each other, as supporters, and the fashion prevails to this day.

Among Semitic peoples the veneration of the Sacred Tree implies far more than the almost universal tree worship of primitive races on account of their utility. It stands either as a vegetable symbol of the divine power, as the female personification of the creative forces of Nature, or it is the image of a mythical tree endowed with some supernatural purpose or meaning. What could have given to the people of Mesopotamia the idea of representing their great Goddess of Nature by a tree? The explanation offered by Prof. Tylor is, that on the Assyrian monuments in the greater number of instances the sacred tree is a palm, toward which two figures seem to hold the point of a conical object, with a reticulated surface, which bears a close resemblance to the inflorescence of the male date palm. He finds here a representation of the fertilization of the palm by the artificial transferring of the pollen to the clusters of the female, or date-bearing tree, a process referred to by Herodotus as practised in Chaldæa. This seems to be a more reasonable explanation of the origin of the cone than that proposed by Dr. Bonavia, referred to in a recent number of the *Nation*, in which, objecting to the pineapple theory, on account of the American origin of that plant, he concludes that "the cones were cedar cones used as sprinklers of holy water." If Tylor be right, the Assyrians seem to have drawn from the sexual relations of the palm the same symbolism relating to the renewal and communication of life that other nations have found in human sexuality.

But the Sacred Tree, among the Semitic peoples, as we have stated, also represented a mythical object of varying significance. Sometimes it stands for the Tree of the Universe, whose summit is the sky and whose trunk the earth; or the Tree of Life, whose juice conferred immortality; or the Tree of Knowledge "of good and of evil." The Cherubim with flaming sword who kept the way of the Tree of Life in the Garden of Eden bear a much greater resemblance to the monstrous creatures which guard the approaches of Assyrian palaces than they do to the *Amoretti* of Christian art. The fruit of the Tree of Life, whether it were clusters of dates or bunches of grapes, yielded alike a fermented liquor, that elixir of life which finds an echo in the modern *eau de vie*.

The Aryans also had their mythical trees. Among the Hindus we find a similar Tree of the Universe, a Tree of Life, from whose leaves distilled the celestial *amrita*, the drink of immortality; also a Tree of Knowledge, whose sap begets poetic and religious inspiration. The Greeks had their Sacred Tree in the Garden of the Hesperides, with golden fruit guarded by dragons; and the Scandinavian mythology had its sacred ash, Yggdrasill, whose branches spread over the whole world and tower above the heavens. But our author does not find the explanation of the coincidence in the possession by both Semites and Aryans of the Tree of Heaven, of Life, and of Knowledge in a common origin. He sees only examples of the well-established fact of the migration of fables among nations differing widely in race and language. He thinks they are merely logical coincidences in the application of vegetable symbolism; or that enrichment and approximation of mythologies which follows upon the mutual exchange of symbols and of myths.

TYRRELL'S LATIN POETRY.

Latin Poetry: Lectures delivered in 1893 on the Percy Turnbull Memorial Foundation at the Johns Hopkins University. By R. Y. Tyrrell, Regius Professor of Greek in the University of Dublin. Boston: Houghton, Mifflin & Co. 1895. Pp. xxiv, 323.

Prof. Tyrrell speaks so warmly of the courtesy of his American hearers in various cities, and his volume shows so much learning, acuteness, and literary art, that it seems ungracious in Americans to review it unfavorably. And, indeed, if a book so attractive in appearance and in the design announced in the preface is disappointing, it is rather because the author seems to work under certain false conceptions than because he does not do with much skill what he sets out to do. He announces his purpose to be chiefly analysis and literary criticism, rather than biography and literary history, which is entirely right if he does not allow the first to override the second. For instance, when he declares that to make Horace's renowned "O Navis" refer to the ship of state is the work of "typehunting editors," he directly sets at naught the words of Quintilian.

His false conception seems to be this: something essentially new was to be said of the Latin poets, and this end of the nineteenth century has brought to light two new metrical canons, one abstract and the other concrete, by which all poetry may fitly be judged. The first seems to be that passion is the true note of the best poetry—a sort of corybantic or dithyrambic furor—enthusiasm according to the ancient sense of the word. He seems to forget that Apollo applied the bridle as well as the goads to the Sibyl. This view of inspiration is a favorite one at the present day; it has operated to revive the study and exalt the glory of Pindar, and, years before Prof. Tyrrell wrote, to exhibit Catullus as the master of Latin poetry to the proportionate disparagement of the controlled and moderate Horace. It stamps with approval some work of Burns which never ought to be reprinted, and raises to fame some much later writers who should be left in their obscurity. By this canon Prof. Tyrrell not only exalts Catullus, as Munro did before him, to a very questionable supremacy, but he finds in Lucretius, and even in Plautus, a passionate and fiery temper which has hardly been detected hitherto. He seems in his literary analysis to confuse such traits as frankness, sincerity, simplicity, spontaneity, and passion—shades of tone far from identical, and often inconsistent.

His second canon, sometimes curiously in conflict with the first, appears to be that Tennyson is the standard poet, both for design and execution; that we may test the work of any poet in any language or period, for praise or blame, by finding his parallels and contrasts to Tennyson. Now, without seeking to deprive this age of a single comfort it takes in its Tennyson, one may say that other ages have taken equal satisfaction in poets of wholly different metal; and to employ him as a new Procrustes strikes a note of agony on some sensibilities. Professor Tyrrell recasts Lucretius's grand sermon on death into the metre and style of "the Two Voices," which is a startling use of octosyllables; yet he cannot recall that Scott used that metre with success without calling his poems "metrical romances." The children of this age must allow old-fashioned people to suggest that when after-times shall discuss the endless question, "What is epic poetry?" they may find "The Last Minstrel" and "Marmion" nearer the ideal than "Elaine" and "Guinevere"; and may insist that, whatever Tennyson's genius, he is essentially the child of his time, and no more fit for use as a standard than any other writer who completely satisfied his own contemporaries—Cowley, for instance, or Pope.

Prof. Tyrrell dwells at the greatest length on Lucretius, Catullus, Virgil, and Horace; dealing with the other Latin poets rather by groups than individually, and giving them distinctly lesser space. On the first two names, though his handling is fresh and lively, he has no very new point to offer; but little not already indicated by Sellar and Munro, the influence of the latter being in some cases more powerful than healthy. To Virgil he shows almost entire justice; yet one must fear that if Lord Tennyson had not laid down the lines for admiration, it might have come less readily; for Virgil's restrained and refined force, and his absolute objectiveness, whereby the man is lost in his work, are in a very different strain from most of the self-proclaiming writers Prof. Tyrrell so generally admires. He does perceive the nameless charm of Virgil's poetry, which fixes it in memory and thought, interpreting just that part of ourselves which our own tongues never will. He gives an interesting appendix in continuance of Conington's essay on Virgil's English translators.

Of Horace himself Prof. Tyrrell takes a strange and, as he says, an unorthodox view; but heresy is not always truth. The universal regard which Horace has received with men of so many different minds seems to him misplaced; Horace painfully lacks originality and poetic sincerity; his satires are largely plagiarisms from Lucilius, as may be detected even from the *disjecta membra* which are all we have left of the Auruncan; his odes are simply mosaics: *tours de force* in the transference of Greek lyric metres, hardly ever revealing the poet's own soul. In one word—though he does not use it—he regards Horace as a good deal of a humbug. One wonders at this point why he regards it as unpoetical insincerity to talk about a love for Lydia which represents no real feeling, and yet only legitimate Fescennine wit when Catullus charges Cæsar with immoralities of which there is no real evidence. If we grant the criticism that much of Horace's most sparkling satire is only a washing of Lucilius's crystals from their native mud, it would only prove what this book

admits is true of Virgil, and is equally true of Shakspere and our exalted Tennyson. One reads Apollonius, and Greene, and Sir Thomas Malory, chiefly because they gave materials to the men who "founded the massy ore, and scummed the bullion dross." The poet is he who makes the poetry. To the second charge, that Horace's odes are merely elaborate and unreal metrical exercises, one very adequate reply is this: Your spontaneous poet, your impressionist, who works over nothing, will, like Catullus, like Dryden, put one glorious stanza in immediate juxtaposition with a commonplace one, and even with a vile one. But the warped and paradoxical nature of Prof. Tyrrell's view is well shown by a single typical instance. "Surely," he says, "Horace was struggling in the shackles of his metre when, in warning Pollio how difficult and delicate was the task of writing a history of the Civil War, he tells him that he is walking on treacherous ashes which conceal a fire beneath," this version being an inversion; and he goes on to say that this does not in fitness of language convey the sense it seems to. Past ages, which have supposed it was an admirably expressive metaphor struck out by a great genius, have been all wrong; it was merely incorrect language imposed by Alcaic exigency. Prof. Tyrrell loves "Maud"; his criticism may be paralleled by this one: to call the evening dew on the passion-flower a splendid tear ought to mean that the flower felt with the hero's passion; but evidently Tennyson forgot what the monks meant in naming the flower.

But to close by naming the crowning discovery of this book: there is a dedicatory sonnet to the city of Baltimore. Its sonorous lines convey the idea that that city felt decorous and tender hesitation about joining the Union arms; but that when she had done so, and not till then, the Southern hosts were swept away, and slavery abolished from the Potomac to the Gulf. This is equal to the legitimist histories, which taught that the armies of King Louis won victories at Jena and Wagram under the command of the Marquis de Bonaparte.

Lotos-Time in Japan. By Henry T. Finck. Charles Scribner's Sons. 1895. Pp. xvi, 337, with sixteen full-page photographs.

MR. FINCK does not tell us *when* he saw the lotos in Japan; but if, after the manner of historians in fixing the date of ancient texts, we collate the facts that he went in company with Mr. Shugyo, the ex-consul at New York, that he dined with Mr. Robert Blum, and that he possessed a visitor's ticket to the Third National Exhibition, we know indubitably that his trip was made in the summer of 1890. His three months' sojourn was a very profitable one for the enjoyment both of himself and of his readers; for he came to it with the fullest preparation in the way of reading and of experience in foreign travel, and, as he tells us, "a trained observer can see more in five hours than a careless spectator in five months."

Nevertheless, even the trained observer that Mr. Finck is can never quite escape the traveller's ruling fallacy of generalizing from insufficient data. Mr. Finck is marvellously clever in interpretation of national character, but he does sometimes nod as to particular facts. His idea that the Japanese live a domestic life, open to the public gaze, is based on seeing the houses of the humbler classes along the street; but the real charm of life in the house of a well-to do Japanese is exactly the privacy of it. Our author thinks that the Japanese nerves are shattered by "boiled tea-leaves," yet it was, after all, the Japanese who taught us that the boiling water should never remain on the leaves more than a minute. He insists on the propriety of "Mikado" for "Emperor," though scarcely any Japanese who have not lived abroad will understand what one means by it. He misses the beautiful allegory of the carved monkeys at Nikko, who bid us "Hear not [evil], see not [evil], speak not [evil.]"

But we must overlook these trifles in the face of Mr. Finck's success in the main and unique purpose of his book, to give "a convenient bird's-eye view, in a few brief chapters, of the principal points in which Japanese civilization is superior to our own. . . . I have tried to show that the Japanese have as much to teach us as we have to teach them, and that what they can offer us is, on the whole, of a higher and nobler order than what we can offer them." This is not the first time that this has been said, but it is the first time that the demonstration has been made so thoroughly. The spirit of his last two chapters, "The Esthetic Nation" and "A Superior Civilization," is shown in these passages: "The Japanese are the only truly artistic *nation* in the world—the Esthetic Nation *par excellence*." "In morals at least our equals, they are, in general refinement of manners and in social culture, far superior to Americans and Europeans." And these theses he illustrates copiously, from the experience of other observers and himself, by the facts of different phases of art and life. In doing this, he has done what many of us have tried to do, but never as systematically and convincingly as here. Mr. Hearn is of course the great apostle of the Japanese gospel to those who can appreciate the subtilties of character; Mr. Finck has made this gospel so plain that all can understand.

Let us make no mistake about this. Let us read once more the above sentences, that we may appreciate the force of each word and the significance of the whole. Let us understand, if we can, once for all, that our customary attitude of patronizing superiority is narrow, false, and grotesque. "How delightful," we think, "that the Japanese can fight with our modern tools of bloodshed, can work a parliamentary constitution, can build up a factory system. Very creditable, to be sure, this borrowing from us." Well, then, let us understand that if the Japanese are but children and "heathen" as to our material civilization, we are but boors and savages as to what we have to learn from them, and that the balance of self-gratulation and patronizing, if there is to be any, should be on their side. Can an American or a European conceive himself in an attitude of humility, of respectful consideration, of generous and equal fellowship, towards an Oriental nation? It is difficult—as difficult as it was for the sodden Pharisees to appreciate the significance of the New Dispensation in the person of a mere Carpenter. Nevertheless, the day will come, in the international comity of the far future, when our national Pharisaism will be seen in its true light; and Mr. Finck's book will have helped to that end.

Early Venetian Printing Illustrated. Venice: Ferd. Ongania; New York: Scribners. 1895.

THIS beautiful book, intended to "serve as a pattern to the printer and as a document to the student," fulfils the expectations raised by the prospectus. It consists of prefatory historical text, by C. Castellani, on the art of printing at Venice during the Italian Renaissance, on water-marks, and on the printing of music by movable types—an innovation claimed for Venice. Then follow 200 pages of facsimiles of illustrated or decorated works in chronological order, initial letters and other ornaments, printers' marks, and paper-makers' water-marks; and a brief essay on bindings is succeeded by photographic copies of elegant specimens. Borders, initials, marks, and letterpress are printed in color when the original calls for it.

The first facsimile is of the first book printed in Venice, Cicero's 'Epistolæ ad Familiares,' and the list includes fine editions of Terence, Livy, Ovid, Pliny, Quintilian, Justinian, Marco Polo, Dante, Petrarch, Boccaccio, the 'Hypnerotomachia Poliphili,' and a few Greek authors, as Strabo in the original, and Herodotus, Euclid, and Plutarch Latinized. The range in years is from 1469 to 1524, with a solitary instance of musical printing, dated 1539. In short, this collection reflects very strikingly the feverish activity of the dawn of printing in Italy, and to students of that art and of book illustration it affords a most convenient source of first-hand information. That printers and publishers can profit by it in the raising of their ideals of workmanship and standards of taste is also certain; yet a part of the lesson for them is lost owing to the failure to specify the occasional reductions in scale (the Justinian on p. 62 must be an example of this), as well as to the fact that the original margins are seldom indicated or preserved. Indeed, with a proper economy, Signor Ongania has utilized such spaces for his water-marks, initials, printers' marks, etc. The student, again, will find the indexing inadequate, in view of such a mixed arrangement. That by years is well enough, though it has some hiatuses; and the several classifications of the ornaments and type are welcome, so that, *e. g.*, we can easily track Aldus's anchor and dolphin through its several delineations. To all these should have been added a page-for-page index, naming and dating every item. But these deficiencies detract very slightly from the praiseworthiness of the execution of a scheme which might well be extended to other Italian cities.

Desideri Erasmi Roterodami Convivia e Conloquiis Familiaribus Selecta. Edited, with notes and vocabulary, by Victor S. Clark. [School Classics.] Boston: Ginn & Co. 1895.

"REVIVALS, too, of unexpected change," says the poet; and concurrently with the renewal of popular interest in Napoleon, scholars have been returning to the study of Erasmus. The slender text-book before us was announced, we believe, at least as early as the appearance of Mr. Froude's work on the great Dutchman, which itself was but the latest of a considerable series in recent years. The editor's aim has been primarily "to provide supplementary reading for Latin classes in secondary schools," and he has made a fairly entertaining patchwork of excerpts, with a liberty in omitting and welding which he frankly avows, but which he certainly carries too far when he confounds the speakers, as on pp. 7, 8, 12, 13, and especially 15, line 4. Mr. Clark has also deliberately disregarded the *formulæ* in which the 'Colloquia' abounds, and which make it preëminently available as a discipline in Latin conversation. Youngsters who have any linguistic aptitude like nothing better than to disport themselves in practising the tongue

they are learning, and Erasmus is prodigal of equivalent and parallel phraseology answering to the needs of polite society. Mr. Clark sometimes seems to have admitted doublets unawares, as on p. 6: "Quid cunctamur capum hunc discerpere? *Quid trepidamus hunc gallum lacerare?*" Again, on p. 7: "Augustine, quid babes quod parum es hilaris? *Quid accidit tibi quod sedes tristior?*" And finally on p. 3, "ut reducam in concordiam, *ut pacem inter eos componam*," where the duplication is masked by printing *et* for the second *ut*. There is a by no means sparse glossary at the foot of each page in addition to a full vocabulary at the end, and notes. These last seem to us pitched rather high for the class of pupils aimed at, and to be somewhat wanting in racy idiomatic renderings when opportunity not seldom offers. The discourse on the Alpine white hare that owed its color to the snow it fed on, ought in these days to have been annotated not by a flout at mediæval superstition, but by a reference to protective mimicry. Had Mr. Clark been a born bookmaker, he might have made a much more attractive disposition of the text. His blanks and his paragraphing are often perplexing. The proof-reading has been very careful. We remark only "sunc" for *sunt* on p. 47, line 12. *Cervisia*, p. 39, line 7, has not found its way into the vocabulary.

We may, after all, doubt whether a better book "studio iuventutem inlectare ad elegantiam Latini sermonis" (as Mr. Clark's epigraph reads) could not have been made out of the anecdotic portions of those philosophical works of Cicero which Erasmus kissed every time he read them (p. 27). Something here, no doubt, is learned of the scholar himself, his lore and the whimsies of his palate; but, to our thinking, a judicious abstract (say) of the "Puerpera" would have given a better idea of the man in his larger aspect, and would have left a more fixed and salutary impression. The interlocutors are but two, the theme single, and the conversation close, and the grammatical difficulties no greater than those encountered in Mr. Clark's selections. This Colloquy, however, would lend itself comparatively ill to pedagogic editing.

BOOKS OF THE WEEK.

Allen, Grant. The Scallywag. Cassell. 50 cents.
An Aide-de-Camp of Napoleon: Memoirs of Gen. Count de Ségur. Appletons. $2.
Black, Barbara. Kate of Gotham. G. W. Dillingham, 50 cents.

JUST PUBLISHED:

KERNER & OLIVER'S NATURAL HISTORY OF PLANTS.

With 1,000 original cuts and 16 colored plates. Quarto. 2 vols. Vol. I. (bound in 2 parts) ready. $7.50 *net*.

"It is full of new and important views; the style is fascinating and the exposition of the subject philosophical and masterly. I can conceive of no book more likely to give an intelligent inquirer a firm grasp of the leading principles of life on our globe. It is a treasure-house of knowledge."—*Grant Allen.*

"A semi-popular work on plant-life by the professor of botany at Vienna, admirably written. An English edition, translated under the supervision of Prof. Oliver, is having much success in Great Britain. It ought to sell largely here to college and public libraries, as well as to individuals, and I can heartily commend it."—*Prof. J. E. Humphrey of Amherst.*

HENRY HOLT & CO., N. Y.

Economic History Since 1763.

Compiled by Benjamin Rand, Ph.D. Third Edition with Bibliography. 8vo, $3 00.

"This book may be said to mark an epoch in the teaching of political economy in this country, and to make possible a new branch of study in the curriculum of the universities of America."

A Bibliography of Economics.

By Benjamin Rand, Ph.D. 8vo, $1.25.

This work embraces the more important English, French, German, and Italian authorities in general economic literature.

JOHN WILSON & SON,

UNIVERSITY PRESS, CAMBRIDGE, MASS.

GUILLERMO DOBLACHE'S "*Picarillo*" (natural, unsweetened, unfortified table sherry), bottled in Port St. Mary's, Spain, and shipped in cases of one dozen bottles each. For sale by PARK & TILFORD, New York, and all wine merchants. Send for price list.

Yale Mixture.

A GENTLEMAN'S SMOKE.

You won't know the luxury of Pipe-Smoking until you use Yale Mixture.

A two-oz. trial package, postpaid, for 25 cents.

The Nation.

NEW YORK, THURSDAY, MAY 23, 1895.

The Week.

NOTHING in Mr. Choate's brilliant argument against the income tax was more cogent and instructive than the portion which related to the *stare decisis* rule. There has been nearly as much confusion in the popular mind about this as about the "Monroe doctrine." We were told, as soon as the constitutionality of the income tax came up, that inasmuch as the judges at the close of the last century had recognized only two taxes, namely, those on land and capitation taxes, as direct, the taxes on salaries and other sources of income were not direct; and by this rule we must stand, if necessary, for a thousand years. "Stare decisis," cried all the "scientific" taxers, and then closed their ears. The passage in Mr. Choate's argument which disposes of this is worth quoting:

"The reason of the rule is, that it is often better on public grounds, where a question of law has been decided—where it has been repeatedly decided—that the court should let it remain rather than, by the declaration of another though a better rule, dispense with it. Where is that chiefly applied? Where ought it chiefly to be applied? Where has it always been applied? When the former decision has grown into a rule of property, and vested rights in a trusting community, relying upon the past decision, have become fixed, where rules of conduct have come to be governed by it, as in the making of contracts and other arrangements between man and man and between citizens and corporations, I acknowledge that there may often be cases where less damage to the public, less injury upon the whole, arises from letting the bad rule stand. Everybody has acquiesced in the rule, everybody knows it to be the rule, everybody has acquired his property under the rule, and made his contracts under the rule. But what right or reason is there for its application to a constitutional provision respecting the power of Government in the matter of taxation? Let the learned Attorney-General point to one man in the United States, to one woman, to one child, who will be affected detrimentally, whose rights will be in the least impaired, by a correction of that former error here—if such error has ever been committed, and I do not believe it has been."

See the effect of letting human reason play around a thing. As soon as we ask how the *stare decisis* rule came by its sanctity, we see its exact value. But when somebody who has never examined the matter at all tells us that on no compulsion and for no purpose must we depart from what the court said about it one hundred years ago, then we get a glimpse of the great Chinese secret. The explanation of the Chinese immobility comes to us like a flash. The Chinese adopted *stare decisis* as the rule of their lives thousands of years ago, and we see the result.

The Republicans of this State show much natural anxiety over the discovery that the tax levy for this year is likely to be fully fifty per cent. higher than that for last year. The rate has been fixed at 3.24 as against 2.18 in 1894. This advance is made necessary by an increase of about four and a quarter millions in the State's expenditures, two millions of which are incurred by the transfer to the State of the care of the insane in New York city and Brooklyn. The remainder is due to the extravagance of the Legislature, growing out of desires for political patronage and jobs. The farmers of the State will not take kindly to an increase of 50 per cent. in their State taxes, and the rural members of the Legislature will have difficulty in reconciling them to it. It was tolerably safe for those members to refuse New York city the legislation which it demanded, for their constituents cared little about that, but raising taxes is quite a different matter. The consequence is, that the Republican party will go into the next campaign with the city and country both hostile to it because of the conduct of the Legislature; and if its managers think they are going to have an easy time carrying the State under those conditions, they will discover their mistake when election day arrives.

It is doubtful if the issue of business or politics in the management of municipal affairs was ever more clearly presented than it has been in the statement which Col. Waring made to the Board of Estimate and Apportionment on Saturday. He showed that, at the present rate of wages paid by him in the Street-Cleaning Department, the streets cannot be kept clean throughout the year without leaving a deficit of a half-million dollars, but that if the regular market rate were to be substituted, the streets could be kept clean without a deficit. If the rate were not reduced, it would be necessary to reduce the number of men. "In reducing the cost of labor," said Col. Waring, "we may either select a certain number of men who are now receiving $2.30 a day, turn them out and deprive them of all income, with their families to be provided for, or reduce the rate of wages paid to the whole force." If the wages were reduced, the streets could be kept clean; if the force were reduced, the streets could not be kept clean. As the Board of Estimate has no available funds which it can transfer to the Street-Cleaning Department to make up the half million necessary to prevent a deficit, it must face the problem directly of either reducing wages or letting the streets go dirty. When the problem was presented to it on Saturday, not a member of the board had the courage to say a word. Why? Because to propose to reduce wages would offend the labor organizations and alienate the labor vote. Yet if the Board of Estimate had been the directing body of any business establishment, it would have solved the problem at once by reducing wages.

Wages at present in the department for common day-labor are $2.30 a day, with extra pay for Sundays. The regular pay in the building and other trades for like labor is $1.25 a day. The Street-Cleaning Department rate was put up under Tammany management for the purpose of gaining votes. By the law of 1892 it was fixed at $600 a year, about $2 a day, and Mayor Gilroy and his associates were content with that as a demonstration to the laboring classes that Tammany was their friend. An amendment to the street-cleaning law was passed in 1894 which fixed maximum limits for all salaries paid in the department, and gave the Board of Estimate and Apportionment power to pay the sweepers any sum not exceeding $720 a year. Instead of either adhering to the $600 rate or reducing it, the Board fixed the rate at $720, or $2.30 a day, nearly double the market rate. This was Tammany's assessment upon the city, made in its desperate condition of last year, and designed to get the labor vote for Tammany at the city's expense.

Attention was recently called to the extraordinary action of the Portland (Me.) City Council in passing a measure establishing what was called the system of "toe-warming by rotation" in the Department of Public Works, the salient feature of which was a requirement that the Commissioner should discharge his entire force of employees every month and hire new men. The fact should be noted that Mayor Baxter has rescued the taxpayers from the mischief thus threatened. He vetoed the rule, on the ground that its adoption "would not only demoralize and disorganize the labor force, to the great injury of the laborers themselves, but would be equally injurious to the city's interests." The Mayor pointed out that no business corporation had ever made so absurd a rule for the employment of labor as this, and declared that there was "no reason why the city should adopt any but sound business principles in the employment of its laborers." These common-sense arguments had sufficient effect with the Council to prevent its overriding the Mayor's veto. An attempt was made to get around it by authorizing the committee on public works to register and employ laborers "under such rules as they may deem proper," in the expectation that they would adopt the "toe-warming" policy; but public sentiment has at last compelled the committee to follow the example of the Council and back down.

The action of Gov. Werts of New Jersey and five of the lay judges of the Court

of Errors who sit with him in the Board of Pardons, in remitting the sentence of imprisonment of the Guttenberg race-track men, is an affront to public decency which, it is pleasant to say, is not often inflicted upon any State. The conviction of these men was secured with great difficulty, their guilt was undoubted, and their sentence was light. That Gov. Werts should have been coerced into leading the movement for their pardon in the face of such a protest as the Chancellor made against it, leaves no room to doubt that this gang of gamblers has a hold on him which he dares not defy. Only a few days have passed since the investigating committee at Trenton brought out facts showing that when Gov. Abbett and the lay judges pardoned the ballot-box stuffers of Jersey City, they did so under improper influences. Gov. Werts is too smart a man to follow in Abbett's footsteps so quickly if he were not an unwilling instrument. There is no doubt as to the effect of his course on party politics in New Jersey. If the Republicans nominate a man with a good record, like ex-Senator Griggs of Paterson, for Governor, the Democrats can probably name no one who can defeat him. They must openly condemn and discard all such leaders as Abbett, Werts, and the men who tried to steal the State Senate last year before they can hope to recover power in the State. The action of the Board of Pardons will still further attract attention to the character of the lay element in the Court of Errors and in this board, and will assist doubtless in securing the adoption of the pending constitutional amendment reorganizing both the court and the board.

The newer States of the West are naturally far more ready to break with the traditions and try experiments than the older commonwealths of the East. The Utah Constitutional Convention has put in the fundamental law framed for that incoming State a radical change in the jury system, by which eight is substituted for twelve as the number to be empanelled, and the agreement of three-fourths of the eight will be sufficient to constitute a verdict in civil cases. The trial of this experiment will be watched with interest. The last Legislature of California also authorized a new feature in jury trials—the empanelling of one or two extra jurors, at the discretion of the presiding judge, who shall hear the evidence like the regular jury, but take no other part in the proceedings except when death or illness removes one or two from the box, in which case one or both of the reserves may be substituted. This will prevent the not infrequent occurrence in protracted cases of a mistrial by reason of a break in the jury; and as the discretion allowed the judge will not require a recourse to the new system in the mass of petty cases, there seems to be no objection to the plan.

A correspondent sends us an article from the *American Economist* touching excessive importations of woollen goods under the new tariff, and asks us whether the figures there given are correct. We remember this paper very well, although it is a long time since we saw it or heard of it. It belongs to the dim and distant past, and its articles have much the same effect upon elderly readers as those on the bank controversy, slavery in the Territories, and the problem of reconstruction. The article in question tells us that "since the Gorman tariff went into effect we have been buying very liberally from foreign countries of woollen manufactured goods." It then gives comparative tables of imports for six months ending February 28, 1895, and 1894, showing that "the increased market for foreign woollens reached $9,680,694 in half a year." The dismal consequences of this are not enumerated, but are left to the reader's imagination. Wisely so, we think, because if we go back to the year ending June 30, 1892, we find that the imports of these goods were larger than they were in either of the years selected by the *American Economist*. We do not happen to have the half year's importations at hand. Whole years are better than half years for making averages. If we divide the year's importations by two in order to get a standard of comparison, we shall find that the importations of the six months ending February 28, 1892, compare with those of February 28, 1895, in the following manner—for the former, $17,832,046; for the latter, $17,383,292. The difference is not great, but it shows that under the McKinley tariff the importations of woollen goods were greater than under the present tariff. If a schedule of exportations of woollens were made up for the corresponding periods, they would probably show a contrary result—that is, larger exportations now than then. The New York *Times* publishes figures of textile imports for the year 1893 showing that the same comparison holds good for that McKinley year also.

The *Outlook* (religious) has a department of Notes and Queries in which it answers the questions of correspondents on various subjects. One of these, who signs the initials J. L. R., asks the question, "Is the pamphlet 'Coin's Financial School' reliable?" To which the *Outlook* replies: "The pamphlet 'Coin's Financial School' is reliable as to facts." This is rather severe on religion. The *Outlook* thus becomes responsible for the following among a multitude of other "facts" in the pamphlet referred to:

"Congress passed laws making all foreign silver coins legal-tender in this country."

"On account of the scarcity of silver, both Jefferson and Jackson recommended that dimes, quarters, and halves would serve the people better than dollars, until more silver bullion could be obtained. This was the reason why only about eight million of the one hundred and five million of silver were coined into dollars."

"As long as free coinage was enjoyed by both metals the commercial value of silver and gold never varied more than two per cent."

"Adam Smith informs us that in 1455 the price of wheat in England was two pence per bushel."

"A war with England would be the most popular ever waged on the face of the earth."

The last is a mere hypothesis, but we presume that the *Outlook* endorses that also, as it is not more wide of the mark than the four preceding citations. There are a few truths, and but a few, in the whole 155 pages of 'Coin's Financial School,' and these are employed to carry false impressions to the minds of uninformed readers, such as the *Outlook's* correspondent J. L. R.

The course of Presbyterian politics has been for some years as sinuous as that of the world that lieth in wickedness, but we doubt if ever before has the pious manœuvring for election of Moderator of the General Assembly been so clearly laid bare to the gaze of the ungodly as in the letter against Dr. Booth's candidacy, made public on Monday. Nominations have long been made on sectional grounds; and wicked reporters have often been in doubt, when listening to nominating speeches, whether they were in a religious or a political gathering. There is the same loud booming of a man as "the chosen representative of the great Northwest," or as "in touch with the heart of the people beyond the Rocky Mountains," or as "one whose long and unselfish services imperatively demand this honor." Nor, we presume, is Mr. Gilman's letter against Dr. Booth the only one of its kind in the history of intrigues for the moderatorship. But it must be unique in tone. Not a word in it refers to religion, or a superintending Providence, or the good of the Church. It is the frankest politician's letter, and makes one look instinctively for a P. S., "Burn this." The writer was sure that "an Eastern man" would be defeated, but thought that "a good square brother from the West or Northwest" might win. He enclosed a list of commissioners, with red marks set against those believed to be "brave and pushing men," and the reactionaries also checked. Would the veriest worldling of a wire-puller have written otherwise? For our part, we like this frankness. The customary infusion of cant about the Great Head of the Church and the Holy Ghost would have made the letter sickening. But surely we have got a long way from the days when ecclesiastical councils announced their decisions, "Nobis et Spiritui Sancto placuit." Those decisions, it is true, were often reached after just as much squabbling and wire-pulling as marks the election of a moderator. The old way was more dignified and sonorous, but the new is simpler and more straightforward. Mr. Gilman evidently believes, with Selden, that the Holy Ghost resides in "the odd man," and goes "hustling" after that odd man without any nonsense whatever.

The rumors from Hawaii that the Government is falling to pieces, and that Thurston is going to head a movement to flop back to the monarchy, may have no truth in them, but there is no reason why they should not. Thurston and most of the others in the plot to seize the islands and sell them to the United States have every mark of the unprincipled adventurer about them, and would go in for the monarchy without winking if they saw a chance to get the places that some other fellows have won by pretending to be republicans to the core. Only half-a-dozen years ago Thurston was making speeches in the Hawaiian Legislature furiously defending the native monarchy and denouncing those who were plotting annexation. When that line ceased to pay, he fell desperately in love with a republic and annexation and the incidental perquisites. These now being suddenly cut off, nothing is more natural than that he should put on a fresh mask and wring the hearts of his Jingo friends in this country by suddenly discovering that a republic is impossible in Hawaii, and that the only hope is in making Kaiulani Queen with himself as her prime minister. The peculiar quality of the patriotism of these Hawaiian adventurers is now pretty well established. It was sufficiently defined by Jowett when some one asked him if logic was a science or an art. "It is neither," he replied; "it is a dodge."

The repeal of the famous Irish coercion act, over which there was such a fierce fight in Parliament during Lord Salisbury's ministry, has been carried to a second reading in the House of Commons by the now usual Government majority. It is not the ministry who have introduced it, but they have supported it, although they see no chance of its being carried in the Lords. Mr. Morley was able to justify it by statistics both of outrages and convictions, which showed that the state of Ireland is extraordinarily peaceful, and that juries do their duty with increasing alacrity. All parties, even Mr. Balfour and Mr. T. W. Russell, admitted that Ireland was now wonderfully peaceful, and Mr. Morley pointed out that he had never exercised any of the powers given him by the act. The chief argument used against the repeal was that the Irish were now lying low, and that as soon as the act was repealed the outrages would begin again. This is a very unfortunate argument, which has always been used to explain Irish peaceableness. Whenever the crime record has fallen extraordinarily low, it has always been said in England that it was due to coercion; and whenever the crime record was high, that it was for want of coercion. This may be true, but it is bad politics never to give a large community credit for good motives. Nothing more predisposes men to be bad than steadily refusing them any better reason for being good than fear. English abuse of the Irish has had a large part in maintaining the Anglophobia which makes the government of Ireland so difficult. It is extremely exasperating to the Irish, who are very human, and Celtic to boot. "Soft sawder" is a very potent instrument of rule, a fact which our politicians have found out and do wonders with. Nevertheless we dare say there is a certain foundation for the fear of the opponents of the repeal. Doubtless much of the Irish tranquillity is due to the expectation that something will eventually be done by a friendly ministry towards home rule, but a good deal also by the land acts. The incoming of a ministry, however, which treated all the Irish leaders, priests included, as rascally adventurers, and the Catholics as all cowardly conspirators, would probably revive the old troubles.

Economy in governmental expenditures is the order of the day in France. Everybody is in favor of everybody else taking his hands out of the Treasury. The chairman of the Senate committee on finance made a touching plea for retrenchment, which his enthusiastic colleagues at once ordered printed and placarded in every commune of France. Then they turned to and voted more extravagant appropriations than ever. In particular did they vote for those little extensions of the state railways out into their own districts which every year, on the system of reciprocal courtesy, add millions to the prospective burdens of the taxpayers. This year they voted about $18,000,000 worth of new roads. Of course, they would not take this sum outright to build a railroad up to some little swallow's-nest of a village in the mountains. That would hardly do, just after laying their hands on their hearts as friends of economy. One kilometre or so a year is all they ask, the rest to come later. So modest are they in their beginnings that, according to the rate of progress provided for, it will take twenty years to finish one of their projected extensions, seventy years to complete another, and a hundred and forty years another. Truly art, in appropriation bills, is long. Meanwhile, that money as well as time is fleeting may be seen in a table of French receipts and expenditures from 1882 to 1893, just put out by the Ministry of Finance. Some years make a better showing than others, but, taking the period as a whole, there has been a steady progress towards insolvency, the excess of expenditures over receipts for the entire time being $103,000,000. This table, says the *Débats*, ought to be carved on the walls of the Chamber; but it adds, on sober second thought, "it is true that nobody would look at it."

A correspondent of the *Journal des Débats* calls attention to some recent legislation in Switzerland as indicating the dangers attending the policy of concession to the Socialists. Three measures of especial importance were enacted at the last session of the Federal Chambers—one for a Government monopoly of the match manufacture, another limiting the powers of stockholders in railroads and extending the control of Government, and a third establishing a Government bank. The first of these measures is in the line of the monopoly of alcoholic drinks, and follows an attempt to prohibit the manufacture of matches made with yellow phosphorus as injurious to the health of those engaged in it. The second law appears to be of no especial consequence, but the third is a serious matter. The Constitution of 1874 gave the Confederation control of bank issues, but prohibited state monopoly; in 1891 this restriction was removed by the efforts of the Socialists, and the state bank has now been ordained by the Chamber of Deputies, to be operated directly by the Government, like the Bank of Russia, and not merely supervised, as in the case of the Bank of France. The measure was strongly opposed, and has still to pass the second chamber, and doubtless the referendum will be demanded. But the idea that the Government can in this way "regulate the money market," as alleged by the Socialists, will have a great charm for the masses.

The resignation of Count Kálnoky, consequent on his clash with the Hungarian prime minister, Baron Banffy, illustrates the strictness with which the rules of official etiquette and diplomatic propriety are enforced in Europe. When such things occur there, somebody has to resign. No Pickwickian explanations will serve. Count Kálnoky could not be told that he must not mind Banffy's jocose ways, nor could the latter be appeased by being assured that the Count was only playing to the galleries. We have changed all that. A member of our cabinet may be rapped over the knuckles, as Foster was by Harrison, for example, and go on smilingly in office as if nothing had happened. Our chairman of the Senate committee on foreign affairs may declare war a dozen times a week, and the country will take it only as a side-splitting joke. It is much to the credit of European perspicacity that these playful ways of ours are perfectly understood abroad. European, especially English, density is a favorite theme for story and laughter with us; but, dense as the slow wits of Europe may be, they at least have mastered our standards of official propriety. If a Russian or Austrian or even a Spaniard or Turk in Morgan's position should bellow away at England as he does, Downing Street would be plunged into intense excitement; as it is, we see nothing but eyebrows languidly lifted, and hear only the bored remark: "What, that bull of Bashan escaped from his keepers again?"

THE INCOME-TAX DECISION.

WHENEVER the politico-economical history of the past thirty years in America comes to be written, the cause and origin of the socialistic phenomena which have marked it will assuredly be found in the legal-tender decision of 1871. No man can read that decision to-day without being struck by the clearness and directness with which it suggests and authorizes all the dishonest schemes with which the intelligence and morality of the community have, during this period, had so hard a fight. Greenbackism and free-silverism, which have kept us in hot water, and threatened us with national bankruptcy and dishonor, during the last quarter of a century, are so plainly the result of opinions in those cases that no account of them would be complete which did not quote the judgment of the Supreme Court as delivered by Mr. Justice Strong:

"The legal-tender acts do not attempt to make paper a standard of value. We do not rest their validity upon the assertion that their emission is coinage or any regulation of the value of money; nor do we assert that Congress may make anything which has no value money. What we do assert is, that Congress has power to enact that the Government's promises to pay money shall be, for the time being, equivalent in value to the representative of value determined by the coinage acts, or to multiples thereof. It is hardly correct to speak of a standard of value. The Constitution does not speak of it. It contemplates a standard for that which has gravity or extension; but value is an ideal thing. The coinage acts fix its unit as a dollar; but the gold or silver thing we call a dollar is, in no sense, a standard of a dollar. It is a representative of it."

We cannot quote more largely from this judgment, which contains many startling passages of the same nature. It will probably answer our purpose better to reproduce the account given by the latest commentator on the Constitution, Mr. Hare of Philadelphia, of the state in which these legal-tender decisions have left the power of Congress over the currency and over contracts providing for a payment in "money." An agreement to pay in "money" means any kind of money Congress may choose to provide:

"The material words in every such case are those which fix the numerical amount of the debt, and, if this be tendered, the creditor cannot refuse to receive it on the ground that the metal of which the pieces are composed is different from that for which he stipulated; nor can a tender be objected to as insufficient because the currency has been debased since the debt was contracted, and the sum offered less in weight and values than would have been due but for the change. It results from these considerations that the power of Congress over the currency is supreme. It has no limit, and none is set to it by the Constitution. Congress may by law declare any coin equivalent, for the purpose of payment, to any other of greater or less intrinsic value, and, by a necessary sequence, render debts contracted in coins of one kind payable in coins of another kind, equalling the numerical amount of the debt. A promise to pay $10 silver money of the United States may, for instance, be fulfilled by the tender of an eagle, or of ten gold dollars, or of a hundred dimes. The question is an arithmetical one, whether the money proffered by the debtor makes up the sum for which he is bound. Were Congress to substitute a different metal in coining dollars, as, for instance, nickel for silver, or platinum for gold, no one could question the validity of the act."

A better authority for the Populist demand for more money, cheap money, plenty of poor man's money "per capita," money made of anything that is handy, money that is simply a commodity and not a measure of value, even Peffer or Coxey could not desire. And out of this view of the nature of American money the other doctrines of Populism naturally grew. It seemed criminal for any government with this capacity for producing dollars to leave a single citizen in want or a single laborer out of work. With this judgment in his hand, Coxey might well ask for the expenditure of $500,000,000 on road-making, and thunder against the inequality of fortunes. Harvey, too, can rest on it his demand for silver money in unlimited quantities: why should not Congress make what it has the power to make, for the promotion of public comfort?

The decision fell in, too, very aptly with the current of socialistic feeling which has been flowing so freely in most countries during the quarter of a century in which democracy has been climbing into power. Money is the bottom question of economics in the popular mind. How to get it, and how it ought to be distributed, is the chief concern of the poor and ignorant voter. On it he builds nearly all his sociological speculations, and on hearing that it is a Government product, rather than a standard of value, he naturally looks around to see who has got too much of it, and sets himself diligently to consider by what means greater equality of fortunes can be produced, and in what legal way the qualities which, under our present régime, most contribute to success in life may be dispensed with.

That we owe the income-tax law in large part to this state of mind we do not think any candid man will deny. It was an attempt on the part of the Democratic party to satisfy not only the Populists proper, but that large body of the community which thinks that its own failure to achieve $4,000 a year indicates something wrong in the body politic. It was, in short, a bit of the ethical legislation which such judgments as that of the legal-tender case strongly suggest, and which a good many philanthropists are longing for. All such legislation and all attempts to use the power of taxation for the promotion of ideal justice, however, are based on the Hegelian view of the "State," which has taken a strong hold on the socialistic mind. That view makes the Government a body of all-wise and all-just men, who know exactly what everybody owes to the public, and what the public owes to him, and arrange that everybody shall have his due. We know, however, that no such body exists or can be created. The most startling fact of modern politics is the decline of our legislative bodies. The governments of the world, instead of towering high above the communities which support them, in wisdom and morality, are dropping rather below the popular level. To intrust the brutish Congress which passed the income-tax law and refused to reform the currency, or the Albany Legislature which killed the education bill, with the power of deciding who should be rich and who poor, would strike every intelligent person as an invitation to anarchy. There is no higher power in the world now than there ever was. Government is no better than the people who elect it, and often not so good, and worship of the "State" is no better than worship of ancestors.

We cannot help looking on the judgment of Monday on the income tax as a retreat on the part of the Court from the immoralities of the legal-tender decision. Any man who should assume for himself the power over plighted faith and honest contracts which the Court there attributed to a Christian legislature, would find himself an object of general abhorrence. It is difficult to read without a blush the claim made by the Court for an American legislature of the power to adulterate coin and to change its value, which was one of the worst abuses of the sovereign power over money of the mediæval kings. We have seen whither this sort of jurisprudence leads the nation. We believe the income-tax decision has arrested this downward progress. The heat with which Justice Harlan expounded the Marx gospel from the bench showed that the brake was applied none too soon. The Judge's observations on the need of the tax to keep the rich in their places was as odd as anything that has fallen from a court since Lord Ellenborough's day.

SOUTH CAROLINA.

IT was a curious coincidence that on the same day when one United States judge sitting in the Federal Court at Columbia declared unconstitutional the registration laws of South Carolina, another judge should have annulled on similar grounds the law of that State regarding the sale of liquor so far as it affects liquor brought from other States for the personal use of the buyer. This latter decision, which was rendered by Judge Simonton, a South Carolina Democrat, was warmly applauded by a large element among the whites who have always fought Tillman's dispensary system; and their ready acceptance of the right of a federal court to set aside one State law renders it somewhat embarrassing for them to dispute the right of the same authority to annul another State law. Ex-Senator Butler does not hesitate to justify this interference in the case of the election laws, and to declare his opinion that the decision was correct. It should be added that the impression that Judge Goff's decision absolutely prevents the lawful holding of the proposed constitutional convention is erro-

neous. He only held that the existing registration laws of the State are unconstitutional. To say nothing of the possibility of getting a prompt decision from the highest tribunal by an immediate appeal to the Supreme Court, there is ample time for the Governor to convene the Legislature for the passage of a registration law which will not be open to criticism.

Evans, the youthful lieutenant whom Tillman put in the Governor's chair when he himself took the Senatorship, issued a two-column manifesto last week about the impending contest between "the white peaceful flag of Anglo-Saxon civilization and progress" and "the black flag of the debased and ignorant African," which "must be a free open fight." Tillman follows this up with loud talk about a "blood" campaign and "hell broke loose, with the devil taking the hindmost," and a declaration that, if Judge Goff went any further in this matter, "he, for one, would advocate open rebellion." Judge Goff's action, however, has been received with favor, and even enthusiasm, by a considerable portion of the most intelligent whites. The Columbia *State*, a plain-spoken Democratic newspaper published at the capital, hailed the decision as virtually a proclamation of emancipation for those whites who have opposed the Tillman régime and who have been cheated under the registration laws as outrageously as the blacks. The *State* does not hesitate to pronounce the Evans manifesto "infamous," and to declare that "the paper teems with misrepresentations." Nor is the *State* alone in this. The Charleston *Evening Post* says that the registration law has been used to "disfranchise many thousands of white Democrats"; speaks of "the bald travesty of the registration of last March"; declares that, "under the provisions of the Constitutional Convention act, thousands of white Democrats remain, and will remain, disfranchised," and concludes:

> "Could these people hope to go on for ever goading the minority, ignoring and despitefully using it, without expecting to engender opposition and forcing it to crystallize? Time was when no respectable lawyer would have dared to appeal to a federal judge to set aside an election law enacted by white people, but that time has passed. Bitter, cruel experience has taught a minority of the white people that they have no more relentless, more ungenerous and unfair political enemies than their own fellows, and so there rose, among the former, men who rebelled, who flung defiance at them, and appealed to the one power from which redress had not already been denied."

The Greenville *News* says that there is no sense in abusing Judge Goff for his decision, because "Tillman declared months ago that these laws are unconstitutional, and made that the chief excuse for calling the Constitutional Convention." The *News* also directs attention to the significant fact that the State Supreme Court has had before it for six months a case involving the constitutionality of these laws, "and has flunked and refused to give a decision one way or the other." The Spartanburg *Herald* speaks of "all that has been gained by the upsetting of an infamous law," and says that "now is preëminently the time for wise counsel, deliberate action." The Clarendon *News* characterizes the talk of the Tillman leaders as "the blatant boastings of shallow-brained politicians," declares that "we have been already overpowered by the United States Government, and cannot for our own safety afford to resort to force," and says that "it is time that white citizens fully realize that it is better to enter into some compromise with the negro, by which the intelligent part of their race will be induced to join hands with the intelligent part of our race in working for the good of our whole State. In Georgetown County," it adds, "they've tried that and it works charmingly."

It is not necessary to make further quotations from the press to show that Tillman and Evans represent only a faction of the whites. The conservative Democrats, who have long opposed them, are now bolder than ever. In one of Evans's pronunciamientos he said: "There will be a straight fight now between the white man and the 'nigger,' and God save the white man that goes to the negro." We have no doubt that in Camden and in Manning this was understood to be a menace directed against some one whom the rebellious Governor had in his eye. For our part we read Col. John J. Dargan, editor of the Sumter *Freeman*, between the lines, and we now observe in the *State* a letter from that gentleman in which he takes the language of the proclamation in the same sense, for, after challenging any man to meet him and discuss the right of colored Americans to the suffrage (including his own right to "go to the negro"), he concludes with a defiance of Gov. Evans's threat, though it cost him his life. Col. Dargan has set himself in earnest "to see that the despised negro gets justice and fair dealing in South Carolina hereafter, and that cheating at elections be no longer tolerated as excuse for defrauding whites, also, who happen not to be in accord with the administration over which he [Gov. Evans] presides."

The more sensible people of South Carolina do not expect any collision with the federal authorities. Ex-Congressman George D. Tillman, who is a brother of *the* Tillman, and himself a Democrat with an excellent reputation, told a reporter the other day:

> "About half of these fellows who are put in the gubernatorial chair ought to be sent to a lunatic asylum instead. It is very fortunate that we have a federal Government which will step in when matters have reached a critical stage, and slap them on the back and say: 'There, there, son, you've gone far enough.'"

Probably Gov. Evans will back down after he has sputtered long enough. If he does not, President Cleveland will take him by the ear, as he did Gov. Altgeld of Illinois last summer, and show him his mistake in supposing that "injunctions don't go" in South Carolina.

THE LEGISLATIVE TORMENT.

It is rather difficult to take an objective view of the New York Legislature, we are so used to it; but there are very few who cannot imagine how it would strike an absolute stranger—say the well-known traveller from Mars. Although nominally a body which meets once a year to make laws (meaning by laws emanations of the sovereign will intended to benefit the community), and although it does occasionally make a law, hardly anybody ever thinks of it in that light. Most people regard its meeting as a calamity, and a shout of rejoicing goes up when it adjourns. In fact, if one were to judge it by the popular talk about it, one would suppose it was an agency for the torment and annoyance of the people, created by some hostile power. If we told the Mars traveller that it was the creation of the people themselves, that it was they who provided for its meeting and who paid the members for their work, he would dissolve in laughter and ask us to be easy on him. The members do not represent the State in any proper sense of the term. They have no connection, or none worth notice, with its industry, or trade, or commerce, or art, or science, or literature, or religion, or education. They are mostly young, obscure, and often very ignorant men. They seldom have any regular means of livelihood outside politics. Very few of them could get private employment in any reputable calling. Yet we call them together regularly once a year, and hand over to them, for such control or alterations as they see fit, nearly all our social and political arrangements, including our taxation. The use they make of this power reads like an account of the pranks of a lot of vicious boys off on a "bender." The traveller from Mars might think this was an accident which had never occurred before. We should in that case have to undeceive him. We should have to tell him that it was but a repetition of what had been going on for a quarter of a century, and that when each new Legislature met, everybody knew exactly the kind of thing it would be and the kind of things it would do. "Why on earth," he would say, "if this is true, do you not abolish it?"

To answer this question we should have to explain to him that we were living under representative government, a contrivance of the modern world intended to secure to everybody a say in the administration of public affairs, for want of which the Roman Empire perished; and that, though the Romans often got "the laugh on us" in these later days, no substitute for it has yet been devised. We must have something in the shape of a representative body, and it seemed to be part of the mysterious purposes of Providence that legislatures in our day should be largely made up of these young or old ne'er-do-weels. They are coming to the front and seizing on power in all democratic countries. We are simply showing the democratic

road to the older nations. The youths whom nobody will trust or employ have long suffered from popular odium and neglect. Their turn has come at last; a field has been found for them, and it is apparently the government of the world. This would not satisfy our Mars friend, however, for he would naturally ask why, if they annoyed us and discredited us so much, we let them meet so often. If we cannot wholly get rid of them, surely we could restrict their activity by making them triennials or biennials instead of annuals.

Here, we think, he would have us on the hip. It was a great pity that the Constitutional Convention did not recognize the force and reasonableness of the movement which has in nearly all other States made the sessions of the Legislature biennial. We assert with confidence that if the New York Legislature met only once in five years, no material interest of the State would suffer by it, while every moral interest would gain. It is no exaggeration to say that if we rule out the necessity this year of rectifying abuses created by former legislatures, there is not a single statute of the past ten years without which we could not have got along perfectly well. In other words, the work of the Legislature has been, in the main, simple mischief, or worse. In the belief of nearly all the intelligent portion of our population, the meeting of the Legislature every January in Albany is simply the opening of a school of vice. As soon as the Speaker is elected, the members organize, under a master who is not a member of their body, for the sale of legislation in quantities to suit purchasers, or for the levy of blackmail. Not the smallest sign do they show of any responsibility for public peace, comfort, or prosperity. They take their pay in money or offices or "something equally as good." They create a small army of go-betweens and lobbyists and gamblers—a kind of devil's "drummers" who bring buyers and sellers together. By threatening the wealthy, too, they make the corporations partners in their corruption, and fill them with contempt for, or distrust of, popular government. We venture to assert that the activities of Platt and his Boys during the past twenty years have all but extinguished respect for, or belief in, democratic institutions in the breasts of most of the rich men of this city. If we could look at this body in a dry light, and not through the haze of sentiment, tradition, and usage, it would, in fact, seem amazing that a Christian people should suffer such an organization to sit four months of every year in its capital city.

The worst of it is the effect on the youth of the State, not only of witnessing the legislative pranks, but of hearing the opinions of the State Government entertained by their elders. Every New York boy hears every day that the legislators are a pack of scoundrels, and that the legislation is, in one form or another, for sale. Foes and friends say the same thing. The fathers who do not denounce the legislators for their corruption, do not deny that they would like to be legislators themselves so as to share in it. The extent to which children are educated by what they see and hear around them in business and politics, is singularly overlooked even by the best of us, while the confidence we all have in our schools as instruments of moral training, is equally amazing. The proposal of the body which has just broken up at Albany to neutralize the effect of its own falsehood, levity, corruption, and indifference to public interest on the minds of the children, by ordering the national flag to be hoisted on all school-houses, gives a touch of the comic to what would otherwise be simple vulgar humbug. "Patriotism" with all these people is conveniently lodged in drill and flags, with which the boys are to be occupied while the elders set the public powers up at auction.

THE CENTENNIAL OF THE CRUSADES.

The eighth centennial of the preaching of the First Crusade has been celebrated during the week at Clermont, France. The place was appropriately chosen, for it was there that Pope Urban II. made that memorable appeal—one of the most famous in history—which caused Christendom to spring to arms to rescue the Holy Sepulchre from the infidel. We are just beginning to understand the deep significance of this strange uprising, now that the researches of scholars have brought to light the contemporary documents of that age, and have enabled us to form a true picture of Syria under the Franks. The old idea that it was a spasmodic effort, born of superstition and a chivalric love of adventure, which speedily spent its force and left no trace save in the pages of romantic fiction, is curiously incorrect. To the crusades Europe owed the downfall of feudalism, the birth of civil and religious freedom, and the increase of learning, the arts and sciences. Upon Syria their effect was more immediate, though less permanent. The early Crusaders were adventurers, it is true, but they proved themselves as successful in statesmanship as in war. They organized their conquests into a feudal kingdom "as fully assigned, cultivated, and administered as any part of contemporary France or England." The code of laws under which the land was governed, the famous Assizes of Jerusalem, showed a wisdom and intelligence far beyond the age. The peace and prosperity which the people enjoyed under them is testified to, not only by the chroniclers and pilgrims, but by the remains of their massive buildings, churches, monasteries, castles, and harbors, more numerous than those of any former conquerors. Few European cities, indeed, like Jerusalem before her capture by Saladin, could point to walls crumbling with age and disuse, and boast that they had not seen the face of an enemy for ninety years.

But we are not concerned now with the direct or indirect results of the Crusades, interesting as this subject is in the light of our present knowledge. Christendom, in the way characteristic of the nineteenth century, is again endeavoring to take possession of the Holy Land, and the inquiry which this octocentenary suggests is, How do the conditions in 1895 compare with those in 1095? At first thought it would seem as if there could be nothing but sharp contrasts, but more careful consideration shows that the resemblances are possibly more numerous and deeper than the differences. The Turk was the master then, as he is now. It was his conquest of the land twenty years before, in fact, which was the immediate cause of the Crusades. Up to this time the Arab caliphs had welcomed and protected the Christian pilgrims and merchants. But now Europe thrilled with passionate indignation at the pitiful story, told by Peter the Hermit and repeated by Pope Urban in the great square at Clermont, of the sufferings of Christians at the hands of the fierce Seljuks. Twice within the last twenty years, in Bulgaria in 1876 and in Armenia last summer, has the Turk proved to a horror-stricken world that he is unchanged—that as he treated Christians then he treats them now, when he has the opportunity. Eight centuries ago a practically united Europe drove him from the land which he ravaged. To-day his presence is endured there simply because the Powers cannot agree upon his successor.

The inhabitants of the land are nearly the same in race, religion, manner of life, and mutual hatreds as they were when Godfrey of Bouillon was chosen to rule over them. The modern traveller finds them all there to-day, the Syrian and Maronite Christians, the Druses of Lebanon, the Moslem of the town, the wandering Bedouin of the plain, the Turkish lord, and the cringing Jew. Only the Assassins have disappeared, to be worthily replaced by the lawless Circassians. And moving among them is the same ceaseless throng of pilgrims passing from one holy site to another, of every Christian nationality, of every rank and class and degree of piety and intelligence. They come from farther afield, the perils and difficulties of the pilgrimage are vastly lessened, and their relations to Rome may have changed, but otherwise there is little essential difference to be observed between the mediæval palmer and Cook's tourist.

Nor is it pure fancy which sees a resemblance to the great military orders to which the Crusades gave birth, the Hospitallers, Templars, and Teutonic Knights, in the monastic houses of the Roman and Greek Churches and in the missions of Protestant England, Germany, and America. And it would almost seem as if the land was about to fall into their hands,

as it did for a time into those of the warrior monks. A fourth part of Jerusalem is said to be the property of the Russian Church, which also owns and occupies with churches, hospitals, and inns a large tract outside the walls, as well as in many other parts of Palestine. In like manner, though not to the same extent, the Roman and Armenian Churches have acquired land and built fortress-like convents surrounded by the dwellings of their retainers, have planted vineyards and gardens. The Protestant colonists who are doing the most to give the land a European aspect with their vine-covered villages, the Temple Christians of Würtemberg, have adopted the very name of the men whose work but not whose methods they have taken up. They have laid aside sword and shield for the Bible, the spelling-book, and the medicine-chest.

The commercial relations between Syria and Europe were far more important in 1095 than they are to-day. Then the Italian ships brought the wealth of Persia, India, and China from the Syrian seaports to Europe. The stopping of this trade by the Turks was one of the deeper causes of the Crusades, and without the aid of the Italian fleets their success would have been impossible. With the extension of the Akka-Damascus Railway, now being built, to the Euphrates a part of this commerce will doubtless return. In one slight particular it is being curiously reproduced. Among the products transported to Europe by the ships of Amalfi and Genoa was bitumen from the Dead Sea. And now, after the lapse of centuries, during which the Sea has been deserted and an object of superstitious dread, boats are again engaged in picking up the floating bitumen for sale in Europe.

One of the marked differences between the eleventh and the nineteenth centuries is the manner in which the Jew is treated in Syria. The Crusader hated and oppressed him. To-day he is finding a secure and peaceful home once more in the Promised Land. There are at least eighteen Jewish colonies in Palestine, and there are 40,000 dwelling in and about Jerusalem. While some live in the deepest poverty, the objects of a mistaken charity, many are cultivating the land or are engaged in industrial pursuits. Another difference between the two ages is that, in the earlier, Europe received more from Syria than she gave, the learning of the East, its arts and sciences. Now she is repaying the debt. She has given it a literature, by translations of the Bible and other works into the Arabic, while Western civilization, with its potent adjuncts of steam and electricity, is already changing the face of the land.

LONDON'S INDEPENDENT GALLERIES.

LONDON, April 29, 1895.

ONE has been long accustomed to look outside the Academy for whatever is vital, or original, or individual in the work of British painters. Hitherto in England there have been two chief headquarters for the two chief groups of Independents. The New Gallery, inheriting the traditions of the Grosvenor, has offered shelter to Burne-Jones and his school; the New English Art Club has been a centre for the younger men who also have disdained academic restrictions, but whose sympathies are with modern movements rather than primitive revivals. For a time, the Grafton seemed about to provide an English refuge for the Glasgow men, but it has not fulfilled the promise of its first exhibitions. There are still but the two galleries to uphold a standard of independence.

Fortunately, this year both have opened before the Academy—the New English Art Club several weeks ago, the New Gallery to-day—so that there is time to give them the preliminary attention which is unquestionably their due. It is curious that, different and opposing as are their respective artistic creeds, both alike begin to show signs of exhaustion. It is depressing, as well as curious, in the case of the New English Art Club, whose members are only just fairly embarked upon their career. The little organization is not much more than ten years of age, and it started with the most excellent intentions. Its aims, according to English canons, were distinctly revolutionary; in their gallery you could smell the powder, as I heard an enthusiastic, metaphorical French artist once express it. There was not one among them who was not preoccupied with genuine artistic problems; whose concern was not with harmony of color, or play of light, or beautiful arrangement of line, or technical dexterity, rather than the preaching of a sermon or the telling of a story in paint. Their first shows were distinctly interesting; their own work, if mainly experimental, was at least an experiment in the right direction, while they counted one or two members—Mr. Sargent for instance—who had already achieved a reputation among artists, and space was always spared for the canvases of those distinguished painters who were their true masters. But gradually a little clique within the club, taking matters into their own hands, succeeded in estranging all who were not in accord with them, the Glasgow men among the number. The supply of masterpieces by Monet and Degas gave out. Mr. Sargent has ceased to contribute regularly. And Mr. Furse, once a prominent member, seems at least to be reserving his more important pictures for other exhibitions. The result is that this spring their walls are covered with sketches and studies and experiments, but little else. The excellence of intention is still evident, but one seeks in vain for the actual accomplishment which surely, after all these years of apprenticeship, should now be forthcoming. And, as if the painters themselves had wearied of the tentative stage, the sketches and experiments have scarce the vigor and robustness and buoyancy revealed in the beginning. It is hard to account for the fact, but there it is to discourage all who believe in the club as a power for good. Certainly the show is far better than any other held in London; it never could sink to the commonplace level of the Institute or British Artists. But, though the average of intentions is high, it is not possible to point to any perfect achievements, unless to the very lovely paintings on silk by Mr. Charles Conder. What the artist has undertaken to do he has done; he has broken down the barrier of aims and experiments which holds back the others, and has painted two little pictures complete in themselves, beautiful schemes of color. Beyond these, nothing is to note unless it be the improvement of one man, Mr. Anning Bell, the new promise held out by a second all but unknown. Mr. Walter Cadby. The members with names more familiar continue to rest on their very meagre laurels. Mr. Steer, it is true, produces very marvellous sketches, but it is not too exacting to expect from him, by this time, canvases more finished and less obviously studies for pictures.

If the movement represented in the New Gallery seems weakening, disappointment is less poignant. The Neo Primitives were doomed from the first to disappear; their methods were too artificial, their attitude too self-conscious, their influence too unhealthy. They, or their original Pre-Raphaelite leaders, may have given the impetus to the Rosicrucianism, or mysticism, which has had such a vogue in France and Germany and Belgium. But with men like Böcklin and Stuck, like Khnopff and Aman-Jean, the first business of the painter was acknowledged to be to learn how to paint. Technical proficiency has always been disdained by the English primitive, until he has tumbled, as was inevitable, into the inanity that now prevails at the New Gallery. Academic banality is not more disheartening than his sham naïveté. Of course, this does not apply to Sir Edward Burne-Jones, who is much to the fore this year. He exhibits no less than three large designs and two portraits. In all, he has carried out very much the same scheme of color—that arrangement of blue and green which has already occurred in several of his decorations. In all he introduces the characteristic "Burne-Jones" type, so that even "The Lady Windsor," in his portrait of her, seems but another version of the "Sleeping Beauty" who hangs near; the little "Dorothy Drew" but a plump infant edition of Lucifer, who falls, to such fine decorative purpose, in the most successful of his contributions. This really shows him at his best. The procession of fallen angels makes a beautiful sweeping line down the long narrow canvas; the blue of the heavens and the blue green of the angels' armor yield a fine, stately harmony, with not a touch of the sickliness or morbid pallor that disfigures the "Sleeping Beauty," an early design of the fourth picture in the Brier Rose series. The effect is obtained by a strange combination of water color and pastel, which perhaps no other artist would have ventured upon in a work designed on so large a scale. By comparison, the "Wedding of Psyche" sinks into ineffectiveness, and seems hardly worth the considerable proportions in which it has been executed.

But, whether altogether successful or not, between the work of Burne-Jones and that of his followers a great gulf lies fixed. His, at its feeblest, commands respect; theirs, at its strongest, it is kinder to ignore. From it, indeed, one turns with something like relief even to a portrait by Mr. Holman Hunt, who once more exhibits in the New Gallery, only to show, however, that his unpleasant mannerisms at last have mastered him completely. M. Khnopff, a mystic of another school, in (for him) a very mediocre production, called "Sous les Arbres," explains that mysticism and technique are not necessarily at daggers drawn: his knight holding a wand is little more than a white silhouette against a wooded background, but an exquisitely painted jewel at his neck and a carefully drawn clasp at his waist prove simplicity to be intentional and not a mere makeshift.

When all is said, the Primitives are in woful minority. From Academical highways and any chance by-ways, pictures have had to be sought, that galleries may be entirely filled.

There are rooms which seem but an annex of Burlington House; and the sad part of it is that the outside element is equally feeble and incompetent. It is no exaggeration to say that it contributes but one striking work, Mr. Sargent's portrait of Miss Ada Rehan. This, it must be confessed, is not one of Mr. Sargent's triumphs. The color is all but offensive. The tall figure in the white satin gown is set against a tapestry background, in which a dull dirty gray predominates; no incomparable harmony is presented as in the lovely "Lady Agnew." But, to turn from Mr. Shannon's or the Hon. John Collier's pink-cheeked dolls to this tall, stately Miss Rehan with the sallow, somewhat elderly face and the disordered gray hair, is to be confronted with a woman who lives within the frame, a woman who rejoices in strongly marked character, a woman whose face is to be remembered as one remembers the Philip of Velasquez or Bellini's Doge. The pose, as she stands playing with her fan, her shoulders well back, her head well poised on the graceful throat, is magnificent; and the sheen and folds of the gown are rendered with a full flowing brush, delightful in the freedom and knowledge so unostentatiously displayed. For the mere rendering of character, Mr. Sargent has seldom done anything finer. One would like to blot out the background, which is a feeble and unpleasant echo of the flat gray tone in that part of his decoration for the Boston Library which he showed in last spring's Academy.

There is nothing to compare with the "Miss Rehan." Mr. Shannon may have surpassed himself in one portrait, of a little girl; Mr. John Reid may be uncommonly good in another, of "Mrs. Arthur Sanderson," but they are students feeling their way where Mr. Sargent is the master. Nor do the landscapes excite more lavish enthusiasm. There is a beautiful example of Mr. Peppercorn and Mr. Edward Stott. Mr. Alfred Parsons and Mr. Arthur Lemon are, as ever, observant and studious. Little else arrests the attention or calls for special description. Certainly the independent galleries this year have failed to justify their existence. Whether this is because, at last, the Academy has adopted a more liberal policy and is encouraging the artist, will be made clear once Burlington House has opened its doors for its summer exhibition. N. N.

Correspondence.

THE MADISON LETTER.

To the Editor of The Nation:

Sir: The letter of "N.," which you print this week, strikes me as a very peculiar piece of reasoning. Your correspondent assumes that the Madison letter "shows that all the learned arguments upon the economic question what is a direct tax . . . may be thrown into the waste-paper basket." He says, further, that, "*indirect taxes* were taxes procured indirectly by 'requisition' on the States; *direct taxes* were taxes laid *directly* by the Federal Government." He says further: "The framers of the Constitution evidently had never looked at the subject from a politico-economic point of view; they had never given a thought to the philosophy of taxation; the term 'direct taxes,' as they used it, did not refer to the kind or character or nature of the tax, but to the fact that such taxes were . . . to be laid . . . directly upon the taxpayer by the newly constituted taxing power."

These confident assertions, so contrary to the testimony of the *Federalist* and of the Debates on the Constitution, are all deduced from the Madison letter, which, however, flatly contradicts them in the following words: "The only question will be whether direct taxes shall be raised by the General Government itself, or whether the General Government shall require the State Governments to raise them." Now, Madison was certainly not the man to write nonsense; but if by "direct taxes" he meant taxes raised by the General Government and not raised by the State Governments, the passage last quoted would be nothing but nonsense, as anybody can see by substituting for the words "direct taxes" therein the definition of those words propounded by "N."

Secondly, what becomes of duties and excises? Are they not taxes? And are they direct or indirect? If the former, they would have to be apportioned among the States; if the latter, they could not, under "N.'s" definition, be levied by the General Government at all, but only by the State Governments. In either case, "N.'s" reasoning terminates in impossible conclusions. A. T.

To the Editor of The Nation:

Sir: In corroboration of the position taken by "N." in his letter published in your issue of May 16, may I be permitted to offer the following? It will be noticed that while Madison made the terms "requisition" and "indirect taxes" synonymous, another great Constitution framer—Gouverneur Morris—makes "indirect taxes" have a very different significance, but gives to "direct" taxes the same meaning as Madison.

In July, 1787, the Federal Convention was struggling with the question of *representation*. The points at issue were: (1) Should slaves be counted as population, as the South insisted they should? and (2) If so, how should they be counted? All the world now knows of the compromise which settled this dispute. But for days during the Convention the discussion was violent, and at one time seemed to threaten the disruption of the Convention and the consequent loss of the cause. It was at this time that Gouverneur Morris, a delegate for Pennsylvania, proposed, because he was an uncompromising abolitionist, that taxation should be in proportion to representation. Hardly had he made the proposal when, to his utter consternation, he saw that it struck at the very root of the structure they were trying to erect, a strong central government; and he hastened to explain that by taxation he meant *direct* taxation. "It would," he said, "be inapplicable to indirect taxes on exports and imports and consumption." Bancroft observes (Hist. U. S., vol. 6, Rev., p. 266), "By the temerity of one man, the United States were precluded from deriving an equitable revenue from real property. Morris soon saw what evil he had wrought, but he vainly strove to retrieve it."

The course of Gouverneur Morris in this memorable Convention, his strong convictions as expressed in many of his letters still preserved, and even his attitude on the question of slavery, are conclusive evidence that he did not believe in the system of "requisitions." Yet here is a clear reference to *direct* taxation. He had already defined *indirect* taxation, and he again defines it in the words quoted above. He clearly uses the words antithetically. As indirect taxes were taxes on imports, exports, and consumption, direct taxes were taxes made upon the citizens of the States; and *all* taxes, no matter of what character, that were so made were direct taxes, and should be levied in proportion to representation. Congress clearly has a constitutional right to levy taxes upon almost any kind of property or income from property; only such taxes must be laid in the manner prescribed by the Constitution for the levying of *direct* taxes. The income tax as laid by Congress was an unconstitutional tax, but not upon the grounds alleged in the decision of the Supreme Court. O. K. Stuart.

1528 N. 18th St., Philadelphia, May 21.

THE PINCKNEY DRAFT.

To the Editor of The Nation:

Sir: Some months since, a question was raised in your columns as to the authenticity of the so-called Pinckney draft of the United States Constitution, and a wish was expressed that the original MS. could be examined. As is known, the Journal of the Convention was printed when John Quincy Adams was Secretary of State. Upon turning to the "copy" which was used in that publication, I found that the Pinckney draft was merely a copy, made by some clerk of the Department, and did not even bear mention of the fact that the paper of which it was a copy had been received from Pinckney more than thirty years after the event. One or two emendations were in the handwriting of Adams, but nothing else to show the history of the document. The officials of the Department made a search for any new material that would throw light upon the matter. This was of some importance, as Chief-Justice Fuller quoted the draft in his opinion on the income-tax question, in the common belief that the paper was entirely reliable. I have, through the courtesy of the Department, been allowed to see the letter from Pinckney enclosing this draft, or paper. As a matter of historical interest I think it worth printing in full. With the letter was a copy of the paper in Pinckney's handwriting. In the clause or section quoted by Mr. Fuller, the only change is in the second word, which the copyist of the Department made singular instead of plural. The sentence should read "The proportions [instead of proportion] of direct taxation shall be regulated by the whole number of inhabitants of every description." I do not think this letter of Mr. Pinckney has ever been printed. Its contents are sufficient to throw considerable doubt upon the so-called Pinckney draft, in certain details; it does establish the general accuracy of other parts.

Respectfully yours,

Worthington C. Ford.

Washington, D. C., May 14, 1895.

Charles Pinckney to John Quincy Adams.

In Charleston, Dec. 30th 1818

Sir

On my return to this city as I promised I examined carefully all the numerous notes & papers which I had retained relating to the federal Convention. among them I found several rough draughts of the Constitution I proposed to the Convention. although they differed in some measure from each other in the wording & arrangement of the articles, yet they were all substantially the same. they all proceeded upon the idea of throwing out of view the attempt to amend the existing Confederation (then a very favorite idea of a number) & proceeding de novo. of a Division of the Powers of Government into legislative, executive & judicial & of making the Government to operate directly upon the People & not upon the States. My Plan was substantially adopted in the sequel except as to the Senate & giving more power to the Executive than I intended. the force of Vote which the small & mid-

dling States had in the Convention prevented our obtaining a proportional representation in more than one branch & the great powers given to the President were never intended to have been given to him while the Convention continued in that patient & coolly deliberative situation in which they had been for nearly the whole of the preceding five months of their session, nor was it until within the last week or ten days that almost the whole of the Executive Department was altered. I can assure you as a fact that for more than Four months & a half out of five the power of exclusively making treaties, appointing public Ministers & Judges of the Supreme Court was given to the Senate after numerous debates & considerations of the subject both in Committee of the Whole & in the House. this I not only aver but can prove by printed Documents in my possession to have been the case. & should I ever have the pleasure to see you & converse on this subject will state to you some things relative to the Business that may be new & perhaps surprising to to you. the veil of secrecy from the Proceedings of the Convention being removed by Congress & but very few of the members alive would make disclosures now of the scenes there acted less improper than before. with the aid of the Journal & the numerous notes & memorandums I have preserved it would now be in my power to give a view of the almost insuperable difficulties the Convention had to encounter & of the conflicting opinions of the members & I believe I should have attempted it had I not always understood Mr Madison intended it. he alone I believed possessed & retained more numerous & particular notes of their proceedings than myself. I will thank you Sir to do me the honor to send me or to get the President to direct a copy of the Journal of the Convention to be sent me as also of the secret Journals of Congress should it be considered not improper in me to make the request.

I have already informed you I have several rough draughts of the Constitution I proposed & that they are all substantially the same differing only in words & the arrangement of the Articles. at the distance of nearly thirty-two years it is impossible for me now to say which of the 4 or 5 draughts I have was the one. But enclosed I send you the one I believe was it. I repeat however that they are substantially the same differing only in form and unessentials. it may be necessary to remark that very soon after the Convention met I changed & avowed candidly the change of my Opinion on giving the power to Congress to revise the State Laws in certain cases & in giving the exclusive Power to the Senate to declare War thinking it safer to refuse the first altogether & to vest the latter in Congress. I will thank you to acknowledge by a line the receipt of the Draught & this

With very great respect and esteem,
I have the honor to be your most
obedient servant
CHARLES PINCKNEY.

THE "TRINUMMUS" AT SYRACUSE.

TO THE EDITOR OF THE NATION:

SIR: An event of no little interest for American scholars took place at Syracuse, N. Y., on the evening of May 16, when the "Trinummus" of Plautus was rendered before a pleased and appreciative audience by members of the Senior Class of the University. The creditable production of an ancient play in the original tongue is a matter of greater difficulty than the public at large can possibly imagine. The preliminary questions as to scenery, costumes, music, metrical delivery, etc., etc., are not only very numerous, but often extremely difficult of solution. Some, indeed, cannot be theoretically answered with absolute certainty, yet they must all be decided in practice if the play is to be given at all. For example, the directions of Pollux and of Donatus with regard to the masks and the colors appropriated to the various typical characters of comedy are, as every scholar well knows, neither complete nor always sustained by the extant monuments. Pollux records the traditions of the Greek New Comedy; Donatus supplies, but in much less detail, similar rules for the Roman *Fabula Palliata*, to which class of plays the "Trinummus" belongs. But Donatus flourished about the middle of the fourth century of our era; he has doubtless given us the stage traditions of his own day. When these differ from those of the Attic New Comedy, may we rightly infer that the difference existed from the very first? Did Plautus himself alter, to that extent, the traditions of the Greek stage, as he certainly introduced Roman customs, allusions, ideas into the text of his adaptations? or did these changes occur later? This is no idle question; for, if we adopt changes not belonging to the age of Plautus, but to some later, perhaps post-Terentian age, are we not bound, in consistency, to put our Roman actors into masks?

This is but one example of the many questions which Prof. Smalley had to settle before he could put the play in study. That all such points were duly considered and passed upon, any scholar who was present at this performance could readily see. Even to the fiery wig of the slave Stasimus, everything had been carefully considered and decided. Some points, of course, must have raised doubts in the minds of those spectators who were most at home in such questions. For our part, we may say that they appeared to us to have been generally decided in the most judicious way. Thus, it seemed to us particularly wise to limit the chanting of the *Cantica* to a few verses of each, the rather as there is considerable difference of opinion among the editors of Plautus as to the metre and the length of some of the verses. In each case the actor soon passed from actual song into a sort of intoned *recitativo*, after having sufficiently called attention to the quasi-lyric nature of the passage.

The point upon which we should be most inclined to differ from the theories adopted in this rendition concerns the matter of elision. While, at the Harvard rendering of the "Phormio," elision was thought by some competent judges to have been overdone, we could not but think that it was insufficiently marked in the "Trinummus." In this opinion we were confirmed by observing that, while pronouncing syllables not intended to be heard, the actors were often compelled to crowd two syllables into the time allotted to one, with the result that, now and then, a long syllable was made short, to the discomfort of the trained ear.

These not very numerous slips, and an occasional English vowel-sound, especially the so-called "natural vowel" in syllables ending in "r," were the only defects which a fair critic would feel disposed to note in this very meritorious performance. Great credit belongs to everybody concerned: to the young people, who gave it so much care and labor; to Prof. Frey, the composer of the appropriate music; to Prof. Smalley, upon whom fell most of the heavy work; and to the enlightened and distinguished Chancellor under whose auspices and by whose substantial aid the University has rendered this service to American scholarship. FRANCIS PHILIP NASH.

HOBART COLLEGE, May 17, 1895.

SOME DANTE QUESTIONS.

TO THE EDITOR OF THE NATION:

SIR: In your number for April 18 you have been good enough to notice my little book, 'Dante: His Times and His Work.' One is always sure of intelligent and good-natured criticism of Dante books in the United States. But you ask a question: "Where does Dante tell us that he wrote the *Vita Nuova* before he was twenty-five?" Well, I should say in the first chapter of the 'Convito': "et io in quella [*sc.* V. N.] dinanzi all' entrata di mia gioventù parlai." As, later on, somewhere in Book IV., he says that *gioventù* begins at twenty-five, it seems to me that one must be *Germanis Germanior, Rhœtis Rhœtior* to find any other meaning in the words.

Now in return will you tell me where you find that Guido Cavalcanti died in August? I must admit that I was not aware of the other version of Pietro di Dante to which you refer; nor have I had the advantage of reading Signor Luigi Rocca's discussion of the passage about Beatrice. I should be only too glad if it could be proved genuine, because it would settle the question in the sense I believe correct. But I confess that, as you quote it, it bears to me all the look of a fourteenth or early fifteenth-century gloss. May I say that I did mention Scartazzini's one-volume edition on p. 197?

When you say that Blanc's 'Vocabolario' was originally written in French you convict me of an oversight. I have used the Italian version for twenty years, but never read the preface, and supposed that the German version was the original form.

Yours faithfully, A. J. BUTLER.

WOOD END, WEYBRIDGE, ENGLAND, May 6, 1895.

[The manner in which we put our question as to Mr. Butler's statement was not happy. We were, of course, familiar with the passage in the 'Convito' to which he refers, but we had long since ceased to give it the exact interpretation that seems to proceed from Dante's later definition of *gioventù*. Dante was twenty-five in May or June, 1290; Beatrice died June 9, 1290. Yet the 'Vita Nuova' plainly was written some time after this event. Indeed, it mentions the anniversary of her death in 1291, and almost certainly events of 1292. Clearly, then, Dante did not write the book before he was twenty-five; and his statement in the 'Convito' must be taken as loose, either in respect to the date or in respect to the meaning of *gioventù*. We prefer the latter alternative.

The date of the death of Guido Cavalcanti was discovered by Prof. Del Lungo, and given by him in his great work, 'Dino Compagni e la sua Cronica,' vol. ii., p. 98, n. 26. It appears in an entry in the *Obituario* of the Church of S. Reparata in Florence, which runs: "IIII Kal. [Sept.] MCCC. Q[uiescit] Guido f. dñi Cavalcantis de Cavalcantis." This gives the date of burial. Guido's death must have taken place one or two days earlier.—ED. NATION.]

Notes.

THE journals of Townsend Harris, first American envoy in Japan, kept at Shimoda and in Yedo, 1856-1858, will be published by Houghton, Mifflin & Co. They have been edited, with a biography and a chapter on Japan at the end of the century, by Dr. Wm. Elliot

Griffis. The contents will probably surprise none more than the Japanese themselves. It is the story of success won by one man without ships or soldiers, but mainly by patience, enlightenment, tact, and unswerving truth.

J. M. Bowles, No. 286 Roxbury Street, Boston, has nearly ready 'Notes Critical and Biographical' on the well-known private art collection of the late W. T. Walters of Baltimore, by R. B. Grenelle, printed in red and black on Michallet paper, with embellishments by Bruce Rogers; and in preparation an edition of the Book of Ecclesiastes in the form of an illuminated MS., engrossed by Mr. Rogers, limited to fifty copies, only forty of which will be for sale, printed on Japan paper and bound in parchment.

A. C. McClurg & Co., Chicago, are about to publish 'Government & Co, Limited,' an examination of the tendencies of Privilege in the United States, by Horatio W. Seymour, and 'The Eye in its Relation to Health,' by Chalmer Prentice, M.D.

T. Y. Crowell & Co. will issue in June the forty-two articles on Lincoln printed in the *Independent* on April 4. They announce also 'In the Land of Lorna Doone,' with other pleasurable excursions in England, by William H. Rideing, 'Punishment and Reformation,' by Dr. F. H. Wines, and a new, illustrated edition of 'The Narrative of Captain Coignet, Soldier of the Empire.'

Ginn & Co. have nearly ready 'Exercises in Old English,' by Prof. Albert S. Cook of Yale.

A monograph on Thackeray, by Adolphus Jack; 'Miscellaneous Studies,' by the late Walter Pater; a handbook of 'Picture Posters,' by C. T J. Hiatt; 'Passages of the Bible, Chosen for their Literary Beauty and Interest,' by J. G. Frazer; 'The Natural History of Aquatic Insects,' by Prof. Miall; and a 'Text-book of Operative Surgery,' are in the press of Macmillan & Co.

Charles Scribner's Sons publish this week 'The Adventures of Captain Horn,' by Frank R. Stockton.

D. Appleton & Co. will shortly bring out 'European and American Cuisine,' by Mrs. Gesine Lemcke.

From J. B. Lippincott Co. we are soon to have the Memoirs of Gen. James Longstreet of the Confederate Army, and an historical novel of the Delaware Valley, 'The Colonial Wooing,' by Dr. C. C. Abbott.

The Life of Sonya Kovalevsky is on T. Fisher Unwin's latest list; it is by several hands.

The reprint of selected portions of the 'Voyages and Travels' of Captain Basil Hall (T. Nelson & Sons) falls in with the prevailing Napoleonic recrudescence. It is full of the experience of a man-of-war actively cruising in the wars of the Empire, and describes with much detail the battle of Corunna, which Captain Hall witnessed, and the subsequent embarkation of Sir John Moore's reduced force, minus their ill-fated commander. Captain Hall was a graphic if prolix writer, and boys will still be interested in a narrative designed for them, yet not composed in a manner perceptibly different from that appropriate for adults. There are a few rather cheap illustrations.

Ulm, Austerlitz, and Jena are the battle-pieces *par excellence* of the Memoirs of Count de Ségur ('An Aide de-Camp of Napoleon,' D. Appleton & Co). We have already given some account of this interesting book, an abridgment of the eight volumes of 1873. It has been translated by H. A. Patchett-Martin none too well or idiomatically, and provided with an index.

The Dent-Macmillan reprint of Defoe, under the editorial care of Mr. George A. Aitken, continues with 'Memoirs of a Cavalier; or a Military Journal of the Wars in Germany and the Wars in England [1632–1648],' which is critically adjudged to have been a pure compilation—in other words, an historical romance, but of a high order. The same publishers have added "King Henry VI." in its three parts to the delectable little "Temple Shakspere."

The second volume, 'Arne,' in the issue of an English version of Björnson's novels (Macmillan) is introduced by an obituary tribute to the translator, Mr. Walter Low, who has been cut off in his prime. He has left completed his translation of 'The Fisher Maiden.'

A life almost as short as Mr. Low's was that of Jean Carriès, the French sculptor, who died before the article upon him and his works in the volume of the *Century* just completed (November, 1894–April, 1895) was printed. The illustrations of this artist's busts are among the most striking in the volume. For the rest, Prof. Sloane's pictorial Life of Napoleon dominates everything else, but in the political line we may recall the Bismarckian head of Crispi accompanying Mr. Stillman's sketch of that statesman; in fiction, Mr. Crawford's "Casa Braccio"; in social matters, the glimpses of "Festivals at American Colleges for Women"; and in mechanics, the account of Tesla's inventions and Maxim's exposition of the art of navigating the air.

A new and excellent edition of Mr. Hall Caine's 'Shadow of a Crime' (Boston: Joseph Knight Co.) deserves honorable mention. The story has not been heretofore published in this country, except in a cheap paper form, which, together with the repellent title, limited its circulation, especially as Mr. Caine had not then made a reputation. But he has written nothing since better worth reading, and it has the advantage of being less desperately sad than 'The Deemster' and some others. It is as good for Cumberland as 'Lorna Doone' is for Devon. The best of the illustrations are those reproducing photographs of the Lake Country scenery.

'A Brief Descriptive Geography of the Empire State,' by C. W. Bardeen (Syracuse: Bardeen), is an effort in the right direction, inasmuch as it presents a large body of local material, generally well illustrated, from which teachers and scholars in New York may learn much about their own State. The method employed, however, is unsatisfactory, inasmuch as it fails to base the topographical descriptions on a strong natural foundation, and further fails to bring forward sufficiently the many intimate connections existing between geographical form and the conditions of human life, occupation, and movement. Long Island Sound is spoken of as "the American Mediterranean," this being quoted from some foolish person who was so unwise as to publish so unapt a comparison. The departure of the Hudson below Newburgh from the Great Valley which continues southwestward into New Jersey and beyond, is not brought out. "The Hudson River, Lake George, and Lake Champlain lie in a narrow and rugged valley reaching from the Bay of New York to the St. Lawrence." The real facts cannot be learned from such a statement. Instead of following this book with special geographies of each county, as the author proposes, a revision of the book itself with the object of lifting it to a proper level would be more advisable.

'Short Studies in Nature Knowledge,' an introduction to the science of physiography, by William Gee (Macmillan), is an entertaining little volume intended to serve as a reader and companion to geographical text-books. Its subjects are well chosen and generally well illustrated. The weakness of the book, as of many others of its class, results from the insufficient acquaintance of the author with the higher lines of study on the subject that he treats.

Mr. Sidney S. Rider, Providence, has greatly enhanced the value of his precious "Rhode Island Historical Tracts" by publishing an Index to the first series (Nos. 1–19). One has but to give it a cursory glance to perceive that it is a little gazetteer and biographical dictionary in one. The rubrics Providence, Rhode Island, Newport, Samuel Gorton, Roger Williams, William Coddington, are ready examples. Some additions and corrections to the Tracts are noted in a preface and duly incorporated in the Index.

The first memorial to reach us of the tercentenary of the death of Tasso (April 25) is that of the San Sebastian Circolo Romano di Studi, a folio of 72 pages freely illustrated with portraits, views, and an autograph of the poet. The Pope himself gracefully leads the list of contributors, of whom De Gubernatis is perhaps the most widely known. The various works of Tasso and his own personality are commented on in various phases, and there are several valuable bibliographical articles. Prof. A. Avoli recommends the study of his letters; Alfonso Bartoli, with many curious details concerning the numerous editions of the 'Gerusalemma Liberata,' concludes that the most authentic and the most approved by the author (amid his general dislike for all) was that of Febo Bonnà, published by Baldini at Ferrara in 1581. Dr. G. Fortebracci points out the sources of certain passages in the same poem. Prof. E. Fabiani reviews the many attempts to dramatize the life of Tasso, and this theme is pursued by Prof. B. Morsolin in his notice of the "Torquato Tasso" of Jacopo Cabianca. And, to conclude our partial summary of the contents with the most interesting of all, Prof. E. Salvadori gives copious examples of Tasso's marginal annotations of the 'Divine Comedy.'
